Meany Asks 1971 Policies Tied to Full Employment

Key Bills Die As Congress Goes to Wire

The 91st Congress ran out of time on Jan. 2 after completing action on some, but not all, of the controversial bills that had blocked an earlier adjournment.

It sent to the White House a heavily-compromised food stamp bill, which couples a needed expansion of the program with a harsh, punitive provision that would deny food stamps to an entire family if any adult member refused any type of work paying as little as $1.30 an hour.

But it also gave final approval to labor-supported legislation establishing a new pay-setting system for federal white-collar employes. The first pay raise under the new system is expected to be about 6 percent and will be retroactive to Jan. 1, 1971.

Also sent to the President's desk was an $18.9 billion appropriations bill to finance programs of the Dept. of Health, Education & Welfare and the Labor Dept. The bill provides about $200 million more than the President had requested, but is less than a funding bill he vetoed earlier in the session.

A deadlock over funding of the SST supersonic transport plane—included in a Dept. of Transportation appropriation bill—led to a compromise agreement to leave the decision to the 92nd Congress.

The House and Senate approved a resolution continuing funding of the SST and the Dept. of Transportation programs through March 30, 1971.

Abandoned in the adjournment rush was a social security benefit increase bill which passed both the House and Senate in different versions.

The 118-page House bill included benefit hikes of at least 5 percent; the 400-page Senate version provided at least a 10 percent rise.

But the Senate did not complete action on the bill until a few days before adjournment and House Ways & Means Committee Chairman Wilbur D. Mills said it would be impossible to work out differences in the complex legislation in a quickie House-Senate conference.

Mills, however, pledged early action on a comprehensive social security bill in the new Congress, which convenes Jan. 21. He pledged that the bill would make benefit increases retroactive to Jan. 1, 1971.

Furthermore, Mills, said the legislation would be a package including Medicare and Medicaid amendments, welfare assistance and aid to the disabled and aged.

Oil Industry Pattern Set In Gulf Pact

Denver—The Oil, Chemical & Atomic Workers achieved their first goal in 1971 oil contract negotiations by winning a "pattern" settlement with wage increases totaling 16 percent over a two-year term. The agreement covers 6,200 employes of Gulf Oil Corp. at 15 locations across the country.

The union announced that it had also reached accords benefiting 11,000 other workers with American Oil Co., in Texas City, Tex.; Texaco at facilities employing 8,500, and at plants of five other refiners.

The OCAW's National Oil Bargaining Policy Committee approved the Gulf settlement, thereby establishing its terms as the minimum to be met in current bargaining at other firms. Still unsettled are 400 other contract renewals covering some 40,000 employes of 90 companies.

Union policy, set by the committee last July, has been to strike if necessary only on a local basis and to seek a pattern settlement as a standard to be followed in other agreements. The Gulf contract achieves that goal, OCAW Pres. A. F. Grospiron said.

Most oil industry contracts expired Dec. 31 but members continued to work during extended negotiations. Two exceptions were at Port Arthur, Tex., where 3,800 workers voted to strike Texaco's largest refinery, and three Husky Oil Co. refineries in Wyoming and Utah, where 280 employes are striking. Settlement details were being worked out at Port Arthur on the basis of the overall agreement.

FLAG OF ISRAEL is raised by Sec.-Treas. David J. Fitzmaurice of the Electrical, Radio & Machine Workers in front of IUE headquarters—directly across from the Soviet embassy in Washington—in protest of death sentences imposed on two Leningrad Jews for their part in an alleged plan to hijack an airplane to Israel. Police arrested Fitzmaurice on charges of demonstrating within 500 feet of a foreign embassy and held him five hours before a trial date was set. **(Story, Page 2)**

Spells Out Labor Goals In New Year

American labor called on Pres. Nixon to start the New Year with a new "game plan" for the nation's economy—one keyed to the goal of full employment.

AFL-CIO Pres. George Meany urged the Administration to abandon an economic strategy that has brought about both high unemployment and continued inflation.

It has "flopped," he charged, and it will take more than the promised "mini-expansion" to make a comeback during the second half of the Nixon Administration.

Meany cited an increase of 2 million unemployed during the past year, shrinking job opportunities, real earnings below the levels of five years ago, and lack of housing at prices most people can afford.

"The only real game plan for America is full employment," Meany stressed.

"When all Americans — black, white and brown, men and women, young and old — who want jobs have jobs, only then can America solve the problems of poverty, hunger and deprivation."

Meany's New Year's statement spelled out labor's program for a healthy economy. **(Excerpts, Page 5.)**

Its cornerstone is full employment which would both repair the tax revenue base that has been eroded by the present recession and generate the consumer purchasing power needed to keep the economy going.

It calls for faster growth in the available money supplies and substantially lower interest rates.

Cutting interest rates, Meany noted, would bring down prices and "end the great idiocy of the times—soaring bank profits at a time of general recession."

Full Union Rights:

Labor Presses Laws For Public Employes

The AFL-CIO has opened a nationwide campaign for state labor-relations laws giving state and local employes the same collective bargaining rights enjoyed by workers in private industry.

Legislative Director Andrew J. Biemiller has sent copies of a model state labor law as well as model anti-injunction legislation to officers of each of the 50 state federations.

Biemiller noted that the model laws were drafted by an Executive Council subcommittee headed by Transport Workers Pres. Matthew Guinan, in accordance with a resolution of the 1969 AFL-CIO convention.

The resolution directed the federation to seek legislation:

- "Repealing repressive laws inhibiting the rights of state and local government employes to organize and bargain collectively.
- **"Assuring employes of state and local government of procedures similar to those existing in private industry for the recognition of unions as exclusive bargaining agents and for the processing of unfair labor practice charges, and**
- "Guaranteeing true collective bargaining rights for state and local government employes, enabling them to negotiate effectively concerning wages, hours and all conditions of employment, including union security."

The proposed legislation has two principal objectives:

1.—To establish more harmonious and efficient relations between state and local governments and their employes.

2.—To encourage the organization and protect the union rights of millions of state and local public employes who have been excluded from the protection of unionism or

(Continued on Page 8)

President Vetoes Bills For Pay, Benefit Hikes

Two labor-supported bills that would have benefited large groups of federal employes were vetoed by Pres. Nixon as the 91st Congress adjourned.

Nixon rejected as "inflationary" a compromise bill that would have added an additional 4 percent pay step for long-service blue-collar workers employed by the government.

He waited until the last day of Congress—when the House and Senate were unlikely to muster a quorum and when there was not enough time to act on overriding—to veto the wage bill.

And he waited until Congress had already adjourned before vetoing a bill that would have extended to fire fighters at federal installations the same early retirement rights now held by other groups of workers in hazardous jobs.

The vetoed blue-collar pay bill would also have given unions a greater voice in the wage-setting procedure and would have established a wage board system for some 80,000 employes of military post exchanges and other self-financing government activities.

Both the pay and retirement bills had passed the House and Senate by one-sided margins. And the wage bill had been substantially trimmed back by a House-Senate conference committee in an effort to avoid a veto.

Unions representing federal workers sharply denounced the

Nixon's Record Scored As Another 'Goose Egg'

On George Meany's scorecard, the Nixon Administration's domestic record for 1970 added up to another big goose egg, its second in a row.

The AFL-CIO president gave that assessment in a year-end radio interview for the United Press International audio network.

In its second year, he said, the Administration's record has gone from bad to worse.

"We've had higher and higher levels of unemployment," Meany noted. "We've had higher and even higher price levels. And accompanying that, we've had the highest interest rates this country has seen in 100 years."

In response to questions, Meany told a three-man interviewing team that:

- National health insurance is "a must" because the middle-income family can't afford the $100-a-day hospital rooms and the high cost of the nation's "completely uncoordinated system of health and medical services." While the "very, very poor" receive government help and the "very, very rich" can pay the price, good

STALINIST TACTICS are being used by the Kremlin to make Jews the scapegoats, AFL-CIO Pres. George Meany told a meeting of the Emergency Conference on Soviet Jewry. The meeting, attended by more than 400 leaders of Jewish organizations, was held in Washington, Dec. 30 to protest the death sentences and harsh labor-camp terms meted out to 11 persons for allegedly conspiring to hijack an airplane. Nine of the 11 are Jews, including those who were sentenced to die. A Soviet court commuted the death sentences the following day.

Meany Condemns Soviet Union On 'Stalinist' Oppression of Jews

A massive worldwide protest—in which the American labor movement actively joined—was credited with saving the lives of two Jews sentenced to face a Soviet firing squad.

The death penalties and long labor-camp sentences invoked against Jews "accused" of having tried to flee to Israel had been denounced by AFL-CIO Pres. George Meany as a continuation of the Soviet government's notorious anti-Semitic policy.

"These victims of so-called Communist justice, some of whom were anti-Nazi fighters while the Soviet government was still in a pact with Hitler, are not guilty of any crime," AFL-CIO Pres. George Meany told a meeting of the National Emergency Committee on Soviet Jewry.

The conference was held in Washington Dec. 30, the day before the Soviet supreme court commuted the death sentences.

"Apparently," Meany said, "the Russian rulers equate the love of liberty with the crime of high treason.

"The Kremlin has resorted to Stalinist methods of making Jews the scapegoats and is seeking, through this unconscionable verdict to frighten and terrorize members of other minority nationalities in the Soviet Union who might harbor the idea of fleeing the USSR to breathe the air of freedom."

Meany noted that the Leningrad verdicts and a series of anti-Semitic trials now in preparation are a severe blow to Middle East peace hopes because "they are calculated to reassure the most warlike Arab elements of unlimited Soviet support even to the point of imposing the death penalty on any Jewish Soviet subject seeking to flee to Israel to build a new life of freedom."

Protests over the Soviet trials brought the arrest of one labor leader, Sec.-Treas. David J. Fitzmaurice of the Electrical, Radio & Machine Workers.

Fitzmaurice was arrested by Washington police for raising a flag of Israel in front of IUE headquarters—directly across the street from the Soviet embassy.

He was charged with demonstrating within 500 feet of a foreign embassy and released on bond after being held five hours before a trial date was set.

The court commuted the death sentences of Mark Dymshits, 43, and Eduard Kuznetsov, 30, to 15-year labor camp terms.

Kuznetsov, however, was sentenced to serve under "especially strict" conditions, meaning that he will be given a subsistence diet equal to about one-third of the calories required to maintain good health. He will be allowed one visit a year from relatives and no food parcels from outside the camp.

Dymshits, the Soviet high court said, will serve his sentence under a "strict regimen," one notch above "especially strict" conditions.

Former labor camp inmates in Moscow were quoted as saying that "especially strict" conditions are "like a slow death, but better than a fast death."

The court also reduced the sentences of three others of the Leningrad 11, all charged with conspiring to hijack a small airliner at Smolny Airport last June and fly it to Sweden from where they would make their way to Israel.

Under Soviet law, fleeing the country is an act of treason, and the 3 million Jews there have had little success in applying to the Soviet government for permission to emigrate to Israel.

Soviet law also states that planning a crime is the same as committing it.

Commutation and reduction of the sentences came from the Soviet court less than a day after Generalissimo Francisco Franco commuted the death sentences passed on six Basque nationalists for alleged terrorist acts.

Sentencing of the Basque nationalists had brought condemnation including that of Meany who scored the "Franco dictatorship's inhuman treatment of workers, peasants, intellectuals and religious leaders opposing the Falangist dictatorship."

Union's Dental Service Wins National Acclaim

Los Angeles—A prepaid group dental program operated by the Los Angeles Hotel-Restaurant Employer-Union Welfare Fund for 37,000 union members and dependents is winning national acclaim.

The U.S. Public Health Service has ordered 5,000 copies of a report and evaluation of the union program prepared by Dr. Jay W. Friedman of UCLA who called it, "one of the first attempts to provide truly comprehensive dental care for low-income workers and their families."

Copies of his report were ordered by the health service with an eye toward circulating them to universities, colleges and dental schools throughout the country.

Friedman said the dental program, which began in a remodeled supermarket and now treats nearly 400 persons daily at two fully equipped clinics, represents a pioneering effort in the development of group dental practice.

"The success of the venture is particularly noteworthy in view of the relatively low operating budget," said Friedman. "It illustrates what can be accomplished in a direct-service group practice supported by capitation payments rather than being spread out and diluted as in the more conventional open-panel, fee-for-service system."

The original allocation for dental care was one cent per hour of employment, or $26,000 a month when the union-management program started in 1954 for 21,000 members and dependents. Within 18 months, the allocation was increased by 50 percent because of demand for the service.

The monthly allocation today is $100,000 with the clinic budget running $124,000 per month. The difference is made up through nominal surcharges to patients, and even these have been reduced this year because of a surplus from such charges.

For example, in 1967 an employe paid $1 for a full mouth X-ray and a dependent paid $3. Now, the employe pays nothing and the dependent $2.

Dr. Donald G. McQueen, who directs the program, said costs are further reduced because 11 percent of the patients are on dental maintenance programs of regular checkups, cleaning and minor filling.

The clinic's professional staff of 25 dentists and four dental hygienists stresses a program of preventive dentistry. Most patients require only ordinary types of treatment such as fillings, extractions and dentures.

Shrinking Paychecks:

Buying Power Slips $1.41 Over the Year

By John R. Oravec

The purchasing power of American workers was further eroded in November as consumer prices rose three-tenths of 1 percent from October, the Labor Dept. reported.

Gross weekly earnings for a worker with three dependents averaged $121.07 in November, a decline of 66 cents over the month. The worker's real spendable earnings—take-home pay adjusted for price increases since the 1957-59 base period—were down 60 cents from October.

Over the year, real weekly earnings were $1.41 below November 1969 while the Consumer Price Index was 5.6 percent higher, the department's Bureau of Labor Statistics noted. Real earnings on a year-to-year basis have dropped for 17 of the last 18 months.

A two-tenths of 1 percent cutback in the average workweek also contributed to the sag in purchasing power, the BLS said.

Although the November rise in prices was less than the five-tenths of 1 percent increases in both October and September, the CPI went up four-tenths of 1 point to 137.8.

This means that it cost a worker $13.78 for goods and services in November that he could have purchased for $10 in the 1957-59 base period.

Mainly responsible for the November rise in the index were higher prices for consumer services, clothing, houses and cars. Food and gasoline prices declined.

Charges for consumer services were six-tenths of 1 percent higher than in October, led by house upkeep costs. Mortgage interest costs advanced because of higher house prices that more than offset a slight decline in mortgage interest rates, the BLS said.

Medical care costs continued to increase, up seven-tenths of 1 percent over the month, about the same rate of increase as in the May-through-September period.

Significant increases in the cost of transportation services were noted because of higher local transit rates and hikes in auto insurance premiums.

New car prices were up more than usual for the month, showing an increase of 1.6 percent. This was less than the rise in October.

The prices of apparel and clothing upkeep rose seven-tenths of 1 percent, pushed mainly by a 1 percent rise in women's and girls' clothes.

Before seasonal adjustments, food prices declined five-tenths of 1 percent from October led by a decline of 1.5 percent in the price of meats, poultry and fish. However, prices of dairy products and restaurant meals rose.

While most of the items in the transportation sector of the price index rose, gasoline prices declined six-tenths of 1 percent from October, the BLS noted.

About 46,000 workers who have cost-of-living escalator provisions in their wage contracts will receive pay increases because of the rise in the CPI.

Some 14,000 employes of the aerospace and farm machinery industries will receive 8 cents an hour more based on the 5.6 percent increase in consumer prices since November 1969.

Another 31,000 workers in various industries will get from 2 to 8 cents more an hour based on yearly, semiannual and quarterly increases in the national index, the BLS reported.

Tax Changes to Affect 1971 Take-Home Pay

A combination of decreased withholding rates on personal income and higher social security taxes went into effect Jan. 1, raising the take-home pay of some workers but lowering it for others.

Immediate benefits from the changes will be felt by workers who earn less than $7,800 a year or $150 a week. Generally, those who make more than that, will have more taken out of their weekly paychecks than last year for the same salary until the maximum social security tax is reached. Those earning less will end up with a larger take-home pay.

Effective the first of the year, withholding for social security and Medicare taxes was boosted from 4.8 percent to 5.2 percent of earnings. The ceiling on taxable earnings remained at $7,800 a year. Workers earning more than that will pay $31.20 more a year because of the boost, and employers will also pay $31.20 more in matching payments into the social security fund. The new ceiling on deductions for social security becomes $405.60 a year.

The lower income tax withholding results from the Tax Reform Act of 1969, which increased the standard deduction as of Jan. 1 to 13 percent of gross income with a maximum of $1,500. The old standard deduction was 10 percent up to a ceiling of $1,000.

Although many taxpayers itemize their returns, the standard deduction is used to determine all withholding rates.

The standard deduction will be raised in 1972 to 14 percent with a $2,000 ceiling and in 1973 to 15 percent with the ceiling remaining at $2,000.

Also effective this year, single persons will pay no more than 20 percent higher federal income taxes than a married couple with the same income. Bachelors and single girls in the past had to pay as much as 40 percent more in taxes than a married couple with the same income.

Personal exemptions will remain at $650 throughout 1971, the level that went into effect last July 1. In 1972 the exemptions will be raised to $700 and in 1973 to $750.

Activities Schedule For Studies Center

The AFL-CIO Labor Studies Center has five institutes scheduled for January and February. They are:

Staff Development Program, Jan. 10-29.

Collective Bargaining Seminar, Jan. 20-22.

Preparing for Work, Feb. 1-5 (for labor members of vocational education and manpower advisory councils).

Arbitration Institute (to be held at the University of Illinois), Feb. 8-12.

New Staff Program, Feb. 7-19.

Key to Economic Health:

Meany Asks Drive For Jobs for All

(Continued from Page 1)

Labor's program calls also for full-funding of federal programs, especially those that would provide jobs for workers and set the economy back on its feet.

Meany charged the Administration with fostering "economic stagnation by its restricted appropriations requests and veto policy."

He warned that America's cities, especially, "stand on the brink of fiscal disaster. They need immediate full funding of federal programs for housing, community facilities, education, health care, anti-pollution and urban transportation."

And to prevent the waste of human resources, job training and other needed programs must be accompanied by an acceptance of "the government's responsibility to be the employer of last resort."

In the year ahead, Meany declared, "workers will continue to seek their fair share at the bargaining table." They will seek to recoup buying power lost to inflation.

On the legislative front, the labor movement's first goal is national health insurance.

More than money is needed to improve the delivery of health care, Meany stressed. "Reform is vital."

In other legislative areas, Meany called on the new Congress to:

- Raise the federal minimum wage to at least $2-an-hour and extend coverage to 17 million workers not now protected.
- Pass a strengthened Family Assistantce Plan keyed to adequate jobs at decent wages for all able to work.
- Expand housing programs to build 2.5 million new low and middle-income housing units a year.
- Enact foreign trade legislation that will end government subsidies to foreign subsidiaries of U.S. corporations and preserve U.S. jobs from being swept away in a flood of imports.
- **Approve a constitutional amendment for direct election of the President, pass legislation to stop campaign spending abuses and establish a uniform federal voter registration system.**
- Safeguard workers' pension funds.
- Extend collective bargaining rights to all federal employes.
- Upgrade consumer protection.
- Consolidate administration of civil rights legislation "to end confusion and enhance enforcement."
- Reform the Federal Reserve System.

The "dividends" of this legislative program, Meany declared, would be "prosperity, human dignity and a better life for all Americans."

MEMBERS OF SHEET METAL WORKERS Local 108 in Los Angeles County lend a helping hand to the Boys Club of East Pasadena, Calif., by installing heating, ventilating and air conditioning systems at the club's new home. Local members donated 208 man-hours in one day, completing a job that could have taken three weeks. The union members came to the rescue when freeway construction closed the Boys Club's former home.

President Sets Target Of 4% Unemployment

Pres. Nixon acknowledged that both unemployment and prices are too high but expressed confidence that the modestly expansionary federal budget he will send to Congress later this month will help make 1971 "a good year" and 1972 "a very good year."

In a televised interview with network news correspondents, Nixon said his "goal" will be to bring unemployment down to 4 percent—higher than when he took office but in line with the Administration's definition of "full" employment.

The jobless rate in November was 5.8 percent.

The President declined, however, to predict when the "goal" would be reached, saying it would be "irresponsible" to do so.

He said he has considered the possibility of wage-price controls or guidelines but has decided "that none of them at this time would work."

The President said also that "this year" he will not ask Congress to enact a "value-added" tax—a form of national sales tax that would hit consumers hardest.

He had considered the possibility, Nixon said, as a substitute for other forms of taxation "and, looking to the future, we may very well move into that direction."

But this year, he said, it would not be "realistic" to propose it.

Nixon will propose to Congress what he terms a "full employment budget." That means the budget will be balanced if there is high employment because more money will be coming into the Treasury in taxes. Otherwise the end of the fiscal year would show a deficit.

The AFL-CIO has termed the Administration budget and monetary plans a "mini-expansion" that would be far short of the massive action needed to turn the economy around.

In his interview, the President portrayed himself—now that the election is over—as standing apart from partisan politics.

"This is a noncampaign year," the President said, and for the balance of the year "I'm going to wear my hat as President of the United States."

But one day later, departing for a "working vacation" at his California home, Nixon left behind a statement sharply critical of the Democratic-controlled 91st Congress.

It will be remembered, he said, "not for what it did, but for what it failed to do."

In his television interview the President said he has "great hopes" for the next two years of his term. "I think I know better how to do the job," he said. "I think I know better how to deal with Congress."

Nixon said his chief goals in the new Congress will be welfare reform and revenue-sharing with the states. Administration officials have indicated that a large part of the "revenue sharing" will involve cutting back federal programs to states and cities and turning the money over to the local and state governments to spend without federal supervision.

Samuel Frost Dies, Officer of TWUA

New York—Last rites were held Jan. 3 for Samuel Frost, a vice president of the Textile Workers Union of America and, since 1968, director of the union's region serving Delaware, Michigan, New Jersey, Ohio and Pennsylvania.

Frost was 55 when he died in a Brooklyn hospital after a long illness. He had served on the TWUA staff since 1947 as an organizer, manager of the union's joint board in Pottstown, Pa., and assistant regional director. He became vice president and member of the TWUA executive council in 1964.

Frost also served as a vice president of the New Jersey State AFL-CIO.

Gulf Oil Pact Called Pattern For Industry

(Continued from Page 1)

Grospiron called the Gulf settlement a "fair and realistic agreement." If it is ratified by members of 15 OCAW local unions at Gulf, they will receive general wage boosts of 16 percent—from 70 to 71 cents an hour this year and next—plus pension improvements and other gains.

The agreement, reached a few hours before the midnight Dec. 31 deadline, raises wages by 8.5 percent this year and an additional 7.5 percent in 1972. Gulf also agreed to increase its contribution to the cost of hospital and medical insurance by $5 a month in each of the two years. That will bring its payments to $25 a month for employes and their dependents, the union said.

Hospitalization insurance for unmarried employes was improved by raising Gulf's contribution by $2.50 a month for each year of the contract.

The new pact has a clause requiring Gulf to give advance notice of at least six months in plant shutdowns, and giving the union the right to negotiate protections and improvements for laid-off employes. Also provided is one additional paid holiday.

The OCAW said pension improvements are a major issue in negotiations continuing at other companies along with wages, health and safety, and job security.

Piano Workers Certified for Trade Act Aid

The Labor Dept. has certified about 400 members of the Furniture Workers as eligible for trade adjustment assistance because they lost their jobs or were laid off as a result of the rise in piano imports.

The Everett Piano Co. at South Haven, Mich., cut the jobs of 60 workers in July 1969 and has since laid off for temporary periods up to 350 workers.

A petition was filed last October with the Labor Dept. by the UFWA requesting the certification of eligibility for benefits under the Trade Expansion Act of 1962.

Weekly payments up to $85 a week, testing, counseling, training and job placement are among the benefits provided. The payments are limited to 52 weeks, but may be extended up to 26 weeks for workers to complete training courses.

CWA Calls Convention For Structure Review

The Communications Workers will hold a special convention in Denver Mar. 22 to act on proposals for basic changes in the structure of the union.

The one-day session has the purpose of "getting ourselves attuned to the '70s," CWA Pres. Joseph A. Beirne said in noting that the union had not reviewed its structure for 20 years.

For the past two years, the CWA has been examining its thrust, structure and operations with an eye toward bringing about a renewal of the union, Beirne noted.

A structure review committee was created at the CWA's 32nd annual convention in Cincinnati last June to consider suggestions and make recommendations. After the committee issued a preliminary report last September, delegates to regional conferences studied the proposals and presented additional suggestions.

The committee's final report was issued to the CWA's 850 locals in December.

Recommendations covering 10 major areas of union activity call for:

- Increasing the number of geographic districts from nine to 13.
- Establishing local minimum standards to insure adequate training for all officers and stewards.
- Continuation of annual conventions.
- Periodic local, state and district meetings.
- A new dues concept based on a percentage of wages.
- Establishing an organizing department for both internal and external activities.
- Requiring mandatory retirement of all officers at age 65.
- Extending the terms of officers from two to three years.
- Development of an internal jurisdictional disputes system.
- Establishment of retired members' clubs.

The CWA has scheduled its regular annual convention for June 14-18 in Kansas City.

Nixon's Record Scored As Another 'Goose Egg'

(Continued from Page 1)

medical care is beyond the reach of most Americans.

- The minimum wage must be raised because "you can't live on $1.60 an hour" and it should be tied to the cost of living. To lower the minimum wage for teenagers, as some Administration officials have suggested, would merely worsen the problem and put young people in a position of competing at lower wages with their parents in a scarce labor market.
- In response to criticism of "inflationary" wage increases won by unions in the building trades, Meany noted that local union negotiators must "face the fellows who are married to the ladies who have to go shopping . . . and their attitude is that the prices have gone up so much since the last contract was signed that they've got to make up the difference."

He noted that the conservative - supported Landrum-Griffin Act took away some of the authority of international unions over local agreements on the theory that members needed protection from "labor bosses."

If the Administration wants to change the pattern of bargaining, he pointed out, it would have to change the Landrum-Griffin Act.

- Labor's endorsement, in 1972 as in the past, will go to "friends of labor . . . not to the Democratic Party, not to the Republican Party."

While "it is a fact of life that we support more Democrats than we do Republicans," that is based on the record of the candidates and not their political label.

The trade union movement will support candidates who believe in the things labor believes in as against those who do not, Meany said. "And this will apply . . . from the President all the way down."

Hawaii TV Series Focuses on Labor

Honolulu, Hawaii—A weekly television series designed especially for working people is being prepared by the Hawaii Educational Television Network in cooperation with the Labor Unions of Hawaii and the University of Hawaii's Center for Labor Management.

The series will provide up-to-the-minute news on labor affairs as well as features ranging from consumer information to union-sponsored sporting events.

The program, Rice and Roses, will premiere in mid-January.

No Strings?

THE NIXON ADMINISTRATION is putting together a major campaign for a revenue-sharing program for the 92nd Congress.

The President, in effect, launched the campaign in his hour-long interview with four television commentators when he said he would propose a plan "going far beyond anything that we have suggested to date."

The following day, stories moving out of Washington told of Administration plans to have the program sponsored by a majority of the members of the new House—218—and indicated that the President's State of the Union message slated for Jan. 22 would deal in great detail with the revenue-sharing program.

Lest it be forgotten, the Administration had a revenue-sharing proposal before the 91st Congress—a proposal to set aside $500 million in federal funds in fiscal year 1971 and rising to $5 billion by 1976 to share with the states and to be passed through to the cities with no strings on how the funds could be spent. The $5 billion in 1976 would be the equivalent of 1 percent of anticipated federal taxable income.

A close look of the proposal indicates that in pure dollar terms the scheme would have had little impact on the state and local financial situation and only a meager share would have flowed to the cities.

In 1976 when the program would have been fully operative the $5 billion would have represented less than 3 percent of the projected levels of state and local expenditures in that year. The share to local governments would come to 30 percent to be split among every county, city and township. In contrast, under present grant-in-aid programs, two-thirds of the funds go to urban areas.

AN ANALYSIS of the general problem of revenue sharing appearing in a recent issue of the AFL-CIO American Federationist commented that "at first blush, such a method of 'no-strings' revenue sharing may sound like a bold new approach. But when the gift-wrapping is removed, holes and traps are revealed which could hamper our ability to provide the public services and facilities so badly needed. Such sharing is not a magical new concept. It will not create money where none now exists."

The first order of business to help the cities and states, the article by AFL-CIO Economist Arnold Cantor continued, "should be to strengthen the administration and appropriation for present grant-in-aid programs. And within this context, immediate priority should be given to taking the welfare load off the backs of the large cities and poverty-stricken rural areas."

As to the long-run objectives, the article concluded:

"If America's goal is to mount a direct frontal attack on the economic and social inequalities that are dividing the nation, emphasis must continue to be on federal grants-in-aid that are used to finance specific, high-priority, nationwide programs, channeled where the needs are greatest and administered under enforceable federal standards of performance.

"Proposals such as no-strings revenue sharing would impede such progress."

A Word Edgewise:

Use of Paraprofessionals Seen Solution to Doctors' Shortage

By John P. Roche

UP IN I CORPS in Viet Nam, the Marines developed a remarkable community action program. Various units literally adopted Vietnamese villages, helped them with sanitation, drainage, and all the other problems of rural life in an underdeveloped nation, including—and this is the point—health. Corpsmen ran dispensaries, gave shots, fixed broken legs, supervised childbirths, and in general practiced medicine.

They were (and are) good and it is fair to say that they were quite competent to handle about 90 percent of the medical business in their communities. Moreover, they had the brains to recognize cases that needed expert care, who would then be sent to physicians, surgeons, and other accredited members of the medical profession.

As I have wandered around some primitive parts of the world, and some primitive sections (both urban and rural) of the United States, the thought has often occurred—why can't paraprofessionals of this sort substitute for doctors in public health programs?

We say there is an acute doctor shortage in the United States, but I suspect there are more M.D.s in greater Boston than there are in the whole of Indonesia. Our hospitals are full of foreign interns and residents who theoretically are going back to Afghanistan, Lebanon, or wherever once they have finished their lengthy training. However, I have a sneaking suspicion that many of them spend what little time they have off from their professional duties trying to obtain American citizenship. And if they do return, one may suspect they will not establish their offices out in the boonies.

This is not said in criticism either of current American medical education or of the individuals concerned: "How are you going to keep them happy out in Kabul after they've seen Cambridge?" (To paraphrase an old song.) We need all the qualified doctors we can get, both here and abroad. But at the same time, what is being done to build up the ranks of the paraprofessionals?

For example, a friend of mine was in an automobile accident one night down on the South Shore (Massachusetts). It was pretty messy, but the ambulance arrived and out jumped two attendants, who moved with precision and dispatch to save the life of one of the victims.

My friend, who fortunately was injured only slightly, assumed they were interns or residents. They turned out to be corpsmen from Weymouth Naval Air Station, who were working nights (on their own time) at the South Shore Hospital. Both had served in Viet Nam in Medivac operations, which, as one of them noted sardonically, was ideal training for coping with automobile accidents.

Since then I have snooped around and learned that local hospitals whenever possible supplement their resources from nearby military medical installations. It is very intelligent. But I have also learned that once a corpsman or any Army medic gets his discharge, he has an extremely difficult time getting any hospital employment except as an orderly or in a menial role.

While there are indications that the medical bureaucracy (i.e., the American Medical Association) is beginning to think about the problem, the fact is that a group of well-trained medical paraprofessionals are in limbo.

AGAIN WITHOUT SNIPING at the medical schools—which have enough problems already—isn't it time for those concerned with community medicine, particularly in the slums, to maximize these skilled technicians?

In other words, we could institute in our society what all of us who have ever served in the armed forces knew: a split-level approach to medical treatment. Minor disorders, shots, tests, setting simple fractures, etc. to be handled by paraprofessionals; serious problems to be referred to doctors for diagnosis and treatment. And if this approach would be useful in the United States, it would be invaluable in the developing nations.

Is it too much to suggest to our elite medical schools that training such paraprofessionals should be as high on their list of priorities as turning out psychiatrists to alleviate the angst of the upper classes?

Meany Views New Year:

Nixon's Economic Policies Pose New Concern for Workers in '71

The following is excerpted from the New Year's statement by AFL-CIO Pres. George Meany.

AMERICAN WORKERS view the new year with apprehension and grave concern. And they have good reason.

Approximately 2 million more Americans are out of work today than a year ago. Those who still have jobs have been hit hard by an economic policy that increases unemployment, continues inflation, cuts the workweek and reduces production.

Workers are exhausting their savings in an effort to stay even. They find job opportunities shrinking. Real earnings have fallen below levels of five years ago. New housing, so desperately needed, either is not being built or is priced out of reach for most people by astronomical interest rates. Wage increases have not kept pace with rising prices.

Administration policies give workers little comfort.

While people are losing their jobs, the Administration is talking about its "game plan."

Its "game plan" up to now has failed. Economically and humanly, it flopped.

Now, for the second half, the Administration team is plotting a new "game plan."

The word the press hears from the locker room this time is "mini-expansion"—the hope that the economy will "look better" by the spring of 1972. They are simply using new formations to disguise the same plays that didn't work in the first half.

The only real "game plan" for America is full employment. When all Americans—black, white and brown, men and women, young and old—who want jobs have jobs, only then can America solve the problems of poverty, hunger and deprivation.

When everyone is working, then the serious undermining of the tax revenue base, caused by the present recession will be over. And consumers will once again have the purchasing power to keep the economy going.

As America seeks solutions to its economic problems, the trade union movement has made its position abundantly clear.

Since 1966 we have repeatedly expressed our willingness to cooperate in a program to stabilize wages, prices, profits, rents, dividends, interest, capital gains, executive compensation and professional fees.

We accept the policy of equal sacrifice, applied across the board.

But lacking uniform stabilization measures, American workers cannot—and will not—make unilateral sacrifices. They have lost too much ground to inflation. Past wage increases have been wiped out; they haven't kept pace with price increases.

Workers will continue to seek their fair share at the bargaining table. They have to.

While the state of the economy is uppermost in the minds of workers, they look to the new Congress to develop new programs to improve the quality of life for all Americans.

Topping the list is national health insurance. The system of delivery of health care to American citizens is breaking down. At the same time the cost of medical care is the fastest growing item in family budgets.

DOCTORS AND HOSPITALS must be given a stake in providing more efficient health care. Since treating illness is more expensive the emphasis should be on keeping people well.

We also call on Congress to take the following actions:

- As a major attack on poverty, increase the federal minimum wage to at least $2 an hour and extend coverage to 17 million workers.
- Assure all Americans the opportunity to live at standards above the poverty level by passing a strengthened Family Assistance Plan which would provide adequate jobs at decent wages for all those able to work.
- Improve existing housing legislation to construct 2.5 million new low and middle income housing units a year.
- Enact foreign trade legislation that will end government subsidies to foreign subsidiaries of U.S. corporations and preserve U.S. jobs from being swept away in a flood of imports.
- Modernize the electoral system by (1) approving a constitutional amendment to eliminate the archaic electoral college and replace it with direct popular election of the President and Vice President; (2) revising the Corrupt Practices Act to stop campaign spending abuses, and (3) enacting a uniform federal voter registration system.
- Provide federal protection for workers' pension funds.
- Extend the right to bargain collectively to all federal government employes.
- Return to the commitment to consumer protection abandoned in the past session of Congress and by the Administration.
- Consolidate administration of civil rights legislation to end confusion and enhance enforcement.
- Reform the Federal Reserve System. This is of vital importance with a chairman who advocates 19th Century economic policies.

Workers believe in investing in America. The legislative program we seek is an extension of that belief—that this country must have faith in itself and invest in its own future.

The dividends of this investment will be prosperity, human dignity and a better life for all Americans.

Labor-Backed Programs:

New Law Takes Major Steps To Spur Low-Income Housing

THE 1970 HOUSING ACT broke new ground with labor-backed programs, despite Administration attempts to "merely extend some of the existing programs," an AFL-CIO spokesman noted in a network radio interview.

AFL-CIO Legislative Rep. Ray Denison listed authority for unions and other non-profit organizations to help build housing for farm and migratory workers, and federal assistance in the construction of dormitory-type quarters and new communities as major steps toward meeting national housing needs. He pointed out that two years ago, Congress set a 10-year goal of 26 million new housing units.

Denison said that even though high mortgage rates and land prices have slowed the pace of home building, "considerable opposition arose (in the House) . . . primarily from the Republican side of the aisle," to money for urban renewal and other federally-funded programs. He said he expects that future funding requests—particularly those for the New Communities Program—will be "heavily contested" in the new Congress.

"The real determination of whether the Administration will support that or not will be decided by the state of the economy six months to a year from now," he asserted. Denison appeared on Labor News Conference, broadcast Tuesdays on the Mutual radio network.

Denison renewed the call for the president to use the authority Congress gave him to "ration and redirect credit . . . toward the building of homes."

He said that the Secretary of Housing & Urban Development, George Romney, should also "order and direct" that the FHA-VA interest rate ceiling be cut from the present 8 percent to 7 percent now —and eventually to 6 percent. That would have a "psychological and direct impact on money in the housing field," he declared, and the banks would follow that lead and "drop their lending rates" as well.

Noting that "every 1 percent an interest rate drops cuts an average of $5,000 from the price of a dwelling over the lifetime of the mortgage," he predicted that such a move would "spur considerable home building."

Reporters questioning Denison on the AFL-CIO produced public affairs interview were Tom Joyce of Newsweek magazine and Frank Swoboda of Business Week magazine.

By Press Associates, Inc.

SLOWLY BUT SURELY, the National Labor Relations Board is entering a new and crucial period of change as Nixon appointees take over.

Although the board's new chairman, Nixon appointee Edward B. Miller, has been in office only a matter of months, there is a perceptible but clear change in viewpoint from that of his predecessor Frank McCulloch. On a number of occasions, Miller has dissented from his colleagues who are holdovers from the Kennedy and Johnson Democratic days.

His dissents have not been overly startling ones. But they show a man who is management-oriented and is sometimes impatient with the rulings of his fellow members who, he obviously feels, are much too favorable to the labor position. This comes through in a number of recent cases.

In National Tape Corp., of Herrin, Ill., vs. the Textile Workers Union of America, Miller disagreed with his colleagues who found the company guilty of firing workers illegally because of union activities. He held, rather, that the employer had shown legitimate cause for the discharges. In addition, he declared that he found "without merit" the majority's finding that the workers had been fired for such activity.

In United Transportation Union Local 1023 vs. the Capitol Bus Co., in Washington, D.C., he again disagreed with his colleagues who found that certain picket line language was of minor importance and not the responsibility of the union. "This rationale, in my opinion," Miller declared, "leads to condonation of picket line misconduct in many situations. . . ."

Perhaps of greater significance was Miller's dissent in a case involving a question of an employer's "freedom of speech"—that is, how far can an employer go in attacking unions and making threats during an organization drive? Slowly but surely, the NLRB has been narrowing the limits to which an employer can go, resulting in management charges that its "freedom of speech" has been violated. Miller has clearly shown sympathy for this viewpoint.

In Tommy's Spanish Foods of Fullerton, Calif., vs. Meat Cutters Local Union 551, Miller disagreed with his colleagues who found that the employer had made a number of statements about his attitude toward the union which were violative of the act. Miller, on the other hand, found these same statements "simply lawful rhetoric, which the act does not forbid."

AGAINST this background of understanding of management problems with recalcitrant workers, is the melancholy story of the NLRB's helplessness in the face of employers who stubbornly and all too successfully use free speech and every other device to defeat organization of their workers. J. P. Stevens & Co. is not alone in these techniques.

In South Texas Chapter of Associated General Contractors of Corpus Christi vs. Laborers Local 1179, a trial examiner laid down certain "remedies" for unfair labor practices by the employer, but confessed in the same breath that the remedies were "of little value" in undoing the effects of the unfair labor practice.

His confession of futility is a classic example of NLRB helplessness to really crack down on a stubborn employer who is determined to kill unionism.

"In short," the trial examiner said, "the company will have 'won' practically even if it 'loses' legally, for the company will have enjoyed the old contract for the year in dispute whatever order may be entered or enforced."

We have, then, an NLRB which in the "real" world has been unable to devise adequate remedies against anti-union employers and, at the same time, we have a new chairman of the NLRB who already is showing his management orientation.

Instead of weakening the power of the NLRB, as management has been demanding, the evidence suggests that its hands should be strengthened in cases such as that of Stevens and the General Contractors.

CONSTRUCTION of low-income housing will be stepped-up by the 1970 Housing Act despite attempts by the Administration to merely rely on old programs, AFL-CIO Legislative Rep. Ray Denison, center, said on Labor News Conference. He was questioned by Frank Swoboda, left, of Business Week magazine and Tom Joyce of Newsweek magazine. The program is broadcast Tuesdays on Mutual radio.

Trial Examiner Hits Stevens on New Violations

A trial examiner for the National Labor Relations Board has found that J. P. Stevens & Co., Inc., big government textile contractor, still is discriminating against union members despite 11 previous NLRB rulings ordering the company to stop such violations of its employes' rights.

Examiner Marion C. Ladwig, after hearing the testimony of employes and management at a Stevens plant in Statesboro, Ga., found that plant supervisors illegally refused to grant a wage increase and promotion to one mechanic and denied overtime to another because of their union activities.

Both had been called as witnesses for the Textile Workers Union of America at a previous NLRB hearing into charges of discrimination against known union supporters. The testimony never was given because the company agreed to a stipulated settlement. Nevertheless the plant supervisors retaliated against the two workers with unfair and unequal treatment, the examiner ruled.

He recommended that Stevens be ordered to pay both employes the amount of earnings they lost and to promote one of the men to the same higher rating granted two other mechanics who stayed out of the union.

The examiner also urged an NLRB order against company punishment of any employe for joining TWUA and against denial of wage increases to any employe testifying at an NLRB trial.

NLRB records show that Stevens, in 10 years of legal battling, has managed to avoid bargaining with any union in spite of numerous court orders. Stevens is the nation's second largest textile firm.

High Jobless List Expands To 37 Areas

Thirty-seven of the nation's 150 major manpower centers were on the Labor Dept.'s list of "substantial" unemployment in December. The list was increased by one from November with the addition of New Jersey area of Paterson-Clifton-Passaic

The list of smaller areas suffering from substantial unemployment—a jobless rate of 6 percent or more—rose by six in December to 617. Eight new areas were added and two removed from the list.

"Persistent" unemployment prevails at 455 of the smaller job centers. This means that the jobless rate has been 6 percent or more for a year and at least 50 percent above the national average for several years.

Four of the major manpower centers are also classified in the "persistent" category, the Labor Dept. noted.

The eight smaller areas added to the substantial unemployment list are Lewiston-Auburn, Me.; Hagerstown, Md.; Fitchburg-Leominster, Mass.; Watertown, N.Y.; Salem, Ore.; St. Helens, Ore.; Bennettsville, S.C., and Port Angeles, Wash.

Greenville and Richton, Miss., were the smaller areas removed from the list of substantial unemployment.

The pattern of rising joblessness over the year was reflected in the increase in the number of major manpower centers on the substantial unemployment list—from five in December 1969 to 37 last month.

CHILD LABOR VIOLATIONS are a symptom of the current economic downturn with employers cutting corners to boost profits, AFL-CIO Economist Rudolph Oswald, center, said on Labor News Conference. He was questioned by Murray Seeger, left, of the Los Angeles Times, and Harry Conn of Press Associates, Inc. The public affairs program, produced by the AFL-CIO, is aired Tuesdays on the Mutual network.

Child Labor Violations Jump 15 Percent in Year

Child labor, thought by many to have ended in the United States decades ago, is actually on the rise, an AFL-CIO economist noted in a network radio interview.

Citing a recent Labor Dept. report on Fair Labor Standards Act violations, which showed a 15 percent jump in the last year, Rudolph Oswald of the AFL-CIO Dept. of Research said the 13,000 violations uncovered are probably only a small part of the problem.

There may be as many as "75,000 children . . . some of them as young as 7, or 8 or 9 . . . working during school hours or in hazardous occupations," he said. But with only 1,000 wage and hour inspectors for the entire country, the Labor Dept. is able to investigate "only about 3 percent of the firms" covered by the law.

Oswald appeared on a AFL-CIO produced public affairs network radio interview, Labor News Conference, broadcast Tuesdays on Mutual radio.

Calling for a larger force of wage and hour inspectors and "more rigid enforcement" of the law's protections against child labor, he said he doubts that "ignorance leads an employer to hire" underage workers. "It is difficult to believe that an employer would not know when schools are in session or be ignorant of laws that have existed for more than 30 years," he declared.

Oswald said that employers who hire underage workers in violation of the law are not doing those youngsters or their parents any favor, regardless of the family's financial need.

"This is the one time in their lives that they are able to get the basic education they need to hold a job," he stressed, "and if they are spending their time at work rather than in school, they are handicapped for the rest of their lives" in finding and holding jobs.

He pointed out that although many child labor violations occur on farms, they are also found in many other industries, particularly retail trade and service establishments. He said the rise of violations is "a symptom of our current economic downturn," with employers cutting corners to make better profits, and "employing children because they can get them at rates lower than they can employ adults."

Oswald also said that a lowering of the federal minimum wage law for teenagers would not solve their employment problems, suggesting that "it would just switch unemployment between teenagers and adults."

Reporters questioning Oswald were Harry Conn of Press Associates, Inc., and Murray Seeger of the Los Angeles Times.

As Time Runs Out:

91st Congress Clears Some Major Bills

(Continued from Page 1)

Pres. Nixon, who issued a surprise blast at the record of Congress before leaving for his California home, set off a constitutional controversy with what he intended as a "pocket veto" of a popular bill during a three-day Christmas recess of Congress.

When Congress is in session, the President must return a vetoed bill to Congress which then has an opportunity to pass it over his veto by a two-thirds vote. If he doesn't sign or veto a bill, it becomes law without his signature.

However, when Congress is not in session the President can kill a bill by not signing it. This is a pocket veto.

A group of senators and congressmen have challenged Nixon's announcement that he had pocket-vetoed a bill to finance training of family doctors to meet a critical nationwide shortage. They stressed that Congress was merely in a short-term recess and that the President's failure to return the legislation meant that the bill had become law. A showdown leading to a court test could come about if Congress voted funds for the program and the President refused to spend the money.

Conservatives on the House and Senate Agriculture committees used the adjournment deadline to push through a restrictive food stamp bill despite strong evidence that a majority of Congress wanted a more liberal program.

A food stamp bill clearly aimed at eliminating hunger in America had passed the Senate in 1969. The House Agriculture Committee kept food stamp legislation bottled up until mid-December. And when it reached the floor, a non-record vote taken with 200 House members absent set up a parliamentary situation that blocked consideration of a bipartisan substitute endorsed by liberals and moderates.

The conservative-dominated House-Senate conference committee accepted the most restrictive sections of the House bill and congressional liberals found themselves stymied. If no action were taken, the entire program would have expired on Dec. 31.

Rep. Thomas S. Foley (D-Wash.) bitterly protested that the mandatory work requirement would mean "visiting the sins of the fathers or the mothers or the aunts or the uncles on innocent children."

The entire household, including children, would be denied food stamps—as contrasted with the Senate bill which would have refused stamps only for an individual refusing suitable employment.

Despite Pres. Nixon's veto of a bill aimed at boosting wages of federal blue-collar workers, he was expected to sign the pay bill for 1.3 million salaried employes—and indirectly for the military services.

It will provide virtually automatic salary adjustments for federal employes to match private industry rates. Only if the President sought to deny a scheduled raise would Congress be involved. In such a case, the President would submit an alternate plan.

But if either the House or Senate rejected it, the original comparability figure would stand.

Starting in 1972, unions representing federal employes would be brought directly into the pay-setting procedure through a new Federal Employes Pay Council.

President Vetoes Bills For Pay, Benefit Hikes

(Continued from Page 1)

vetoes and pledged to renew the battle in the new 92nd Congress.

Both the American Federation of Government Employes and the AFL-CIO Metal Trades Dept. charged that the "inflation" excuse was a subterfuge to block expansion of the collective bargaining principle in the federal government.

"The President has made clear his hostility to the extension of meaningful collective bargaining in the federal service," Metal Trades Pres. Maywood Boggs declared.

"The most significant provisions of the bill," Boggs said, "were those which strengthened the role of free collective bargaining in the establishment of wage rates. This is the direction that must be taken if federal employes are to be assured of fair wages and job conditions as a matter of right, rather than as a matter of politics."

Pres. John F. Griner of the Government Employes charged that Nixon's message "cynically used a phony cry of inflation" to keep nearly 800,000 blue-collar workers from bringing their paychecks into line with private industry.

The "true reason" for the veto, Griner suggested, was to deny wage grade employes an effective role in determining their pay scales "by keeping their union representatives outnumbered and outvoted" in the present "management-stacked system of blue-collar wage surveys and pay computation."

Griner made a "grim promise" that an even stronger bill will be pushed to enactment early in the new Congress.

The veto of the fire fighters retirement bill was protested in a telegram to Pres. Nixon by Fire Fighters Pres. Howard McClennan.

He told the President the veto appeared "incomprehensible" since legislation providing even superior retirement benefits for fire fighters in the District of Columbia had been signed by the President just a few months earlier.

ONE MILLION DOLLARS in backpay and interest is being distributed to 2,150 women workers by the Wheaton Glass Co. of Millville, N.J., on order of a U.S. District Court which found that the company had paid them less than men for performing the same work. The women, represented by Glass Bottle Blowers Local 219 which helped work out the settlement with the company, are receiving back pay plus 6 percent interest retroactive to Mar. 1, 1965. Four of the women, with checks ranging from $3,000 to $3,500, are, from left, Florence McCormick, Roberta Kishpaugh, Esther Henderson and Olive Shaaf. Standing behind them are Glass Blowers Executive Officer Pat Boochicchio, Local Pres. Asher Schwegel and Area Director William MacLuskie.

Nixon Signs Landmark Legislation:

Strict Enforcement Pledged On Federal Job Safety Law

Enforcement of the new occupational health and safety law has been assigned "a top priority," Labor Sec. James D. Hodgson announced.

His remarks at the signing ceremony for the bill responded to the earlier warning of AFL-CIO Pres. George Meany and other union leaders that passage of the legislation will not automatically reduce the toll of on-the-job injuries, deaths and occupational ailments.

"There must be close scrutiny, constant policing and prompt and adequate enforcement" to accomplish the goals of the new law, Meany had stressed.

Hodgson pledged to government, union and business leaders gathered to witness Pres. Nixon's signature on the legislation that the Labor Dept. will administer the program "with all the vigor and momentum we can generate. From this day forward, the health and safety of the American worker becomes a top priority activity for this department."

The law does not go into effect until Apr. 28, and Hodgson told newsmen that the Labor Dept. is asking Congress for an $11 million supplemental appropriation to finance the program through the current fiscal year, which ends June 30th.

At full strength, Labor Dept. officials indicated, the enforcement program will be comparable in size to the department's wage-hour division which has some 2,000 employes.

"One of our biggest problems," Hodgson said, "is to find and train a staff of inspectors. There are not an adequate number of trained people in this field. This is one of the lessons we learned from the Mine Safety Act."

For the key new post of Assistant Secretary of Labor for Occupational Health & Safety, Hodgson said, he is seeking an "accomplished executive" who knows "the world of work" and can get along well with the Dept. of Health, Education & Welfare, which has an important research role, and with state governments, labor and industry.

The initial concentration on enforcement will be in industries with the poorest safety and health records—the "worst first," Hodgson said.

With Pres. Nixon listening, Hodgson painted a picture of the new law as the brainchild of the Nixon Administration—completely ignoring the labor-supported efforts of the Johnson Administration to pass a strong safety-health bill.

"Pres. Nixon triggered it all," Hodgson declared.

Actually, the final bill was substantially closer to the labor-supported legislation sponsored by two New Jersey Democrats—Sen. Harrison A. Williams, Jr., and Rep. Dominick V. Daniels—than to either the original Nixon Administration proposal or to the employer-backed House version authored by Rep. William A. Steiger (R-Wis.). But the final compromise worked out by a House-Senate conference committee was accepted by the Administration and the President said at the signing ceremony that its enactment was "the culmination of the American system at its best."

Major provisions of the new law, the Occupational Health & Safety Act of 1970, are as follows:

Purpose—The act provides for the setting and enforcement of nationwide occupational safety and health standards.

Coverage—The act applies to any business affecting interstate commerce. It is estimated that it will cover about 57 million wage earners in 4.1 million establishments.

Standard-setting—The act establishes a procedure whereby the Secretary of Labor sets safety and health standards with the assistance of advisory committees where appropriate. Any interested person is afforded an opportunity to present his views in this proceeding.

Employer Duty — Employers must comply with specific standards set by the Secretary of Labor. In addition, the act contains a "general duty" provision requiring employers to furnish a place of employment free from recognized hazards causing or likely to cause death or serious physical harm to workers.

Inspections—A labor or a management representative or both may accompany a federal official on an inspection of a factory. When an employe representative reports a violation of a standard and the Secretary of Labor finds such violation likely, a special investigation can be ordered.

Enforcement—The Secretary of Labor will conduct investigations to determine employer compliance with safety and health standards. Where a violation of the standards is found, the Secretary will issue a citation to the employer specifying the violation and giving a reasonable period to correct the violation. If the employer desires to contest the findings, he may appeal to the Occupational Safety Health Review Commission which will cause an administrative proceeding to be held to determine whether the employer has violated the standards. The final judgment of the commission is appealable to a federal Court of Appeals.

Penalties—The bill provides civil penalties for violation of a standard. A criminal penalty—a fine up to $10,000 and up to six months imprisonment or both—may be imposed where there is a willful violation that results in death.

Other Provisions—The act provides for rapid court procedures to remedy conditions or practices that pose an imminent danger to the safety and health of employes.

In addition, the bill authorizes each state, after submission and approval of a state plan, to assume responsibility for the development and enforcement of standards. It requires the heads of all federal agencies to establish and maintain safety and health programs consistent with standards issued under the act.

It also provides for research programs, establishment of a National Institute on Occupational Safety & Health and a National Commission on State Workmen's Compensation Laws, and economic assistance to small businesses to better enable them to comply with the act.

JOB SAFETY BILL is signed into law by Pres. Nixon at a ceremony in the Dept. of Labor auditorium. AFL-CIO Pres. George Meany, Labor Sec. James D. Hodgson and congressional, union and government officials were among those witnessing the signing.

Capt. Crooks, Masters-Mates Official, Dies

Salem, Ore. — Capt. Charles Crooks, who had held all three major offices in the Masters, Mates & Pilots successively over a nine-year period, died here after an illness of about a year. He was the union's secretary-treasurer when he died at age 50.

Crooks had "served his fellow workers with the diligence that becomes a true trade unionist," AFL-CIO Pres. George Meany and Sec.-Treas. Lane Kirkland observed in a message of sympathy to the union.

The MM&P, of which Capt. Thomas F. O'Callaghan is president, said Crooks was the only member in the organization's 90-year history to be elected to all top union posts. He was president from 1961 to 1965, vice president from 1965 to 1968, and secretary-treasurer from 1968 to his death Dec. 29.

Born in Arizona, Crooks moved to California and then to Oregon. He was a seaman in the merchant marine during World War II, won a third mate's license in 1942 from the Maritime Commission Training School at Alameda, Calif., then a master's license.

New Holiday Law Adds Four 3-Day Weekends

The Monday holiday law that went into effect this year will assure many workers of at least four more three-day weekends each year.

Congress in 1968 approved shifting the observance of three holidays—Washington's Birthday, Memorial Day and Veterans Day—to Monday and added Columbus Day as a legal public holiday to be observed on Monday. Labor Day will continue as a Monday holiday.

The other holidays, New Year's Day, Independence Day, Thanksgiving and Christmas, will continue to be observed on their regular dates. But this year, Independence Day and Christmas fall on weekends, giving workers two more extended weekends.

These are the new Monday holidays:

- **Washington's Birthday, the third Monday in February.**
- **Memorial Day, last Monday in May.**
- **Columbus Day, second Monday in October.**
- **Veterans Day, fourth Monday in October.**

Forty-five states have approved the shifts. State legislatures still to act on the law are Louisiana, Oklahoma, South Dakota, West Virginia and Wisconsin.

White House Dusts Off Bill to Bar Rail Strikes

The Administration will attempt to resurrect legislation that would outlaw strikes in the transportation industry, especially on railroads, Labor Sec. James D. Hodgson told reporters as he reviewed the Labor Dept.'s year and looked ahead.

Hodgson said passage of a bill to deal with national emergency disputes in transportation will be his department's number one goal this year. A similar measure was sought by the Administration last year but died without a hearing in Congress.

Describing the proposal as a move to "improve collective bargaining," the Secretary said that negotiations now conducted by railroad management and labor are "a farce."

The proposal centers on forcing settlement of a dispute by having an arbitrator choose between the final offer from either side of the bargaining table. The decision would be binding and strikes or lockouts would be barred.

"The crisis in railway bargaining is the most disappointing development in 1970," Hodgson declared.

He said that the one-day railroad strike last Dec. 10 may have triggered greater congressional and public support for a law to bar such strikes.

Hodgson suggested that another railroad crisis is likely Mar. 1 when the congressionally-imposed strike ban runs out.

If the new Administration proposal is anything like the last year's measure, the law would give the President sweeping powers in transportation disputes in the airline, railroad, longshore, maritime and trucking industries.

The old proposal would have virtually repealed the Railway Labor Act and would have added new sections to the Taft-Hartley Act covering the five industries.

At that time, AFL-CIO Pres. George Meany condemned a key provision of the proposal as "a novel form of compulsory arbitration" which labor considers incompatible with "principles of democracy."

Hodgson also indicated that steps may be initiated to curb wage settlements in the construction industry. He charged that "the number of strikes and the astronomical level of wage settlements in this industry is ruinous."

He also proposed that an audit be made of the Davis-Bacon Act, which requires employers to pay the prevailing area wage rate on federal construction projects, to determine if "it had not cost the taxpayers a lot of money."

However, he said that the Administration currently has "no blueprint" for handling negotiations in the construction industry.

Other legislative proposals considered high on the Administration's priority list, Hodgson observed, are welfare reform and a manpower program. Last year, welfare reform died in the Senate and Pres. Nixon vetoed the manpower bill.

Additional goals for 1971 cited by Hodgson were improved protection for workers' pensions, increased job opportunities for Negroes, some sort of labor law protection for farm workers, and improved U.S. relations within the International Labor Organization.

Group Health Unit Elects Cohelan

Jeffery Cohelan, who fought for improved health services during six terms as a Democratic congressman from California, has been named executive director of the Group Health Association of America.

Cohelan was named by the GHAA board of directors to succeed Dr. W. Palmer Dearing, who is retiring but will continue to serve the organization as a consultant. A former officer of a Teamsters local union, Cohelan was an early advocate of multiple-choice health and welfare plans in California.

The Group Health board also announced the appointment of James F. Doherty to a new post of legislative representative. Doherty is counsel of the House Banking Committee and previously served as an AFL-CIO legislative representative.

Joseph Tomaszek Dies, New England Staffer

Dorchester, Mass. — Joseph F. Tomaszek, AFL-CIO representative in the New England region, died in a hospital here after a heart attack suffered on New Year's Day. He was 60.

Tomaszek has been a member of the organizing staff of the AFL-CIO and the former CIO since 1953. Before that he had represented the Furniture Workers in New England and upper New York State and the Textile Workers Union of America in Massachusetts. His wife Norine and a son survive in Randolph, Mass.

Full Union Rights:

Labor Presses Laws For Public Employes

(Continued from Page 1)

who have been subject to repressive legislation already on the books.

An introductory policy statement accompanying the model laws notes that "the denial by some public employers of the right of employes to organize and the refusal by employers to accept the procedure of collective bargaining lead to various forms of strife and unrest with the consequent effect of obstructing public business.

"Experience in private and public employment has also proved," the statement says, "that protection by law of the right of employes to organize and bargain collectively safeguards employes and the public from injury, impairment and interruptions of services."

Principal provisions of the model state law are as follows:

Employes' Rights — The law would guarantee the right of employes to organize and join unions and require the recognized union to represent all employes fairly—whether members or not.

It would authorize a union security agreement, an agency shop, requiring that all employes in the bargaining unit pay union dues even if they elect not to join.

Employers would be required to check off union dues when authorized by workers, but in cases where one union has gained exclusive recognition, the employer could not check off dues for another labor organization.

Both employer and employe groups would be forbidden from engaging in unfair labor practices involving union organization and collective bargaining. Employers and unions would be required to bargain on all conditions of employment.

Labor Relations Board—A Public Employe Relations Board would be established consisting of three members appointed by the governor to administer the act.

This board would be similar in power and function to the National Labor Relations Board in the private sector. It would have the power to hold hearings and issue subpoenas and would decide the unit appropriate for collective bargaining in cases where that issue is raised.

Elections—A union representing 30 percent of the employes in a bargaining unit would be entitled to an election to obtain exclusive representation. Other unions would be allowed to appear on the ballot only if they represented at least 10 percent of the employes.

Contracts—Contracts could provide for final and binding arbitration of grievances, including disciplinary grievances, and arbitration decisions would be enforceable in the courts.

Wages and other matters which have been negotiated and which require legislative approval would be submitted—by the employer—to the appropriate legislative body.

The legislative branch of government would then have 30 days in which to act. If legislators took no action within the time limit, the negotiated contract or agreement would be approved automatically.

If the legislative body rejected the agreement, the law would require the resumption of good-faith bargaining.

Mediation and Fact-Finding—The parties involved could agree on their own fact-finding or arbitration procedure for resolving disputes. If there is no mutual agreement, however, the law provides for a tri-partite panel of fact-finders who would be required to make recommendations, but who also could engage in mediation.

'Sit Down and Let's Talk!'

Pittsburgh Teachers Strike for New Pact

Pittsburgh—Union teachers, unable to reach contract agreement in talks that started last May, walked out Jan. 4 and set up picket lines at 110 public schools enrolling 73,000 pupils.

It was the second strike in the history of Teachers Local 400, representing 3,400 classroom employes, but the first under a new state law that gives legal sanction to strikes by public employes after specified procedures are exhausted. The law went into effect last Oct. 21.

The parent union, the American Federation of Teachers, reported two other strikes under the same law. Members of AFT Local 2026 at the Community College of Philadelphia have been out since Dec. 2 seeking improved wages and working conditions. In Scranton, an AFT local representing 500 public school employes struck Dec. 23 and stayed out when talks failed to produce an agreement by Jan. 4.

Negotiations are continuing in all three work stoppages.

Pittsburgh School Superintendent Louis J. Kishkunas asked the Pennsylvania State Labor Relations Board to mediate the dispute, which the union said is being prolonged by the school board's reluctance to accept classroom conditions as a subject for bargaining.

The union won bargaining rights for all educational department employes after an 11-day strike in 1968. A first contract, negotiated at that time, expired Dec. 31 and the walkout followed. A rival group, the Pittsburgh Teachers Education Association, claims the union has never been certified but Local 400 disputes the charge.

The union seeks higher wage schedules, smaller classes, expanded special education, physical education and reading programs for Pittsburgh pupils, and other changes in teaching effectiveness.

"We feel these involve working conditions for teachers, and should be in the contract," said Local Vice Pres. Rufus Jordan. School officials contend that these are policy matters to be decided only by the administration.

On wages, union negotiators want a starting annual salary of $8,000 for teachers with a bachelor's degree and a top of $13,900 after 10 years. Schedules in the old contract started at $7,600 and rose to $11,600 in 11 steps.

For holders of a master's degree in education, the union is seeking a range of $9,500 to $15,400 instead of the former range of $8,000 to $12,600.

The school system offered a 3-percent raise in salary schedules but union members voted, 1,206 to 57, to hold out for more acceptable terms.

In other labor disputes here, custodial workers walked out briefly but returned after accepting a better contract offer. They are represented by State, County & Municipal Employes Local 297. Also on strike are 220 members of the Printing Pressmen who voted to reject a settlement offer by the Pittsburgh Press, and 3,000 city and county employes including sanitation men, road crews, drivers, plumbers, mechanics and laborers.

Resumption of Talks Ordered In N.Y. Dispute

New York—A State Supreme Court justice stepped into a contract dispute between the city and 11,000 of its employes by ordering both sides to resume good-faith bargaining.

Justice William Kapelman, former state assembly member from the Bronx, said he would hold back a ruling on injunctions sought by the city and Fire Fighters Local 94 to give them further time for negotiations.

Kapelman directed the union to end its "job action" and resume full performance of duty by its 11,300 members; ordered the city to withdraw—with prejudice—its injunction petition against the union under the Taylor no-strike law, and agreed to keep jurisdiction over the firemen's refusal-to-bargain lawsuit pending further developments.

The justice said negotiations covering all matters in dispute must be resumed under the direction of Eric J. Schmertz, mediator. The talks must be "sincere, diligent, complete and without any unnecessary delays," he specified.

The firemen's union submitted contract proposals Oct. 9 and, when its contract expired Dec. 31 without any satisfactory reply from city negotiators, launched a "job action" under which members answered fire alarms but refused other duties. The city sought its injunction at this point.

Two other employe groups with 41,000 members are allied with the firemen in seeking contract improvements—the Uniformed Sanitationmen and the Patrolmen's Benevolent Association.

Defense Dept. Accused of Boosting Lettuce Purchases to Break Strike

Los Angeles—The United Farm Workers Organizing Committee has filed suit accusing the Defense Dept. of boosting its purchases of lettuce from a major California-Arizona grower in a conspiracy to break the UFWOC lettuce strike.

The class action suit seeking millions of dollars in damages for thousands of farm workers, was filed in federal court here against Melvin R. Laird, in his capacity as Secretary of Defense, and grower Bud Antle, Inc., based in Salinas, Calif.

The suit was entered on behalf of UFWOC Director Cesar Chavez and all farm workers of California and Arizona.

The suit contends that while the Defense Dept. bought from Antle 8.3 percent of the lettuce purchased for the armed forces during the entire 1970 fiscal year ended last June 30, purchases from Antle for the first quarter of the 1971 fiscal year jumped to 29.1 percent.

Jerry Cohen, UFWOC chief counsel, charged at a news conference announcing the filing of the suit that the Secretary of Defense "has decided to use his authority to become a buyer of last resort" for the struck lettuce.

This, he said, was a "violation of a multiplicity of federal constitutional, statutory and regulatory provisions at great expense to the American taxpayer."

Cohen charged further that while Antle sales to the Defense Dept., have escalated grossly, armed forces' lettuce purchases from Interharvest, another major grower that has signed union contracts with UFWOC, "have decreased markedly."

"This is a boycott against a unionized grower and we want to know why," Cohen declared.

While the suit was being filed here seeking damages and injunctive relief under the Civil Rights Act and other federal laws, other action was underway in Washington.

Sen. Walter F. Mondale (D-Minn.), whose Migratory Labor subcommittee probed similar Defense Dept. escalation of grape purchases in 1969, has announced plans for a probe of the government's lettuce buying.

At the 1969 Senate hearings, the Defense Dept.'s claim that it was "neutral" in the dispute was sharply challenged by AFL-CIO Organizing Director William L. Kircher and UFWOC leaders.

UFWOC has been involved in a labor dispute with Antle and other growers in California and Arizona, one result of which was the jailing of Chavez for 20 days until Christmas Eve for refusing to call off the strike and boycott activity against Antle.

Cohen said that the Farm Workers' activities have caused the price of lettuce to drop markedly and this is one reason why the Defense Dept. has come to Antle's rescue." He noted that the suit accuses the department of buying lettuce grown by Antle at prices substantially higher than the prevailing market price.

As an example he cited purchases on Dec. 15 by the Defense Personnel Subsistence Center in Los Angeles of 49,320 pounds of lettuce from Antle at 12.3 cents per pound or $5.54 a crate. Cohen said the prevailing market price on that day was $3.50 a crate for the highest quality of wrapped lettuce sold in Los Angeles.

The suit asks $15,000 actual and $30,000 punitive damages from Antle for each of the thousands of plaintiffs and it asks that the court bar Antle for three years from submitting bids to the Defense Dept.

Leo F. Flynn Dies, Retired AFL-CIO Staffer

Port Angeles, Wash.—Funeral services were held here for Leo F. Flynn, who retired in 1956 after 30 years of Seattle area labor service. He was 84 when he died in December.

Flynn was area representative for the former AFL until merger, when he became assistant regional director for the AFL-CIO. He served a six-year term on the Washington State Personnel Board. Survivors include his wife Myra, two brothers and two sisters, all of the Pacific Coast area.

Krause Named New President Of Rail Carmen

Kansas City, Mo.—Anthony L. Krause, assistant president of the Railway Carmen, is the new president of the union succeeding George L. O'Brien. The latter stepped down for health reasons Dec. 31 and Krause took over automatically, as the union constitution provides.

Krause is a native of Hammond, Ind., who began work as a car builder in 1924 and switched to a carman's job at the Baltimore & Ohio Railroad's Chicago terminal in 1929. He held office on the local and regional levels until 1958, when he became a Carmen's vice president. The union's 1968 convention chose him as assistant president in 1968.

O'Brien had been president since 1966. He helped organize a carmen's lodge in 1934 at Chicago, and was elected a union vice president in 1941. He became assistant president 14 years later.

AFL-CIO News

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, January 16, 1971 | No. 2

New Tax Break to Business Nixon Answer to Recession

Nearly 5 Million:

Unemployment Up To Nine-Year High

A nine-year high was hit in December as the unemployment rate climbed to 6 percent with no relief in sight.

The rise affected almost all categories of workers: adult men and women, married men, white-collar and blue-collar workers, the Labor Dept.'s Bureau of Labor Statistics reported.

Joblessness Rises 58% During Year

Unemployment rose a staggering 58 percent during 1970 as the nation slipped deeper and deeper into recession.

At the start of the year, 3.1 million persons were looking for jobs and not finding them.

By year-end, the number had grown to 4.9 million. On a percentage basis, 60 out of every 1,000 persons in the labor force were out of work in December as compared with 35 out of 1,000 at the start of the year.

Even averaged out over the year, the 1970 unemployment statistics bore out the sluggish economy's inability to provide jobs for an expanding workforce.

The average jobless rate for the year was 4.9 percent—compared with the 3.5 percent average of 1969. The average number of persons jobless during the year was 4.1 million, up from a 2.9 million average in 1969.

The labor force grew by nearly 2 million during the year, reflecting normal population growth, a reduction in the armed forces and an in-

(Continued on Page 3)

In human terms, it meant that tens of thousands more workers drew their last paychecks, that the already long lines at state employment service offices grew still longer, and that the word from employers was "No Help Wanted."

Although nonfarm payroll employment rose by 290,000 as most of the workers involved in the auto strike returned to their jobs, the number of persons out of work rose to 4,974,000, seasonally adjusted, from 4,858,000 in November.

AFL-CIO Pres. George Meany had warned last February that the 6-percent mark could be reached by the end of the year unless the Administration changed its policies.

Federation Research Director Nat Goldfinger said that the 6 percent unemployment rate "is a tragedy that could have and should have been averted."

"We take no satisfaction in the fact that Pres. Meany's forecast was accurate," Goldfinger added.

The unemployment rate moved up from 5.8 percent in November —and up 3.5 percent from a year ago.

Long-term unemployment was up significantly in December, increasing the number of workers out of a job 15 weeks or longer to 1.3 million from 1 million in November, the BLS noted. Only a half-million workers were listed on long-term unemployment in December 1969.

Despite Vetoes:

Record of Congress Better than Average

By David L. Perlman

The record of the second session of the 91st Congress is substantially better on labor's scorecard than the "do-nothing" label Pres. Nixon sought to pin on it.

In fact, if it hadn't been for presidential vetoes, 1970 would have gone down in legislative history as a vintage year—with a far better than average list of accomplishments.

One of the President's nine vetoes killed a manpower bill that would have launched a public service jobs program urgently needed in a period of high unemployment.

Another veto blocked a major election reform—a ceiling on political spending for television and radio time during campaigns. And the President resisted congressional efforts to reshape the nation's spending priorities by vetoing education, housing, health and federal employe legislation.

There were also important areas, of course, where Congress failed to act.

The 1970 session ended without final approval of needed social security improvements, national health insurance, trade legislation, minimum wage updating, welfare reform and direct presidential elections.

Some action taken was sharply disappointing, such as the restrictive food stamp bill bulldozed through in the dying days of the session.

Nevertheless, this was the year in which a landmark occupational health and safety bill was finally enacted.

It was a year that saw 18-year-olds get the vote, along with an extension of the civil rights Voting Rights Act and a curb on state residence requirements for voting in presidential elections.

Congress approved collective bargaining rights for postal workers as part of a negotiated reorganization package and set up a new comparability salary system for federal white collar employes.

Giveaway Plan Called 'Incredible'

By John R. Oravec

The Nixon Administration announced a multi-billion dollar depreciation tax windfall for business and industry as its answer to the nation's recession.

The money will come out of federal tax revenues, which will mean that America's workers will be paying an increased share of the tax burden.

AFL-CIO Sec.-Treas. Lane Kirkland termed the Administration's action "incredible."

"The President is helping those who need it the least at the expense of those who need it the most," Kirkland charged.

"It is not the nation's wealthy corporations that need help; it is the workers who are struggling to keep their heads above water and to pay the property taxes and school taxes that already burden them disproportionately," he added.

Kirkland said the labor movement "is deeply disturbed by Pres. Nixon's further commitment to the 'trickle-down' theory of economics. In this time of recession, inflation and 6 percent unemployment, it is incredible that the President can find no better action than to extend a tax windfall of several billion dollars to the nation's corporations."

He charged that Nixon's "bonanza to business undoes much of the progress toward tax justice made by Congress."

Pres. Nixon ordered the new "assets depreciation range system" into effect in what he said was a move to create jobs, promote economic growth, make U.S. goods more competitive overseas and

(Continued on Page 8)

HEW Delays Radiation Safeguards For Underground Uranium Miners

The AFL-CIO expressed concern over a six-month postponement in the adoption of lower radiation-exposure levels for underground uranium miners and asked the Secretary of Health, Education & Welfare to explain the reason.

At the request of HEW Sec. Elliott L. Richardson, Pres. Nixon granted the extension of the older, higher exposure levels to give federal agencies more time to study the effects of the new limitations.

An order setting the new standards was to have gone into effect Jan. 1. It was issued at the urging of organized labor during the last days of the Johnson Administration to reduce the hazard of radiation-induced lung cancer among uranium miners.

The U.S. Public Health Service has estimated that of the 6,000 men who have mined uranium on the Colorado Plateau, between 600 and 1,100 will eventually die of lung cancer. More than 170 already have died, according to public health officials.

A report published in August 1968 by the now-defunct Federal Radiation Council showed that in a group of 3,414 uranium miners, there were 62 deaths from lung cancer over a 17-year period—or, about six times the normal rate of death from the disease.

AFL-CIO Legislative Director Andrew J. Biemiller, who is chairman of the AFL-CIO Committee on Natural Resources & Atomic Energy, questioned the postponement of the new radiation restrictions in a letter to Secretary Richardson.

(Continued on Page 8)

Government Hikes White-Collar Pay

The federal government's 1.3 million white-collar employes have collected their first installment under the Pay Comparability Act passed shortly before Congress adjourned.

As of the first pay period in January, their pay went up an average of 5.96 percent—based on a survey of private industry pay by the Bureau of Labor Statistics.

Under the terms of the law, the increase was put into effect by Pres. Nixon without the need for further congressional action.

RAISED HANDS of delegates to a special convention of Leather Goods Workers signify a nearly unanimous approval to raise per capita payments and local dues.

Leather Union Votes Per Capita Increase

New York—The Leather Goods workers voted an increase in both minimum local dues and per capita at a special convention.

The nearly unanimous vote of the 351 delegates raised minimum local dues to $6 per month and the per capita to $2. The local minimum had been $4.33 and the per capita $1.21.

A percentage of the new per capita will be used exclusively to achieve the union's goal of contract uniformity, Pres. Charles Feinstein told the convention.

Feinstein said the handbag industry would be the first target in the quest for uniform contracts. The two largest affiliates of the union are already "zeroing in" on the handbag industry, Feinstein said, and once this is accomplished the luggage industry would be next.

Feinstein also reported an increase in membership of 25 percent since the present administration took office in January of 1970. A total of 12,000 members has been added, bringing the membership to 50,000.

This growth was attributed to what Feinstein called the union's "new spirit of unity and teamwork which exists in our union today." He also pledged a similar effort in the legislative field to provide for job security through a trade bill that will curb the impact of imports through quotas.

James C. Gildea, executive assistant to AFL-CIO Pres. George Meany, told the convention that the Leather Goods workers' achievements in "the very tough year" of 1970 were a parallel to what went on in other parts of the labor movement.

As proof that progress can be made "in the face of extremely adverse circumstances," Gildea cited the General Electric strike, in which "the principle of collective bargaining was defended against a massive onslaught;" breakthroughs in recognition and the right to bargain for farm workers and postal workers and the rejection of Supreme Court nominations which would have transformed the court "into a partisan political tool" Gildea said that 1970 was a particularly tough year since the entire economy was stagnated "because of wrong and misguided government policies." Gildea said it took the 1970 elections to convince Pres. Nixon that he had "to shift his economic gears."

"But the grinding and the groaning in the country's financial transmission box show that he can't even shift gears with a sure hand," Gildea said.

The convention was also addressed by two New York state officials, Atty. Gen. Louis J. Lefkowitz and newly appointed industrial commissioner Louis L. Levine.

Rail Strike Ban Spurs Call For U.S. Takeover

Cleveland—The United Transportation Union at an annual meeting of officers adopted a policy statement calling for federal operation of railroads if Congress and the courts continue to control rail labor relations.

For many years, UTU Pres. Charles Luna said, the Railway Labor Act "has been twisted and bent to the advantage of railroads. Collective bargaining has ceased to exist in the true sense of the word."

Since the UTU began negotiating with management a year ago, other unions have successfully negotiated contracts "in an atmosphere of free collective bargaining, including the right to strike." But, said Luna, "when we tried to strike it was all over, by court order. Now we are headed for another crisis on Mar. 1"—the deadline set by Congress for settlement of four-union contract negotiations with the railroads.

Congress already has taken a step toward nationalization of railroads by establishing a semi-public corporation to operate most inter-city passenger trains, Luna pointed out.

Union officers at their meeting here noted that rail employers "demand that employes accept increasingly substandard wages and conditions" and abandon work rules negotiated at the sacrifice of other benefits over the years.

'Appallingly Inadequate':

Rail Passenger Plan Scored by 20 Unions

Twenty unions representing most of the nation's railway employes have called a proposed new U.S. railroad passenger network "appallingly inadequate" and urged Transportation Sec. John A. Volpe to improve it.

The Administration's plan calls for 16 basic rail routes serving 14 major cities. The system, under the Rail Passenger Service Act of 1970 passed by Congress last October, will be operated by the National Railroad Passenger Corp., a semi-public utility called Railpax for short.

The plan involves a "frightful emasculation" of existing service and should be "radically revised" to provide passenger service by rail between all parts of the nation and all major metropolitan areas, the unions said in a joint statement by the Congress of Railway Unions and the Railway Labor Executives' Association.

The two organizations submitted their comments to Volpe in a 49-page document asserting that his proposal misconstrues the new Railpax act and violates the intent of Congress in enacting the law. They said that whereas members of Congress expressed the intention of maintaining 80 percent of present passenger service initially, the Volpe proposal would cut this to a little over 40 percent.

The Volpe plan has been called inadequate also by state governors, city mayors, members of Congress, representatives of passengers and others.

The rail labor statement to Volpe noted these "glaring omissions" from Volpe's list of proposed "city-pair end points" for continued service: "No Washington-Chicago route; no North-South service on the entire Pacific Coast; no service throughout the Southwest or across the South; and nothing in central and northern New England."

The unions listed 27 major metropolitan areas that now have "substantial through rail service" but would be guaranteed no such service under Volpe's original plan.

They said "the system this report would permit to exist would not be a national system" but a "truncated regional system serving basically two cities, Chicago and New York, with less service" than they now have.

The unions urged a six-point revision of Volpe's plan, including preservation of about 80 percent of the trains now operating.

Under the law, all railroads will be eligible to turn their pasenger service over to Railpax, which may add new service but may not cut back on service during the period May 1, 1971 to July 1, 1973. Railroads which do not take part in Railpax must continue to operate all present passenger service until Jan. 1, 1975.

Participating railroads will be required to put into Railpax cash or equipment sums based on their present claimed losses from passenger operations. The initial capitalization of $40 million for operating passenger trains is to be furnished from federal tax money.

Railpax will contract with the railroads to operate the trains in the basic system with their present crews, under protective provisions won by rail unions over the years. The law does not provide any method for appealing provisions of the basic plan adopted by the Secretary of Transportation, rail unions point out.

NLRB Upholds Wearing Of Union Badge on Job

Workers have the right to wear union insignia on the job, even when installing equipment in another employer's plant, a National Labor Relations Board examiner has ruled.

Trial Examiner Arthur Leff found two employers in Orangeburg, S.C., broke the labor law when they told Gerald O. Smoak, a member of the Communications Workers to remove a pocket guard containing a union message before installing telephone equipment in a customer's plant.

He ruled that Southern Bell Telephone Co. and Fabric Services, Inc., had no right to require Smoak to remove a pen-guard with the message: "CWA. It Doesn't Cost—It Pays. Join CWA-AFL-CIO."

Leff said the freedom of employes to wear insignia declaring their union identity "is a form of expression that is basic to the full employment of their right to become and remain union members."

Smoak is a long-time member and former officer of CWA. Southern Bell had sent him to the Fabric Services' plant to perform repair work and the company's personnel director said he was not willing to let Smoak work in the plant as long as he wore a union pocket protector. Smoak reported the incident to his supervisor, who instructed him to remove the pocket protector "if that was what Fabric Services wanted."

Smoak took off the union badge, returned to the customer's premises and finished his assignment. His union then filed charges, claiming his rights had been invaded.

Leff upheld the union. The principle has long been recognized, he said, that the right of employes to wear union insignia at work is a form of union activity "safeguarded" by the law in the absence of special circumstances endangering employe discipline or uninterrupted production.

No such circumstances were present at Orangeburg, Leff said. Therefore, there "appears to be no reason on principle for denying to employes whose work functions carry them to the premises of others the same protection . . . accorded employes generally" to wear badges or pocket guards declaring "their identification with and support of the union."

The examiner recommended that the two employers be ordered by the NLRB to stop imposing, maintaining or enforcing any rule prohibiting employes working on its premises from wearing union insignia.

New York City Steps Up Drive Against Exploitation of Workers

New York—A stepped-up drive to stamp out the abuse of workers—unjust firings, substandard wages, poor working conditions and unfair labor practices—is taking shape here under the direction of the Mayor's Committee on Exploitation of Workers.

The committee, made up of leaders representing labor, churches, the community and business, is headed by Benjamin McLaurin of the Sleeping Car Porters.

Mayor John V. Lindsay recently reappointed Pres. Harry Van Arsdale, Jr., and Sec. Morris Iushewitz of the New York City Central Labor Council to the committee. Eight other new committee members from labor include Pres. Leon Sverdlove of the Jewelry Workers.

Currently, the committee is distributing 20,000 pamphlets printed in English and Spanish alerting workers to services available to victims of unfair labor practices.

Iushewitz said the mayor's action "focused attention on the plight of minorities." Estimating that 300,000 workers in the city are paid less than the $1.85-an-hour state minimum wage, he declared: "Our major job is to end abuses of workers' rights," whether by employers or by "racket unions" that spring up in a number of industries.

At a City Hall ceremony, Lindsay said "workers' rights are human rights. . . . Low-wage jobs, on-the-job abuses and corrupt union practices injure not only the worker but also the law-abiding employer and the labor movement."

The executive order, he said, was designed "to provide the mayor's committee with a formal mandate to investigate and identify flagrant violations of employe rights, and to report its findings and recommendations to me. By protecting the rights of workers, we protect both the moral and economic climate of our city."

The committee was first formed by former Mayor Robert F. Wagner in 1958. The present mayor directed members to meet at least four times a year, and to interview complainants in its offices at 225 Broadway with the aid of a staff provided by the city's Economic Development Administration.

As part of its duty to make recommendations, the committee may evaluate current laws and propose new laws, arrange hearings on substandard labor conditions, identify neighborhoods where unsatisfactory conditions exist, and assist complainants with labor problems.

Textile Workers Name Hoyman Vice President

New York—The Textile Workers Union of America named Scott M. Hoyman of Charlotte, N.C., as a vice president and executive council member succeeding Adolph Benet, of Philadelphia, who resigned for health reasons.

Hoyman is 50, and has been on the union staff since 1948.

Wages Too Low:

Pay Raises Needed, Economist Asserts

Bigger take-home pay for America's workers is needed to help pull the nation out of its economic slump, a prominent economist maintains.

Leon H. Keyserling, who headed the President's Council of Economic Advisers during the Truman Administration, gives his prescription for ending the recession in a study published by the prestigious Conference for Economic Progress.

Increased buying power for workers—wage increases above the level of climbing prices—is the major ingredient.

Keyserling calls for a "shift to vigorous expansionary policies" that go far beyond any now under official consideration to restore a pattern of growth to the economy.

The Nixon economic game plan "has failed miserably" and has put the nation in an "absolute economic recession," Keyserling declares.

This failure, combined with economic stagnation from mid-1966, means that hundreds of billions of dollars in potential gross national product has been forfeited, he says. The results are the sharpest rise in unemployment and consumer prices in many years.

In calling for stepped-up expansionary policies, Keyserling urges increased federal government spending and an expanded money supply by the Federal Reserve System.

Linked directly to these proposals is the need for increased real wage purchasing power.

Keyserling says that expansionary fiscal and monetary policies alone cannot restore full economic growth since undue restraints on real wage expansion could cancel out these policies.

Purchasing power currently lags behind prices because of the wage-price guidelines that were in effect from 1961 to 1966, he observes.

The study also charges that these guidelines helped stabilize prices "only by causing real wage rate gains to be far below productivity gains."

After 1966, real wages continued to lag behind the growth in productivity and the needs of the economy. This wage lag contributed greatly to stagnation and recession, Keyserling asserts.

He suggests that real wages between now and 1972 must grow at a faster rate than the rest of the economy to overcome the lag and offset any further increases in living costs. Wage rate increases also must provide much purchasing power stimulus to expand jobs.

Recent wage contracts and those coming up for negotiation "are not excessive in terms of these needs," Keyserling stresses.

Even if reasonable price stability were assured in the future, expanded buying power would still be needed to contribute to real economic growth, he notes.

"An attempt to restore price stability by restrictive wage policies would have little or no net expansionary effects," he stressed. "Wage increases have been chasing previous price increases . . . and the 'administered' price increases have not been due to the wage increases."

The current clamor for a lopsided income policy, Keyserling observes, continues to indict the wage earner for inflation and wrongly looks on wages as business costs instead of recognizing their key role in economic expansion.

TEACHER UNION officers held a "fly-in" at Baltimore's Friendship Airport to report on experiences with performance contracts, vouchers and other current threats to teacher status in the classroom. AFT Pres. David Selden, right, addresses some of the 130 conference delegates.

Unemployment Rises To Nine-Year Record

(Continued from Page 1)

Adult women accounted heavily for the rise in the December unemployment as their rate was up to 5.7 percent from 5.5 percent the month earlier. For adult men, the jobless rate rose to 4.3 from 4.2 percent, the BLS said.

The teenage unemployment rate remained at 17.5 percent. And while the rate held steady for white workers at 5.5 percent, it jumped to 9.3 percent for Negroes and other minorities from 8.8 percent in November.

For blue-collar workers unemployment rose to 7.7 percent from 7.4 percent in November, while the rate for white-collar workers increased two-tenths of 1 percent to 3.7 percent.

Among major industry groups, the unemployment for construction workers was 11 percent, an increase of 1.9 percent over the month. In December 1969 the rate was 6 percent.

A decrease in unemployment in the durable goods industry was more than offset by jobless increases in the nondurable goods sector, boosting unemployment in manufacturing to 7.5 percent from 7.2 percent in November.

About 300,000 auto workers were returned to the payrolls following the end of the General Motors strike, but manufacturing employment was still 370,000 below the pre-strike level of September, the BLS noted.

Virtually all of the employment increase in manufacturing occurred in the five durable goods industries most heavily affected by the strike. Employment rose 255,000 in transportation equipment, 45,000 in fabricated metals, 40,000 in electrical equipment, 25,000 in primary metals and 15,000 in machinery.

Harold Goldstein, assistant commissioner of the BLS, said that not all the workers laid off because of the secondary effects of the auto strike have been rehired.

He said that economic conditions have worsened since the strike started and it's likely many of these will not be returned to work.

Earlier, the Administration blamed much of the rise in unemployment on the strike.

The average workweek in manufacturing rose one-tenth of 1 hour in December to 39.7 hours, seasonally adjusted, but it was 1 full hour below the year-ago month. Factory overtime declined one-tenth of 1 hour to 2.6 hours, the lowest since April 1963.

For all production and nonsupervisory workers on nonfarm payrolls, the average workweek remained at 37 hours. Over the year, it was six-tenths of 1 hour lower.

A relatively low level of hiring in the retail and wholesale trade for the Christmas season was reflected with an increase in the jobless rate from 6.1 to 6.4 percent, the BLS noted.

Teachers Win Wage Boosts In Pittsburgh

Pittsburgh—Public school teachers stayed out of classes for a week to win yearly raises of $600 to $1,250 and major improvements in working conditions in a new two-year agreement.

The American Federation of Teachers, reporting on three other contract disputes, said 21,000 members walked out of 533 Chicago public schools Jan. 12 in a dispute over wages and class size; the faculty of the Community College of Philadelphia settled a strike that started Dec. 2, and AFT's Scranton local union continued to stay out in a walkout that began Dec. 23.

Chicago schools have 578,000 pupils, and Pittsburgh schools 73,000. The Pittsburgh, Philadelphia and Scranton walkouts were the first under a new state law permitting strikes by public employes after specified procedures are exhausted.

Pittsburgh teachers returned Jan. 11 after voting to ratify a four-step system of raises. The agreement will hike the salary schedule for bachelor's-degree holders from the current $7,600-$11,600 to $8,500-$13,600 by September 1972, and the current scale of $9,200-$13,800 for those with the doctor of philosophy degree to $10,100-$16,300 in the same period.

The Board of Education agreed to recognize AFT Local 400 as exclusive bargaining representative of all Pittsburgh teachers. It accepted a grievance mechanism with binding arbitration in disputes, and agreed to hire 71 additional teachers in the 1971-72 school year to help reduce class size.

The contract calls for complete funding by the board for physical education and athletics in junior-senior high schools; improved reporting and review procedures in school discipline cases; and two-week summer employment for secondary school counselors on a trial basis.

The union achieved improvement in programs aimed at reducing class interruptions to a minimum, establishing a stated lunch period and other working conditions.

Joblessness Up 58 Percent in 1970, Nation Slumps Deeper in Recession

(Continued from Page 1)

crease in women in the labor market. But the number of jobs increased by only 730,000—and most of the addition was in part-time women workers.

Taking the brunt of the rise in unemployment over the year were adult men and full-time workers. Jobless rates for adult women and teenagers also were up substantially, the BLS said.

A fairly steady rise in jobless rates was recorded during the 12-month span and long-term unemployment became more significant toward the end of the year.

The number of workers out of jobs 15 weeks or longer in the fourth quarter totaled 890,000, more than double the number in the same period of 1969.

Over the year, the number of persons out of work 27 weeks and longer rose to an average of 235,000 from 133,000 in 1969. The average duration of unemployment was 8.8 weeks, compared with 7.9 weeks in 1969.

For adult men, the average jobless rate last year rose to 3.5 percent from 2.1 percent the year earlier. For women, it increased to 4.8 percent from 3.7 percent.

The average teenage rate rose more than 3 points to 15.3 percent after holding in the 12 percent range for the four preceding years.

Blue-collar unemployment averaged 6.2 percent in 1970, rising substantially from the 3.9 percent rate of 1969, while white-collar unemployment edged up seven-tenths of 1 percent to 2.8 percent.

All major industry groups also showed significant increases in the average rate of unemployment over the year. Construction was up to 9.7 percent from 6 percent, manufacturing up to 5.6 percent from 3.3 percent, transportation and public utilities climbed to 3.2 percent from 2.2 percent.

Increases in unemployment were marked by both white and Negro workers. The average annual rate more than doubled for whites rising from 2.1 percent to 4.5 percent, and climbed for Negroes from 6.4 to 8.2 percent.

Nonfarm payroll employment averaged 70.7 million for the year, about 400,000 more jobs than in 1969. This was the smallest year-to-year increase since 1961, the BLS noted.

All of the net growth in payroll employment occurred among the service-producing industries, which posted gains of 1.25 million jobs over the year. The largest gains were in jobs with state and local governments.

Jobs in manufacturing declined by 683,000 in 1970 to 19.4 million. Most of the decline came in durable goods sector, which showed a drop of 683,000. The nondurable goods sector was down by 87,000 jobs.

Employment in contract construction was down 91,000 from 1969 to 622,000 jobs. The only job gains recorded in the goods-producing industries were in mining, up 3,000 to 622,000, and petroleum, up 91,000 to 192,000.

The average workweek fell by five-tenths of 1 hour to 37.2 hours last year, with the decline widespread among all major industries, the BLS reported. The factory workweek dropped to 39.8 hours, down eight-tenths of an hour.

Overtime in manufacturing declined to 3.0 hours, the lowest level since 1963, the BLS noted.

1970 Strike Time Highest in Decade

Work time lost by strikes rose during 1970 to the highest level in more than a decade with the 71-day General Motors strike accounting for one-fourth of the total, the Labor Dept. reported.

But despite the increase, the lost time amounted to only 0.34—or 34 out of every 1,000 days worked.

There were 3.3 million workers involved in strike activity during 1970 as compared with 2.5 million workers the previous year.

Higher Wages Ordered Paid In Puerto Rico

A Labor Dept. Wage & Hour Committee has ordered that higher minimum wage rates apply for employes in four Puerto Rican industries.

After conducting public hearings in Puerto Rico, the committee ordered higher minimums in men's and boy's clothing, leather goods, children's dress, and needlework and fabricated textile products.

In the men's and boy's clothing industry, minimum rates in the trousers classification will be raised from $1.30 an hour to $1.45, effective Jan. 7, and further raised to $1.55 an hour effective this Feb. 1.

Minimum wages in this industry's general classification will increase from $1.45 to $1.60 an hour Feb. 1 as will the rates in the three other industries.

Epstein Named Research Chief Of Machinists

The Machinists named Albert Epstein as director of research succeeding the late Vernon Jirikowic. Reginald Newell, IAM economist, will take Epstein's former post as associate research director. Both are staff veterans—Epstein with 25 years of service and Newell with 13.

Epstein is a specialist on health, welfare and pension programs. He helped found the IAM labor-management pension fund and still serves as a trustee. In 1964 he was named to the Dept. of Labor advisory committee on employe welfare and pension benefits. Epstein has been a member of the Upholsterers, Office Employes and the IAM in a 43-year career.

Newell became an IAM contract analyst in 1958, later headed the agreements section and was promoted to economist in 1967.

AFGE Signs Contract For 4,000 Workers

A new collective bargaining agreement covering 4,000 non-supervisory employes of the Dept. of Labor has been negotiated by Local 12 of the American Federation of Government Employes.

It includes, for the first time, arbitration of major grievances.

Misguided Guideposts

IN THE EARLY 1960s, the government promulgated a so-called wage-price guidepost policy. Average increases in wages and fringe benefits were supposed to be limited, voluntarily, to the trend-figure of rising private output per manhour in the previous five years—a percentage that was soon nailed down to 3.2 percent and, with the passage of time, developed into a rigid 3.2 percent fixation.

On the other hand, the "voluntary guidepost" for prices was a vague theoretical truism, devoid of policy implications. The price level would remain stable if prices of rapidly rising productivity industries would decline, while prices of other industries would remain stable or increase, depending on their productivity increase in relation to the national average.

So the "voluntary guidepost" policy contained a precise percentage guideline for increases in workers' wages and fringe benefits. But there was no effective guideline for prices. And there was no guideline at all for profits, dividends, executive compensation and other forms of income.

When the textbook theory of a "voluntary guidepost" policy was translated into action in the real world, it was hardly more than a sophisticated, largely one-sided pressure to hold down wage increases.

Wages and salaries are not merely a cost to employers and a factor in the price of goods and services. They are also income to workers and the major source of consumer buying power.

Emphasis on the cost side of this issue, to the exclusion of the income side, represents a lack of objectivity, as well as social and political insensitivity. Any objective view must include consideration of both sides of this issue—wages are both income to workers and a cost to employers.

WAGE DETERMINATION is subject to employer resistance and to the time lags and advance notice that are part of the collective bargaining process, as well as to the influence of economic conditions. Price-setting, on the other hand, has no such built-in restraints, except for the influence of changes in economic conditions. And in several key industries, the major corporations so dominate their industries that they set prices with little, if any, effective price competition.

Moreover, the United States is a huge country of continental size, with tens of thousands of different markets, industries and occupations. Each of them has a large number of specific and different conditions, a multitude of tangible factors and real problems that have to be met.

For these reasons, no one single "magic number" can be imposed as the precise limit for all increases in hourly compensation of all employes throughout the varying and different markets, industries and occupations. Moreover, an attempt to base such a single "magic number" on one economic factor alone—such as productivity—makes the idea even more unworkable.

Therefore, the AFL-CIO determined that the so-called wage and price guidepost policy—with its precise "magic number" for wages—was unworkable as well as largely one-sided and inequitable. And the AFL-CIO has maintained this view to the present time.

—From A Trade Union View of Inflation by AFL-CIO Research Director Nat Goldfinger in the January 1970 Federationist.

Trickle-Down Theory

A Word Edgewise:

The Union Stands Firm Today Compared to Civil War Years

By John P. Roche

EVERY SO OFTEN, as I read and listen to the dolorous accounts of the current state of American society, a very strange feeling comes over me. I get the odd sense that the critics are living in a hermetically sealed time capsule, that they have absolutely no sense of where we have been, of what we as a nation have lived through. They really believe that this generation of Americans is the first that ever confronted real problems.

I had a moment of truth on this subject at Christmas. My wife has a charming great aunt who, knowing my historical interests, gave us some Civil War relics. Three of her uncles had served in the Union forces and among the gifts was a photograph of Uncle Erskine, Captain, 31st New York Volunteer Regiment. Another gift was the scabbard of his brother's sword, found on the obscure battlefield where he died.

We promptly hung Uncle Erskine's picture in the place of honor in the dining room and our teenage daughter came in to pay her respects. "But Daddy," she gasped, "he looks like a kid!" In fact, he was a "kid" by contemporary standards; he and his brothers volunteered at 18. However, he spent four years at war (two of them in Libby Prison) and had the good fortune to survive the holocaust. In further discussion with my daughter, it soon became obvious that to her the American Civil War was just one of those wars we had four or five hundred years ago—like the War of 1812. She was stunned to learn that her (great-great?) Aunt Helen, whom she considers anything but a historical relic, had uncles who fought back in the Middle Ages.

How can one transmit to the young the appalling tragedy of the Civil War? At a time that Americans huddle and quiver because some psychopath has bombed a bank or a computer center, it might be useful to recall the incredible bloodbath that tore the nation apart for four years but which we somehow survived.

Let us just examine the cold statistics. They are admittedly imprecise because we were not then statistic-conscious, and on the Confederate side they are often little better than highly educated guesses. According to the 1860 Census, the United States had about 4 million white men between the ages of 20 and 40—the relevant military age group—of whom about a million and a half were in the 11 states that seceded in 1860-61.

THE UNION ARMY, which kept fairly good records, had 2,213,000 soldiers who served at one time or another. Estimates on the Confederacy vary widely, but the best guess is about 1,200,000. These are overall totals: the Confederates probably never had more than 500,000 under arms at any given time; the Union peaked at close to a million in January 1865.

Over half a million Union soldiers died in service: about 40 percent in battle, the remainder of wounds and disease. No one knows the Confederate death total, but it is estimated at over 300,000. Perhaps another half million on both sides were wounded. The average Union regiment lost 104.4 dead per 1,000 men per year; the comparable figure for World War II was 11.6; in Viet Nam it is below 5. The long and short of it was that about one American out of every five in the 20-40 age group was killed.

In gross population terms, this was a greater loss than any of the European powers suffered in World War I. In every tiny New England town there is somewhere a monument with the names of the dead. If you visit Concord, Mass., take a close look at the one there in the square, a seemingly endless roster of those who left this small village and never returned.

No. the United States is not coming apart at the seams in 1971, but it might be educationally both innovative and relevant to teach our youngsters how far we have come since the "kids" of 1861 put on their blue or grey uniforms and went forth to kill each other over conflicting concepts of national policy.

The Yardstick:

Working-Class Poor Alienated By Snobbery of 'Intellectuals'

By Msgr. George G. Higgins

I **HAVE ALWAYS** thought of the Christian Science Monitor as being, by all odds, one of the best newspapers in the United States but, frankly, have never thought of it as being particularly sensitive to the problems and needs of middle and lower-middle class Americans who work with their hands for a living. On the contrary—to be completely open about the matter—it has always struck me as being rather aristocratic, not to say elitist, in its editorial point of view.

This is no longer true of the Monitor, however —if indeed it ever was—as witness its lead editorial, "Elitist and Hard-Hat," in a recent issue. The point of this editorial is that a new form of snobbery appears to exist on a very broad scale.

"It exists," says the Monitor, "on the part of many of those in America whom it pleases to believe that they work solely with their minds and operates against those who work wtih their hands. This snobbery has come to be described as 'elitism,' a term increasingly applied to the fairly broad spectrum of those engaged in specifically intellectual activity of whatever nature."

The result of all this, the Monitor concludes, "is a rising resentment, discomfort and frustration on the part of those not included in this elite class and who therefore believe that they are looked down upon."

The Monitor's point is well taken. In other words, there is no doubt in this writer's mind that the sense of alienation being experienced today by many of the working-class poor in the United States stems, in large measure, from the justifiable feeling on their part that they are being looked down upon by the so-called intelligentsia.

The Monitor is not alone in deploring this phenomenon. A number of liberal spokesmen—who themselves are generally thought of as belonging to the intelligentsia—are currently speaking out very forcefully against this new elitism referred to above. Michael Novak, for example, in a recent review in Commonweal of Charles Reich's best seller, The Greening of America, pointedly reminds his liberal peers that "one key to our failure lies in the huge perceptual gap that separates us from the American people and especially from the worker."

OUR PHANTASIES about the working-class poor, Mr. Novak continues, are "vile." To illustrate this point, he then cites a passage from The Greening of America which caricatures, "the plumbers, gas station attendants, and truck drivers around us" in the most patronizing of terms and leaves the impression that the typical hard-hat is some sort of fascist moron who "has fled all his life from consciousness and responsibility . . . is in turmoil against his own nature . . . (and) in his agony . . . has recoiled upon himself."

In short, Mr. Reich concludes, the subject in question "is what the machine left after it had its way." Mr. Novak says that the margins of his copy of The Greening of America carry an anguished exclamation mark at the "ignorance" displayed by this passage.

The December issue of the distinguished Jewish monthly, Commentary, in a series of three related articles, pays its respects to these self-appointed members of the new American elite and lets them have it with both barrels. Norman Podhoretz' introductory editorial sets the tone for this entire series.

By its own account, Mr. Podhoretz points out, the counter-culture "opposes the predominant values of the American middle class. It has every right to do so. But the fact that it describes these values in terms that are drenched in an arrogant contempt for the lives of millions and millions of people, the vast majority of whom are considerably less affluent and less privileged in every other social regard than the typical counter-culture loyalist, is to be sufficient indication of the ludicrousness of the claim of superior humaneness which it is always making on its own behalf."

More power to Mr. Podhoretz. It's about time that someone of his stature in the so-called intelligentsia had the nerve to blow the whistle on the new elite.

Bayard Rustin Says:

Nation Should Honor Dr. King As Symbol of a Single Society

I **AM STRONGLY** in favor of making Martin Luther King, Jr.'s birthday a national holiday, but not for the reasons that are often given to justify such a momentous, indeed radical, departure from tradition.

The arguments I have heard from countless blacks are all based upon Dr. King's extraordinary contributions to his people. There is also reference made to the psychological and symbolic significance of creating a national holiday in honor of a leader of a minority that has suffered so many centuries of oppression and discrimination.

I find these arguments compelling, but in the end they are not sufficient, for what is to prevent an Italian or a Jew or an Irishman from demanding similiar recognition? One could argue, I think correctly, that these minority groups of Americans have not suffered nearly as much hardship as have blacks, and that, therefore, creating a national holiday for Dr. King would be a form of just compensation for a people so sorely denied.

There is a much more basic reason for honoring Dr. King. More than any single individual, he was the symbol of racial reconciliation, and if the races in America are not reconciled with each other, this nation will not survive. The division between black and white throughout American history forms the core of our national drama and, as Gunnar Myrdal pointed out long ago, is the central dilemma of American life. Dr. King's life, work, and death demonstrated the way to resolve that dilemma, and he should therefore be honored by the entire nation.

Dr. King was able to maintain a balance in his life that is absent in the romantic and often suicidal notions of many so-called revolutionaries and in the narrow world of conservatives as well. He saw that democracy was not a sham but a precious and fragile form of government, and that American society, despite its terrible injustices, could be changed through democratic struggle. His tremendous achievements restored the faith of millions in the democratic process.

HE ALSO SAW that nonviolence was not only morally necessary, but the only form of social struggle that could change the society for the better. It offers a way for the victims of society to be truly free, for it is at once an effective form of struggle and a guarantee that the victims will not become the new oppressors.

And Dr. King maintained his faith in integration throughout his life. The ideal of integration has been attacked from many sides in recent years, and yet the violence and the hatred that have been associated with these attacks have only proved how vital integration remains as an objective. Racial barriers can never lead to racial peace but only to endless conflict. Building a single society is not a choice but a necessity.

Dr. King was a man of love, and for that he was loved, hated and mocked. We should appreciate the spiritual side of his nature without sentimentalizing it, for he was acutely aware of the economic context in which people live. He believed not only in brotherhood, but also in the redistribution of wealth, and he engaged in struggles toward that end. He recognized the need for a social and economic program without which we will never solve the basic problems of our society.

Dr. King was a man for all of us. He challenged what is worst in our society by appealing to what is best in our natures. Though he is no longer with us he still symbolizes our hopes and our ideals, the ideals of equality, freedom, and peace.

By honoring him America would be doing justice to itself, for it would be creating a symbol—a day of national observance—of how we must behave toward one another if we are ever to realize the principles upon which this nation was established.

By Press Associates, Inc.

A**N ESTIMATED** 124 million persons in the United States were old enough to vote in the elections last November, the Bureau of the Census reports, yet only 55 percent of these actually cast their ballots.

Although there has been a slight improvement in voting participation over the years, the Census Bureau reports approximately the same percentage voted in 1970 as did in the last off-year election, 1966.

Both percentages were considerably below the 1968 Presidential election when 68 percent of the eligible voters reported voting. Even this was a drop of 1 percent from 1964.

Yet, this figure is far below the 80 to 90 percent voting participation reported in most advanced, industrialized countries.

The greatest single group of people of voting age unable to cast ballots were denied the right because of residency requirements.

The Voting Rights Act Amendment of 1970, which takes effect this year, greatly liberalizes the length of residency rules for national elections. This, plus the easing of literacy requirements, should add a considerable number to the election rolls in the future.

The voting rights bill also lowered the voting age in national elections to 18 years and the bureau estimates this will add 10.2 million persons to the voting age group.

IN THE 1970 elections, the Census Bureau says that 68 percent of all persons eligible to vote by age were actually registered to vote. This included 69 percent of the eligible white voters, 61 percent of the eligible Negro voters. Among whites in the youngest age group, 18 to 24, only 40 percent were reported registered.

As for those who actually voted, the bureau provides this profile: Those 45 to 64 years of age topped all other age groups with 64 percent reporting they voted; 56 percent of whites voted and 44 percent of Negroes voted.

The latter group, however, reflects the most significant gains. In the South, the proportion of Negro voters registered climbed almost 5 percentage points between 1966 and 1970 while the proportion of those of voting age casting ballots gained almost 4 percentage points.

This would indicate that those who fought in the last Congress for essentially an extension of the Voting Rights Act of 1965 were on sound ground. It was helping southern Negroes secure voting rights. Easing literacy requirements should add to the total.

Unless 1970 voting patterns are radically different from those of other recent years, here are some other characteristics of voting:

- The younger the age group the smaller the percentage of participation up to the age of 64 where there is a sharp fall-off.
- The percentage of male voters is slightly better than the percentage of female voters.
- The more education a citizen has the more likely he is to vote. Only about 59 percent of those with 8 years or less education vote while those with more than 12 years reach 84 percent participation.
- Only about 58 percent of unemployed workers vote while 71 percent of those employed cast their ballots.
- Those with the highest family income vote most heavily.
- Those who live in metropolitan areas have a slightly better voting record than those who live in non-metropolitan areas.

For working people, for lower income and minority groups, these dry statistics provide an important lesson. If they could increase their level of voting participation they would well increase their power as voting blocs and more directly affect national policy.

RECOGNIZING 25 YEARS of service as executive secretary of the American Guild of Musical Artists, a plaque is presented to Hyman R. Faine, right, by AGMA Pres. George London. Faine resigned his post to join the University of California at Los Angeles as professor of arts administration and director of a new arts administration program at the university's Graduate School of Business Administration. The presentation was made at a reception in New York City.

TAX JUSTICE drive by Ohio trade unionists in the form of more than 97,000 signatures is delivered to the state capitol in Columbus. Labor's target is the untaxed profits of corporations, insurance companies and banks. The drive is sponsored by the Tax Reform Action Committee, which presented the petitions to Sec. of State Ted W. Brown, second from right. From left are Ohio AFL-CIO Pres. Frank W. King, Pres. Ray Ross of the Ohio Auto Workers Community Action Program, Brown, and State AFL-CIO Sec.-Treas. Warren Smith.

A 70-Year Struggle:

Battle Over Water Resources Continues in Western States

The fight to protect water resources from those who would use public projects for private gains is just as intense in the arid lands of the West today as it was when the battle started almost 70 years ago.

Dr. Paul S. Taylor, writing in a recent issue of the Federationist, the AFL-CIO magazine, cites "the strength and persistence of large landholders' opposition to anti-monopoly measures on water development" as current threats to the public interest in western irrigation projects.

Taylor, a professor of economics at the University of California and research director of the California State AFL-CIO, says the struggle centers on the law, passed in 1902, that no one person may have more water "than the amount necessary to irrigate a family-sized farm of 160 acres."

While that has been the law of the land for almost 70 years, it has never really been followed, mostly because of administrative decisions by the U.S. Dept. of Interior, Taylor writes.

"The attack on the law has taken every conceivable form," Dr. Taylor says, "through legislation, the courts and the policies of Interior. By and large, the legislative attempts to circumvent the law have been unsuccessful. And the Supreme Court spoke definitively on the issue in a 1958 decision which cited the need to 'benefit people, not land.' "

"But the administration of the Reclamation Act has been quite a different matter," Taylor writes. The law states that "excess lands," or more than 160 acres, must be disposed of before the owner can receive water from federal projects, Taylor explains, but there is no time limit on how soon he must dispose of those lands.

"That unlimited time given an owner goes a long way in explaining how the law has been so successfully flouted," he says. Not only does this failure to enforce the law lead to vast holdings and buying of arid lands for speculation, the author asserts, but it also means a missed opportunity for great public good.

For one thing, public ownership of the excess lands—if they were sold to the government before water was provided—would help toward a rational land policy, especially in rapidly growing California. These could be used to preserve the ecology through agricultural greenbelts and open spaces that would serve to check what Taylor calls "urban sprawl and slurb."

Secondly, the nation's historic habit of using public lands to further education, such as the land-grant colleges, could be applied to these excess lands. A comparable program of "water grants for education" would be of immense value today, the article notes.

Both educators and conservationists have recognized this potential, Taylor points out, and have joined in the fight to get the 1902 Reclamation Act enforced—a fight in which organized labor has long been involved.

But the forces they are opposing are powerful and entrenched, Taylor observes in tracing the history of various methods used to circumvent the 160-acre law. Two of the most recent attacks on the law have come from the Task Force on the Acreage Limitation Problem, a five-man panel appointed by Gov. Ronald Reagan of California, and from the Public Land Law Review Commission, headed by Rep. Wayne N. Aspinall (D-Colo.)

The recommendations of these groups parallel the efforts of their predecessors in overturning the 160-acre limitation. Various methods have included getting one project exempted from the law, then extending the exemption to others; allowing the large land owners to "buy their way out" of the law by refunding to the government a small portion of the subsidy involved in bringing water to them; allowing the pumping of surface water, which has led to a deterioration of the environment, and the setting up in California of a State Water Project to which the federal 160-acre limit would not apply.

Taylor says the "catch" on the state project is that it uses federal facilities, to which acreage limitation does apply.

The system of letting large land owners "buy their way out" by paying a small fee for the water they receive in excess of the limits is also recommended by the task force named by Reagan. What Taylor describes as a "pithy challenge" to such concepts was issued by a U.S. Army Corps of Engineers official who asked, "Is a man entitled to buy up, settle or promote a chunk of desert and then demand that his government bring water to him from the general direction of the North Pole?"

The stakes in the struggle are tremendous, Taylor points out, with the United States having already spent about $10 billion on construction alone to provide such water. And the crops on the 6.5 million acres irrigated were worth almost $2 billion in 1967, double their value of 10 years before.

The human stakes are also high, with the flouting of federal law helping perpetuate "almost feudal domination of the land," which produces—in the words of former Sen. Paul Douglas (D-Ill.)—"an agricultural system with a few owners and a great mass of Mexican-American laborers living in hovels."

High Court Nullifies Georgia R-T-W Clause

The U.S. Supreme Court has nullified a provision of Georgia's so-called Right-to-Work Law which says that checkoff authorizations are revocable at the will of the employe.

The high court affirmed the opinion of the 5th U.S. Circut Court of Appeals in New Orleans which had said that the Georgia statute was in conflict with the National Labor Relations Act and, therefore, must yield to it.

The case arose from the checkoff provisions of a contract between a division of the W. R. Grace & Co., and the Industrial & Professional Employes division of the National Maritime Union.

The contract provided for dues checkoff for employes who had signed the usual authorization. The authorization cards specified that the checkoff was irrevocable for a period of one year, or until contract expiration, whichever came first.

Several months later, the company informed the union that it had received written requests from three employes asking that the company stop deducting union dues from their paychecks.

Even though the employes had signed the checkoff authorization previously, Grace said it would honor their requests and then asked a U.S. District Court to rule on the question.

The NMU filed its own suit in the U.S. District Court at New York, seeking an injunction to compel the company to honor the original checkoff authorization.

The suits were consolidated in the Georgia court which ruled in favor of the union. That decision was upheld by the U.S. Appeals Court.

After the company appealed to the U.S. Supreme Court, Solicitor Gen. Erwin N. Griswold and General Counsel Arnold Ordman of the National Labor Relations Board, said in a memorandum to the court:

"The Georgia statute here impermissibly interferes with the process of collective bargaining fostered by the National Labor Relations Act by effectively incorporating into every checkoff arrangement the requirement that the checkoff arrangement be revocable at will, thereby precluding a binding agreement, voluntarily entered into, for the longer period permitted by federal law."

Jobless Benefits Due Locked-Out Workers

South Bend, Ind.—An Indiana appellate court has ruled that locked-out workers are entitled to unemployment compensation benefits for the duration of the lock-out if they are "unemployed through no fault of their own."

The ruling involves a three-month lock-out in 1968 by the Clip Pattern & Foundry Co. and three other foundries against members of the Pattern Makers Association in South Bend.

The companies closed their doors at the expiration of a contract.

The precedent-setting decision means that nearly 100 members of the union will receive retroactive unemployment benefits amounting to tens of thousands of dollars.

Max Wright, secretary-treasurer of the Indiana AFL-CIO, explained that the locked-out workers had applied for the benefits each week. When they were denied the benefits, they appealed the denial to the review board of the Indiana Employment Security Act.

Both a referee and the review board found that since no impasse had been reached in negotiations before the lock-out, the workers were unemployed through no fault of their own, and, therefore, entitled to the unemployment benefits.

The appellate court found that the evidence supported this finding because the employes had offered through the union to keep on working until a new agreement was reached. The employers, however, responded that the plants would be closed.

The court acknowledged the legal right of an employer to lock out his workers, but said that "he cannot use the Employment Security Act to further his cause."

The review board had found that the companies had given the union a "no contract, no work" ultimatum. The board summary said:

"At the time the employers decided to close their plants, there had been no work stoppage by employes, no overt actions by employes to curtail production by slow-down tactics, and no irregular attendance by employes. . . . The record is conclusive in that the facts show that work was available, the employes had continued working regularly, and they were ready and available for work."

The companies contended that there was an impasse in negotiations and that a labor dispute existed. But the appellate court held that the employes still had the right to unemployment compensation during the lockout unless their own intransigence had contributed to it.

Court Affirms Right to Sue Negligent Firm

Montgomery, Ala.—The State Supreme Court ruled in a precedent-setting decision that employes covered by the Alabama Workmen's Compensation Law or others may sue the employer, foreman, supervisor and other company officials for death or injury caused by negligence.

A five-judge panel decided by unanimous vote that two members of Laborers Local 366 in Sheffield, Ala., have the right under the law to sue for damages in excess of the $20,000 ceiling provided by the legislature.

Workmen's compensation laws are exclusively a state function and the laws differ from state to state. Only a few state courts have ruled that plaintiffs who file claims against insurance companies also may sue individual employers and other company officials.

Howell Heflin, Tuscumbia attorney who represents the Laborers in Sheffield, won a workmen's compensation award in the case of a union member who lost his life in an accident, and also sued the man's employer on the ground that he was negligent in the death of one man and the injuring of another. The insurance company appealed, and the state's high court ruled against it. No further appeal was filed in the time allowed by law.

Heflin will take the oath of office Jan. 18 as chief justice of the State Supreme Court. He was elected last November.

Levine Appointed Commission Head

New York—Louis L. Levine, who was for eight years the New York City Central Labor Council's community services committee director, has been named state industrial commissioner, succeeding M. P. Catherwood.

Levine, 43, directed the labor council's community services and rehabilitation programs for eight years. He was named deputy state industrial commissioner in 1966 and commissioner for labor affairs in 1969.

Wage-Hour Unit Reports Complaints on Increase

The number of complaints received by the Labor Dept.'s Wage-Hour Division jumped sharply in the July-November period of 1970, Administrator Robert D. Moran reported.

The division received 16,499 complaints during the period, an increase of 2,524 over the corresponding period of 1969.

The division handles complaints dealing with the minimum wage law, equal pay for men and women doing comparable work, and violations of the prohibition against age discrimination.

The largest number of complaints came from the four-state region, headquartered in Atlanta, encompassing Georgia, Florida, North Carolina and South Carolina. There were 3,200 complaints from those states during the period.

Next largest workload came from the Chicago-based region of Illinois, Michigan, Ohio, Indiana, Minnesota and Wisconsin, with 2,800 complaints filed.

Veto of Key Bills Mars 91st Congress

Legislators' Record Better Than Average

(Continued from Page 1)

It launched a big new maritime program of American-flag shipping.

It approved new and expanded programs for housing, transportation, crime control, hospitals and education.

Responding to national concern over the environment, it passed a strong bill to curb air pollution as well as a water pollution bill.

And the Senate showed its respect for the Supreme Court as an institution by rejecting the President's nomination of G. Harrold Carswell.

In the domestic area, these were the highlights of the second session of the 91st Congress, which opened Jan. 19, 1970 and continued until Jan. 2, 1971:

JOB SAFETY—For three years, the labor movement had sought passage of a strong occupational health and safety law. And for three years, the big employer organizations had battled to block any meaningful legislation.

The battle was largely won in the 1970 session of Congress. The new law, which takes effect this spring, requires the Secretary of Labor to set health and safety standards and to inspect workplaces to make sure the standards are met. A compromise put enforcement machinery in the hands of an independent board.

The final version was substantially closer to the labor-backed Williams-Daniels bill than to the cumbersome substitute supported by the Administration and employer groups.

Goal of the new law is to reduce the annual toll of some 14,500 accidental deaths and 2.5 million disabling injuries—and to undertake the research and standard-setting needed to protect workers against a mounting threat of occupational illnesses.

Congress also enacted during 1970 a railroad safety law, giving the Secretary of Transportation strong authority to set and enforce federal railroad safety standards.

CARSWELL NOMINATION—The Senate's rejection of Pres. Nixon's nomination of Clement Haynsworth to the Supreme Court was a highlight of the first session of the 91st Congress.

Most political observers considered it inconceivable that a majority of the Senate would also turn down his subsequent choice of G. Harrold Carswell, no matter how undistinguished his record and qualifications.

The AFL-CIO, working with civil rights groups, took an early stand against the nomination, which Federation Pres. George Meany termed "a slap in the face to the nation's Negro citizens." Leading lawyers—Republicans as well as Democrats—branded Carswell "mediocre." And the Senate, by a 51-45 vote, rejected the nomination.

MARITIME — This time, the trade union movement, the Administration and Congress were all on the same side. And the result was approval of a landmark law aimed at sending 300 modern new ships to sea over the next 10 years, built in American shipyards, flying the American flag and manned by U.S. seamen.

UNEMPLOYMENT INSURANCE—A compromise bill, short of labor's goals, extended unemployment insurance coverage to some 4.8 million additional workers —but continued to exclude farm workers.

The new law also provided a much-needed extension of unemployment benefits of at least 13 weeks during periods of high joblessness to persons who use up their regular state benefits and still are unemployed. But a number of states still have not yet passed enabling legislation to qualify for the extended program.

The AFL-CIO has sought universal coverage of all workers and federal minimum standards on both amount and duration of benefits.

PUBLIC SERVICE JOBS—Even before the present recession, the AFL-CIO had stressed the need for a public service jobs program to provide work for persons who couldn't find jobs in private industry.

With unemployment mounting month-by-month, the urgency grew —and Congress responded to it.

It passed a bill which included a large-scale public service jobs program as part of a manpower reorganization package the Administration had sought.

A key portion of the bill required the government to earmark approximately one-third of manpower funds for the public service jobs program.

Pres. Nixon vetoed the bill and the vote to override was short of the required two-thirds majority.

The veto, Meany said, was "a devastating attack on the unemployed, the unskilled and the poor, at a time of widespread joblessness created by the Administration's economic policies."

FEDERAL EMPLOYES—In the aftermath of a series of wildcat strikes by postal workers, the AFL-CIO and postal unions sat down with top Administration officials and negotiated a pay and collective bargaining package as part of a new semi-autonomous postal service.

While the House balked at a section authorizing a union shop agreement, the final legislation provided strong collective bargaining machinery, granted an early 6 percent pay raise for all federal workers and a later 8 percent raise for postal workers. It also paved the way for a bargaining agreement to cut the time lag to top pay rates from 21 to eight years.

The new law is a landmark in the federal government's relations with its employes.

In one of its last acts before adjournment, Congress approved new pay-setting machinery for federal white-collar employes aimed at bringing them up to comparability with private industry through semi-automatic annual raises. Their unions will have a say in the machinery and the first-installment raise has been made retroactive to the first pay period in January.

Congress also voted an additional 4 percent pay step for long-service blue-collar workers, who are paid under the wage board system of area prevailing rates.

But Pres. Nixon vetoed this bill as "inflationary" and Congress was too close to adjournment to vote on overriding the veto. The bill also would have strengthened collective bargaining machinery and provided a wage board system for workers employed at military post exchanges and other self-financing activities.

An end-of-the-session presidential "pocket veto" killed another labor-supported federal employe bill. This one would have given fire fighters at government installations the same early retirement benefits accorded other groups of workers in hazardous jobs.

One modest accomplishment was passage of a bill raising the government's contribution to its employes' health insurance to 40 percent of the premium cost. The Administration had threatened to veto any higher amount.

KNOW YOUR STEWARD program of Machinists' District 727 in Burbank, Calif., was initiated in the district's newspaper with a feature story on Mrs. Vicki Bowker. She is a senior shop steward on the swing shift at a Lockheed aircraft plant in Burbank. The program is designed to better acquaint IAM members with their stewards.

FOOD STAMPS—Strong congressional concern over hunger in America was reflected in Senate passage, during the 1969 session, of major improvements in the government's food stamp program. But the conservative-dominated House Agriculture Committee and the Rules Committee bottled up the bill until late in the second session. And, with too many liberals absent from the floor during a key vote, the House passed a harsh, restrictive bill.

Conservative Senate conferees quickly agreed to most of its provisions and, with the authorization for the program about to expire, the conference agreement was passed shortly before adjournment under a warning that it was the inferior bill or nothing. Labor had worked hard for a good bill and the final action was one of the big disappointments of the session.

HOUSING—There was good and bad news in housing legislation during the 1970 session.

On the plus side, Congress approved a labor-supported housing bill that would inaugurate important new programs as well as raise the spending ceiling on continuing federal aid to housing.

It includes federal aid for economically balanced "new towns" in metropolitan areas, a migrant housing program, and subsidies to close the gap between expenses and rental income in public housing developments.

Earlier, however, Pres. Nixon had vetoed an appropriations bill for the Dept. of Housing & Urban Development as too costly and Congress passed a pared-down measure after failing to override the veto.

Another disappointment was the failure of Congress to create a "bank of last resort" to provide housing loans for low and moderate income families priced out of the home market by high interest rates.

Congress did, however, approve an expanded program of federal mass transit grants to improve bus and subway service in urban areas.

POLLUTION—A major accomplishment of the second session was passage of Sen. Edmund Muskie's bill setting strong clean air standards and requiring auto manufacturers to cut down carbon monoxide pollution 90 percent by 1975. The Administration had backed a much weaker bill.

Also approved at the 1970 session were bills making responsible parties pay the cost of cleaning up oil spills and authorizing a large-scale research and construction program for new solid waste disposal systems.

VOTING RIGHTS—Two big battles were won in a single bill—the Voting Rights Act of 1970.

The 1965 law, which abolished all the restrictions and subterfuges that had kept Southern Negroes from voting since the Reconstruction Era, was about to expire. The Nixon Administration had sought to replace it with a watered-down nationwide law, which civil rights groups and the AFL-CIO warned would invite a return to past practices.

Instead, Congress approved a five-year extension of the 1965 law, adding abolition of all literacy tests nationwide, set maximum residence requirements of 30 days for voting in presidential elections—and lowered the voting age to 18, starting in 1971.

ELECTION REFORM—A Senate filibuster and a presidential veto dashed hopes for action in 1970 on two important measures—a proposed constitutional amendment to provide for direct election of the President and a law curbing spending on political broadcasts during election campaigns.

In 1969, the House had approved the labor-supported direct election amendment by a 339-70 vote, well over the required two-thirds majority. But Senate opponents refused to let it come to a vote and an attempt to limit debate fell short of the two-thirds needed under Senate rules.

Both the House and Senate, by big margins, passed the political broadcasting bill, which the AFL-CIO strongly supported as a means of preventing domination of the airwaves by the candidates or parties with the most money. But Pres. Nixon, presumably aware of the 2-1 spending advantage the Republicans had in TV and radio campaigning in 1968, vetoed the bill and the effort to override fell short.

EDUCATION FUNDS—Congress rebelled against Pres. Nixon's continuing efforts to pin an "inflationary" label on aid to education funds. During the 1970 session, the President vetoed one education appropriations bill too many. This time, both the House and Senate mustered the two-thirds majority necessary to override the veto.

HEALTH PROGRAMS—While Congress did not act this year on an urgently needed national health insurance program, Senate hearings set the stage for a major battle in the 92nd Congress.

An expanded hospital construction and modernization program moved ahead—despite Pres. Nixon's veto of a bill updating the Hill-Burton Act. The veto was overridden, 279-98 in the House and 76-19 in the Senate.

But the President used a challenged "pocket veto" to kill a bill for federal grants to train more family doctors. By announcing that he was withholding his signature while Congress was in a short-term Christmas recess, the President blocked a vote on overriding. But a number of congressmen and senators have questioned the legality of the pocket veto under such circumstances.

RAILROADS—For rail workers, there was a 15 percent retirement benefit boost, tied in with the social security increase of the previous year.

But there was also continued congressional determination to keep workers from striking even after all procedures of the Railway Labor Act were exhausted. Two strike-ban bills were enacted in 1970.

In an effort to salvage the remnants of rail passenger service, Congress set up a semi-public corporation, commonly known as Railpax, to operate a nationwide inter-city passenger train network.

AND ALSO . . . Congress expanded the school lunch program and set a compromise ceiling of $55,000 on subsidies to the nation's big-business farm owners.

It approved legislation protecting consumers against credit card losses and curbing abuses by credit-reporting agencies which collect and circulate financial and personal information about customers. But a number of other consumer bills failed to pass.

Congress failed to reach a permanent agreement on financing of the supersonic transport plane. It withheld part of the U.S. contribution to the International Labor Organization as a mark of displeasure at the increased Communist-bloc role.

It voted standby anti-inflation control power to the President, but Nixon said he didn't plan to make use of it. And it adopted an internal legislative reform package which will add to the public's knowledge of how congressmen vote in committees and in previously unrecorded teller votes on amendments to bills.

Unless Signals Changed:

Unemployment Rate Points Toward 6.5%

Pres. Nixon's economic strategy threatens to send the unemployment rate up to 6.5 percent by midyear, AFL-CIO Research Director Nat Goldfinger warned.

"Unless the Administration takes massive expansionary actions—very decisive action—to boost sales, production and employment, unemployment is going to continue to rise through most of the rest of the year," Goldfinger said on a network radio interview.

"It may well reach 6.5 percent or higher by the summer and fall of this year," he said.

Goldfinger, the AFL-CIO's top economist, said the basic cause of high unemployment is the Administration's squeeze on the economy during the past two years.

He expressed "grave doubts" that Pres. Nixon's proposed "mini-expansion" would provide the massive stimulus needed to reverse the economic slide of the past two years.

"The basic reason for the rise in unemployment, the decline in sales and production, and the general weakness in the economy is the fact that when the Administration came into office in January 1969, it set forth an economic policy to choke off the expansion of the American economy," he said.

"They squeezed the American economy—during most of 1969 and into early 1970—and we're all paying the price for that, particularly the working people of this country."

The AFL-CIO research director said he failed to see what Pres. Nixon means by "expansionary policy" in light of the President's veto of such bills as the Manpower Act, which would have provided public service jobs for the long-term unemployed and the chronically underemployed.

"It would seem to me that if he wants an expansionary policy—if he wants an increase of government expenditures for vital social needs such as housing, hospitals and education, the thing to have done was accept the legislation that was passed by Congress."

Goldfinger said that if the President took such actions, it would not only create jobs and increase purchasing power in a consumer-goods oriented economy, it would also strengthen the fabric of society.

An increase in the money supply also is needed, he said, as he called on the Administration and the Federal Reserve Board to drive down interest rates.

"These are the kind of actions that could be taken to stimulate the economy, and to create jobs, and to boost production and employment," he said.

Goldfinger spoke on Labor News Conference, a public affairs broadcast produced by the AFL-CIO and aired Tuesdays on Mutual radio.

UNEMPLOYMENT will go even higher unless Pres. Nixon changes his economic strategy, AFL-CIO Research Director Nat Goldfinger warned. Goldfinger, center, was interviewed on Labor News Conference by William Eaton, left, of the Chicago Daily News and Murray Seeger of the Los Angeles Times.

Stone Workers' Merger Completed

Barre, Vt.—Amalgamation of the Stone Workers with the Steelworkers has been completed, officers of the two organizations reported. A merger approved by conventions of both groups took effect this month.

Top officers and staff members of the former Stone Workers are now international representatives or USWA staff members, and three headquarters offices—at Barre, Alpena, Mich., and Carlsbad, N.M., will remain open as field offices. The stone union's publication, the Beacon News, has been integrated with Steel Labor.

Now on the USWA staff are former Presidents Gaston LeBlanc, Pittsburgh, and Robert W. Kurtz, Alpena, and former Sec.-Treas. John C. Lawson, Barre.

Tax Cut for Industry 'Incredible' Giveaway

(Continued from Page 1)

simplify income tax procedures.

All this would cost the Treasury in tax revenue $2.6 billion this year, rising to $4.1 billion in 1976 and then tapering off to $2.8 billion a year by 1980, according to the Administration's own estimates.

In brief, the Treasury action would allow business to write off equipment for tax purposes in as much as one-fifth shorter time than is allowed under current tax guidelines.

Treasury Sec. David M. Kennedy contended that the Administration had the power and authority to institute the tax break for business through "administrative" changes rather than getting the approval of Congress.

But a day after Nixon "approved" the tax cuts for business retroactive to Jan. 1, the Administration acknowledged that it had not followed the procedure required by law for tax rules changes, and said the plan would not go into effect until after public hearings.

The hearings are required under the Administrative Procedure Act before any tax regulation is implemented unless the change is "favorable to all taxpayers," said Assistant Treasury Sec. Edwin S. Cohen.

He admitted that the new tax rule prescribed by the Administration "may be favorable to some taxpayers but . . . would be unfair to others."

Thus, the proper step would be to hold hearings on the proposal, Cohen said. But the previous day, when the changes were announced, the Administration gave no indication that hearings would follow.

The three key features in the accelerated depreciation allowances call for:

- An optional "asset depreciation range" system so a business can take its depreciation deductions of 20 percent shorter—or 20 percent longer—than specified in current standard guidelines for equipment and machinery.
- A choice of "first year conventions" that would allow the asset depreciation range to give a bigger deduction soon after the equipment is installed.
- Abolishing the "reserve ratio test" so businesses that continue to use old guidelines need not prove that they're actually replacing equipment that rapidly.

Economist Walter W. Heller, chief of economic strategy in the Kennedy and Johnson administrations, said that the loss in revenue by the proposed tax changes for business would be permanent—not merely temporary as the Administration predicts—and would be of little help in creating jobs.

"This bonanza looks passing strange in the light of Mr. Nixon's veto of the manpower bill," Heller declared.

He suggested that the Administration action was "the wrong thing" to do to stimulate the economy.

Paul W. McCracken, present chairman of the President's Council of Economic Advisers, conceded that the initial impact on capital spending would be minimal. Capital spending is estimated to rise only 1.4 percent this year to $81.7 billion.

In the long run, McCracken contended that the accelerated tax write-off would increase productivity, which would in turn create more jobs. But in answer to a newsman's question, he could give no estimate on how many jobs the proposal was supposed to create.

Court Upholds Ruling Against Airline Firings

The Supreme Court refused to review, and therefore let stand, an Appeals Court decision that National Airlines broke the law when it fired 940 members of the Machinists in a protest walkout in 1969.

The IAM said National now is obligated to give lost pay, shift differentials, cost-of-living bonuses and the cost of hospital and insurance benefits to the employes, who won a new contract and returned to work after being locked out for a year or more. Besides backpay of as much as $10,000, the airline also must pay into pension, social security and jobless insurance funds.

A three-judge panel of the 5th U.S. Circuit Court of Appeals, New Orleans, found in 1969 and again in 1970 that National's mass discharge of IAM mechanics and other ground crewmen was not justified under the Railway Labor Act. The men had walked out to protest the layoff of three mechanics in a safety dispute at John F. Kennedy International Airport, New York, N.Y.

Previously, the Supreme Court had ruled that under the National Labor Relations Act employers could discharge workers engaged in an unauthorized strike.

However, under the Railway Labor Act, which covers railroads and airlines, detailed procedures are spelled out and both management and labor are required to maintain the status quo until those procedures are exhausted.

In a separate case, the Supreme Court refused to hear an appeal by the Machinists on behalf of 307 National employes who were denied unemployment compensation by Florida because state law bars benefits in a labor dispute.

1-16-71

HEW Delays Radiation Safeguards For Underground Uranium Miners

(Continued from Page 1)

The letter asked Richardson to explain what is being done to meet, or exceed, the new deadline of June 30.

"It is our understanding," Biemiller said, "that the results of additional studies conducted during the past two years or more, including economic impact of the more stringent standards on the uranium mining industry, have demonstrated both its need and feasibility."

The 1968 order would have set new exposure limits of four-tenths of one working level of radiation per month. Currently, miners are exposed to one full working level a month.

A "working level" is the amount of radioactivity measured in a liter of air.

The radiation in the air is caused by "daughter elements" of uranium that attach themselves to dust particles inhaled into the miners' lungs and bronchial passages.

During 1968 Labor Dept. hearings on new standards of radiation exposure, uranium-producing companies contended that it would be too costly to reduce the radiation hazard by installing fans and ventilating equipment to bring fresh air into the mines.

AFL-CIO Economist George Taylor expressed little sympathy for the companies, stating that "if it is not economical to operate a safe place for the workers to work, then the employer should not be permitted to operate a uranium mine."

A study during the past two years has shown that the stricter standards will not be nearly as severe as predicted by the uranium companies who said the increased costs would put them out of business.

A report for the Federal Radiation Council by Arthur D. Little, Inc., concluded that the stricter standards would add another 20 cents a pound to the cost of mining uranium oxide ore.

Postponement of the new restrictions brought a sharp reaction from Wilbur J. Cohen, HEW Secretary under the Johnson Administration.

In a telegram to the White House, Cohen said that delays in lowering the exposure to radioactivity in the mines would be "a serious threat to the health of American workers."

The telegram, signed by a number of health and labor officials, including Anthony Mazzocchi of the Oil, Chemical & Atomic Workers, read in part:

"We earnestly appeal to you to place the lives of our fellow citizens above all other economic and administrative considerations and allow the existing regulations to go into effect as presently provided."

Cohen termed the postponement "very unwise."

"It is essential to protect the health of the uranium miners," he said. "When I took my action, the Atomic Energy Commission was opposed to it. Their interest was in uranium production."

Reports Cite Fire Fighting Job Hazards

South Bend, Ind.—Fire fighting was described as the nation's most hazardous occupation at a symposium here on occupational health and hazards of the fire service.

The three-day session, bringing together fire fighters, administrators and medical and scientific research experts, was sponsored by the John P. Redmond Memorial Fund of the Fire Fighters.

Dr. Roswell L. Atwood, the union's research and education director, reported that his surveys found the occupational death rate of fire fighters the highest of all occupations.

The union's figures showed 107 job-related deaths per 100,000 fire fighters and on-the-job injury rate of 37 per 100 fire fighters.

N.Y. State Sets Referendum on 18-Year Vote

Albany, N.Y.—The New York State Legislature has given overwhelming approval to a state constitutional amendment lowering the voting age from 21 to 18 in all state and local elections.

If the amendment is approved by New York voters in a referendum next November, 930,000 young people between the ages of 18 and 21 will be eligible to vote in the 1972 state elections.

A compelling reason for passage of the amendment by the legislature was bringing state law into conformity with new federal voting standards. This will avoid the confusion and complexity of separate ballots and voting lists for federal offices and for state and local offices.

The move had strong bipartisan support and labor endorsement.

Labor, Liberals Open Drive To Enact New Health Plan

COMPLETE SUPPORT of the AFL-CIO for a National Health Security program is announced by Federation Legislative Director Andrew J. Biemiller at a press conference launching the drive to win enactment of the program. Other sponsors and supporters, from left, are Dr. Michael E. DeBakey, Sen. John Sherman Cooper (R-Ky.), Max Fine of the Committee for National Health Insurance, Sen. Edward M. Kennedy (D-Mass.), and Pres. Leonard Woodcock of the Auto Workers who is chairman of the Committee for National Health Insurance. Behind Biemiller is Clarence Mitchell, Jr., of the NAACP.

Program Offers Solution to Costs

By John R. Oravec

An improved national health care program that has the strong support of organized labor was unveiled as the answer to the need for quality medical services for all Americans at a price they can afford.

The proposed Health Security Act of 1971, sponsored by a bipartisan group of senators and congressmen, embodies the best elements of bills calling for national health insurance that were introduced in Congress last year.

Besides improving services for all citizens, the National Health Security program is designed to expand the resources of the nation's entire health care system. This would include recruiting and training more doctors, nurses and medical technicians along with support for innovative health programs and group practice development.

A full range of medical coverage would provide for the prevention and early detection of disease, the care and treatment of illness, and medical rehabilitation. Partial coverage is proposed for dental care, skilled nursing home care, psychiatric treatment and prescribed medicines.

The starting date for benefits would be July 1, 1973, after two years of preparatory financing of the program under a proposed Resources Development Fund.

The legislation calls for general tax revenues of the federal government to provide 50 percent of funds for the program. The other half would come from a health security tax on employers, workers and self-employed individuals. **(Details, Page 7.)**

AFL-CIO Legislative Director Andrew J. Biemiller pointed out that under the proposal there would be no increase in taxes for workers earning less than $7,800 a year.

Biemiller represented the federa-

Rules Fight First Issue In Congress

The 92nd Congress opened its first session with battles over rules reform and contests for party leadership posts topping the agenda in both the House and Senate.

Democrats shuffled their leadership teams in both the House and Senate as party caucuses met before the opening of Congress.

At the start of the session, the House formally elected Carl Albert of Oklahoma as its new Speaker. Albert, 62, was the overwhelming choice of the Democratic caucus to succeed John W. McCormack, who retired from Congress after 22 terms.

To succeed Albert as majority leader, the Democratic caucus chose Hale Boggs of Louisiana, who had served his apprenticeship as party whip or assistant leader. Boggs, 56, won an easy second-ballot victory after leading a five-man field on the first tally.

There were hotly-contested leadership battles on the Senate side, in both the Democratic and Republican caucuses.

Democrats renamed Mike Mansfield (Mont.) as majority leader wtihout opposition. But in

Recession, Inflation Blamed:

Nation's Real Total Output Shows First Dip Since 1958

Recession and inflation showed their impact on the nation's economy in 1970 as the real gross national product—the total value of the country's output of goods and services—slipped $2.8 billion over the year.

The decline in real output was the first since 1958—an Eisenhower Administration recession year. A major factor was the 5.3 percent increase in prices, the largest since 1951.

Adjusted to 1958 dollars, the real GNP totalled $724.3 billion, fourtenths of 1 percent below the 1969 output of $727.1 billion, the Commerce Dept.'s Office of Business Economics reported.

Preliminary estimates of the GNP for 1970 in current dollars amounted to $976.8 billion, an increase of $45.4 billion from 1969, the government noted.

In the last three months of 1970, real output fell at an annual rate of 3.3 percent, with the Commerce Dept. attributing the decline largely to the auto strike. But even before the auto strike, the real GNP was running behind the 1969 pace in the first two quarters of the year. Only the third quarter showed a growth rate above the 1969 level.

Assistant Commerce Sec. Harold C. Passer said that direct and indirect effects of the General Motors strike cost about $14 billion to $15 billion in lost production during the fourth quarter. But the Wall Street Journal cited the estimates of several other economists that the impact of the strike was less severe—possibly in the $10 billion range.

Even if the $14 billion were added to fourth quarter GNP, this would produce only a slight increase in the real GNP for the period—about 2.5 percent.

Consumer spending — covering durable and nondurable goods and services—amounted to $616.8 billion last year, compared with $577.5 billion in 1969, according to the report.

Prices in the fourth quarter rose at an annual rate of 5.7 percent, somewhat higher than the 4.6 and 4.3 percent increases recorded in two preceding quarters, but not as much as the 6.4 percent rate in the first three months of 1970.

The price increases are calculated in the GNP "implicit price deflator"—a measure of overall price changes.

Spending for durable goods over the year declined to $89.4 billion from $90 billion in 1969, the report showed. Spending for nondurable goods amounted to $264.7 billion, up about $19 billion, and spending

Meany Appoints Panel On Solid Waste Issues

A greater national commitment to solving the problems of solid waste disposal was urged by Federation Pres. George Meany as he announced the formation of an AFL-CIO committee to study the problems.

Meany made the announcement during an address to the annual luncheon of the National Coordinating Committee on the Beverage Industry.

Member unions of the committee are vitally concerned with waste disposal because the production of nonreturnable bottles, cans and other containers—involving tens of thousands of jobs—has become a subject of heated debate.

"As part of labor's commitment to the effort," Meany told luncheon guests, "I have appointed a committee of international union presidents to present their recommendations on this problem to the AFL-CIO Executive Council when it meets about four weeks from now."

The federation president warned

(Continued on Page 2)

Rail Unions Voice Hope Of Settling Long Dispute

Leaders of four major railroad unions expressed hope for a negotiated settlement of their year-long dispute over new contracts for 500,000 workers as one union called its general chairmen to Washington and the Labor Dept. summoned the others to resume talks with management.

Pres. C. L. Dennis of the Railway & Airline Clerks said his union's 300-member board of general chairmen was scheduled to hear a report Jan. 22 of management's latest proposal.

No details were given, but Dennis told a news conference he was "hopeful we can soon announce a settlement" of the BRAC dispute over wages and work rules on all the nation's Class 1 railroads. Dennis said the chairmen will be asked to ratify an agreement if one is reached, or consider further action to be taken after a no-strike law imposed by Congress reaches its expiration date, Mar. 1.

The other three unions in the

(Continued on Page 3)

Meany Names Panel to Study Waste Disposal

(Continued from Page 1)

that "quick, easy solutions" to the problems of waste disposal "may not be solutions at all."

"It is easy to point the finger," he said, "to call for banning returnable bottles. It is easy to point to a beer can cast thoughtlessly beside the road by a lawbreaker and say: 'If we ban that can there'll be no more litter.'

"It is easy, but it is not true. And it is not true because that's a program for banning jobs, not eliminating litter."

As alternatives to a course of action that would increase unemployment, Meany pointed to waste disposal plans now being researched under the auspices of the Resource Recovery Act of 1970.

The law authorizes the newly created Bureau of Solid Waste Management to spend more than $460 million in the next three years to study ways of reusing some of the 4.3 billion tons of solid waste produced in this country each year —including 30 billion glass bottles and 60 million cans.

Meany listed two approaches:

- Recycling of glass bottles and cans to other uses. Bottles can be crushed and made into paving material. Cans can be melted down and reused, thus conserving vital natural resources.
- Using compacted refuse as a source of electrical power. Burning refuse in this manner contributes little to air pollution since low amounts of sulfur dioxide are produced.

"While necessary research is being undertaken," Meany said, "there is one thing we must do. Strict laws, enforced to the highest degree possible, do have an effect on litter. Littering is not only unsightly, it is illegal. And it should be treated as such."

He noted that bottles and cans are not the sole pollution problem, but part of a much larger crisis facing the nation.

He congratulated the beverage industry for not "ducking the question" and for "working to help find solutions." And he pledged that labor would continue its own efforts, including support for anti-litter campaigns.

"Keeping litter in cars and off highways seems like a small effort, he observed. "But small efforts, individual actions, labor and management cooperation, expanded government enforcement—the sum of all these will mark the success of our efforts to preserve the environment."

2 Union Officers Elected to Board

The heads of two unions—Pres. I. W. Abel of the Steelworkers and Pres. Lee W. Minton of the Glass Bottle Blowers—have been elected to the board of the National Center for Solid Waste Disposal.

The center, a joint labor-management venture in Washington, D.C., will undertake a program of research and action in the field of solid waste control, including reclamation and reuse of products.

Donald M. Kendall, chairman of the board for the center, said it will define the way in which waste collection and disposal systems function, locate their weaknesses and "propose systems which are compatible with the physical requirement of American life."

The center has assured Congress and the Administration that all its actions and programs will be compatible with anti-pollution steps being taken by the government.

ORIGINAL AFL CHARTER of the Utah State Federation of Labor is inspected by Pres. C. Everett Berger of the Utah AFL-CIO at a ceremony marking the opening of labor archives at the University of Utah. Ralph D. Thomson, left, director of university libraries, presented a copy of the charter to Berger. Documents covering the activities of the labor movement in Utah dating back to the 1880s are in the university collection.

2-Year Contract Settles Chicago School Strike

Chicago—Union teachers won their first two-year contract agreement from the Board of Education after a four-day walkout.

Mayor Richard J. Daley mediated the final talks that covered a period of 12 hours and produced an agreement to increase wages by 8 percent retroactive to Jan. 4, with another 8 percent next January.

School officials finally abandoned the argument that a two-year contract is against the law. Daley said he is confident the legislature will change the law and help provide more money to run the city's 533 public schools. Gov. Richard B. Ogilvie said he doubts it, but a majority of 20,000 strikers voted to accept the settlement and returned to classes Jan. 18.

The new salary schedule raises starting pay for teachers with an A.B. degree from $8,400 to $9,072 as of Jan. 1, 1971, with a top salary of $14,458 after 15 years. Those with a master's degree will get a minimum of $9,692 and a maximum of $15,477.

Effective next Jan. 1, the salary range will be from $9,727 to $15,613 for the bachelor's degree and from $10,468 to $16,716 for the master's degree—both in 15 steps.

The board also agreed to hire 500 to 600 additional teachers to relieve overcrowding, put teachers' aides in the union bargaining unit, pay the full cost of hospitalization insurance for teachers and their dependents, and to make improvements giving AFT Local 1 one of the nation's best school contracts.

The Chicago strike started Jan. 12 and included a day the board decided would be a holiday in memory of the late Dr. Martin Luther King, Jr. The holiday will be included in future contracts, it told the union.

Another AFT strike, at Eau Claire, Wis., ended in an agreement that raises all scheduled salary steps by 6 percent and increases health insurance benefits. The issue of class-size limits will be submitted to binding arbitration.

Other strikes continue—at Chicago City College, where 800 to 1,000 teachers resumed picketing after a court order was dismissed; and Scranton, Pa., where the State Dept. of Education ordered five secondary schools closed because of a lack of qualified teachers in a strike that started Dec. 23.

J. Schlossberg, Clothing Union Pioneer, Dies

New York—Joseph Schlossberg, who helped found the Clothing Workers and battled all his life for union rights, died at his home in the Bronx at the age of 95.

Schlossberg, who came here from Russia and went to work at 13, was a forceful leader, speaker and writer. An early rebel against sweatshops in the needle trades, he became secretary-treasurer of the New York Joint Board of the Brotherhood of Tailors and first general secretary-treasurer of the ACWA. He was a member for 28 years of the Board of Higher Education here.

Schlossberg wrote for the English and Yiddish labor press, published a book of essays on "The Workers and Their World," and was editor of Abendblatt and Arbeiter, Yiddish labor papers. For some years he was editor of Advance, the Clothing Workers newspaper.

Schlossberg helped organize the Congress for Labor Palestine in 1918. He was a charter member of the National Committtee for Labor Israel, and was elected its president in 1934. The Israeli labor federation, Histadrut, established a cultural center in his honor later in Ashkelon, Israel.

He had been a director of the American Civil Liberties Union, the Amalgamated Bank of New York, the Yiddish Scientific Institute, and a governor of the American Association for Jewish Education. His wife Anna and two children survive.

John McManus Named Assistant CSA Director

John J. McManus, former executive director of the Long Island United Fund, has joined the AFL-CIO staff as assistant director of community service activities.

McManus, 46, headed the United Fund of Long Island Inc. since its founding in 1965. Earlier he had served three years each as Nassau County, N.Y., public welfare commissioner and as executive director of the county Health & Welfare Council.

For 1971:

Scheduled List of Union Conventions

Below is a list of conventions scheduled for 1971 by AFL-CIO national and international affiliates, departments and state central bodies. Changes and additions will be reported.

DATE	ORGANIZATION	PLACE
Apr. 12-15	Louisiana	Baton Rouge
Apr. 12-16	Coopers	Niagara Falls, Ont.
Apr. 14-19	Utility Workers	Washington, D.C.
Apr. 26	Metal Polishers	Cincinnati, O.
Apr. 29-May 1	Arizona	Tucson
May 3	Firemen & Oilers	Bal Harbour, Fla.
May 6-14	Ladies' Garment Workers	Miami Beach, Fla.
May 10-14	Jewelry Workers	Miami Beach, Fla.
May 17	Grain Millers	Minneapolis, Minn.
May 17-22	Printers, Die Stampers & Engravers	Philadelphia, Pa.
May 23-30	Railway, Airline & Steamship Clerks	Miami Beach, Fla.
May 24-28	Insurance Workers	Miami Beach, Fla.
May 25-27	Pennsylvania	Philadelphia
June 6-9	Arkansas	Hot Springs
June 6-11	Office & Profesional Employes	Miami Beach, Fla.
June 7-9	Idaho	Boise
June 7-18	Flint Glass Workers	Miami Beach, Fla.
June 14	Hotel & Restaurant Employes	Chicago, Ill.
June 14-16	Michigan	Grand Rapids
June 14-18	Communications Workers	Kansas City, Mo.
June 27-31	Musicians	Seattle, Wash.
June (no date)	Actors & Artistes	New York, N.Y.
June (no date)	New Jersey	Atlantic City
July 12-16	Newspaper Guild	Boston, Mass.
July 19	Longshoremen	Miami Beach, Fla.
July 19-23	Elevator Constructors	Bal Harbour, Fla.
July 26-30	Pottery & Allied Workers	Las Vegas, Nev.
July (no date)	Stove, Furnace & Allied Appliance Workers	Colorado Springs, Colo.
Aug. 1	Molders & Allied Workers	Cincinnati, O.
Aug. 1-6	Oil, Chemical & Atomic Workers	Bal Harbour, Fla.
Aug. 2-6	Plumbers & Pipe Fitters	Denver, Colo.
Aug. 6-8	Nevada	Reno
Aug. 7-13	Typographical Union	Miami, Fla.
Aug. 9	Transportation Union	Miami Beach, Fla.
Aug. 9-11	New York	New York, N.Y.
Aug. 16	Aluminum Workers	Huntsville, Ala.
Aug. 16-20	Teachers	San Francisco, Calif.
Aug. 19	Montana	Helena
Aug. 22-27	Plasterers & Cement Masons	Toronto, Ont.
Aug. 23-25	Virginia	Roanoke
Aug. 30-Sept. 3	Pulp, Sulphite & Paper Mill Workers	Montreal, Que.
Aug. (no date)	Texas	Dallas
Sept. 3-5	Siderographers	Philadelphia, Pa.
Sept. 6-10	British Trades Union Congress	Blackpool, England
Sept. 13	Stereotypers & Electrotypers	Indianapolis, Ind.
Sept. 13-15	Marble, Slate & Stone Polishers	Chicago, Ill.
Sept. 13-15	Minnesota	Minneapolis
Sept. 13-15	Tennessee	Nashville
Sept. 15-17	Connecticut	New Haven
Sept. 19-26	Laborers	Miami Beach, Fla.
Sept. 20	Bill Posters, Billers & Distributors	Philadelphia, Pa.
Sept. 20-24	Oregon	Eugene
Sept. 20-24	Woodworkers	Kansas City, Mo.
Sept. 22-24	Iowa	Davenport
Sept. 24-26	Hawaii	Honolulu
Sept. 27-29	Nebraska	North Platte
Sept. 27-Oct. 1	Transit Union	Las Vegas, Nev.
Sept. (no date)	Sleeping Car Porters	Chicago, Ill.
Oct. 4-7	Illinois	Springfield
Oct. 4-8	Allied Industrial Workers	St. Louis, Mo.
Oct. 4-8	Massachusetts	Boston
Oct. 11-14	Florida	Jacksonville
Oct. 18-20	Train Dispatchers	Chicago, Ill.
Oct. 18-22	Telegraph Workers	Denver, Colo.
Oct. 20-22	Georgia	Atlanta
Oct. 22-24	North Dakota	Jamestown
Oct. 26-29	Oklahoma	Oklahoma City
Oct. 28-30	West Virginia	Charleston
Oct. (no date)	New Hampshire	(Not set)
Nov. 1-5	Flight Engineers	Lisbon, Portugal
Nov. 1-6	Lithographers & Photoengravers	New Orleans, La.
Nov. 8-10	Metal Trades Dept.	Miami Beach, Fla.
Nov. 13-17	Intl. Labor Press Assn.	Miami Beach, Fla.
Nov. 15-16	Union Label & Service Trades	Bal Harbour, Fla.
Nov. 15-17	Maritime Trades Dept.	Bal Harbour, Fla.
Nov. 18-23	AFL-CIO National Auxiliaries	Miami, Fla.

Gulf 'Pattern' Prevails:

Oil Talks Wrap Up 90% of Agreements

Denver—The Oil, Chemical & Atomic Workers have passed the 90 percent mark in negotiating improved contracts for the 57,000 oil industry workers the union represents, Pres. A. F. Grospiron announced.

New two-year agreements with most major companies call for an improvement of $135 a month for the average oil refinery worker by January 1972, Grospiron said. The figure is based on an average of $125 a month in higher wages and holiday pay premiums, and a reduction of $10 a month in payroll deductions for hospitalization insurance.

Some increases, in the $200 a month range, were won for groups of truck drivers and marketing terminal employes.

Grospiron said agreement has been reached on contracts covering some 50,000 members in separate negotiations with 90 companies. The new two-year agreements follow the "pattern" settlement with Gulf Oil Corp., established shortly before major contracts expired last Dec. 31.

Contracts approved by the national oil bargaining committee generally provide wage increases totaling 16 percent, full pensions at age 62 with benefits $50 to $80 a month higher than in the expired contracts, and other gains.

"We have established basic patterns of settlement with the major companies," the union spokesman said. "We still have some mop-up work to do in some minor facilities of major companies, and we are concluding agreements with minor firms as rapidly as we can."

Grospiron said strikes still are under way against three "obstinate" companies, "but these involve only about 1,700 of our members."

One strike involves local plant-level issues at Union Oil Co. facilities in Port Neches, Tex., and Lemont, Ill. Two others, on national contract issues—wages, pensions and other benefits—are against Husky Oil Co. at Cheyenne and Cody, Wyo., and North Salt Lake City, Utah; and Ashland Oil Co. at Ashland, Ky., and Canton, O.

The OCAW president said he considers current settlements "fair and realistic, although they do not contain all we believe the workers are entitled to."

Grospiron emphasized that the contract gains "do not justify, and we do not believe they will cause, increases in the prices of consumer products." The costs can be absorbed, he said, "because of the magnificent increase in the productivity of oil workers who constantly are turning out more products per hour of labor."

The pattern agreement at Gulf raises wages by 8.5 percent this year and an additional 7.5 percent in 1972. Gulf agreed to pay an additional $5 a month each year toward the cost of hospital and medical insurance to a peak of $25 a month for employes and their families.

The new pact requires Gulf to give advance notice of at least six months in plant shutdowns. Also it gives the union the right to negotiate benefits for laid-off employes, and provides one additional paid holiday and pension improvements among other gains.

Top Officers Of Stereotypers Are Re-elected

New York—The Stereotypers announced that all current officers were re-elected in a membership referendum and reported continuing progress in talks aimed at merging their union and the Printing Pressmen.

The union said a committee is currently drafting a letter of intent to merge with the Pressmen. When agreement is reached on merger terms, a special convention can be called for a vote on approval or rejection.

In the membership vote, results were as follows: Pres. James H. Sampson defeated Walter E. Baker, 5,039 to 2,703. Also re-elected over their challengers were Vice Pres. Charles F. Brennan, Vice Pres. George Robinson, Canadian Vice Pres. George P. Fry and Sec.-Treas. Frank G. Creamer. James J. Kelley, Journal editor, also won a new term.

Sampson has offices in Chicago, Creamer in Flushing, N.Y., and Kelley in Cleveland, O.

Seven constitutional changes were approved by more than two thirds of those voting. They involved pension rights of officers and staff representatives, authority to assess members when the mortuary fund falls below $125,000, and other internal matters.

Wage, Pension Gains Negotiated at Chrysler

Detroit—A new agreement between the Auto Workers and Chrysler Corp. follows the pattern of wage increases and working conditions won earlier from General Motors and Ford Motor. One additional provision calls for establishment of a joint labor-management committee to investigate the possibility of a four-day 40-hour workweek for Chrysler's 110,000 production workers.

Members walked off the job at eight Chrysler plants but returned when a tentative settlement was reached. It provides wage increases averaging 51 cents an hour retroactive to Nov. 2 plus 14 cents an hour in each of the next two years; removal of the ceiling on cost-of-living increases, and a pension of $500 a month after 30 years of service by age 58.

The proposal will be submitted to the UAW Chrysler Council and then to members for a vote. Close to settlement also is a similar pact for 10,000 salaried workers.

The union reported also that 14,100 Ford of Canada workers struck main Ford plants at Oakville, St. Thomas and Windsor, Ont., after trying since July 16 to win a new agreement. Also out are 40,000 workers at plants of the Harvester Corp. in another contract dispute.

1/2 Union Products
1/4 and Union Services

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

CONTRACT NEGOTIATORS for railroad unions have encountered "real collective bargaining" for the first time since Dec. 10, when the courts blocked a strike, Pres. C. L. Dennis of the Railway & Airline Clerks told reporters at a Washington news conference Jan. 15. Dennis said he was hopeful of a settlement in negotiations for nearly 500,000 members of his union and three others—the United Transportation Union, Maintenance of Way Employes and dining car employes.

Rail Unions Hopeful of Settlement As Talks Resume in Long Dispute

(Continued from Page 1)

dispute have been keeping in touch with developments in the expectation that negotiations would resume momentarily.

Talks at the Labor Dept. were scheduled, as the AFL-CIO News went to press, between the 160 major carriers and committees of the United Transportation Union, the Maintenance of Way Employes and the Hotel & Restaurant Employes representing dining car crews.

The unions have been negotiating separately with the National Railway Labor Conference, representing management. Major issues in the dispute are the union's insistence on wage increases on a level with recent transportation industry settlements and an acceptable solution of disputes over work rules agreed to in past negotiations.

The unions first set Sept. 14 as their deadline for agreement. They were preparing to strike three carriers in a selective action when a U.S. District Court judge issued a temporary restraining order.

The order became legally dead when Pres. Nixon appointed an Emergency Board to hear both sides to the dispute and make recommendations intended to form a basis for settlement.

The board proposed wage increases of 32.5 percent in seven steps over a three-year period and seven changes in working rules that would, the unions said, cost the jobs of many thousands of their members.

The talks bogged down again and union negotiators set a Dec. 10 strike deadline. A short time after the second walkout began, Congress passed emergency legislation forbidding a strike by employes or a lockout by management.

Coupled with the no-strike, no-lockout order was a provision for an immediate but temporary pay increase of 13.5 percent for members of the four unions. The Labor Dept. was directed to seek further talks and to report back to Congress at least 15 days before the Mar. 1 deadline.

The negotiations were then resumed and Dennis reported at a Jan. 15 press conference that his union had the opportunity for "some real collective bargaining for the first time" since the courts and Congress intervened.

"I'm very hopeful," he said, "that we have a chance to wrap this up for our members within a week. Many issues are still open" but prospects of settlement seem more promising, he said.

In response to questions, Dennis said the Railway Labor Act has worked fairly well but "needs to be dressed up a little" after 40 years. He stressed that if free collective bargaining fails to produce results this year, the BRAC will seek a series of amendments to the act "to strengthen its desirable procedures and improve the bargaining process, including the right to strike."

Dennis voiced firm opposition to the "Nixon plan" for compulsory arbitration of rail disputes as did other railroad union leaders, including Pres. Harold C. Crotty of the Waymen and Charles Luna of the UTU.

Crotty said that for rail workers "legislation to block nationwide work stoppages on the railroads means only one thing—industrial slavery."

Earlier, UTU officers at their annual meeting adopted a policy statement calling for government operation of the railroads if Congress and the courts continue to outlaw strikes and control labor relations.

Court Reaffirms Right To Honor Picket Line

Richmond, Va.—The 4th U.S. Circuit Court of Appeals has reaffirmed the right of non-striking employes to refuse to cross picket lines as a matter of principle.

The court ordered the Union Carbide Corp. to offer reinstatement with full back pay to two employes who would not cross a Machinists' picket line at a Union Carbide plant during a strike three years ago.

The court's opinion noted that it is well established that non-striking employes who refuse on principle to cross a picket line have joined the strikers in a common cause and have, in effect, become strikers.

The opinion goes on to reaffirm this right:

"It cannot be denied that respect for the integrity of the picket line may well be the source of strength for the whole collective bargaining process in which every union member has a legitimate and protected economic interest. And any assistance by a union member to a labor organization in the collective bargaining process is for mutual aid or protection of the non-striking unionist even though he has no immediate stake in the labor dispute."

The circuit court's ruling upheld an order of the National Labor Relations Board which said Union Carbide violated the Taft-Hartley Act by refusing to rehire the two men who respected picket lines.

The court, however, would not enforce the NLRB order for a third employe because it found that his refusal to cross the picket line was based solely on fear.

"One who is afraid to cross a picket line by reason of physical fear makes no common cause, contributes nothing to the mutual aid or protection and does not act on principle," the court said.

Union Carbide had argued that it had not violated the law because it had discharged the three employes to prevent a large scale defection of workers to the strike.

But the court said the two employes who, as a matter of principle, refused to cross the line were entitled to the same consideration as strikers with regard to discharge and replacement.

"They may not be discharged but may be replaced by workers hired as permanent replacements during the strike in order to continue operations," the court ruled.

Meany Hits Soviets On Death Sentence

AFL-CIO Pres. George Meany issued a statement strongly protesting the death sentence imposed by a Soviet Union court on a 34-year-old Lithuanian, Vytautas Simukaitis, for an alleged attempt to hijack an airplane to seek asylum in Sweden.

Like the Soviet Jews, Meany observed, Simukaitis "is the victim of Soviet terrorization of minority nationalities . . . whose crime is to want to breathe the air of freedom.

"The AFL-CIO stands firmly with the patriots of those captive nations and with Lithuanians the world over in this black night of repression and injustice wrought by imperialist communism and its leaders in the Soviet Union."

The No. 1 Goal

"WE ARE CONVINCED that a majority of the American people, and a majority of Congress, agree that building the highest possible level of national health is a matter of the most urgent priority, and that delay can no longer be tolerated. The answer is national health insurance and the AFL-CIO believes it can—and must—be enacted."

As the 92nd Congress formally marked its opening, the declaration by AFL-CIO Pres. George Meany last Labor Day making national health insurance labor's No. 1 goal was implemented with the introduction of the National Health Security Act by a distinguished, bipartisan group of senators and representatives.

Strongly supported by the federation and the Committee for National Health Insurance, the bill is the chosen vehicle for translating the health care goal into reality.

The Health Security program has two simple basic purposes:

- To create a national system of health security benefits that will make comprehensive personal health services available to all.
- To effect major improvements in delivering medical services so as to increase availability, control rising costs and safeguard quality.

Why these simple objectives are so important in present-day American life is spelled out in an analysis of the legislation. It says in part:

"The health care crisis in the United States is reflected in many ways: runaway costs, too few doctors and nurses, inadequate care, large gaps in private health insurance coverage.

"It adds up to a massive disgrace due to the lack of orderly development in recent years of a system to provide health care. . . . If Henry Ford were building automobiles today using the same outmoded techniques this country is using to deliver health care, we would still be driving the horse and buggy. If the same techniques were used to deliver our food, hamburger would be $10 a pound."

The facts marshalled to support the legislation, and the need for national action, show clearly that:

- The health of most Americans is worse today than it was 15 or 20 years ago compared with other industrial countries. This is true despite the high percentage of U.S. earnings spent for health care, the high competence of doctors and the highest level of income in the world.
- The inefficient use of health care resources raises private health insurance costs, doctor and hospital bills. It wastes billions of dollars a year and it often denies care to people who need it most.
- The health care of most Americans is costing more and more—either in cash or through health insurance—and every year more income is spent for health care than anywhere else in the world.

Enactment of the National Health Security Act means that all Americans will be guaranteed quality medical care regardless of their economic status—a goal that must be obtained in the 92nd Congress.

A Word Edgewise:

A Head-On Collision Destroys Driver's Feeling of Invincibility

By John P. Roche

THE WINTER has been pretty rough all around the nation. My daughter reported a radio announcement that the "state of Iowa has been closed," and we had over two feet of snow up here in Massachusetts in December. Once upon a time, we would look out the window and see snow and cheer. Now, perhaps as an indication of decline, we groan.

Our daughter thinks this attitude is awful, but she has it made. Off she goes on cross-country skis, while we are left to maneuver on four wheels. Snow isn't bad. When I was in graduate school at Cornell, we lived 30 miles outside of Ithaca in the middle of the snow belt and I drove to work over snow-packed roads without a quiver. In fact, with the right kind of snow tires I am prepared to this day to tackle a blizzard in an automobile.

No, the real problem is that up in this part of the world we have invented a new sport—ice skating with autos. Two feet of snow have been ploughed off the roads and pack the edges. Then comes a nice, warm series of sunny days with the temperature going up to, say, 40. The snow melts and settles on the streets and—zap!—at about 4:30 p.m. the whole mess freezes.

It never used to bother me particularly until one day, as I was carefully driving along, a car skidded out of the other lane and got me head-on. The skid began about 250 feet up the road and it was like a bad movie. I geared down, braked, tried to climb the snow bank on the right, but inexorably that car came slamming in. Fortunately nobody was seriously hurt—and I have never scoffed at seat belts since—but the event destroyed my myth of invincibility. (In 25 years of driving I had never been in an accident beyond bumper bruises.)

Suddenly, as the theologians say, I lost my faith. And you have to have it happen to you to appreciate the full meaning of faith in our lives.

DO YOU HAVE any idea how many things in this life we take on faith? Take for granted? Well, among the most important is the simple proposition that the car on the other side of the street coming towards you will stay in his lane, not veer abruptly into yours. By and large this faith is justified when you consider the incredible number of cars on American roads at any given moment. (Believe it or not, we had fewer deaths per 100,000 miles of driving in 1970 than in 1920!) But then there is always the shock when the law of averages doesn't pan out.

Obviously no sensible extrovert wants to become a recluse from the day the first snow hits the ground until the frost is all out. A possible solution is to retire to Palm Beach for the winter months, but this requires (a.) a rich father, (b.) a rich wife, or (c.) an entrepreneurial chromosome I was born without. My father left me a lot of good advice, and my wife is remarkable but—as they used to say—came to me "undowered."

So here I am skating through the ice fields in a station wagon, strapped in like an astronaut and peering suspiciously at every approaching car. While it is paranoidal, I have noticed that enemy cars come in distinctive categories and I automatically file them as they bear down. For whatever it may be worth to the sum total of human knowledge, the Volkswagen is Enemy No. 1. This is not said in a Nader-like spirit (though I never enjoyed the thought of driving with the gas tank in my lap), but because Volkswagen drivers seem to suffer from the illusion of immortality. As I was crawling down an icy hill last night in first, one actually passed me—tooting merrily.

Of course, there is a solution. I could buy an army surplus armored personnel carrier or even a small tank. But while the town fathers of Weston are not unsympathetic to eccentricities, this would be pushing the Yankee tradition too hard. So I guess I'll just go on skating in my Plymouth and try to regain that faith which surpasseth understanding.

For Professional Care!

In Labor's House:

AFL-CIO Spells Out Record In Fight Against Discrimination

The following is excerpted from remarks by Donald Slaiman, director, AFL-CIO Dept. of Civil Rights, at a debate with Herbert Hill, national labor director for the NAACP, sponsored by the New School for Social Research in New York City on Jan. 13, 1971.

I COME NOW to the question of what the labor movement has been doing to eliminate discrimination in its own house.

On exclusion: First, you should know that 95 percent of all union members are automatically enrolled when hired by the employer. The remaining 5 percent are concentrated in the building and other trades, where unions control job referrals. Non-exclusion is now the policy of the building trades, as it is of all our international unions. There have been some violations of this policy, but the small number of cases that have been filed are about the extent of the problem, and that is being solved by our Outreach Programs.

I might add that today there are over 2 million Negroes in the labor movement, and it has recently been estimated that one out of every three new members are from a minority group.

On segregated locals: In October 1965, the Equal Employment Opportunity Commission stated that any labor organization which operates on a racially segregated basis is in violation of Title VII of the Civil Rights Act.

That very day, AFL-CIO Pres. George Meany issued the following statement: "The interpretation issued today by the EEOC is entirely consistent with the policies of the AFL-CIO as determined and reiterated by its conventions. It is precisely the policy which we urged the Congress to adopt when it was debating the Civil Rights Act."

In fact, the AFL-CIO had called upon its affiliates to merge segregated locals with all possible speed in 1959. The merger process was accelerated by the passage of the Civil Rights Act five years later. What are the results?

The Railway Carmen had 64 all-black locals, whose members were limited mainly to helper's jobs. Now all but two of these locals have been merged, and many of their Negro members have been upgraded to the carmen classification.

The Musicians Union had at least 55 separate all-black locals. Last week I was told that there is only one left. The Oil Workers, the Molders, the Tobacco Workers, the Papermakers and a number of other affiliates had segregated locals. Today they have none.

I HASTEN to say that this problem has not been completely solved, but we are resolutely determined that it will be.

On separate seniority lines: Racial segregation in collective bargaining units and the maintenance of lines of promotion or seniority on the basis of race is a violation of Title VII. This is the position of the Equal Employment Opportunity Commission, and it is the position of the AFL-CIO.

Segregation in collective bargaining units results not from union action but from the discriminatory policies of management, which has exclusive control of hiring. By hiring Negroes only for certain categories of low-paying jobs, employers have created segregated bargaining units whose workers have less access to promotion and advancement. Even when the lines of promotion and seniority seem reasonable in themselves, they may have the effect of codifying, in collective bargaining agreements, the disadvantage at which Negro workers have been placed by previous discriminatory policies.

The fact is that many changes have been made by unions in their collective bargaining agreements to eliminate discrimination. A good number of these changes have been initiated by unions themselves, while others required complaints by minority workers, civil rights organizations, or government agencies. The point is that in most of the court cases, the adversary position of the unions rested not on a defense of the discriminatory status quo but on a disagreement as to the new setup.

ON APPRENTICESHIP: Technological change has been wiping out unskilled and semiskilled jobs while simultaneously creating jobs that require more skill. It is not surprising, therefore, that so much attention should be focused on apprenticeship training programs.

Now what progress has been made?

By 1960, the number of Negroes in registered aprenticeship programs had risen from one to less than 2.5 percent—which prompted Roy Wilkins to observe that "at the present rates of advance, it will take Negroes 138 years, or until the year 2094, to secure equal participation in skilled-craft training and employment."

But is hasn't turned out that way. In 1969, according to the U.S. Dept. of Labor, the number of nonwhites in apprenticeship programs totaled 20,000 out of 255,000, approximately 8 percent.

But that's not all. Of the 73,000 new enrollees in the first half of 1969, 11 percent came from minority groups. As of Sept. 30, 1970, the number of apprentices placed by Nutreach programs alone, in over 80 cities, passed the 8,000 mark. Of these 7,564 were in the building trades.

I have been giving you facts—not fantasies. Very significant changes have occurred in minority participation in apprenticeship, especially in the building trades. These changes are the product of sound programs initiated by civil rights groups—such as the Urban League, the Workers Defense League and the A. Philip Randolph Educational Fund—financed by the Dept. of Labor, and having the cooperation, not only of national, but of local building trades unions and their councils. All of this has been aided by the systematic efforts of the AFL-CIO's Dept. of Civil Rights.

Delegates Hamstrung:

Conference on Children Called Failure Because of Restrictions

AN AFL-CIO SPOKESMAN labeled as a "failure" the 1970 White House Conference on Children and saw little hope that the upcoming Conference on Youth will succeed, unless citizen groups are allowed more say in policies, programs and decisions.

AFL-CIO Community Services Director Leo Perlis charged that "the people who have been running the White House Conference on Children and Youth" have repeatedly "rejected . . . organizations that have offered their services, their brains and their hearts" to the effort. He said the 1970 Conference on Children was "controlled lock, stock and barrel" by its chairman, White House Aide Stephen Hess, who refused to allow the 4,000 delegates to meet in official general sessions to air their views and shape policies and proposals.

That restriction was imposed by the White House to avoid the "risk of confrontation—especially confrontation by the young," Perlis said on Labor News Conference, a public affairs program produced by the AFL-CIO and broadcast Tuesdays on Mutual radio.

Perlis said that most of the recommendations from the 1970 conference were so "general" that they stand little chance of spurring the kind of specific action programs needed to attack the problems affecting children and youth in this country. He said the AFL-CIO solidly agrees with the theory and sentiment of recommendations such as "development of programs to eliminate the racism which cripples all children," but contends the conference should have spelled out specific actions toward that goal, such as the kind of legislation and court orders needed to fully desegregate the school system.

Noting that White House Conferences on Children and Youth have been held every decade since the first was called by Pres. Theodore Roosevelt in 1909, Perlis, a trade union delegate to the 1950, 1960 and 1970 conferences, called for a return to a single, combined conference in Washington, D.C., instead of splitting it into separate sections on children and youth.

Chances for successful conferences in the future could also be improved, he said, by guaranteeing the delegates the "opportunity to express themselves" in open plenary sessions, and by giving citizen organizations a voice in developing the direction and format.

By Press Associates, Inc.

WHEN PRESIDENT NIXON vetoed the Manpower Bill that would have created public service jobs, he sneered at the work programs of New Deal days as leading to dead-end jobs that did nobody any good. His words were his own, but the voice was that of Herbert Hoover.

"WPA-type jobs," Nixon said, "are not the answer for the men and women who have them, for government which is less efficient as a result, or for the taxpayers who must foot the bill."

In his veto message, the President echoed with startling similarity the Hoover-Republican outcries of 35 years ago when the Roosevelt Administration came to the conclusion that the private economy could not provide desperately needed jobs and that only a combination of public and private job-producing measures could help save the 16 million unemployed.

Was the Nixon jibe at the Works Progress Administration, the Public Works Administration, the Civilian Conservation Corps and similar programs of the New Deal days really justifed?

The record is to the contrary.

The record of the WPA as laid down in its final report showed that at its peak 3.5 million men and women on relief had been given gainful employment; that 18 billion hours of work had been performed; that at one time or another 8.5 million persons with 30 million dependents had worked for the WPA.

THESE MEN AND WOMEN had constructed or repaired 650,000 miles of highways, roads and streets; had built nearly 40,000 new public buildings across the face of the country and had helped improve 85,000 existing buildings; had built or improved thousands of parks, playgrounds and recreational centers; had helped improve sanitation services and had worked on thousands of airports and airway facilities.

Today—thanks to WPA workers—Americans can enjoy facilities of New York's Central Park Zoo; the San Francisco Aquatic Park, Chicago's water-front, the Philadelphia Art Museum as well as thousands of libraries, hospitals, municipal buildings, swimming pools—the list is endless.

Perhaps even greater results were achieved by the Public Works Administration which built structures as the Grand Coulee Dam, and the Civilian Conservation Corps which took thousands of unemployed boys off the streets and put them to useful work in conservation and reforestation.

The Nixon veto-message jibes at "dead-end" jobs was strongly resented by liberal members of Congress who pointed out the unfairness of the criticism of the WPA program and the even more unjust criticism of the Manpower Bill which went out of its way to assure that the measure would provide for useful work.

They could point to the insistence of much-maligned Harry Hopkins, WPA head who repeatedly pointed out the advantages of work to "relief."

"Work for the unemployed is something we have fought for since the beginning of this Administration and we shall continue to insist upon it," Hopkins said in a 1934 radio address. "Work preserves a man's morale. It saves his skills. It gives him a chance to do something socially useful."

The vetoed Manpower Bill—so strongly supported by organized labor—sought to do the same.

The program is to have a new chance in the current 92nd Congress. A similar bill will be introduced by Rep. James G. O'Hara, (D-Mich.), who led the fight for the vetoed measure.

It was with some bitterness that O'Hara commented on the Nixon sneer at WPA-type jobs in the veto message.

"Well," he told Congress, "there was much wrong with the WPA, but I am just barely old enough to remember that it did give people jobs. I am just old enough, Mr. Speaker, to remember that a WPA-type job was a whale of a lot better for the spirit and for the stomach than a Hoover-type breadline. The President apparently feels just the opposite."

THE FAILURE of the 1970 White House Conference on Children will be repeated in the upcoming Conference on Youth unless citizen groups are allowed more say in policies, programs and decisions, AFL-CIO Community Services Director Leo Perlis, center, predicted on Labor News Conference. He was questioned by Nan Robertson, left, of the New York Times and John Matthews of the Washington Evening Star.

TWENTY ARTICLES on crime in the streets won the Newspaper Guild's 1970 Heywood Broun award for Reporter Donald Singleton of the New York Daily News. Shown at the ANG award presentation of a $1,000 check are, from the left, Newbold Noyes, editor of the Washington Star; ANG Pres. Charles A. Perlik, Jr., Singleton and ANG Chairman James B. Woods. The winning series, one of 86 entries, was judged the best work of 1970 in the crusading spirit of Broun, first president of the ANG.

Series on Crime Wins Guild's Broun Award

Donald Singleton, reporter for the New York Daily News, won the 1970 Heywood Broun award of the Newspaper Guild, for a series of articles on crime and its various aspects.

Singleton, who has been a Guild member since 1964, flew back from a Miami assignment to receive a $1,000 check and a citation for the best newspaper work of 1970 in the crusading spirit of Broun, the columnist who was the ANG's first president.

Accepting the 30th annual award at a luncheon in Washington, Singleton said he had "never been more honored in my life, anytime . . . . I have always been proud to work in the profession of Heywood Broun."

The winning entry was a 20-part series spotlighting the problems of crime in the nation's largest city. Singleton spent seven months investigating crime and wrote a series published in four categories — crime and drugs, crime and the police, crime and the criminal courts, and crime and the prisons.

Three Broun Award judges chose Singleton's work from 86 entries printed in papers and magazines across the country. Editor Newbold Noyes of the Washington Star presented the prize to the winner. The other judges were Philip L. Geyelin, editorial page editor of the Washington Post, and Richard Dudman, Washington bureau chief for the St. Louis Post-Dispatch. Former ANG Vice Pres. Richard Lane was chairman of the award committee.

The judges said the winner, "with unusual literary craftsmanship and social perception . . . brought home to the readers the realities of a national dilemma, promoting its long-range solution by contributing the first imperative—public understanding."

The judges' panel praised the "extraordinary quality and diversity of the entries" from reporters on newspapers small and large.

The winner was chosen without regard to his Guild membership or non-membership.

It was obvious, Noyes told an audience that included members of the Guild's international executive board, here for a quarterly meeting, that the spirit of Heywood Broun is now "very much the in thing." There never was a time, he observed, that such a spirit was needed more than now.

Lane lauded the editors and publishers who "have the guts to print what their reporters dig up."

Real Total Output Shows First Decline Since '58

(Continued from Page 1)

for services totalled $262.7 billion, an increase of about $21 billion from 1969.

Disposable personal income amounted to $684.7 billion, but after adjustments for the price increases since 1958, came to $529.7 billion. This compared with 1969 income of $631.6 billion and $511.5 billion after price adjustments.

In last year's fourth quarter, disposable personal income showed an increase of $3.9 billion, well below the $9.4 billion increase registered in the third quarter, the government figures showed.

Per capita disposable personal income increased to $3,333 last year from $3,108, based on current dollars. Adjusted for price increases since 1958 personal incomes averaged $2,579, compared with $2,517 in 1969.

Personal savings as a percentage of disposable personal income slipped to 7.3 percent in the fourth quarter after climbing to 7.5 and 7.6 percent in the second and third quarters, respectively. For the year, savings averaged 7.3 percent, compared with 6 percent in 1969.

Total government purchases of goods and services last year was boosted to $220.5 billion from $212.2 billion in 1969. Government spending in the fourth quarter was running at an annual rate of $223.2 billion.

While total federal spending for the entire year dropped $99.7 billion from $101.3 billion, state and local governments stepped up their purchases to $120.8 billion from $110.8 billion in 1969.

Defense spending by the federal government was cut last year to $76.6 billion from $78.8 billion in 1969, the Commerce Dept. noted.

In the fourth quarter, military spending dropped to an annual pace of $74.6 billion. State and local government spending in these three months was at a pace of $124.8 billion more than $10 billion above the rate in the fourth quarter of 1969.

Little Progress Made:

Independent Agency Pressed To Ease Consumer's Plight

An independent consumer agency ranks high among the pressing needs of consumers, especially in view of the slight progress made on their behalf since the passage of the truth-in-lending bill in 1968.

This is the view of Sidney Margolius, a widely read expert on consumer affairs, writing in the January issue of the Federationist, the AFL-CIO magazine. Margolius is the author of several books and a weekly newspaper column on consumer problems.

"If the need for such an agency was even in doubt," Margolius says, "it should be dispelled by the tight leash the Administration has put on the present Consumer Assistant to the President."

When the House Rules Committee refused to permit a vote on the bill for an independent agency, Consumer Assistant Mrs. Virginia Knauer called the Administration's more-limited proposal—backed by the Chamber of Commerce—"innovative."

Meanwhile, her office has been emphasizing consumer education, but Margolius suggests that this tactic is "the usual fallback when effective legislative reform is not forthcoming" and states that the program is of "dubious value."

One such example of consumer education, said Margolius, is an expensively produced booklet sent free to schools listing such sources for consumer information as the Chamber of Commerce, and the National Association of Manufacturers.

"Much is made of small concessions to consumers such as Virginia Knauer's success in getting the Agriculture Dept. to reduce the proposed limit on fat content of frankfurters from 33 percent to 30. But the proposal for an independent federal consumer agency that could press for more adequate standards and labeling on all foods, among other consumer needs, was blocked. . . ."

Margolius cites Senate consumer subcommittee hearings on breakfast cereals as another example of highly publicized activity on an isolated problem.

He states that the result of this action was to "persuade much of the public that ordinary cereals have little or no nutrition and to encourage the sale of several over-priced vitamin-fortified products.

"But the much broader and economically significant report of a House subcommittee on the need for more adequate meat supplies was lobbied into oblivion by the American Cattlemen's Association," he notes.

These missed opportunities on the part of the Nixon Administration, Margolius suggests, have meant a serious plight for the consumer, who has had his buying power heavily eroded by the accelerated inflation of 1968-70. More of the same is threatened in 1971, especially from still-rising medical, housing and car-owner costs.

"By November 1970," Margolius notes, "the sharp rise in living costs had wiped out all the wage gains made by the average industrial worker in the past six years. In 1964, the average production worker with three dependents had spendable earnings after taxes of $76.38 in terms of 1957-59 dollars. Currently, he has just $77 a week of buying power calculated on the same basis. The average worker in manufacturing industries actually is even worse off than in 1964, with $84.43 in spendable dollars now, compared to $85.27 then."

Margolius lists six major problem areas where consumers are seriously in need of help today:

High food costs, high interest rates coupled with collection laws stacked on the side of the sellers, booming medical costs, high costs in housing, serious quality control problems and the high and still rising cost of auto insurance.

Food Costs—Still a basic problem, food costs affect all other costs, and the general public has less voice in the decisions affecting these prices than on almost any other consumer issue.

Margolius points to three current proposals that would help restrain food prices, or help consumers select better values, thus indirectly restraining costs.

One is a proposal still kept under wraps by the House Committee on Government Operations to establish a national commission to gather information on present and future meat requirements. (Meat alone takes 25 percent of a working family's food budget.)

The others are unit pricing of food and more-informative labeling of processed foods such as the percentage of additives.

Interest Rates—Although the prime interest rate has been reduced slightly, these reductions have had little direct effect on the plight of consumers.

In at least four states, efforts have been made or are underway to limit retail credit rates to 12 percent per annum. The Washington State AFL-CIO managed this in 1968, and in 1969 the federation urged a national campaign by state bodies to secure similar limits.

Medical Costs—Medical costs have risen by 68 percent in a little over a decade. Eliminating drug costs from the combined figure, medical care services have gone up 85 percent, led by the frightening 200 percent increase in hospital service charges.

The staggering increases have scared moderate-income families into the purchase of private health insurance plans offering payments of $100 a week for hospitalized illnesses at a time when hospital costs are approaching $100 a day.

To meet the crisis of runaway health costs, the AFL-CIO has proposed not only National Health Insurance, but a program that would encourage more economical delivery of health care through prepaid group care and an increased supply of health care personnel.

This is important, Margolius notes, because the experience with Medicare proved that medical fees rise to meet the available insurance.

Housing—The average wage earner has been priced out of the new housing market. The median sales price of new homes purchased in mid-1970 was approximately $24,000, according to the Dept. of Housing & Urban Development.

And even with the reduction of the maximum VA and FHA interest rate from 8.5 to 8 percent, a borrower will repay $53,000 on a $20,000 mortgage at 8 percent over 30 years.

Quality Control—Margolius says that one of the most potentially useful proposals that could help alleviate quality problems in autos, appliances and other equipment is the warranty and guaranty bill proposed by Senators Warren Magnuson (D-Wash.) and Frank E. Moss (D-Utah).

The bill specifies that only a warranty that provides for unrestricted service could be called a "full warranty."

"The real value is that requiring such truth in warranties would influence manufacturers to build more durable, better-quality products or admit that they are providing only a partial guarantee."

Auto Insurance—The steadily rising costs of auto insurance—and the difficulty sometimes in getting insurance at all—pose a critical problem for workers who need cars to get to work.

"Labor unions and central labor councils," Margolius notes, "have become the chief, and often only, public advocate at the state level in fighting rate hikes and wholesale cancellations. Labor groups have also led the way in exploring possibilities of group purchasing and even of establishing their own auto insurance companies."

CONCERN FOR AMERICANS held captive by the North Vietnamese prompted the formation of a young group of letter writers who are appealing to Hanoi for the release and decent treatment of prisoners. The group was organized by Henry L. Champion, upper left, an organizer for the Government Employes at Kelley Air Force Base in San Antonio, Tex.

Proposal Summarized:

Major Provisions of Health Security Act

The following is a summary of the major provisions of the proposed Health Security Act of 1971:

1. Eligible Persons—Every individual residing in the United States will be eligible to receive benefits. There will be no requirement of past individual contributions, as in social security, or a means test, as in Medicaid.

2. Benefits—With certain modest limitations, the benefits available under the program will cover the entire range of personal health care services, including the prevention and early detection of disease, the care and treatment of illness, and medical rehabilitation. There are no cutoff dates, no coinsurance, no deductibles, and no waiting periods. The principal limitations are:

- Dental care, which is restricted to children through age 15 at the outset, with the covered age group increasing thereafter until persons through age 25 are covered.
- Skilled nursing home care, which is limited to 120 days per benefit period. The limit does not apply, however, if the nursing home is owned or managed by a hospital, and payment for care is made through the hospital's budget.
- Psychiatric hospitalization, which is limited to 45 consecutive days of active treatment during a benefit period; and psychiatric consultations, which are limited to 20 visits during a benefit period.
- Prescribed medicines, which are not covered unless they are provided through a hospital or organized patient care program, or are required for the treatment of chronic or long-term illness.

In other respects, the program provides full coverage for physicians' services, inpatient and outpatient hospital services and home health services, and coverage for optometry services, podiatry services, devices and appliances, and certain other services under specified conditions.

3. Compensation of Doctors and Hospitals—Providers of health care will be paid directly by the program. Individuals will not be charged for covered services.

4. Financing the Program—The program will be financed out of a Health Security Trust Fund, acquired as follows:

- 50 percent from general tax revenues.
- 36 percent from a tax of 3.5 percent on employers' payrolls.
- 12 percent from a tax of 1 percent on employes' wages and unearned individual income up to $15,000 a year.
- 2 percent from a 2.5 percent tax on self-employment income up to $15,000 a year.

5. Cost of the Program—In fiscal year 1970, the benefits provided under the program would have totaled $41 billion, or 70 percent of the total personal health care expenses in the United States. None of the $41 billion in expenditures under the Health Security Program represents "new" money. Rather, this amount of money is already being spent by individuals, employers and governments for health care. The $41 billion actually expended in fiscal year 1970 consisted of $29.5 billion in private out-of-pocket payments and private health insurance payments, $11.5 billion in payments by federal, state and local governments.

Under the new program, however, the same amount of money will provide more health services for more people by revitalizing the existing health delivery system and reducing the inflation in the cost of health care.

In addition, under the new program, the relative contributions, of employers and of the federal government will be increased, but the contributions of individuals and of state and local governments will be decreased. In fact, the program is a direct form of revenue sharing. It will relieve state and local governments of $2.5 billion a year in expenditures for health care, thereby freeing substantial state and local funds for other purposes.

6. Administration—The program will be administered by a five-member Health Security Board in the Dept. of Health, Education & Welfare. The board will establish policy, standards and regulations for the program.

7. Resources Development Fund—An essential feature of the program is the Resources Development Fund, which will come into operation two years before benefits begin. In the first year of this "tooling up" period, $200 million will be appropriated for the fund; in the second year, $400 million will be made available. Once the benefits begin, up to 5 percent of the trust fund—about $2 billion a year—will be set aside for resources development. These funds will be used to support innovative health programs, particularly in areas like manpower, education; training, group practice development and other means to improve the delivery of health care.

8. Incentives—Financial, professional and other incentives are built into the program to move the health care delivery system toward organized arrangements for patient care, and to encourage preventive care and the early diagnosis of disease. Incentives are also used to guarantee quality health care in rural areas.

9. Starting Date for Benefits—July 1, 1973. In the two-year tooling-up period prior to that date, the Resources Development Fund will be used to prepare for the program.

BLACKFEET ART FOUNDATION receives a $500 contribution from the Montana State AFL-CIO. Executive Sec. James W. Murry of the state federation presents the check to Evaleen Weter, president of the foundation. A wood carving produced by an Indian artist is displayed by foundation directors Charles Chattin and Ruben Douglas at a meeting in Helena. The foundation is striving to encourage American Indian artists and provide a market for their works. The ultimate aim is to construct an art training center.

Labor-Liberal Coalition Opens Drive for Health Security Plan

(Continued from Page 1)

tion at the introduction of the proposed legislation at a news conference on Capitol Hill.

"The AFL-CIO is delighted to endorse the National Health Security Act," Biemiller stressed. "Enactment of this legislation will mean that all Americans, regardless of their bank balance or the neighborhood in which they live, will be guaranteed quality medical care."

Noting that organized labor has for 30 years striven for passage of this kind of health legislation, Biemiller conveyed a pledge by AFL-CIO Pres. George Meany of the federation's complete support.

Also endorsing the legislation were Pres. Leonard Woodcock of the Auto Workers, who is chairman of the Committee for National Health Insurance, Senators Edward M. Kennedy (D-Mass.), John Sherman Cooper (R-Ky.), Rep. James C. Corman (D-Calif.), Dr. Michael DeBakey, noted heart surgeon, and Clarence Mitchell, Jr., Washington representative of the NAACP.

Other sponsors of the bill include Sen. William Saxbe (R-Ohio), and Representatives Martha W. Griffiths (D-Mich.), Ogden R. Reid (R-N.Y.) and Charles A. Mosher (R-Ohio).

Kennedy said the legislation would be introduced in the Senate early next week and predicted that Congress will be responsive to the proposal. He noted a remarkable change in congressional attitudes toward a national health care program.

"The question," he said, "is no longer whether a national health care program is necessary. The real question is what shape such a program should take."

"Most significant of all," Kennedy stressed, "is the fact that the Administration, which slumbered away two years while our health care crisis deepened, has awakened at last to the need and is on the verge of proposing its own alternative."

He pointed out that three of the nine vetoes imposed by Pres. Nixon last year affected health legislation.

Dr. DeBakey observed that the Health Security Program would not only bring needed services to the nation, but would also provide for expanded medical research, manpower and facilities.

"An important aspect of this program," he stressed, "is that it gives every citizen—no matter what stratum of society he is in, no matter what stratum of economics he is in—equal rights to medical care that can be provided."

Woodcock termed the proposed legislation vital to workers because of the sharply-rising cost of medical care.

He said the nation needs a broad approach to medical care problems by improving the organization and delivery of care and the supply of professionals.

While the nation has the best medical science and knowledge available in the world, it also has a "rapidly deteriorating health care system," Woodcock declared.

He said the Health Security Program would do the "whole job" of providing expanded services and enlarging the supply of medical professionals.

Biemiller recalled organized labor's long struggle for a comprehensive national health program dating back to the 1930s.

"We have been in that fight ever since. . . . We have met one rebuff after another. But those of us who have been in this fight are well aware of the obstacles ahead, and we are equally aware . . . that if we are to stop inflation in medical costs it can only be done by organizing the delivery of medical care in a systematic intelligent way."

If the health security program had been operative in 1970, it would have delivered $41 billion in benefits—or 70 percent of the personal health care expenses in the United States.

But none of the $41 billion in expenditures would be "new" money, the bill's sponsors explained, noting that this amount is already being spent for health care by individuals, employers and federal, state and local governments.

Under the proposed program, the same amount of money would provide more health services for more people by revitalizing the existing health care system and stemming the inflation in medical care costs.

The Health Security Program would be administered by a five-member board in the Dept. of Health, Education & Welfare. Policy, standards and regulations would be established by the board.

'. . . And a Few Forget-Me-Nots!'

Bakers Win Vote At Beech-Nut Food

Canajoharie, N.Y.—Beech-Nut Foods will soon carry a union label.

The Bakery & Confectionery Workers supplanted a company union in a runoff election conducted Jan. 11-12 by the National Labor Relations Board. The vote was B&C 697, Beech-Nut Employes Union 491.

B&C topped three rivals but failed to get a majority of all votes cast in the first election, held Dec. 22.

B&C Executive Vice Pres. John DeConcini said negotiations on a first contract are due to start soon. The three-month campaign at the big food complex was directed by Executive Vice Pres. Graydon Tetrick, assisted by an employes' committee and three B&C staff representatives.

Deadline Prods States to Act:

Rising Unemployment Spurs Drive for Higher Jobless Aid

Mounting joblessness, a new federal law and a presidential deadline have added muscle and urgency to labor's drive to improve state unemployment compensation laws.

With nearly every legislature scheduled to meet this year, AFL-CIO Social Security Director Bert Seidman sees "an excellent opportunity" to achieve long-sought improvements.

He urged AFL-CIO state central bodies and affiliated unions to press for passage this year of higher unemployment benefit ceilings—equal to at least two-thirds of the state's average weekly wage.

Only one state—Hawaii—fully meets that standard now. Nationwide, the average unemployment benefit replaces only one-third of lost wages.

James O'Brien, assistant director of the federation's Dept. of Social Security, said high unemployment points up the need for improved benefits while a law passed by Congress last year provides the opportunity to get labor's proposals to a vote in the legislatures.

Congress established a new federal-state program of extended unemployment benefits during periods of high unemployment and also expanded coverage to additional groups of workers.

States are required to change their laws to conform with the new federal law—by a 1972 deadline. If they don't, the payroll tax on employers in their states will shoot way up—about five times their present levels.

Only eight states have already taken this action, which means the remaining states must change their laws during the coming year. That provides the opportunity to press for more far-reaching improvements than those required by the federal law.

The letter from Seidman to state labor federations enclosed marked copies of a message Pres. Nixon sent to Congress more than 18 months ago—on July 8, 1969.

In it, Nixon endorsed the goal of raising the ceiling on benefits to two-thirds of a state's average weekly wage in insured employment—as a means of assuring that the large majority of unemployed workers would be able to recoup 50 percent of their lost wages in unemployment compensation.

He noted that back in 1954 Pres. Eisenhower had made a similar recommendation.

Nixon, however, shied away from labor's position that the federal government should set national standards requiring states at least to meet those benefit levels. But he strongly implied that if the states didn't act within two years, the Administration would switch its position and support federal standards.

In the President's words, "I call upon the states to act within the next two years to meet this goal, thereby averting the need for federal action."

The two-year deadline, thus, is up this summer and the current sessions of the legislatures mark the final opportunity to act on the President's recommendations.

The AFL-CIO has urged that state benefit ceilings be set as a percentage of wages rather than in dollar amounts which quickly become outdated. It has also called for coverage of all workers, elimination of the one-week waiting period, limitations on disqualification and an increase in the taxable payroll wage base to eventually catch up with the social security wage base.

Along with the drive for improved unemployment benefits, labor will also be pressing state legislatures for substantial upgrading of workmen's compensation programs.

These programs, O'Brien noted, are intended to pay workers injured on the job two-thirds of lost wages as well as full medical expenses.

But, he said, in a number of states maximum benefits are so low that a large number of workers receive only 25 to 30 percent of lost wages when injured. And "under many state programs, a seriously injured worker may be required to pay part of the cost of the medical treatment he needs as a result of a work injury."

In addition, some state programs provide such inadequate benefits for survivors of workers killed on the job that widows and children "are left almost destitute."

To point up the inadequacies of present state unemployment and workmen's compensation laws, the AFL-CIO has prepared a new edition of a chart comparing the laws in the 50 states, the District of Columbia and Puerto Rico. The workmen's compensation section also shows the benefit structure of the special law applying to federal employes.

Single copies of the chart, Publication 36-N, Unemployment Insurance and Workmen's Compensation, are available free from the AFL-CIO Pamphlet Division, 815 16th Street, N.W., Washington, D.C. 20006. Additional copies are 3 cents each or $2 per 100.

NEW SPEAKER of the House of Representatives, Carl Albert of Oklahoma, gave a strong endorsement to the legislative goals of the American Federation of Government Employes at a dinner attended by 2,000 AFGE members. AFGE Pres. John F. Griner, seated, presided at the union's commemoration of the 88th anniversary of the Civil Service Act.

New Congress Opens With Battle over Rules

(Continued from Page 1)

the battle for assistant leader, incumbent Edward M. Kennedy (Mass.) was upset by Robert C. Byrd (W. Va.) on a 31-24 vote. Byrd was the Number 3 man on the leadership team and his place as secretary of the Democratic conference was taken by Sen. Frank E. Moss (Utah).

At the Republican caucus, Hugh Scott of Pennsylvania was re-elected GOP leader by a 24-20 margin over Howard H. Baker, Jr., of Tennessee. Scott, a moderate, opposed the Nixon Administration on several key votes last year.

There were contests at House Democratic and Republican caucuses also over the secondary office of conference chairman, the presiding officer at caucuses. Democrats replaced Dan Rostenkowski (Ill.) with Olin D. Teague (Tex.) At the GOP caucus, John B. Anderson (Ill.) won re-election by a slim two votes over Samuel L. Devine (Ohio), who charged that Anderson wasn't a staunch enough conservative.

Both House caucuses also acted to modify the long-entrenched but unwritten rule of seniority in appointments of committee chairmen and ranking minority members.

The Democratic caucus adopted the compromise recommendations of a broad-based special committee.

Its new rules somewhat curb the power of committee chairmen, enable any 10 members to force a vote of the full caucus on a recommendation for committee chairmanship or assignment, and specify that the recommendations "need not necessarily follow seniority."

A test of the significance of the change is likely in the near future. Liberal Democrats have served notice that they will challenge the renomination of John L. McMillan as chairman of the House District of Columbia Committee, and possibly other ultra-conservative committee chairmen as well.

House Republicans adopted a party reform subjecting all recommendations for ranking committee assignments to confirmation by a secret-ballot vote of the full caucus.

An initial test of the strength of the familiar coalition of conservative Democrats and Republicans was scheduled in the House on the second day of the session.

The House Democratic caucus endorsed a move to curb the power of the Rules Committee to block legislation. The reform proposal is similar to the "21-day rule" that was in effect during the liberal 89th Congress, but scrapped two years later. It would permit committee chairmen to bring directly to the floor bills that had been pigeonholed by the Rules Committee. Conservatives were expected to fight the liberalization proposal when the House votes on adoption of its rules for the 92nd Congress.

On the Senate floor, meanwhile, the stage was being set for a new attempt to curb filibusters through amendment of the Senate rule requiring a two-thirds vote to limit debate. A bipartisan coalition, supported by the top Democratic and Republican leaders, will seek to reduce the margin needed to limit debate to three-fifths of senators present and voting.

If, as expected, die-hard opponents of a rules change resort to a filibuster to block action, success will depend on mustering a two-thirds vote to close debate on the rules reform.

Two deaths temporarily reduced the Democratic majorities in the House and Senate.

Democrats hold a 254-180 majority in the House with one vacancy from the recent death of Rep. L. Mendel Rivers of South Carolina.

In the Senate, the opening-day death of Richard B. Russell of Georgia left the lineup as follows: 54 Democrats plus one independent, Harry F. Byrd, Jr., who lined up on the Democratic side of the aisle; 44 Republicans plus James L. Buckley, who was elected on the Conservative Party ticket but was voted admittance to the Republican caucus.

1-23-71

Older Persons Found Hardest Hit By Poverty, Increasing Joblessness

The Senate's Special Committe on Aging has painted a grim picture of the plight of older Americans in a report on the Economics of Aging issued after a two-year study.

Not only are more persons around retirement age joining the poverty ranks, but "older workers"—those 45 years or above—are especially hard hit by the current high unemployment rate, the study found.

Older Americans are twice as likely as younger persons to be poor, according to the Senate committee's report. It found that the number of persons aged 65 or over living in poverty increased by 200,000 between 1968 and 1969—reaching 4.8 million—and by 12,000 for those aged 60-64. This contrasts with a decline of 1.2 million in the number of poor persons in all other age groups.

The difficulties of workers 45 and older who are laid off were highlighted in the finding that since January 1969, the number of jobless men in this age group has jumped from 596,000 to 1,017,000.

"Their unemployment," says the report, "lasts longer than that of younger workers, and the older person has greater difficulty in finding work at the same pay level after a prolonged layoff."

The report gives an account of the problems of elderly homeowners in meeting property taxes, including the case of one woman who paid more than half her annual income of $1,958 for taxes and a special assessment.

Household costs, the report says, amount to about 34 percent of the average retired couple's budget.

And the committee warns that inflationary pressures are especially severe on older homeowners with fixed incomes because of the direct relationship between local property tax and high-cost government services.

The report criticizes the forthcoming increase from $5.30 to $5.60 in Medicare Part B premiums. It notes that Medicare pays less than half of the total medical costs of the elderly and that in fiscal 1969 the average health bill for a person over 65 was $692—six times that for a youth and 2.5 times the average cost for persons aged 19-64.

In fact, the report emphasizes that retired elderly Americans live on less than half the income of those under the age of 65, despite the 15-percent Social Security increase of December 1969.

Summing up its findings, the Senate committee said it is essential for the committee to declare, "as forcefully as it can" that:

- "Our nation during this 35th anniversary of the social security program, has not yet resolved retirement income problems which severely damage the economic status, morale, and even the health of millions of Americans, including many well above the poverty line, but that,
- "It is within the power of this nation, if it takes full advantage of several unique opportunities during the remaining months before the White House Conference on Aging—and in the months immediately following the conference—to make the 1970s the decade in which this nation will achieve its declared goal of 'an adequate income in retirement in accordance with the American standard of living.' "

Committee Chairman Harrison A. Williams (D-N.J.) said the report makes a clear-cut case for early action on social security increases in 1971.

Williams, author of a bill that would have raised social security benefits by 10 percent last year and by 20 percent in 1972—said he plans early introduction of a revised bill in the 92nd Congress.

"If there was any doubt about the crying need for social security reforms, and other far-reaching actions needed on behalf of most of our 20 million older Americans, this report should dispel it," he said.

Pilots Name McHale To Legislative Post

The Air Line Pilots named Thomas G. McHale, a former Senate Labor subcommittee staff member, as director of governmental affairs. He will work with Congress and government agencies on legislative matters of interest to pilots, ALPA Pres. John J. O'Donnell said.

8.5 Percent Jobless Rate Grips Poor Urban Areas

Hard Look Set on Nixon '71 Program

By David L. Perlman

Congress will take a close, hard and unhurried look at the legislative program Pres. Nixon outlined in a broad-ranging State of the Union address to Congress and the nation.

The initial reaction from key congressional leaders included hostility to the Administration's highly-touted "revenue-sharing" plan, incredulity to the proposal for a massive reshuffling of federal departments, and a cautious wait-and-see approach to proposals the President touched on but did not present in full detail.

An earlier revenue-sharing proposal drew strong opposition from the 1969 AFL-CIO convention. And Federation Pres. George Meany made it clear during the Johnson Administration that organized labor was against any reorganization plan that would submerge the U.S. Dept. of Labor.

The President's message actually presented his legislative program only in general terms, with the clarification to be provided in a promised series of special messages. But Administration officials have been releasing piecemeal tidbits of information on a number of the programs as the first step in an effort to swing public opinion behind them.

If it enacts his six-point program, Nixon promised in his televised address, the Democratic-controlled 92nd Congress will "be recorded as the greatest Congress in American history."

The President deferred the foreign policy portion of his annual message to a later date so as to focus "on the domestic side of the nation's agenda."

His report did not mention the word "recession." It explained the unique combination of high inflation plus a staggering rise in unemployment as the inevitable price of "transition from a wartime to a peacetime economy."

Nevertheless, the President acknowledged, "this is not good enough for the man who is unemployed."

He promised to submit "an expansionary budget . . . designed to be in balance if the economy were operating at its peak potential. By spending as if we were at full employment, we will help to bring about full employment."

But the President made it clear that he would fight any effort to go beyond what the AFL-CIO has termed the Administration's "mini-expansion" program. He asked Congress "to cooperate in resisting expenditures that go beyond the limits" of his budget. And he called for "a much greater effort by labor and manage-

BROAD OUTLINE of the Administration's 1971 legislative program was traced by Pres. Nixon in his State of the Union address to this joint session of the House and Senate—and to millions who watched and listened over television and radio.

Labor Expands Aid to Veterans Seeking Jobs

The AFL-CIO will expand its efforts to find jobs for returning servicemen through a new program formulated by the federation's Human Resources Development Institute.

Operation of the AFL-CIO Veterans Assistance Program is being set up at four separation centers in the San Francisco Bay area.

More than 1 million veterans will be returning to civilian life this year, Federation Pres. George Meany noted in a letter to AFL-CIO state and central bodies.

"And we in the AFL-CIO have a moral commitment to help them find employment," he stressed.

The success of the new program "depends on the wholehearted support and cooperation of every state and local central body," Meany added.

(Continued on Page 8)

To Curb Filibusters:

Senate Rules Change Backed by Majority

A majority of the Senate has joined in sponsoring a motion to change the rule that requires a two-thirds vote to limit debate and cut off a filibuster.

The bipartisan resolution—signed by 32 Democrats and 19 Republicans—would reduce the requirement for cloture to three-fifths of senators present and voting.

If all 100 senators were present, it would require 60 instead of 67 votes to limit debate.

Similar efforts have been made unsuccessfully at the start of almost every Congress in recent years. Rules reform supporters concede it is an uphill fight but take encouragement from the record number of sponsors, the endorsement of both the Democratic and Republican leaders of the Senate—and the hints of "compromise" being dropped by opponents.

Southern-led opponents, meanwhile, divided up into filibuster teams prepared to hold the floor in order to prevent the Senate from voting on the rules change. In effect, this requires a two-thirds vote to close debate on a motion to change the two-thirds rule.

At the start of the last Congress, then-Vice Pres. Hubert H. Humphrey ruled that a majority of the Senate can close debate on a rules change. But the Senate, on appeal, rejected his interpretation.

And although Pres. Nixon, when he was Vice President, had taken the same position in an advisory opinion, Vice Pres. Agnew has said that he will not rule on the constitutional question but leave it to the Senate to decide under an unlimited debate procedure.

The leader of the Dixie filibuster bloc, Sen. Allen J. Ellender (D-La.), said his group might consider a three-fifths "compromise" for limiting debate on appropriations bills and conference reports. But the principal sponsors of the rules reform, Frank Church (D-Ida.) and James B. Pearson (R-Kan.) termed the concept completely unacceptable.

Rules reform was the major business in the House as well as the

Adult Men Hit Hardest By Big Jump

By John R. Oravec

Surging unemployment caused by the economic slump pushed the jobless rate for workers living in urban poverty areas to 8.5 percent during the last three months of 1970.

This was a sharp increase from the 4.9 percent rate recorded a year earlier in the poverty neighborhoods of the nation's 100 largest metropolitan areas, the Labor Dept. reported.

Adult men were most seriously affected by the increase as their jobless rate more than doubled—from 3.1 percent in the fourth quarter of 1969 to 7.2 percent in 1970.

For Negro teenagers, the jobless rate soared to 42.2 percent, more than 14 points higher than in the last three months of 1969. The rate for white teenagers in the urban ghettos rose to 18.8 percent from 11 percent.

Adult women were less severely affected as their rate rose to 6.1 percent from 4.6 percent in the fourth quarter of 1969, the Labor Dept.'s Bureau of Labor Statistics noted.

For the year as a whole, the jobless rate for all workers in urban poverty neighborhoods averaged 7.6 percent, reversing the improving trend registered between 1967 and 1969. Unemployment averaged 5.5 percent for the poor urban sections in 1969.

For the nation overall, joblessness averaged 4.9 percent last year, compared with 3.5 percent in 1969.

While the unemployment rate for white workers in the poor urban sections climbed about 50 percent—from 4.2 to 6.3 percent—the increase for minority group workers was about 40 percent—from 7.2 to 9.5 percent.

Revenue-Sharing Plan Termed Costly to Cities

The gift wrapping on Pres. Nixon's revenue-sharing proposal was stripped away by Chairman Wilbur D. Mills of the House Ways & Means Committee as he charged that the plan would fail to bring needed relief to financially troubled urban areas and might even reduce their share of federal aid.

"It is difficult to say what purpose is served if we bring about this redistribution of income," Mills declared.

"States that would benefit the most are those with relatively less serious welfare problems, while among the states that would be losers are those with very serious welfare problems and with relatively low per capita incomes."

A number of liberal Democratic congressmen expressed agreement with Mills and joined in opposition to the proposal. The senior Republican on the Ways & Means Committee, Rep. John W. Byrnes, also has made it clear that he is against the revenue-sharing plan.

Mills, in an hour-long speech on the House floor, accused Nixon of

(Continued on Page 2)

Unemployment Above 6% In 40 Major Job Centers

Forty of the 150 major job centers in the nation have a jobless rate of 6 percent or more, with the addition this month of three cities to the Labor Dept.'s list of areas with substantial unemployment. A year ago, only five major manpower areas were on the substantial unemployment list.

Added to the list since December were Buffalo, with a jobless rate of 8.8 percent; Atlantic City, N.J., 8.3 percent, and Kalamazoo, Mich., 7.1 percent.

Seven of the 40 job centers on the list are suffering from a jobless rate between 9 and 12 percent. Two major centers have unemployment of more than 12 percent.

The Labor Dept. has also classified 622 smaller areas as having substantial or "persistent" unemployment. "Persistent" means that the average unemployment rate has been 6 percent or more for a year and at least 50 percent above the national average for several years.

Seven major areas, including Cleveland, Oakland and Newark, are in the persistent unemployment category.

'All I Need Is Gas!'

Revenue-Sharing Plan Termed Costly to Cities

(Continued from Page 1)

"a concerted campaign to force the federal government willy-nilly" into the program.

Nixon had said he would call on Congress to allocate $5 billion of unrestricted federal aid to states and cities in the form of revenue sharing. An additional $11 billion would come in block grants—$10 billion of it reallocated from existing federal programs for state and local governments covering manpower training, education, transportation, urban development, rural development and law enforcement.

"While we have heard a great deal about the needs of states and localities for revenue sharing," Mills observed, "we have heard very little why revenue sharing is the best answer to the problem."

Mills pointed out that in fiscal year 1971, overall federal aid to states and cities is estimated at $27.5 billion—up from $6.7 billion in 1959.

"This represents a growth from 7 percent to 14 percent of total federal outlays," he pointed out. "If outlays for defense, space, and international programs are set aside, this is a growth from 16 percent to 23 percent of total federal domestic outlays—a not inconsequential proportion" of domestic spending.

Depending on which formula the Administration proposes for the revenue-sharing program, Mills said "we would find the people of some states losing substantially and those of other states gaining substantially."

If the costs of the revenue-sharing plan are met by cutting back other federal expenditures and if the sharing formula proposed by the Administration last year is followed, 15 states could end up as losers, Mills said. They include California, Texas, Maryland, Missouri, Connecticut and the District of Columbia.

"Despite the presence of New York and Pennsylvania among the states which benefit, most of those in this group are less urbanized states," he observed.

Mills pointed out, however, that if the costs of revenue sharing are to be met by higher federal taxes rather than cutbacks in other programs, New York and Pennsylvania would be among the 15 states that would be severely penalized, based on the proportion of federal taxes they now pay. The others are Illinois, Ohio, Michigan, New Jersey, Massachusetts, Indiana, Missouri, Maryland, Connecticut, Delaware, Rhode Island, New Hampshire and the District of Columbia.

Conversely, the states benefiting would be Mississippi, North Dakota, New Mexico, Louisiana, South Dakota, Alabama, Arkansas, Idaho, Arizona, South Carolina, Wyoming, Hawaii, Kentucky, Utah and Alaska.

The two groupings suggest that "the distributional effects of revenue sharing would hurt most the urban states where we hear the most about the need for revenue sharing . . . while the states which would benefit the most are those with less density of population," Mills said.

He warned that the nation should not rush into a "no-strings-attached" revenue-sharing program without first analyzing the alternatives.

Among other ways of helping states and cities meet their need for funds, Mills suggested:

- Allowing the federal government to help states collect taxes with the states setting their income taxes as a percentage of the federal tax, thus eliminating administrative costs for the states.
- Permitting taxpayers to take a federal income tax credit for the state income taxes they pay—making it less difficult for the states to raise their taxes.
- Reviewing the federal system of "single purpose" grants-in-aid and allowing for wider use of the funds by state and local governments.
- Increasing the federal share of the government's grant-in-aid programs.

"Government taken as a whole—at all levels—must find answers to these serious fiscal situations," Mills stressed. "Bad as the fiscal problems of the state and local governments are, it is not clear that they are any worse than the fiscal problems faced by the federal government."

Labor Dept. Fills 2 Key Staff Posts

Two career Labor Dept. employes have been named to top staff posts in the Labor-Management Services Administration.

Leonard J. Lurie has been appointed director of the Office of Labor-Management & Welfare Pension Reports, after having served as acting director for more than a year.

Louis J. Wallerstein has moved up from deputy director to director of the Office of Federal Labor-Management Relations, which determines bargaining units for federal employes, oversees representation elections and rules on unfair labor practice charges.

Details Awaited:

Wary Congress to Scrutinize Nixon Legislative Program

(Continued from Page 1)

ment to make their wage and price decisions in the light of the national interest."

Unstated but implied was the assumption that the private sector of the economy would be able to provide the needed jobs and training, that as business prospered the benefits would trickle down to the ordinary worker if only he would restrain his desire for higher wages.

In dollar terms, the President's revenue-sharing proposal hardly seemed calculated to match the extent of the financial crisis of states and cities which Nixon stressed in his speech.

But there was little quarrel with the President's description of his proposal as a reversal of the historic trend towards a stronger central government and national programs to deal with problems that are nationwide in scope.

The President, in effect, asked Congress to scuttle multi-billion dollar federal programs dealing with poverty, education, model cities and housing, transportation and job training.

Give the money to the states and cities, he said, and toss in some additional federal funds. His rationale was that state and local governments are closer to the people "in a far more intimate way than the government in Washington can ever be."

Except for setting up six broad areas for which the funds would be used, the only control the federal government would exercise would be to prohibit use of its money for programs based on race discrimination.

The proposed abdication by Congress of any say in how federal funds should be spent drew protests from important conservative as well as liberal congressional leaders.

House Ways & Means Committee Chairman Wilbur D. Mills (D-Ark.) said he will hold hearings on the proposal "not for the purpose of promoting it, but for the purpose of killing it." **(Story, Page 1.)**

And the committee's ranking Republican, John W. Byrnes (Wis.), said he agreed with Mills on the issue and both men had told the President to his face that they have "philosophical difficulties with revenue sharing and are basically opposed to it."

While the nation's mayors and governors have been almost unanimous in urging more federal aid to states and cities, the President's proposal set off few cheers.

The additional promised funds represent only a tiny portion of the operating budgets of states and cities. Detroit's Mayor Roman S. Gribbs suggested the result could even be a decrease of federal aid since some of the grant programs to be discontinued call for higher federal spending in future years. Ohio's Gov. John J. Gilligan said a federal tax credit for state and local income taxes would be a more meaningful help. Civil rights spokesmen were generally dubious that conservative southern states would follow through with programs to help poor blacks if federal earmarking of funds were discontinued.

Revenue sharing is not a new concept and the last AFL-CIO convention, in 1969, declared its opposition to replacing federal programs with "no-string" grants to the states. Federal grants to states, it said, should be "subject to congressional scrutiny and conducted under federal standards of performance."

A more meaningful form of federal help to hard-pressed state and local budgets, the convention resolution suggested, would be full federal financing of public welfare programs.

At least equally controversial, congressional sources indicated, was the President's proposal to abolish seven Cabinet departments and reassemble the pieces in four sprawling new superagencies.

Thus a proposed new Dept. of Economic Development would include most of the units of the present Labor Dept. as well as most of the Commerce Dept. and major functions of the Agriculture Dept. and the Dept. of Transportation, along with agencies dealing with science and technology. But the largest Labor Dept. activity, its Manpower Administration, would be split off into a new Dept. of Human Resources, which also would contain most of the functions of the present Dept. of Health, Education & Welfare.

Also disappearing as separate entities would be the Interior Dept. and the Dept. of Housing & Urban Development.

The Post Office is already scheduled to disappear as a Cabinet agency this year so the only Cabinet departments preserved intact would be State, Treasury, Defense and Justice.

The new chairman of the House Government Operations Committee, Chet Holifield (D-Calif.), made it clear that he did not think much of the idea. And his Senate counterpart, John L. McClellan (D-Ark.), said that while congressional approval was theoretically possible, "it seems to be a challenge to probability."

In the area of health care, Pres. Nixon promised what he termed "a far-reaching set of proposals for improving America's health care and making it available more fairly to more people."

Again, details were lacking. But there were indications that the Administration hopes to head off congressional approval of a universal health security program through an expansion of Medicaid for the poor plus a contributory system of impressive-sounding but relatively low-cost "catastrophic" health insurance.

Nixon also said he would ask increased aid to medical schools and propose an additional $100 million to step up federally-financed research seeking a cure for cancer.

He reiterated his call for a welfare reform, family assistance program to "place a federal floor under the income of every family with children in America," coupled with "an effective work requirement."

And he promised new proposals to improve the environment, clean up pollution and expand park and recreation services.

In text and tone, the President's speech adopted liberal rhetoric and summoned Congress to "act boldly" to "close the gap between promise and performance in American government."

But there were cautionary phrases scattered through the speech that implied a corollary, "but not too boldly."

Labor in Scouting Leaflet Available

"Working Partners," a new AFL-CIO brochure on organized labor's role in Scouting, is now available from the federation.

The publication, prepared by the AFL-CIO Dept. of Community Services, contains a special message from Pres. George Meany urging all affiliates to continue their support for the Boy Scouts. Meany urges in particular that union members respond to Boy-power '76, a long-range plan to involve one-third of all American boys in Scouting by 1976. The campaign will concentrate on boys in low-rent and public-housing projects and crowded urban areas.

Copies of the brochure are available at 3 cents each from the AFL-CIO Pamphlet Division, 815-16th St., N.W., Washington, D.C. 20006.

State Labor Bodies Urged to Fight Move to Force No-Strings Sharing

State labor leaders have been warned by the AFL-CIO that a campaign aimed at rewriting the U.S. Constitution to force no-strings federal revenue sharing with state and local governments could have dangerous consequences.

In a letter to all state AFL-CIO officers, Legislative Director Andrew J. Biemiller urged opposition to resolutions being offered in state legislatures to call a constitutional convention to mandate revenue sharing.

A campaign to persuade the legislatures of 34 states to adopt such resolutions is reportedly being conducted by the National Conference of Legislative Leaders, an organization of state senate presidents and state house speakers.

"The program is dangerous for two reasons," Biemiller said.

"First, if a constitutional convention is called, there is no way to assure that only revenue sharing will be germane, For example, a national 'right-to-work' law could be embodied in the constitutional amendments submitted to the states for ratification.

"Second, revenue sharing is a serious and complicated problem." He cited a recent AFL-CIO study which concluded that "it makes more sense to spend our tax dollars on federal grants in aid that are used to finance specific, high-priority, nationwide programs with specific labor standards than to support no-strings revenue sharing."

Biemiller also noted that AFL-CIO opposition to revenue sharing schemes was declared in a resolution at the federation's 1969 convention and in testimony before the Senate Subcommittee on Intergovernmental Relations.

"To risk a constitutional convention for the purpose of pressuring no-strings federal revenue sharing is at best both dangerous and frivolous," Biemiller advised the state leaders.

"We urge you to oppose in your state legislature any resolution endorsing such a program" he concluded.

To Curb Filibusters:

Senate Rules Change Backed by Majority

(Continued from Page 1)

Senate, both on the floor and in party caucuses.

A familiar coalition of conservative Republicans and Democrats crushed a recommendation to curb the power of the House Rules Committee to keep legislation from going to the floor.

The rules reform had been endorsed by the House Democratic caucus, and urged by Speaker Carl Albert. But it was rejected on a 233-152 vote, with a sizable bloc of Democrats voting against the caucus position and only a handful of liberal Republicans supporting the rules change.

The House Democratic caucus has at least two major controversies to decide at its next meeting.

Seventy-three liberal Democrats have urged the caucus to reject the reappointment of John L. McMillan of South Carolina as chairman of the House District of Columbia Committee and substitute Charles C. Diggs, Jr., a nine-term Negro congressman from Detroit.

Also on the agenda is a battle for the vacancy on the powerful Ways & Means Committee created when Hale Boggs was elected majority leader. Conservative Joe D. Waggonner, Jr., also from Louisiana, is bidding for the seat. But liberals and most moderates appear to have closed ranks behind Donald M. Fraser of Minnesota, head of the liberal Democratic Study Group.

Health care, social security and tax legislation all fall within the jurisdiction of the committee, which also nominates Democratic members of all other House committees subject to caucus approval.

In a move to broaden the base of the House Democratic leadership, Majority Leader Boggs announced the appointment of Thomas P. O'Neill, Jr., of Massachusetts as party whip or assistant leader, and created two new posts of assistant whips. Appointed to the new offices were John Brademas of Indiana, the vice chairman of the Democratic Study Group, and John J. McFall of California.

On the Senate side, Republicans also acted to broaden their party's leadership base.

The GOP caucus adopted a rule that no senator may serve as ranking Republican member of more than one legislative committee. This will open up positions of responsibility to several less senior Republicans, since the ranking member generally appoints minority staff members of committees and has a greater voice in committee decisions.

RAILROAD CONTRACT talks resumed in Washington between the United Transportation Union and management—the first face-to-face negotiations since the UTU and three other unions struck major railroads and were restrained by the courts and Congress. Shown at one session, from the left: W. J. Usery, Jr., assistant secretary of labor; UTU Vice Pres. J. W. Jennings; Chairman George Ives of the National Mediation Board, and J. P. Hiltz, Jr., chief negotiator for management. Previous talks between management and the Railway & Airline Clerks were recessed. Next to meet will be the Maintenance of Way Employes and the Hotel & Restaurant Employes, representing dining car crews.

3 Rail Unions Resume Talks With Carriers

Three railroad unions returned to the bargaining table for their first formal negotiations with the carriers since Congress passed special legislation ending a strike and barring further walkouts before Mar. 1. A fourth union—the Railway & Airline Clerks—recessed talks but expressed the hope final agreement could still be reached before the deadline.

Meeting with negotiators for the National Railway Labor Conference were representatives of the United Transportation Union, the Maintenance of Way Employes and the Hotel & Restaurant Employes which represents dining car crews.

The law passed by Congress Dec. 10 provided for a 13.5 percent wage increase for nearly 500,000 union members who walked out briefly on that date. Also it directed the Dept. of Labor to encourage both sides to bargain and to report back by Feb. 15 on progress and recommendations for achieving a settlement.

Still to be settled for all four unions are the size of second and third-year wage increases and working rules affecting travel expenses, overtime, and other issues.

When BRAC talks were recessed, union Pres. C. L. Dennis said "we do not know how far apart we were" on terms of a new contract "because the price of learning the dimension of the employers' offer was contingent on the unions accepting in advance an insufficient job security provision."

A majority of BRAC's 300 general chairmen, Dennis said, "understandably were unwilling to swap basic economic security for an unknown quantity. We hope that negotiations will be resumed and agreement will be reached."

Labor Challenges Law On Jobless Aid Cutoff

The Supreme Court was urged to uphold a lower court ruling overturning a section of California's unemployment insurance law that automatically cuts off benefits granted a jobless worker when an employer contests the award.

The AFL-CIO in a friend-of-the-court brief, urged the high court to reject an appeal by the California Dept. of Human Resources Development from a decision by the U.S. District Court in San Francisco. That court found that the appeals procedure in the state's unemployment insurance law conflicts with the Social Security Act and violates the due process clause of the Constitution.

The final outcome of the appeal seems sure to have a substantial impact on the manner in which jobless insurance is administered—not only in California but also in other states which have similar laws, the AFL-CIO brief emphasizes. Therefore, the federation is vitally concerned for itself and for its 121 affiliated unions representing 13.5 million workers, it says.

The brief relates that the case tests the validity of the procedure California has adopted to allocate the costs of delay after an employer appeals from an initial ruling—made "after all parties have been heard"—that a former employe is eligible to receive unemployment compensation benefits.

Section 1335 of the California law provides that once an appeal is filed by an employer, no benefits shall be paid the jobless worker out of the compensation fund. That fund had reserves of $1.3 billion in 1969.

The result is that whether it is the employer or the jobless claimant who appeals from an initial ruling, it is the claimant who must bear the costs of delay.

The brief declares that "the purported balance California has struck is not based on a neutral principle for distributing the costs of delay—it is based on the principle that in each instance the entire burden of those costs shall be borne by the unemployed."

The lower court decision describes the California system as follows: "The appeal form, upon being filed, halts payments . . . generally after two payments have been made. . . . No hearing is held; no chance is given the claimant to rebut, even in writing, new information. . . . The arrest of payments continues for a median period of seven weeks."

The brief cites two recent Supreme Court decisions defining the limits the Constitution places on shifting the costs of legal delays from one party to another. In one case involving a wage garnishment, the court ruled that "the interim freezing of wages without a chance to be heard violates . . . due process." In the other, the court ruled that welfare benefits to an eligible recipient could not be cut off without notice and without a chance to be heard.

The brief asserts that the lower court decision in the case insures that, "where a ruling on the merits is in favor of eligibility, the unemployed claimant may not be deprived" of the benefits of the law by withholding them while the employer's appeal is being heard.

Roland E. Engelking, Retired Organizer, Dies

Portland, Ore.—Roland E. (Barney) Engelking, who retired last June 1 after 25 years of service as a staff representative for the AFL-CIO and the former CIO, died here at 65. He succumbed to throat cancer, a malady discovered shortly after he retired.

N. Y. Phone Strike Ends, Arbiter To Decide Issues

New York—An agreement to arbitrate a dispute over the use of repairmen by the New York Telephone Co. ended a 14-day strike by more than 50,000 members of the Communications Workers.

CWA Pres. Joseph A. Beirne reached agreement with the company on final and binding arbitration. Members of 23 local unions representing repairmen and installers approved Beirne's action after lengthy meetings.

Both sides agreed to submit all the issues in the dispute to a three-member panel headed by Mitchell M. Shipman, attorney and member of the American Arbitration Association, for a decision Jan. 29. The strikers returned to work and the company stopped using out-of-town repairmen and supervisors brought here to augment the local repair force.

The strike began Jan. 11, when CWA Local 1101, representing 15,000 employes in Manhattan, Brooklyn and the Bronx, walked out to protest payment of overtime to the outsiders. They voted to stay out until an equitable overtime agreement was reached, and were supported by other CWA locals, including operators and equipment installers.

U.S. District Judge John M. Cannella found Local 1101 and the international union in contempt of court on the grounds the strikers violated an earlier court order forbidding strike action. He levied fines that reached $1.7 million but postponed a final order with the suggestion that the dispute be arbitrated.

During the strike the union declared in advertisements published in daily newspapers in the state that while CWA members are "first class craftsmen who want to provide the first class service the people of New York deserve . . . telephone company policies have made it impossible."

There are no provisions in a 1968 agreement between the CWA and the company for going outside the state for help but, the ads charged, the company put on an intensive recruiting campaign. The union asked its members not to take part in the plan and no signed agreement was ever reached on the subject, CWA said.

The ads charged that the company "persuaded the court to levy what we consider to be improper, excessive and harsh fines against their own people." It added: "We believe this is the worst way" to resolve a dispute.

Imports Cause Shoe Union to Forego Raise

Haverhill, Mass. — The Shoe Workers came to terms with New England shoe manufacturers on a two-year agreement foregoing a wage increase this year, but providing a 5 percent boost next year.

Union negotiators headed by Pres. George Fecteau said they concentrated on preserving the jobs of 3,500 employes at a time when American factories are losing out to a flood of low-wage foreign imports.

The new Massachusetts area agreement calls for a two-cent raise —from 11 cents an hour to 13 cents—in pension fund contributions and an increase in the hospitalization allowance this year from $45 a day to $60. The nine firms involved in the bargaining are situated in Boston, Lynn, Salem and Haverhill.

Effective next Jan. 3, wages of all piece and day workers on the payroll will be raised 5 percent. The hospital care plan will be further improved, free eye examinations and eye glasses will be provided by the employers; and vacation pay will be given on a pro-rata basis after Aug. 1, 1972, in the event of layoffs or factory shutdowns.

Jobless Rate Hits 8.5% In Urban Poverty Areas

(Continued from Page 1)

This resulted in a decline in the ratio of black-to-white unemployment rates in the poverty neighborhoods—from 1.7 to 1 in 1969 to 1.5 to 1 last year, the BLS noted.

In the more affluent urban neighborhoods, jobless rates in all categories were below the national average for 1970.

Nearly one in every four workers aged 16-19 in poor urban sections was out of a job last year as unemployment rate for this group jumped to 24 percent from 19.9 percent in 1969. Nationally, teenage unemployment was 15.3 percent last year, compared with 12.2 percent in 1969.

The BLS said that the 1970 average jobless rate of 35.8 percent for black teenagers in the poverty areas remained more than double the white rate of 16.3 percent last year.

For adult men in the urban poverty sections, the unemployment rate was up sharply to 6.2 percent in 1970 from 3.6 percent the year earlier. The national jobless rate for adult men was 3.5 percent, compared with 2.1 percent in 1969.

The gap was not as wide for adult women living the urban poverty areas as their rate for the entire year edged up to 5.7 percent from 5.1 percent in 1969. The national jobless rate for women 20 and older was 4.8 percent in 1970, compared with 3.7 percent a year earlier.

The population of poverty neighborhoods continued to decline in 1970, continuing a trend of the past few years, the BLS noted.

This decline was accompanied by a drop in the civilian labor force and jobs for the poor urban area workers. Employment for this category averaged 5.7 million last year, down nearly 270,000 from 1969.

Volunteers of America Cite Meany with Award

AFL-CIO Pres. George Meany has been selected to receive the Ballington and Maud Booth award of the Volunteers of America. Gen. John F. McMahon, head of the organization, announced that the annual award is being presented to Meany this year for his "leadership and dedication to serving the American people in the field of human well-being and social progress."

The award, named for the founders of the national social welfare organization, will be presented Mar. 8 in New York.

The Shape of Congress

THE 1970 CONGRESSIONAL elections resulted in very limited changes in the makeup of the 92nd Congress. There was a slight conservative pickup in the Senate balanced out by a gain in liberal strength in the House.

The opening days of the 92nd Congress have fairly well confirmed the verdict of the voters two months earlier. The conservative coalition that has exercised a major influence in Congress for almost three decades—except perhaps for the years 1965-66—was dented a bit in the 1970 balloting but its power was far from broken.

This was rather quickly demonstrated when the House voted down a proposal adopted by the Democratic caucus to allow committee chairmen to report bills directly to the floor if the House Rules Committee had not acted 31 days after receiving a committee-approved measure.

The experienced GOP-Dixiecrat coalition went into action, and the power of the House Rules Committee to schedule legislation for floor action—or refuse to do so—remained untouched.

THE LEADERSHIP elections went much as expected and in line with the direction of earlier Congresses except for the unexpected choice of Sen. Robert C. Byrd (D-W.Va.), a conservative, over Sen. Edward M. Kennedy (D-Mass.) a liberal. But there were indications that the outcome of the Senate whip election was based on factors other than liberal versus conservative political views.

There were changes in procedures for selection of committee chairmen that House Democrats approved, resulting in some reform of the seniority system. And there may be some change in the Senate filibuster rules.

Perhaps the most important change was voted by the 91st Congress itself—the rule to take effect with this new Congress to make teller votes a matter of record. This, coupled with a regulation that would also make votes in committee a matter of official record, should give the voter a much better idea of where his congressman stands and how he actually voted on the tough, substantive amendments.

A REALISTIC READING of the 92nd Congress will come on the substantive legislative issues. While the selection of leaders and reform of procedures are important, it is essentially the end result—the legislative record—that counts.

The voice of the voter will pretty much call the tune on these issues—the voice of the voter as reflected in the varied channels of communication that come together to form public opinion on major issues.

The job of the trade union movement is to make sure that its members' voices are heard loud and strong on Capitol Hill on the important issues of our time.

Jawbreakers

A Word Edgewise:

Revenue-Seeking States Should Put Own House in Order First

By John P. Roche

PRES. NIXON is pushing hard for a program of revenue sharing, going "far beyond anything we have suggested to date." The key aspect of his policy is that "no strings" would be attached; that is, the states could use the money as they see fit.

Already about $25 billion in federal aid is going to state and local governments, but the states complain that these funds are earmarked for specific programs, that their operation is enmeshed in red tape, that they are characterized by remote control rather than by that sense of intimacy that exists between the citizen and his state government.

There are a number of problems with the Nixon program, but first of all let us try to sort out the various arguments that are mixed together in the pot. Admittedly, state and local governments are having financial troubles—there is an employment freeze in Boston, except for police, Philadelphia is letting employes go, and, of course, New York's Mayor John Lindsay virtually has threatened to take the city formally into bankruptcy. State governments are having similar problems.

But there is a difference between the travail of the mayors and that of the governors. Every time the tax rate in Boston, New York, or Philadelphia goes up, a new wave of refugees to the suburbs is created. The cities are trapped in a downward cycle, services decline, and there exists a real possibility that in 25 years metropolitan areas will be enclaves of the poor—black and white. On my home in Weston, Mass., for example, I pay about $2,000-a-year property tax, have first-rate services and excellent public schools. An acquaintance who just moved here from New York was paying almost $5,000 a year there for private schools. His kids will now go to public schools, and I predict, in a couple of years he will be complaining about the local property tax!

In short, the cities are helpless, but what about the states? State behavior, by and large, has been utterly irresponsible and before we rush to fill a governor's pocket with federal coin it might be pointed out that nine states have no income tax at all, four more have a very narrow base, and five apply what is, in effect, an excise on income, a flat tax applied to all hands (4 percent in Massachusetts). And we are not talking about rural states: in the three categories above are included the states of Pennsylvania, Texas, Ohio, New Jersey, Illinois, Indiana, Michigan, and Massachusetts.

THE FIRST RULE of equity is that one must come into court with clean hands. In this spirit, it seems clear that a significant number of states simply do not have the right to complain. They have failed miserably to put their own financial houses in order. The governors can often reply that they have tried, but the sovereign electorate has rejected their proposals (a number of Democratic gubernatorial victories last November were reactions to the efforts of Republican governors to up taxes). We liberals have been trying for years to get a progressive income tax in Massachusetts, with some progress: we lost 8-1 in 1962; the last time it was on the ballot, we got about 1 vote in 3.

But doesn't this, in turn, tell us something? The last time revenue sharing was front and center, I pointed out that the average citizen "relates" (as they say) to the national government and to his local government, city, county, town or village. State governments are a vestigial remnant of pre-Civil War federalism—who knows what goes on at the state house? The notion of handing $400 million in unearmarked federal money to the average state legislature is enough to terrify the most idealistic states'-rights advocate.

Whatever merits it may have in Indochina, the "Vietnamization" of American public finances is an appalling scheme. What we really need are higher, more progressive taxes and direct, functional cooperation between the federal government and local agencies. The states should be retired to the Smithsonian Institution.

A View from the Washington Post:

Nixon's New 'Revolution' Aims At Reversing 38-Year Trend

The following analysis of Pres. Nixon's State of the Union address appeared in the Jan. 23, 1971, issue of the Washington Post. The article, by Don Oberdorfer of the Post staff, was titled "news analysis."

IF ACCEPTED by Congress, Pres. Nixon's "New American Revolution" proposed last night would radically change the way government works at every level, reverse the legislative trends of the last 38 years, dilute the political power of the poor, blacks and interest groups that back national programs in education, agriculture, housing and other fields, and reshuffle 400,000 civil servants in the major domestic departments of the U.S. government.

If not accepted by Congress, the frustrated "Revolution" will provide a major Nixon campaign issue against the Democrats in 1972.

The early portents in political Washington were that Mr. Nixon is more likely to end up with an issue than with an array of bold laws and sweeping redirection.

The new elements of the vast program, which would change the rules and the framework of the American government, were as new to the lawmakers on Capitol Hill last night as they were to Americans listening on a nationwide television hookup.

There was no advance consultation with Congress, White House officials said.

There was no advance consultation with the interest groups who would be profoundly affected by the governmental changes.

The White House is counting on the program to be so popular that the people will demand that Congress pass it, or elect a new Congress that will do the job.

Certainly the program is popular. As is traditional in such matters, the State of the Union proposed something for everyone — prosperity, good health, a cure for cancer, more federal spending and less federal control, an attack on the "bureaucratic elite" in Washington and a chance for greatness for Congress and the nation.

Mr. Nixon gave few details, withholding those for the budget message next week and a series of legislative messages planned for the months ahead.

In a day-long round of briefings for various groups of reporters, White House aides explained the President's purposes, philosophy and his high-minded idealism in proposing the revolution for the nation, but they gave away few of the fine-print details of proposed programs.

The White House officials, who cannot be named under the rules of background briefings, did not display overwhelming confidence that the bulk of the new proposals will be actually enacted by the Democratic-controlled 92nd Congress.

"I think when the Congress hears what the President has to say, we'll get a hearing," one high official said before the President's address. Another official said that if the lawmakers accept even part of the Nixon plans, it will be a good Congress.

HIS AIDES DECLARED that Mr. Nixon is entirely sincere in pushing a bold program despite what is likely to be massive resistance by many groups.

"The President means it. He feels it in every pore of his body," the reporters were informed.

At the heart of the revolutionary part of the Nixon program are two key elements:

- Dissolution of many of the domestic grant-in-aid programs which have been enacted piecemeal since the New Deal, and their replacement by a flow of federal dollars for nearly unrestricted use at state and local levels for such broad purposes as "education," "transportation" and "urban community development."
- Reorganization of the seven most important U.S. domestic departments, which administer the federal programs, into four new super-departments —Community Development, Economic Development, Human Resources, and Natural Resources.

Some members of the White House staff argued against proposing these two controversial and fundamental changes, on the theory that the debate and argument about them will choke the committees with work and oratory and dominate the legislative session, thus endangering the more easily digestible parts of the Administration's program.

Mr. Nixon decided to be bold, despite the risks.

His appeal was more to the people than to the Congress, apparently based on the conviction—buttressed by his private polls—that "most Americans are simply fed up with government at all levels."

Atty. Gen. John N. Mitchell, who was Mr. Nixon's campaign manager for the presidency in 1968, called the State of the Union speech "the most important document since they wrote the Constitution."

That may overstate things a bit, but there is certain to be a vast debate over the merits and impact of Mr. Nixon's "New American Revolution."

The first and most immediately intriguing question is whether the initial debate will dominate the 92nd Congress, or whether it will dominate the 1972 presidential campaign instead.

'Trickle Down' Theory:

Tax Break for Business Called Wrong Medicine for Economy

THE MULTI-BILLION dollar "tax bonanza" for business pushed by Pres. Nixon is the wrong remedy for the economic ills that have pushed unemployment to a nine-year high, the AFL-CIO's chief economist declared.

"This is the old 'trickle-down' theory of the 1890s . . . the economic theory of Presidents McKinley, Coolidge and Harding," said Nat Goldfinger, director of the AFL-CIO's Dept. of Research. He said that the Administration's plan to "liberalize corporate depreciation scales" will cut federal revenues at least $2.7 billion "in the first full year of operation," and "more than $4 billion per year five years down the road."

Goldfinger explained that under the proposed new tax rules, industry will be able to "write off the costs of machines and equipment at a rate about 20 percent faster than at present," and will no longer be required to "actually replace the machines at about the same rate that they are writing them off." That, he said, eliminates "any rational basis for depreciation write-offs."

Speaking on the network radio interview Labor News Conference, Goldfinger labeled the proposal a "strange and wrong-headed move" as the "first step of economic policy measures in the year 1971" to reverse the recession of the last 18 months.

"We certainly do need an expansionary policy—we do need a massive, expansionary stimulus to the economy" to boost sales, production and employment, he asserted, but the most effective way to do that is to create more consumer buying power through greater "public investment" in housing, hospital and school construction. That would increase employment, increase the number of customers, increase consumer spending power, and "eventually increase business investments in new plants and machines," he added.

Goldfinger stressed that almost 25 percent of American industry's machinery and equipment is now standing idle because "there aren't enough customers for the things we can produce in this economy."

Questioning Goldfinger on the AFL-CIO produced public affairs interview were Eileen Shanahan of the New York Times and Frank Swoboda of Business Week magazine. The program is broadcast Tuesdays on the Mutual network.

By Press Associates, Inc.

WHEN PRESIDENT NIXON announced his intention to broaden the depreciation tax loophole for business in the name of spurring the economy, he added insult to injury by doing it at a time when the nation is going through the throes of income tax time.

The announcement came when millions of Americans are trying to figure out what they owe Uncle Sam and where to get the money to pay him by April 15 and then to get started on 1971.

It is a time when tax loopholes for the rich assume more than a theoretical meaning; they largely determine how much the wage and salary worker is going to have to pay the Internal Revenue Service.

Of course, it is also a time when the shrewd tax experts redouble their efforts to attract clients by pointing out the loopholes that are at hand for those with big incomes.

Take this kind of appeal for example:

"Tax Breaks that Lead to Executive Wealth."

The Research Institute of America is ready to provide you, for a subscription of course, one way to split income with your children for tax saving, or how to buy tax-exempt bonds, or how to fix a building the tax-wise way or even how profits from real estate can escape tax.

Or, Prentice-Hall will tell you of the "great 'fringe benefits' tax-exempt to salaried executives." Completely free of taxation are such delights as an extra allowance for car expenses; a $50,000 paid life insurance policy for you and your family without premiums or tax; vacation travel that can be combined with business, not only tax deductible to your company but tax-free to you; annual medical checkups for you and your family and tax-free to you, and company loans at no interest to bring down that 7.5 percent interest charge that you have to pay for your mortgage.

These represent just one small phase of the tax loophole business against which organized labor has been fighting for years.

Others that remain on the books are the tax advantage for capital gains, the generous depreciation allowances, the tax exempt bond, the gift to charity that can bring rich tax rewards, the failure to tax capital gains transferred on death, the oil depletion allowance, the tax-exempt family foundation and the farm "loss" gimmick . . . the list is endless.

UNFORTUNATELY as fast as one loophole is removed or narrowed a bit here and there, new loopholes spring into life. Only recently the 91st Congress—perhaps with only a few members realizing what was happening, opened a loophole that is estimated to mean a tax bonanza to a handful of rich people and corporations. This would permit them to carry over tax-free income beyond the limit set in the tax reform act of 1969.

Now the President has come along with an administrative move to liberalize the depreciation provisions of the tax laws so as to spur capital investment with the idea, the Administration has said, "to help create jobs for the unemployed."

Aside from the fact that this tax gesture came at the time that the President was vetoing a manpower bill that would have directly created jobs for the unemployed, it brought bitter memories of the old Hoover "trickle down" economic theory. This would mean the crumbs that trickle down from the banquet table.

Organized labor called the President's move "incredible." The Farmer's Union conceded that it would benefit a few farmers slightly as compared with "the windfall for big business," and added that it was a "cruel deception aimed at giving the biggest tax break to those who need it least."

Instead of finding a way to cost the federal treasury some $2.5 billion—as this one would—the Nixon Administration should be busy trying to recover the billions that are lost annually through outrageous tax loopholes.

The President has been vetoing job, health and education legislation because the federal government is too poor and because they would "add to inflation."

What better way to add to the federal coffers and battle inflation at the same time than to tackle the loophole problem seriously in the 92nd Congress?

TAX BREAKS for business pushed by Pres. Nixon will not cure the economic ills of the nation, AFL-CIO Research Director Nat Goldfinger, center, declared on Labor News Conference. He was interviewed by Frank Swoboda of Business Week magazine and Eileen Shanahan of the New York Times.

Reaching the Union Member

Participants explore ways to break down communication barriers

The AFL-CIO Dept. of Education recently sponsored a working conference in St. Louis on "Reaching the Union Member."

The Galaxy Conference—so named for its wide range of participants—examined such issues as how new members look at the union, roadblocks to reaching union members, new teaching approaches and communications techniques and practical programs to further strengthen union organizations and the labor movement.

The primary goal of the conference was to pull together experiences and ideas and to make the resulting information available to all AFL-CIO affiliates.

The delegates spent most of their time in small discussion groups, considering communication problems and solutions. Plenary sessions were held to exchange ideas brought up in the smaller groups.

For Working Mothers:

Supreme Court Acts On Sex Bias in Hiring

The U.S. Supreme Court has ruled that an employer cannot refuse to hire a woman solely on the ground that she is the mother of small children, unless he can show factual justification for this differentiation.

The Supreme Court vacated a decision by the 5th U.S. Circuit Court of Appeals at New Orleans which said Martin Marietta Corp. of Orlando, Fla., could refuse to hire Mrs. Ida Phillips because she had pre-school children.

The high court ruled unanimously that, absent any showing of factual justification, it is a violation of the equal employment provisions of the 1964 Civil Rights Act for an employer to have "one hiring policy for women and another for men—each having pre-school age children."

The court held that parenthood "could arguably be a basis" for not hiring the woman "if it is demonstrably more relevant to job performance for a woman than for a man." But it said there was not enough evidence in the record on this point and sent the case back to the lower court for further hearings.

It was the first sex discrimination case under the equal employment provision which forbids discrimination in hiring based solely on race, color, religion, sex or national origin.

Justice Thurgood Marshall concurred that the case should be remanded but argued that sex can be a bona fide job qualification only when such unusual employment as acting and fashion modeling are involved.

Marshall said he could not agree with the court's indication that a bona fide occupational qualification could be established by showing that some women have family responsibilities that interfere with job performance and that men usually do not have such responsibilities.

He suggested that the court "has fallen into the trap of assuming that the act permits ancient canards about the proper role of women to be a basis for discrimination."

The appellate court's action affirmed a summary judgment in favor of the company by a U. S. District Court in Florida.

But Chief Appellate Judge John R. Brown, joined by two of the other justices, had filed a vigorous dissent, asserting that the full court should correct what, in his view, was a "palpably wrong standard."

He added:

"The case is simple. A woman with pre-school children may not be employed, a man with pre-school children may. The distinguishing factor seems to be motherhood versus fatherhood. The question then arises: Is this sex-related? To the simple query the answer is just as simple: Nobody—and this includes judges, Solomonic or life-tenured—has yet to see a male mother."

Lathers Union Ex-President Sal Maso Dies

Paterson, N.J.—Sal Maso, 70, who retired as president of the Lathers last year, suffered a stroke and died a few hours later. Leaders of the labor, government and civic community of this city and state crowded St. Therese's Church for the requiem mass.

AFL-CIO Pres. George Meany and Sec.-Treas. Lane Kirkland expressed their sadness at his death and praised him for serving his fellow workers "diligently and with dedication and distinction."

Survivors include Maso's wife Agnes, son Kenneth and brother Emil. The latter two are principal officers of Lathers Local 143, of which Sal Maso was business manager from 1930 to 1937.

Born in New York City, Maso joined the union in Albany in 1927, moved to Paterson and became active in Local 143. He was elected a vice president of the international union in 1937 and president in 1964 on the death of Lloyd A. Mashburn.

Maso had served as president of the Passaic County AFL-CIO, president of the Paterson Building & Construction Trades Council, commissioner of the Paterson Board of Education, and member of the New Jersey Governor's Committee on Equal Employment Opportunity.

Medical School to Offer Course on Job Hazards

New York—A five-day course in occupational health hazards is being offered trade unionists by the Mount Sinai School of Medicine, Apr. 19-23.

On-the-job hazards caused by chemicals, gases, radiation, dust, metals and other substances will be covered in the full-time sessions conducted by the medical school's Environmental Sciences Laboratory.

Provisions of the new Occupational Health & Safety law will also be analyzed, especially in the area of effective enforcement to promote health standards in the workplace.

Registration in the course will be limited to 75 union and management health and safety specialists and union officials who deal with government agencies.

The faculty of the Environmental Sciences Laboratory and staff members of other Mount Sinai departments will present discussions, seminars and panel conferences. Safety experts from unions and visiting international occupational health authorities also are scheduled to participate in the programs, the medical school said.

Among the union officials expected to take part are Pres. Albert E. Hutchinson of the Asbestos Workers, Pres. Peter Bommarito of the Rubber Workers, Anthony Mazzocchi of the Oil, Chemical & Atomic Workers, Research Director George Perkel of the Textile Workers Union of America and Lawrence J. Ahern of the Chemical Workers.

Additional details about the course may be obtained from the registrar of the Special Course in Occupational Health Hazards, Environmental Sciences Laboratory, Mount Sinai School of Medicine, 100th Street and Fifth Avenue, New York, N.Y., 10029.

CONVENTIONS

The National Association of Broadcast Employes & Technicians will hold its 1971 convention Sept. 14-17 in Toronto, Ont.

The Air Line Dispatchers have scheduled their 1971 convention for Oct. 19-21 in Seattle, Wash.

Arbitrary Wage-Price Guideline Refuted by AFL-CIO Economist

No single "magic number" exists that the government can validly apply as a wage-price guideline, Nat Goldfinger, the AFL-CIO's top economist, declares in the January issue of the Federationist, the AFL-CIO magazine.

Goldfinger, in an article titled "A Trade Union View of Inflation," traces today's inflation problems to the early '60s. Their origin, he says, was "in an unsustainable capital goods boom, based in part on a sharply rising flow of after-tax cash to corporations, government encouragement and government subsidies."

It was at the same time, Goldfinger notes, that the government pushed a so-called wage-price policy.

"Average increases in wages and fringe benefits were supposed to be limited, voluntarily, to the trend-figure of rising private output per manhour in the previous five years—a percentage that was soon nailed down to 3.2 percent and, with the passage of time, developed into a rigid 3.2 percent fixation."

The "magic number" didn't work, Goldfinger says, primarily because of the pluralistic and decentralized nature of American society—which means that wage determination also is decentralized.

"About 150,000 different collective bargaining agreements cover tens of thousands of employes and over 100 national unions and their 70,000 locals," he points out. "Moreover, even where master agreements cover the employes of multi-plant corporations, there are usually supplemental plant agreements affecting wages, salaries, fringe benefits, seniority and other issues."

Organized employes have no single national collective bargaining representative and only a minority of American wage earners are even organized, the article observes.

Nor is there a single national employers' association that can set prices or wages for all employers or even for the vast majority of employes.

Goldfinger stresses that wage determination—whether or not by collective bargaining—also is subject to employer resistance and is subject to time lags if it does involve collective bargaining.

The AFL-CIO research director also cites the sheer size of the continental United States with tens of thousands of different markets, industries and occupations:

"Each of them has a large number of specific and different conditions, a multitude of tangible factors and real problems that have to be met.

"For example, a number of industries have wage inequities and some industries or companies have substandard wages. In many industries, technological changes are displacing jobs, changing job content and skill requirements and shifting job classifications, wage rates and lines of promotion or downgrading; the cost of living is rising, eating into workers' buying power. These issues are real and tangible to the workers and employers and they require workable solutions."

For these reasons, Goldfinger says, no single "magic number" can be imposed as the precise limit for all increases in hourly compensation of all employes throughout the varying markets, industries and occupations.

"An attempt to base such a single 'magic number' on one economic factor alone—such as productivity—makes the idea even more unworkable," he declares.

"The professors who promulgated the 'voluntary guideline' approach know this full well for their own interests—witness their advice to workers while they are actively supporting or accepting silently the successful efforts of the American Association of University Professors to obtain increases more than double the wage guideline."

There were other reasons why the wage-price guidelines of the '60s did not work, Goldfinger points out. He cites, for example, the gross unfairness of the guidelines, aimed as they were at retarding wages, not prices.

"The 'voluntary guidepost' policy contained a precise percentage guideline for increases in workers' wages and fringe benefits. But there was no effective guideline for prices. And there was no guideline at all for profits, dividends, executive compensation and other forms of income."

After adjustments for the rising cost of living during this period, real employe compensation actually was less than the 3.2-percent guideline, while prices were moving up slowly, the article notes.

"When the textbook theory of a 'voluntary guidepost' policy was translated into action in the real world, it was hardly more than a sophisticated, largely one-sided pressure to hold down wage increases. But the difficulties with the textbook theory—which can be stated so elegantly on a blackboard—were not only inequitable results.

Goldfinger reiterates the AFL-CIO position that if the President determines that the nation's economic difficulties require overall stabilization measures—after the establishment of selective credit controls—the AFL-CIO will cooperate.

"But such mandatory controls must be equitably placed on all costs and incomes, including all prices, profits, dividends, rents and executive compensation as well as employes' wages and salaries."

Labor Men Named To Ohio Cabinet

Columbus—Ohio Gov. John J. Gilligan, who was elected in November with the strong support of union members and COPE, has appointed two labor officials to his cabinet.

They are Martin J. Hughes of the Communications Workers, named director of the Ohio Department of Industrial Relations, and William E. Garnes of the Auto Workers, who will head the Ohio Bureau of Employment Services.

Hughes, a member of the CWA since its inception, is the assistant to the vice president of the union's District 4. He also was a vice president of the Ohio AFL-CIO.

Barbara Easterling, a vice president of CWA Local 4302, was also named chief of the Division of Women & Minors in the state Industrial Relations Dept.

In 8 Port Cities:

Meany Scores Plan To Close Hospitals

A move within the Dept. of Health, Education & Welfare to close government-operated hospitals in eight major cities drew a strong protest from AFL-CIO Pres. George Meany.

In a letter to HEW Sec. Elliot L. Richardson, Meany warned that closure of eight hospitals operated by the Public Health Service would cause "great harm to the high level of medical care in the United States."

He pointed out that although Public Health Service hospitals are meant primarily to serve merchant seamen, they also serve government and military personnel and their families, and provide a broad range of services to other citizens in nearby communities. They often provide acute-care and emergency facilities that overburdened private hospitals are unable to supply.

Proposals to "replace" Public Health Service hospital services by the use of Veterans Administration and private hospital facilities simply will not work, Meany said.

"The VA hospitals, as any veteran knows, are crowded and operating near capacity; the overloaded conditions that prevail in private hospitals, where costs often run past $100 a day, are well documented."

By contrast, Meany said, "the budget and operating costs of the Public Health Service hospitals vividly demonstrate that the Public Health Hospital system is one of the few health-care bargains this nation possesses."

Meany reminded Richardson that the nation's need for medical services already far outruns the available resources, that meeting the critical need for improved health care is the AFL-CIO's top legislative goal.

"In view of this situation," Meany concluded, "it seems to be a paradox that the nation should be closing hospitals. . . . To allow the first health-care action of the new year to be the closing of eight hospitals would be a severe blow to the hopes of millions of Americans for adequate and affordable health care.

"I strongly urge that these hospitals be left open, and that they continue to be allowed to provide their wide range of services to seamen and private citizens alike."

The eight hospitals with a total of 2,484 beds are located in Baltimore, New Orleans, San Francisco, Seattle, Boston, Staten Island, N.Y., Norfolk, Va., and Galveston, Tex.

The proposed closing of the PHS hospitals, which were established by an Act of Congress in 1798, also drew an angry response from Seafarers Pres. Paul Hall, who heads the AFL-CIO Maritime Trades Dept.

Hall, in a letter to all U.S. senators, urged them to join in the effort to keep the hospitals open "so that the vital medical services offered by the hospitals to seamen and a wide range of other patients will not be lost."

HEW Sec. Richardson was called to testify on the proposed closings by Rep. Edward A. Garmatz (D-Md.), chairman of the House Merchant Marine Committee.

Garmatz reminded Richardson of 1965 hearings that his committee had conducted on proposed closings.

"As a result of these hearings," Garmatz said, "the committee concluded that whatever justification existed for permitting our Public Health Service program to pass the danger point, it was time to make plans not to close hospitals, but to upgrade, modernize and expand" the remaining hospitals.

On Jan. 26, Garmatz revealed that a legal opinion by HEW's top legal officer contends HEW has full authority to close any or all Public Health Service hospitals. He said the opinion reinforced his "instinctive feeling" that Sec. Richardson had "already made up his mind to close most or all" of the facilities.

Garmatz added, however, that the opinion is in conflict with a 1965 ruling from the comptroller general which held the HEW secretary had no authority to close the hospitals without the approval of Congress or to contract for outside care of patients.

He said he has asked present comptroller general, Elmer B. Staats, whether he agrees with the 1965 decision.

Garmatz said decisions of the comptroller general are "binding and conclusive" on the Executive Branch. If Staats concurs with the earlier decision, Garmatz said, HEW would be barred from spending appropriated funds "in connection with the closing of these hospitals and clinics."

NATIONAL TRUST FUND to further apprenticeships and training in the painting, decorating and related trades is established with the signing of a joint agreement by union and industry officials. Seated from left are Pres. S. Frank Raftery of the Painters, Labor Sec. James D. Hodgson, who witnessed the signing; Pres. Joseph Sansone of the Painting & Decorating Contractors of America and Pres. Mervin Smith of Gypsum Dry Wall Contractors International. Union, industry and Labor Dept. representatives, standing, observe the signing ceremony.

Prepaid Medical Groups Hail Health Security Bill

The Group Health Associations of America hailed the new drive for passage of the comprehensive National Health Security Act as bills embodying the program were introduced in the House and Senate.

The legislation, with the strong support of the AFL-CIO and the Committee for National Health Insurance, is being sponsored by a bipartisan group of congressmen and senators.

About 65 congressmen are co-sponsoring the legislation introduced in the House. The prime sponsors are Representatives Martha W. Griffiths (D-Mich.), James C. Corman (D-Calif.), Ogden R. Reid (R-N.Y.) and Charles W. Mosher (R-Ohio).

The Senate version was introduced by Sen. Edward M. Kennedy (D-Mass.) with John Sherman Cooper (R-Ky.) and William B. Saxbe (R-Ohio) leading the list of 24 co-sponsors.

The GHAA, made up of prepaid group practice medical plans across the country, has for many years backed the concept of national health insurance.

Jeffery Cohelan, GHAA executive director, said his organization applauds the sponsors of the legislation that provides for "marshalling the resources in manpower, facilities and expertise necessary to deliver high quality health care with efficiency and economy to the American people."

The GHAA expressed gratification over sections of the bill that call for the development and expansion of comprehensive health service organizations and prepaid group practice plans.

Cohelan called the proposed Health Security Act "an impressive blueprint for all elements of our society—lay, professional and administrative—that are committed to the goal of an effective health services system."

Labor Boosts Aid to Veterans Seeking Jobs

(Continued from Page 1)

In many cases, returning veterans will be referred to state and local labor bodies by HRDI representatives who will interview and counsel the veterans at the West Coast separation centers.

If the veterans live in the vicinity of any of the 45 HRDI offices across the country, they will be referred there for job and training opportunities.

HRDI Pres. Julius F. Rothman and Director Robert M. McGlotten have called on the state and local bodies to set up veteran's manpower committees to help returning servicemen in their job or training needs.

Those veterans returning to urban areas where unemployment rates are high, Rothman and McGlotten noted, will be most in need of assistance in finding appropriate training and job opportunities.

HRDI also pointed out that while most of the veterans will be in the 20-24 age group, many will be seeking their first full-time jobs. About 20 percent of them will have less than a high school education.

Guidelines were issued by HRDI to state and city central bodies covering interviews, job and training opportunities and progress reports by the veterans' manpower committees.

Meany observed that the program "will mean a lot of work" for state and local AFL-CIO groups "and it will not be an easy task."

But he stressed that through their cooperation "organized labor can begin to repay a portion of the debt we all owe the men who defended freedom in Viet Nam."

The AFL-CIO Veterans Assistance Program was developed by HRDI with the help of the Departments of Labor and Defense. William H. Burks, an HRDI staff representative in Oakland, Calif., is directing the operations on the West Coast.

The program is one of several manpower projects that HRDI operates in 45 major employment centers across the country. HRDI recently received a $2.2 million Labor Dept. contract extending and broadening its operations.

11 Unions to Expand Coordinated Programs

Eleven AFL-CIO unions are moving to expand the program of cooperation that brought victory in the 100-day 1969-70 strike against the General Electric Co.

Plans for intensified research, planning and other joint activities by the unions belonging to the AFL-CIO Coordinated Bargaining Committee were spelled out by James Compton, chairman of the CBC Steering Committee.

"Our success in uniting the interests of 200,000 members of a dozen different unions is one of the most promising developments in American labor-management relations," Compton said. "We are working now to build on that success."

He noted that CBC activities are not limited to preparing for the next round of contract negotiations, still more than two years away. He said the unions are working together in grievance processing and other aspects of contract administration.

"The work of this committee goes on 365 days a year," Compton said. "If we are to make as much progress in improving our GE and Westinghouse contracts as we did in 1970—and we intend to do that—it will be because of the groundwork we lay now."

A top-priority CBC project, he said, will be to encourage local union involvement in community affairs.

"Our greatest asset in the GE strike was the sympathy and understanding of our neighbors in thousands of cities and towns. We intend to keep that spirit alive and growing."

The CBC project will be aided by Leo Perlis, director of the AFL-CIO Dept. of Community Service Activities.

Other current CBC projects include a clause-by-clause comparison of the hundreds of separate contracts under which GE and Westinghouse employes work and an analysis of the experience of the various unions in grievances, arbitrations and other administrative problems.

At its next meeting Apr. 20 in Cleveland, Compton said, the CBC Steering Committee will measure the impact on employes of GE and Westinghouse foreign operations.

"These companies have made our jobs one of their most important exports," he charged. "The time has come to decide what has to be done about it."

The AFL-CIO unions in the CBC include the Carpenters; Electrical, Radio & Machine Workers, International Brotherhood of Electrical Workers, Firemen & Oilers, Flint Glass Workers, Allied Industrial Workers, Machinists, Plumbers & Pipe Fitters, Sheet Metal Workers, Steelworkers, Technical Engineers. Working with them are the unaffiliated Teamsters and Auto Workers.

Poverty Levels Increased $200 By Living Costs

A non-farm family of four persons in the continental United States is considered living in poverty if it has an annual income of $3,800 or less, the Labor Dept. said in announcing it has raised the poverty dividing line about $200 over last year.

The poverty levels were adjusted in line with increased living costs as a guide in determining eligibility for manpower programs aimed at improving the employability of the poor.

Other new poverty levels by income for various non-farm family sizes are: Seven-person family, $5,600; six-person family, $5,000; five-person family, $4,400; three-person family, $3,100; two-person family, $2,500 and single persons, $1,900.

For farm families, poverty-level incomes are $300 to $900 less than for non-farm families, depending on family-size.

Nixon Economic Program Postpones Recovery Goals

NURSERY RHYMES and learning the ABCs take top priority with these youngsters at a Social Welfare Center operated by the Vietnamese Confederation of Labor in My Tho. The center, built with the direct financial assistance of the Machinists, is one of 20 operated by the CVT. A number of unions have contributed to other CVT projects in South Viet Nam. **(Other pictures, Page 7)**

Budget Falls Short On Pressing Needs

Economy

By David L. Perlman

The Nixon Administration doesn't expect to achieve full employment or stop inflation anytime soon—even if its most optimistic predictions about the nation's economic growth come true.

The President's Economic Report to Congress forecasts an unemployment rate of 4.5 percent by mid-1972. While that would be down from the current 6 percent level, it would be substantially higher than the 3.3 percent rate when Nixon took office.

Along with the 4.5 percent unemployment would be a 3 percent annual rate of inflation—lower than at present but still roughly double what economists consider relative price stability.

To project even these modest goals, the President's Council of Economic Advisers assumed a sharp 9 percent increase during 1971 in the gross national product—the total value of the nation's production of goods and services.

The report acknowledges that "a considerable body" of economists doesn't expect the growth rate to exceed the 7 to 7.5 percent range. But it contends that the 9 percent figure is "feasible" based on proposed higher government spending and an anticipated increase in the money supply.

If the White House projections

Budget

By John M. Barry

Pres. Nixon embraced the concept of deficit spending to stimulate the sagging American economy as he submitted a Fiscal 1972 federal budget that he described as "expansionary but not inflationary."

But the budget falls well short of a head-on assault on the pressing social and economic problems confronting the nation. In fact, the President called for the dismantling of a number of the progressive programs enacted over the last decade in such areas as education, housing and poverty to make way for his controversial revenue-sharing plan. And he proposed "economies" that would cut back others, such as Medicare and Medicaid.

The President's Fiscal 1972 budget of $229.2 billion is $16.4 billion higher than the Administration now estimates will be spent in Fiscal 1971, ending next June 30.

Most of this difference, however, is taken up in higher social security payments to a growing number of beneficiaries over which the President has little or no control and in his proposals for "no-strings" sharing of federal revenues with states and cities. There is little new money for existing programs.

Nixon became the first modern Republican president to propose a budget anticipating a deficit. He projected federal expenditures to-

3 States Sued On Violations Of Wage Law

The Labor Dept. has filed suit for more than $1 million in underpayments due several thousand state hospital and county school employes under the Fair Labor Standards Act.

The government suit—against Illinois, Indiana, Missouri, St. Louis County, Mo., and Marion County, Ind.—is the first to be filed under the 1966 amendments to the federal wage-hour law.

The amendments, which had strong support from the AFL-CIO and its affiliates representing public employes, extended coverage of the act to 1.7 million workers at hospitals, nursing homes and educational institutions operated by states and their political subdivisions.

The U.S. Supreme Court upheld extension of the standards

(Continued on Page 2)

Inflation Unchecked:

Price Rise Erases Increase in Wages

Consumer prices rose at an annual rate of 6 percent in December—up five-tenths of 1 percent from November—as inflation ran unchecked throughout 1970 to wipe out workers' wage increases.

Real spendable earnings—take-home pay adjusted for price increases over the years—averaged $77.23 in December for the worker with three dependents, the Labor Dept. reported. This was 68 cents less than the level of December 1969 and even below the real take-home pay in April 1964.

The Consumer Price Index climbed 7.2 points to 131.8 last year, an increase of 5.5 percent from December 1969, the Bureau of Labor Statistics noted. The rise was slightly less than the 6.1 percent surge in the preceding 12 months.

The average monthly increase in the index in 1970 was 6 percent, the sharpest climb since 1951, which came on top of an average rise of 5.4 percent for 1969.

In the two preceding years, prices had climbed at a much slower pace, with the increases averaging 4.2 percent for 1968 and 2.8 percent for 1967.

Consumer prices in the last quarter of 1970 were rising at an annual rate of 5.8 percent, compared with 4 percent in the preceding three months. The December jump at an annual rate of 6 percent compared with 3.6 percent in November.

Most of the December increase was attributed to a six-tenths of 1 percent jump in the cost of consumer services from November, the BLS pointed out.

This included higher residential property taxes, insurance and mortgage interest costs and house and apartment rents. Medical care and transportation costs also were up sharply over the month.

Medical care costs rose eight-tenths of 1 percent from November while insurance and financing was seven-tenths of 1 percent higher.

Heating fuel cost nine-tenths of 1 percent more than in November and utilities were eight-tenths of 1 percent higher. Transportation costs also rose eight-tenths of 1 percent, pushed by a 1.4 percent increase in the price

Administration Assailed On Medicare Cutback

The disclosure in Pres. Nixon's fiscal 1972 budget that the Administration wants to cut back Medicare benefits and increase the share older Americans pay into the program drew a sharp rebuke from the National Council of Senior Citizens.

William Hutton, executive director of the NCSC, charged that the Administration "is trying to balance the budget on the backs of the sick old people."

The budget report reveals that "cost-sharing legislation" also will be proposed for the Medicaid program—directed at several million low-income workers receiving services under the program.

The Administration hopes to save about $827 million from the cuts in benefits and additional charges from the two programs—$383 million in Medicare and $444 in Medicaid.

Even with these proposed savings, federal spending for Medicare is expected to increase $1.1 billion in the next fiscal year to $8.3 billion. The federal share of Medicaid will run about $3.8 billion, an increase

(Continued on Page 6)

Labor Protests Order To Shut Nuclear Plant

The AFL-CIO has urged Pres. Nixon to cancel an order that would shut down plutonium production at the Atomic Energy Commission's Hanford, Wash., plant, throw thousands of persons out of work, and threaten the Far West with a power shortage.

Federation Pres. George Meany wired Nixon that labor is "shocked" by the President's "precipitate decision" to deactivate the last two plutonium-producing reactors at Hanford.

"The immediate effect," Meany warned, "will be a major economic blow to a region already hard hit by unemployment." He estimated that 7,500 jobs will be lost if the action stands.

The AEC subsequently announced that it will hold off closing of one of the reactors pending further review. Some of the scheduled layoffs will be cancelled until a decision is reached.

Plutonium is a key ingredient of atomic weapons and its production has been trimmed back in recent years.

At Hanford, however, electric power has been an important by-product of the operation. Steam from the plutonium reactors is used to generate low-cost electricity which is distributed through the Bonneville Power Administration.

Meany told Nixon that "if the United States has adopted a policy of no longer producing plutonium, it must provide for an orderly transition period to cushion its effect on jobs and the economy."

Handbag Pact Sets Stage for Uniform Talks

New York—The Leather Goods Workers won wage increases totaling 50 cents an hour in a three-year agreement covering more than 10,000 workers in New York, New Jersey, Pennsylvania and New England.

The wage gains constitute the largest single adjustment ever won by handbag workers. The contract has special significance also, union Pres. Charles Feinstein said, because it "constitutes the first stage in the effectuation of a national uniform agreement for the handbag industry."

Feinstein sat in on the extensive negotiations with employers represented by the National Industrial Council of the National Handbag Association. Vice Pres. Frank Casale headed a bargaining team representing the four union joint boards involved.

Besides wages, the new contracts also provide improvements in vacations, paid holidays, overtime pay and wage minimums. Also important, the union said, is an agreement to have the April 1974 expiration date coincide with New York settlements which the union's Local 1, with 12,000 members, is getting ready to negotiate. That will make synchronized action possible, Feinstein said.

Two employers who did not go along with the new national settlement were struck in Syracuse, N.Y., and Perth Amboy, N.J. Nearly 1,200 workers set up picket lines at plants of Julius Resnick, Inc. and J R Handbag. Daval Handbag Co. settled after a few days and agreed to give its workers one additional fringe benefit, the union said.

NEW CHAIRMAN of the Senate Special Committee on the Aging, Sen. Frank Church (D-Idaho), addresses the executive board of the National Council of Senior Citizens. Church succeeded Sen. Harrison A. Williams (D-N.J.), right, now chairman of the Senate Labor Committee. Pres. Nelson H. Cruikshank of the NCSC is in the center.

3 States, Counties Sued On Wage Law Violations

(Continued from Page 1)

as constitutional in 1968, ruling that it was a valid exercise of the government's power to regulate interstate commerce.

Most states have since changed their pay practices voluntarily to comply with the high court's ruling.

But Labor Sec. James D. Hodgson said representatives of the department's Wage-Hour Division "have made repeated efforts over a long period of time to bring about compliance and payment of the back wages owed to these employes" in the states and counties it is suing.

"In all conscience, we can no longer permit noncompliance on the part of these states and political subdivisions at a time when most other states have voluntarily come into compliance with these provision of the law," said Hodgson.

The states and counties named are accused of paying less than the minimum wage, failing to pay time-and-a-half rates for overtime work, not providing equal pay for equal work and faulty record keeping.

Hodgson said the workers involved are practical nurses, nurses' aides, orderlies, maintenance equipment operators, housekeeping personnel, engineers, security guards, firemen, food service workers, clerks, maids and home supervisors.

The government's complaint against Illinois charges that the state failed to pay employes of the John J. Madden Mental Health Center at Hines, Ill., as well as employes at other state-operated hospitals time-and-a-half rates for all hours worked over 42 in a workweek from November 1968 to Feb. 1, 1969, and for all hours worked over 40 since Feb. 1, 1969.

The suit against Missouri alleges that State Hospital No. 2 at St. Joseph and other state institutions failed to pay overtime since May 1, 1968, and did not keep proper records.

In the suit against St. Louis County, its county council and Civil Service Commission, the Labor Dept. alleges overtime and record-keeping violations since July 1, 1967, in the operation of the County General Hospital at Clayton, Mo.

In two suits against the State of Indiana, the government charged that the Muscatatuk State Hospital and Training Center at Butlerville has violated overtime and record-keeping regulations and that the Indianapolis School for the Blind has violated minimum wage, overtime and record-keeping provisions of the act since November 1968.

In another case filed at Indianapolis, the Marion County General Hospital there is charged with violation of overtime, equal pay and record-keeping requirements of the law retroactive to November 1968.

New Contracts in 1970 Averaged 8.9% in Wages

Wage increases averaged 8.9 percent a year for 4.5 million workers covered by major collective bargaining settlements negotiated in 1970, the Labor Dept. reported.

The number of workers covered was less than expected because of prolonged negotiations in the auto and other industries, the department noted, but the average annual wage hike, considered separately from other contract improvements, was above the 7.6 percent average increase recorded for 1969.

The annual survey by the department's Bureau of Labor Statistics covered all nonfarm contracts for groups of 1,000 workers or more. It showed that wage increases in manufacturing industries were about the same as those reported for 1969 while settlements in construction, transportation and other fields were substantially higher.

First-year wage increases averaged 11.9 percent of straight-time hourly rates, up from 9.2 percent in 1969, the survey found.

In manufacturing, the average first-year raise was 8.1 percent as against 7.9 percent for 1969. In nonmanufacturing, first-year wage increases averaged 15.4 percent, compared with 10.8 percent for 1969.

For the construction industry alone, the average first-year wage adjustment was 18.3 percent, against 13.1 percent a year earlier.

Averaging the increases over the life of the contracts, the annual gain was 6 percent in manufacturing, the same as for the previous year. In nonmanufacturing, it was 11.5 percent, compared with 9.3 percent in settlements reached in the previous year. In construction alone the average increase was 14.7 percent, up from 13.1 percent in 1969 settlements.

Assuming changes were to go into effect at equal intervals during the life of all contracts, the total wage and benefit increase would average 9.1 percent a year as against 8.2 percent for 1969, the BLS estimated.

On that basis, the average first-year package would total 13.2 percent compared with 10.9 percent for the year-ago average.

The report noted wide variations in first-year changes. Nearly 30 percent of the contracts studied provided increases of less than 9 percent, while another 30 percent included increases of 15 percent or more.

The bureau said major developments late in the year included settlements at Ford Motor Co. and General Motors Corp., and a first-year wage boost for nearly 500,000 railroad workers mandated by Congress in a back-to-work law.

Dystrophy Group Re-Elects Meany

New York—AFL-CIO Pres. George Meany has been re-elected a corporate member of Muscular Dystrophy Associations of America at the agency's annual meeting here.

National Chairman Jerry Lewis, who himself is a member of eleven unions, praised Meany's contribution to the fight against dystrophy and related crippling diseases.

Other union officials elected to key MDAA positions were Fire Fighters Pres. William H. McClennan, re-elected to corporate membership; Letter Carriers Pres. James H. Rademacher, re-elected to the board of directors; Thomas R. Donahue, Jr., executive secretary of the Service Employes, newly-elected to the board of directors.

Amid Soaring Costs:

Elderly Ask Action On Health Security

Older Americans—hurt most by soaring medical care costs—are appealing to Congress to enact the proposed National Health Security Act.

The country's largest organization representing elderly persons, the National Council of Senior Citizens, has thrown its backing behind the legislative program that would absorb existing Medicare and Medicaid services.

The NCSC has also urged Congress to raise social security benefits 35 percent—15 percent this year and 20 percent in 1972—and to double the minimum social security payment, now $64 a month.

Unanimous support for the National Health Security legislation was voted by the NCSC 50-member executive board.

Nelson H. Cruikshank, president of the council, said the proposed comprehensive health program "would provide the elderly far better health care than is likely to develop under a patchwork improvement of Medicare."

Cruikshank noted that the NCSC helped win passage of Medicare and the council considers the program a great social advance. He pointed out, however, that Medicare pays only about 45 percent of health costs leaving a severe financial burden on senior citizens.

A bipartisan group of congressmen and senators is sponsoring the health security legislation, which has the strong support of the AFL-CIO and the Committee for National Health Insurance.

Several bills embodying the key elements of the health program were introduced in the House and Senate shortly after the 92nd Congress went into session. About 65 congressmen and 24 senators are cosponsoring the legislation.

Cruikshank said the NCSC is backing the proposal because adequate health care is a right of all Americans.

He said the new program would also "provide incentives and controls to assure an efficient, innovative system for delivery of health services." It would replace the outmoded fee-for-service system that "benefits only the rapidly declining number of Americans who can afford its skyrocketing costs," he added.

Stressing the need for the 35 percent increase in social security benefits, Cruikshank said that without it, 5 million to 7 million elderly Americans will continue to be trapped in poverty.

He welcomed the plan to tie social security payments to living costs—as voted by the House last year—but only, he said, "after there has been a meaningful increase on the order of 35 percent with a doubled minimum benefit."

"The nation's elderly citizens have earned the right to live in dignity and financial independence" and the NCSC is determined to push for this goal, he said.

The council also voiced concern for the "shameful neglect and brutality" inflicted on patients in many nursing homes that operate for profit.

"We insist that Congress, the Administration and state and local governments set adequate standards of care for more than 1 million U.S. nursing home patients," Cruikshank declared.

Strict enforcement of these standards is needed, he stressed, because it is almost non-existent in many parts of the nation.

The council, which has a membership of nearly 3 million, also approved 40 model laws on nursing home standards and licensing that will be submitted to state legislatures and local governments.

Carpenters Cite Gains In Minority Apprentices

The Carpenters report a steady increase in the number of apprentices from minority groups since the craft union launched special training programs in November 1966 under Manpower Development & Training Act contracts.

Vice Pres. William Sidell said that 7,381 trainees—25.7 per cent of them Negro or from other minority groups—entered two programs conducted by the union during the past four years.

A total of 4,898 entrants were registered in various pre-apprenticeship classes since 1966, with a 29 percent representation from the minority groups.

In the apprentice entry program, the union reported a total enrollment of 2,483—with 461 or 18 percent coming from the minorities.

Sidell said that of the 4,915 individuals who completed the training programs, 80 percent are still in the trade including 732 minority group members—or 18 percent of those who stayed on.

The Carpenters operate a four-year apprenticeship program. Apprentices are paid between 50 and 75 percent of journeymen's wages to start, with increments coming every six months.

In an effort to help returning servicemen become skilled craftsmen, Sidell said the union will open eight new Operation Transition centers Mar. 1. The veterans will receive six weeks of training to prepare them for apprenticeship programs.

Two pilot centers operated by the Carpenters last year referred 121 veterans to joint apprenticeship committees and local unions for placement in apprenticeship programs. Sidell noted that 20 percent of the placed veterans were from minority groups.

The first two centers are at Fort Lewis, Wash., and Camp Pendleton, Calif. The eight additional centers will be at Fort Bragg, N.C.; Fort Riley, Kan.; Fort Carson, Colo.; Fort Benning and Fort Gordon, Ga.; Fort Hood, Tex.; Fort Campbell, Ky., and Fort Sill, Okla.

Despite cutbacks in the Job Corps program, the Carpenters are still conducting training at 26 centers across the country, Sidell reported. He said that as of Jan. 1, the Carpenters had placed 525 Job Corps trainees in union apprenticeship programs, including 341 blacks and 80 from other minority groups.

Rubber Workers Win Uniroyal Vote

Port Clinton, O.—The Rubber Workers defeated the Teamsters in a representation election among employes at a Uniroyal Inc. plant here. The vote was URW 104, Teamsters 89. Two votes were cast for no union and 1 for an unaffiliated union.

Inflation Unchecked:

Price Rise Erases Increase in Wages

(Continued from Page 1)

of new cars and a 1.2 percent rise in gasoline prices over the month.

Food prices in grocery stores and in restaurants climbed three-tenths of 1 percent over the month, the BLS reported. While the rise in grocery store prices was larger than usual, the rise in restaurant prices was the smallest monthly increase in two years.

Apparel prices in December posted the smallest monthly rise since last July, climbing one-tenth of 1 percent from November, the BLS noted.

Over the year ended in December, public transportation costs led the rise of the CPI components, climbing 15.2 percent. This was followed by insurance and financing, up 12 percent. Home ownership costs—including house purchases, mortgage interests, taxes and repairs—rose 10.3 percent.

Other consumer services showing marked increases over the year were medical care, up 8.3 percent, and housekeeping and home maintenance, up 7.6 percent.

Food prices, overall, rose only 2.2 percent last year. While grocery store items climbed 1.2 percent, restaurant prices increased 6.2 percent. Fruits and vegetables cost 1.7 percent less than in December 1969 and meat, poultry and fish were six-tenths of 1 percent lower.

The prices of new cars climbed 6.3 percent over the year while used cars were up 6.7 percent. Gasoline prices were 2.7 percent higher than in 1969, the BLS reported.

BLS figures also showed that apparel prices and the costs of clothing upkeep were 3.9 percent higher.

The increases in consumer prices eroded all of the $5.17 gain in average weekly earnings for workers over the year, the BLS pointed out.

For a worker with three dependents, weekly take-home pay averaged $104.86 in current dollars, 4.9 percent higher than the 1969 average. But after adjustments for the price increases, real spendable weekly earnings averaged $77.50—80 cents less than the year before and the lowest level since 1964.

Based on the December CPI increase, about 107,000 workers will receive cost-of-living wage boosts, the BLS said. Included are about 29,000 airline employes who will get 7 cents an hour more, 5,000 aerospace workers who will get a 2.5 percent wage increase, and about 30,000 workers in other industries who will be paid 5 to 8 cents more an hour.

An additional 27,000 workers will receive pay increases ranging from 2 to 11 cents an hour based on monthly, quarterly and semi-annual changes in the index tied to their union contracts.

Over the past two years, the combined annual average increase in prices was 11.4 percent, compared with 7 percent for 1967-68.

Steelworkers Ruled Eligible For Tariff Aid

The Labor Dept. has certified 1,700 workers at four International Silver Co. plants in Meriden and Wallingford, Conn., as eligible for trade adjustment assistance because their jobs were severely affected by imports of stainless steel tableware.

The action is the result of petitions filed by the Steelworkers last October with the Tariff Commission after nearly 800 production workers lost their jobs and another 900 were laid off temporarily.

Employes at the Insilco plants selected the USWA as their bargaining representative last August in a National Labor Relations Board election. But the NLRB has not yet certified the election because of company objections, the USWA said.

Payments up to $85 a week will be made to the workers who lost their jobs or were laid off as a result of the imports of tableware. The payments are normally limited to 52 weeks, but may be extended another 26 weeks to allow displaced workers to complete training courses.

A Helping Hand

Labor Dept. Revises Rules on Apprentices

Major changes in federal rules on equal opportunity and nondiscrimination in the selection of apprentices have been proposed by Labor Sec. James D. Hodgson.

Under the proposed revisions, program sponsors with "deficiencies in the utilization of minority apprentices" must adopt an approved selection method or establish percentage goals and timetables as part of an "affirmative action program."

In announcing the revisions, Hodgson acknowledged that there has been "significant equal opportunity progress" in apprenticeship programs over the past seven years.

"However," he said, "there continues to be underutilization of minorities in apprenticeship in some circumstances, indicating the need for revision of the regulations so that the nation can make further progress in minority employment."

Interested parties will have 30 days to submit written views on the revisions to the Secretary. After considering these views, the Labor Dept. said, Hodgson would make modifications, "if appropriate, and will adopt the new regulations."

The new rules would apply to all apprenticeship programs registered with the Manpower Administration's Bureau of Apprenticeship & Training and with the 32 state apprenticeship agencies recognized by the bureau.

About 10,000 apprenticeship programs registered either by state agencies or the federal bureau will be subject to the "affirmative action requirements."

Program sponsors are to be guided by a labor-area census—furnished by the Labor Dept.—in determining deficiencies in their programs, using a number of factors. These include the number of minority persons in apprenticeship programs, the minority population in the area, the minority labor force in the area, and the availability of minorities with a present or potential capacity for apprenticeship.

The Labor Dept. said that performance by program sponsors would be subject to periodic review by the department to insure progress in meeting goals.

In a case where a sponsor with deficiencies submits inadequate, or no goals, the Labor Dept. will itself set goals and timetables.

Program sponsors would have the option of using one of four methods of selecting apprentices:

- Selection on the basis of validated rank order from a pool of eligible applicants.
- Random selection from a pool of applicants by an impartial third party not associated with the program.
- Selection from a pool of current employes on a nondiscriminatory basis.
- Any selection method meeting Labor Dept. standards if accompanied by acceptable goals and timetables.

13 Unionists Join Effort to Aid Veterans

Thirteen labor representatives have been appointed to the 100-member national advisory committee of the Jobs for Veterans program.

The committee includes seven Cabinet members, other government officials and representatives of business organizations and the public.

Labor Sec. James D. Hodgson and James F. Oates, national chairman of Jobs for Veterans, announced the formation of the committee and gave a progress report on the program at a news conference at the Labor Dept.

The Jobs for Veterans program will seek to improve job opportunities for servicemen returning to civilian life. More than 1 million servicemen will complete their military obligations during the next 12 months, the committee noted.

While about one-quarter of the returning veterans will resume their education, most will be entering the labor force—many of these seeking their first full-time jobs.

The program seeks to stimulate the formation of action groups at state and local levels and to encourage employers to seek out and hire or train the veterans.

Representing organized labor on the advisory committee are:

Pres. I. W. Abel of the Steelworkers, Pres. Peter Bommarito of the Rubber Workers, Pres. John F. Griner of the Government Employes, Pres. C. J. Haggerty of the AFL-CIO Building & Construction Trades Dept., Pres. James T. Housewright of the Retail Clerks, Pres. Lee W. Minton of the Glass Bottle Blowers, Pres. Charles H. Pillard of the International Brotherhood of Electrical Workers, Pres. S. Frank Raftery of the Painters, Pres. Alexander J. Rohan of the Printing Pressmen, Vice Pres. Earl Shepherd of the Seafarers, Sec.-Treas. Glenn E. Watts of the Communications Workers, Pres. Hunter P. Wharton of the Operating Engineers and Pres. Julius F. Rothman of the AFL-CIO Human Resources Development Institute, which has already launched the federation's own Veterans Assistance Program.

Unions Hail Addition of Five Routes To Railpax Passenger Service Plan

Two railroad labor spokesmen praised Dept. of Transportation Sec. John A. Volpe for adding five more passenger train routes to the national Railpax plan but said it could be improved by further service additions.

Executive Secretary J. Taylor Soop of the Railway Labor Executives Association and Executive Sec. Donald S. Beattie of the Congress of Railway Unions called the new plan considerably better than the one originally proposed by Volpe several weeks ago. That plan called for government-subsidized passenger service over a grid of 16 basic rail routes linking 14 major cities.

Volpe asked for suggestions on his first proposal and then announced Jan. 29 that these additional routes will be operated by the new National Railroad Passenger Corp. effective on or about May 1, 1971: New Orleans to Los Angeles, Seattle to San Diego, New York to Kansas City, Washington to Chicago, and Norfolk-Newport News to Cincinnati.

Soop said the RLEA unions generally approve the expanded plan but hope union members and the public will keep pressing for more passenger runs and better service. Especially needed, Soop said, are routes from Jacksonville to New Orleans, Milwaukee to Chicago and Boston or New York City to Montreal.

Beattie commended Volpe for adding the new routes to the Railpax plan and for pledging to ask managers of the new corporation for service to Canada and the Mexican border.

"We have high hopes," Beattie said, "that the new plan will turn the tide toward maintaining improved passenger service. But we cannot blink the fact that many passenger trains will be cut off" under Railpax.

The two railroad labor organizations together represent 20 AFL-CIO unions.

The railroad unions called the original Volpe network "appallingly inadequate" because it would cut present passenger service in the United States by more than 60 percent. They protested, as did many state governors, city mayors, members of Congress and organized passengers.

The unions urged a six-point revision of the Volpe plan, including preservation of some 80 percent of the trains now operating. Four of the five additional routes they proposed were adopted by the Secretary.

Volpe told a news conference he had received more than 3,000 written communications and "thousands of phone calls" commenting on his plan. He was required to develop the plan and implement it under the Railroad Passenger Service Act passed by Congress last October in an effort to save passenger trains which railroads have been abandoning by the score.

Under the law, all railroads may turn their passenger service over to Railpax, which may add new service but may not cut back runs during the period May 1, 1971, to July 1, 1973. Railroads which do not take part in Railpax must continue to operate all present passenger trains until Jan. 1, 1975.

Railpax will contract with the railroads to operate the trains in the basic network with their present crews, under protective provisions negotiated by unions over the years and included in the new law.

Moderate Succeeds Russell in Senate

David H. Gambrell, considered a moderate in Georgia politics, has been appointed to fill out the U.S. Senate term of the late Richard B. Russell.

Gambrell is Democratic state chairman and a close political ally of Gov. Jimmy Carter, who appointed him to the Senate vacancy.

The 41-year-old lawyer indicated that his views on civil rights laws and some other issues would differ somewhat from those of Russell, who led southern opposition to passage of civil rights legislation.

Court Rejects Law Banning Strikebreakers

Alton, Ill.—A U.S. District Court judge has ruled that an Alton ordinance barring strikebreaking in the city is unconstitutional.

Judge Omer Poos said in Springfield, Ill., that the ordinance's language is "vague, broad, ambiguous, arbitrary and capricious" and violates state and federal constitutional guarantees of liberty.

The ordinance prohibited firms from hiring non-union help when union workers were striking because, the ordinance said, "the employment and use of strikebreakers tends to incite acts of violence, disturb the peace and endanger the safety of residents of this city."

Poos ruled in favor of the Alton Box Board Co., struck for more than four months by about 400 members of Locals 975 and 976 of the Papermakers & Paperworkers.

Alton's city attorney and the striking locals took the company to court, accusing it of violating the strikebreaking ordinance by hiring non-union employes.

Mayor Paul A. Lenz said he would seek the cooperation of the city AFL-CIO central body in drafting a new ordinance that would meet the test of constitutionality.

Shifting Job Goals

THE HIGH PURPOSE of curtailing unemployment, as set out in Pres. Nixon's budget and economic messages, has obscured some very important shifting of ground by the Administration as to what constitutes full employment.

Obscured, also, is that while the President has highlighted his unemployment target for mid-1972, there has been scant attention paid to the projected unemployment rates for the current year—1971.

Most economists tend to think that the present unemployment rate of 6 percent may go higher in coming months. Paul W. McCracken, chairman of the President's Council of Economic Advisers, said that the jobless rate will "average maybe slightly above 5 percent" for all of 1971. This would be a worsening situation in terms of 1970 when the average unemployment rate was 4.9 percent. McCracken adds, however, that by the end of 1971 he expects the unemployment rate "ought to be down below 5 percent."

AS TO THE full employment goal for 1972, identified by the CEA as in the 4.5 percent "zone," the comments of Hobart Rowan, business editor of The Washington Post, are pertinent:

"It is always discouraging to see the 'full employment' goal moved down. Last year the McCracken council defined full employment as 3.8 percent unemployed. What we have now is a real retrogression that Mr. McCracken—disappointingly—brushed off as an unimportant detail.

"The fact is that 4.7 or 4.8 percent unemployment is probably within the '4.5 percent zone.' So what we are talking about here is something approaching a full point on the unemployment index. One percentage point in an 80-million labor force is 800,000 people.

"This shift also raises a question about the Administration's newly won commitment to 'full employment budgeting,' in which 4 percent was taken as the measure of full employment. If the actual goal of economic policy is defined differently, one can ask whether the full employment budget concept is more a cosmetic attempt to take the sting out of real deficits than a conversion to Keynesian economics."

THERE ARE HONEST differences among economists as to what level of unemployment constitutes "full employment." To set a mid-1972 goal of a "4.5 percent zone" may be a "concession to the facts of life," but it nevertheless changes the economic objective in an important way.

The AFL-CIO has spelled out this problem of goals and objectives in very specific terms:

"The top-priority objective of national economic policy should be to achieve and sustain full employment—jobs at decent wages for all people who are able to work and desire employment. The federal government's tax, expenditures and monetary policies, in combination, should encourage the necessary expansion of the economy to provide enough job opportunities for full employment."

A Word Edgewise:

Strengthened South Viet Nam Seen Fulfillment of U.S. Policy

By John P. Roche

FROM THE TIME that Pres. Eisenhower wrote his famous letter of Oct. 23, 1954 to South Vietnamese Pres. Ngo Dinh Diem, ambiguously promising United States support to the new republic in Saigon, right up to Pres. Nixon's and Sec. of Defense Laird's recent commitments, the keystone of American policy in Indochina has been the development of a viable South Vietnamese state.

For a while in the late '50s and early '60s, things were going fine: Diem destroyed the quasi-religious feudal power of the Cao Dai and Hoa Hao sects, eliminated the Binh Xuyen mafia which once controlled the city of Saigon, and seemed well on his way to creating a stable regime. Indeed, those of us with long and pessimistic memories recall that in the spring of 1963 the ubiquitous Sir Robert Thompson reported to Pres. Kennedy that Diem had things nicely in hand.

Then all hell broke loose: the opponents of Diem's autocratic rule realized that what they needed was religious cover, and almost overnight—with the full cooperation of the resident U.S. press—converted a political fight into an attempt to suppress Buddhism.

True, Diem's opponents were mostly Buddhists, though most Buddhists took no hand in the game but adhered to traditional political inertia. Diem and his sinister brother, Ngo Dinh Nhu, cooperated fully with their enemies, busted their pagodas, and, as far as most Americans were concerned, confirmed the story that a pogrom was underway. The Kennedy Administration was torn in half over the question and, to oversimplify, ended up sponsoring the coup which ousted and killed Diem in October 1963.

At this point, chaos set in: the generals who had destroyed Diem were incapable of establishing a stable regime. And Hanoi, which was apparently startled by the coup and unprepared for it, began to move seriously. The United States was in a box: we had made a commitment to Saigon and, if anything, our role in eliminating Diem intensified it.

Yet the whole ground force establishment at the Pentagon wanted no part of a "land war in Asia," the Army Chief of Staff and the Marine Commandant spent much of their time in the winter of 1964-65 spreading their gloomy prediction among the press corps. Its essence? "A million Americans will be necessary to do the job."

The Navy and Air Force, however, had a different message. "Don't worry about ground troops—we can bomb Hanoi to its knees." A wonderful shortcut! So off went the planes to dominate the air over North Viet Nam—and down the Ho Chi Minh trail came the Communist infantrymen to take over the ground in the south.

By July 1965, it was clear that unless American ground forces came in, the war would be lost. The Saigon government at that point could not organize a two-car funeral.

NOW, FIVE YEARS LATER, thanks in large part to our military power, which served as a shield behind which political development could take place, the situation in Saigon is vastly different.

There is a government which by the standards of the "Third World" is both stable and representative. (And aren't these the relevant criteria? The Republic of Viet Nam is not Denmark, but it has far more in common with Denmark than it does with any of 100 members of the U.N. that I could name.) Finally, and most significantly, the South Vietnamese army is now equipped and trained to carry the burden of the war.

In other words, in 1971 one hopes we have reached the point where the original scenario—the one contemplated by President Eisenhower, Kennedy, and Johnson before the set collapsed—can be fulfilled.

The Americans will provide air support and sophisticated logistical help, while the locals will bear the brunt of defending their own country. The fact that the Republic of Viet Nam is now a state, not a letterhead, has made possible the kind of disengagement which avoids both isolationism and "Americanization."

Classroom Crisis:

New Approaches Offer Hope For Nation's Troubled Schools

The following is excerpted from an article by Albert Shanker, president of the New York City United Federation of Teachers, entitled, "Life or Death for the Public Schools," which appears in the January 1971 issue of the AFL-CIO magazine, the Federationist.

WE KNOW LESS than we thought about what makes some children learn and others not; that indeed the schools are failing large numbers of youngsters. Yet all of the above taken together would still not provide an adequate explanation for the present negative attitude toward public education. There are three more potent factors to consider.

First is the emergence of a powerful new opposition coalition. This consists of: parochial-school interests continuing their drive for public funds; middle-class parents demanding tax dollars for their children's private (and usually segregated) education; southern segregationists seeking a new gimmick to undo the Supreme Court's integration decision; separatist and nationalist blacks who want to set up their own tax-supported training schools; taxpayer groups who see that by giving parents a variety of packages to choose from in the private educational market, pressures on the local government to improve the single (monopolistic) system are reduced.

The second factor spurring dissatisfaction with public education is related to the change in employment requirements. Opportunities for unskilled workers have contracted rather than expanded and practically all industries need more personnel with high school diplomas and college preparation. This situation is further complicated by the social turmoil arising from the greater expectations and increasingly urgent needs of the poor and lower-middle class, particularly of minority-group origin.

Ironically, the third and most important element in today's public opinion transformation is testimony to the success of the public schools. A positive and optimistic attitude toward them prevailed mainly at a time of massive illiteracy, when a high school graduate was considered a well-educated person and college was reserved for the elite. The public schools, by educating millions upon millions, by reducing the learning gap between the teacher and the average citizen, have created a body that feels knowledgeable enough to do a better job than the educators.

Against this background it becomes apparent that Charles Silberman's sober and brilliant analysis, "Crisis in the Classroom," has arrived at precisely the right moment. It has the virtues of accuracy and authority, too, being the product of the $300,000 Carnegie Study of the Education of Educators that Silberman directed.

In a very real sense, Silberman must be viewed as a staunch defender of the public schools. He notes that from reading such persistent critics as Edgar Friedenberg, Paul Goodman, John Holt and Jonathan Kozol, "one might think the schools are staffed by sadists and clods." Their writings reflect "the general snobbery of the educated upper-middle class toward the white-collar, lower-middle-class world of teachers, social workers, civil servants and policemen. In recent years this snobbery has become a nasty and spiteful form of bigotry on the part of many self-made intellectuals, who seem to feel the need to demonstrate their moral and cultural superiority to the lower-middle class people from which they escaped."

THESE CRITICS frequently provide a convenient educational rationalization for white liberals to remove their children from integrated schools, Silberman observes. They romanticize the "virility and violence of lower-class life" and are unable to empathize with the problems of the middle-class teacher, "whose fear of violence they deride as effeminate and whose humanity they seem, at times, to deny."

Silberman concentrates on ways of changing the structure of schools and classroom life so that the "ordinary" teachers can teach. Arguing that this is possible because it is already being done, he points to the British infant schools, the New School approach in North Dakota, Lillian Weber's "open corridor" in New York City and a number of other "open classroom" examples. These have common ingredients: teacher lecturing is either absent or limited; children move about within the class and learn in part by talking to each other. But in no case is the child in control of his education, as in the corrupted models of the progressive school; the teacher is responsible for the movement of children from one set of learning material to another, from one experience to the next.

Turning school into a humane institution for both teachers and students is the primary aim of these programs. In some cases, "admission is staggered over a period of several weeks, to make it easier for the teachers to get to know the children, and the children to know the teachers." The development of self-control and autonomy is encouraged—children are trusted to take breaks in the playground on their own and teachers may leave them unattended during their coffeebreaks.

Unlike other critics of teaching in the public schools who profess to have the cure for educational retardation, Silberman honestly states that no one can be certain his suggestions (or perhaps anything the school alone can do) will guarantee success. Nevertheless, he has given new hope by effectively countering elitist demands for the impossible, and by showing those who would destroy public education in the name of educational heterogeneity and free choice, such as through the voucher system, that we can provide freedom and flexibility within the public schools.

Benefits Low, Safeguards Lacking:

Nixon Family Assistance Plan Termed 'Entirely Inadequate'

THE ADMINISTRATION'S welfare reform plan would not make the system realistic for those who can't work and it would not encourage those able to work to take and hold jobs, the AFL-CIO's social security director warned.

The President has said he wants to accomplish both of those goals in a unified federal welfare system. But his Family Assistance Plan is not "cut out to achieve either of them," Bert Seidman declared. Seidman said that both the floor under family income and the work incentives outlined in the Administration's measure are "entirely inadequate."

He stressed that the $1,600 income minimum the Administration measure proposes is less than half of the government's own estimate of what it takes for even a "poverty level standard of living."

Seidman urged that the floor be at least $2,000 in the beginning, and "rise, as rapidly as possible after that, to no less than the poverty level," which is currently $3,700 for a family of four. He appeared on Labor News Conference, an AFL-CIO produced public affairs radio interview.

Seidman agreed that welfare reform should include incentives for recipients to take jobs, but added that to put major emphasis, as many have done, on the idea "that there are a lot of people on welfare who could be out working, but aren't . . . is entirely the wrong slant."

"Most of the people who are on welfare just can't work" he declared; "they're children, or they're old people, or they're disabled, or they are mothers who should be home taking care of their children."

He renewed the call for safeguards for people who "would be required to take jobs in order to receive family assistance payments." They should not be "forced into jobs that pay less than the minimum wage set by federal law," he declared, and those they do accept should be "decent jobs" that offer realistic hope for advancement and improvement.

Reporters questioning Seidman were James Welsh of the Washington Evening Star, and Tom Joyce, economic correspondent for Newsweek magazine.

By Press Associates, Inc.

PRES. NIXON has called in his State of the Union message for a "sweeping reorganization of the Executive Branch . . . to keep up with the times and with the needs of the people."

Almost every President in this century has sought ways of dealing with the growing federal bureaucracy. Between 1949 and the end of 1968 alone, 85 reorganization plans were submitted to the Congress, 66 of which became effective and 19 rejected.

In this century we have seen the creation of a number of Cabinet-level departments—Commerce & Labor (1903) which became Commerce (1913), Labor (1913); Defense (1949)—from Army (1789), Navy (1789) and Air Force (1947); Health, Education & Welfare (1953); Housing & Urban Development (1965) and Transportation (1966).

In addition, the Post Office Dept., which was created in 1872, will cease to be a Cabinet department on Aug. 1, 1971, when it becomes the quasi-public U.S. Postal Service Corp.

Presidents, starting with Theodore Roosevelt, have sought various forms of government reorganization.

During the 1920s there was little reorganization of the federal government. Not until the New Deal days under Pres. Franklin D. Roosevelt was there action. In a reorganization act in 1933 and another in 1939, Roosevelt invoked numerous changes, but 21 independent agencies and Cabinet departments were untouched.

It was after World War II that substantial changes were made in the Executive Branch. Most of these were inspired by two Hoover Commission reports in 1949 and 1953. Some 300 recommendations were made and more than half were enacted.

Now, in 1971, Nixon proposes to make the most sweeping reorganization ever proposed. He would leave State, Treasury, Defense and Justice untouched but would sweep seven departments into four mammoth agencies.

His Dept. of Economic Development would take in many functions of Labor, Transportation, Commerce and Agriculture. His Dept. of Human Resources would take other functions of Labor, Agriculture, HEW and the Office of Economic Opportunity. His Dept. of Community Development would take something from HUD, OEO and Agriculture. Then, the Dept. of Natural Resources would include operations of Interior, Commerce and Agriculture.

AT THIS STAGE we do not know what the President plans to do with the mass of independent agencies. At last count there were 46 of them—most of them playing an extremely vital role in government.

These agencies include the National Labor Relations Board, the Security & Exchange Commission, the Veterans Administration, the Federal Trade Commission, Federal Communications Commission, Federal Power Commission, Federal Reserve System and many more.

The President's message, however, concentrated on Cabinet-level departments, saying rather than "dividing up our departments by narrow subjects, we would organize them around the great purposes of government. Rather than scattering responsibility by adding new levels of bureaucracy, we would focus and concentrate the responsibility for getting problems solved."

What disturbs many students of government, however, is that the creation of four massive departments would intensify the problem of bureaucracy. Bigness in a department is hardly what the average American seems to want.

It works the other way, in fact. Bigness makes the government even more remote from the people. And the worker, the farmer, the manufacturer, the builder can no longer have a Cabinet-level spokesman.

Congress may be unhappy about the proposal, too, since there is a close alignment between executive departments and committees of the Congress that the Nixon plan would throw out of kilter.

The whole range of government reorganization, as recounted above indicates that the Nixon proposal goes against the grain of history. Since World War II Congress has usually responded to the need for change—but not sweeping change.

DECENT JOBS at fair pay should be the aim of work incentives in any welfare reform adopted by Congress, but the Administration's Family Assistance bill falls short of that mark, AFL-CIO Social Security Director Bert Seidman, center, declared on Labor News Conference. He was questioned by James Welsh, left, of the Washington Evening Star and Tom Joyce of Newsweek magazine.

Administration Assailed On Medicare Cutback

(Continued from Page 1)

of $58 million over the current fiscal year.

Should Congress approve the Administration's proposals, medical care costs of the elderly would increase by hundreds of thousands of dollars, Hutton said.

Although the Administration has revealed only few details on the cutbacks in Medicare, Hutton said the most significant reduction in benefits being contemplated would involve hospitalization coverage.

Medicare currently pays 80 percent of the costs for the first 60 days in the hospital with the patient paying the remainder.

Hutton said the present Administration plans are to reduce the hospitalization coverage from 60 days to 12. This is a substantial reduction in benefits, he stressed, "because most elderly people stay in hospitals from two to three weeks," a much longer period than younger patients.

Other changes expected in Medicare coverage the Administration is reportedly considering include:

- Raising the deductible feature on the doctors-insurance part of Medicare.
- Reducing payments for care in nursing homes.
- Setting limits on doctors' fees for Medicare recipients

For the federal-state Medicaid program, reports are that the Administration plans to derive about $100 million of the proposed $444 million savings by charging low-income workers for certain services.

About one-third of the 19 million Medicaid recipients expected to be in the program in fiscal 1972 would be forced to make partial payments for such coverage as visits to doctors' offices and drug prescriptions. These would be families with incomes low enough to qualify for the program, but too high to qualify for welfare.

In closed hearings before the House Ways & Means Committee, Sec. Elliot L. Richardson of Health, Education & Welfare acknowledged that the Administration "will be proposing the introduction of cost-sharing plans for Medicare and Medicaid."

Richardson revealed few specifics, but said: "In Medicaid, those who require health services would participate in the cost of these services to the extent to which they may be financially capable of doing so."

The proposed cutbacks in Medicare "Part B" coverage—the doctor-bill insurance—reportedly would reduce the amount paid by the federal government from about 47.5 percent to 45 percent. Medicare recipients now pay a monthly premium of $5.30 for Part B—$5.60 as of July 1—and also must bear the first $50 now in expenses. About 19 million persons are enrolled in this supplementary feature of Medicare.

Iron Workers Name Drake As Secretary

St. Louis—Juel D. Drake, a vice president of the Iron Workers since 1956 stationed in San Francisco, was named secretary of the union on the retirement of James R. Downes, who had served in the post for 22 years.

Drake was named secretary by Pres. John H. Lyons and took office Jan. 1 with the approval of the union's executive board. He is 56, and his home is in La Mesa, Calif.

Drake has been a member of San Diego Local 229 of the Iron Workers for 32 years. After nine years at the trade he was named a general organizer, then a vice president.

Downes had been secretary since 1948. He joined the union in 1938 at Canton, O., and was elected business agent of Local 550 there in 1942. He was named to the international organizing staff four years later and served in that post until convention delegates elected him as secretary.

Commuter Airline Signs with Union

The Union of Professional Airmen, an affiliate of the Air Line Pilots, signed a first contract with Executive Airlines, Inc., of Boston, for the commuter line's 150 pilots.

The new 25-month agreement provides improved wages, working conditions and hours of service.

Despite Spending Increase:

Budget Proposal Includes Cutbacks in Key Programs

(Continued from Page 1)

taling $11.6 billion more than the expected revenues of $217.6 billion. And he acknowledged for the first time that rather than the $1.3 billion surplus he forecast last year, the 1971 budget would end up about $18.6 billion in the red, largely because of a dropoff in individual and corporate tax payments resulting from the economic slump.

In his message to Congress, the President said he was adopting the idea of a "full employment budget," one that would be in balance if the economy were operating at full capacity and generating its full potential in tax revenues.

"The full employment budget idea," he said, "is in the nature of a self-fulfilling prophecy: By operating as if we were at full employment, we will help to bring about that full employment."

But the President's immediate target, as set forth in his subsequent economic message, is something less than full employment—a jobless rate in the 4.5 percent "range" by mid-1972. And even that is predicated on an economic boom on a scale most private economists doubt can be achieved. **(Story, Page 1.)**

A number of other variables are involved in the budget calculations. For one thing, Nixon cited the need for a monetary policy by the independent Federal Reserve System "to provide fully for the growing needs of the economy." And he again urged "increasing restraint in wage and price decisions by labor and business. . . ."

Also, the budget as usual includes a number of legislative decisions and programs still subject to the will of Congress, including the controversial revenue-sharing plan.

The "economies" proposed by the President in a long list of what were described as "inefficient, obsolete or low priority programs" would total $2.9 billion, about two-thirds of which require congressional approval.

The biggest item on the list would be a saving of some $827 million through lower benefits and higher patient charges under the Medicare and Medicaid programs. Among the other "economies" would be the elimination of the school milk program and the closing of Atomic Energy Commission's reactors at Hanford, Wash., at a cost of some 7,500 jobs. **(Stories, Page 1.)**

The budget also appeared to contemplate the closing of the Public Health Service hospitals that serve merchant seamen in eight major cities, although the language was vague on this point.

The President provided further sketchy outlines of his revenue-sharing plan. The $5 billion a year in new money for the "no-strings" general revenue sharing to be distributed among states and cities with no restrictions on its use turns out to be $3.75 billion for fiscal 1972. The $11 billion program of special revenue sharing comes down to $700 million in added funds and $9.5 billion diverted from such existing programs as model cities, urban renewal, Appalachian redevelopment, manpower training, education and others.

The special revenue-sharing funds would be distributed on the basis of population to the states with provisions for a "passthrough" of about half the funds to the citites for use in six broadly defined areas—urban community development, rural community development, education, manpower training, law enforcement and transportation.

The Administration pledged that no state would get less than it now receives under the existing federal aid programs. But the requirement for matching funds would be eliminated, thus opening the way for a reduction in the total federal-state-local commitment to the programs.

About half the projected budget deficit of $11.6 billion is accounted for in the $3.75 billion proposed for general revenue-sharing and the $2 billion tax windfall to business in accelerated depreciation write-offs recently announced by the Administration. There are no new breaks for individual taxpayers beyond those scheduled under the Tax Reform Act of 1969.

The President's budget proposes a 6 percent increase in social security retirement benefits, but Congress already has begun consideration of bills to raise the benefits at least 10 percent. Both the Administration proposal and the legislation before Congress would increase the ceiling on wages subject to social security taxes from the present $7,800.

Other highlights of the President's budget:

DEFENSE—The $76 billion in proposed expenditures represents an increase of $1.5 billion after two years of decline. The budget contemplates military pay increases as part of the Administration's proposed shift to an all-volunteer army. Changing priorities in weapon procurement are reflected in $3.3 billion earmarked for new ship construction and modernization for the Navy.

TRANSPORTATION—Highway programs will get the bulk —$4.8 billion—of the Transportation Dept.'s $7.8 billion budget, but opposition seems certain to develop against the President's plan to divert about $1.4 billion of the highway trust funds through revenue-sharing for local transportation needs.

The Administration is pushing ahead with its plans for the supersonic transport plane, seeking $235 million in new money over and above the funds Congress has yet to clear for Fiscal 1971. The budget also includes funds to start the new program of merchant ship construction enacted last year and designed to add 300 ships over the next decade.

EDUCATION—The budget for the Office of Education proposes only a $247 million increase to a total of $4.7 billion. But the Administration announced it plans to seek legislation doubling the government's programs of assistance to college students to $2 billion for loans and $1 billion for grants and work-study programs.

POVERTY—The Office of Economic Opportunity would be cut back to little more than a research agency, with its major program—community action—shifted to local governments through the revenue-sharing plan. In all, seven of the OEO's 10 major functions are scheduled for transfer to other departments or for elimination.

ENVIRONMENT—The Administration proposes to double—to $2.5 billion—the amount it sought last year for anti-pollution measures, mostly for sewage systems and waste treatment facilities, but the funds its seeks are still far below the amounts authorized by Congress.

WELFARE—Although the President is still urging enactment of welfare reform that would include his Family Assistance Plan, it would not become effective during Fiscal 1972. The budget seeks $6.2 billion to cover the federal obligation under existing programs for the elderly, disabled, blind and dependent children—a rise of $1 billion.

Cooperation Held Vital In U.S., Japanese Trade

Tokyo—Trade union cooperation and understanding are essential in meeting the problems and challenges that face both the U.S. and Japanese economies, Retail Clerks Pres. James T. Housewright told the annual convention of the Japanese Confederation of Labor (DOMEI).

Housewright, who represented AFL-CIO Pres. George Meany at the Tokyo convention, observed that "the growing economic power of Japan breeds a certain amount of adjustment and readjustment with the economy of the United States." But these matters "can be resolved with perspective and balance."

Housewright said the American worker is confronted now, as never before, with a challenge of "international corporate and banking greed" which has chosen to exploit cheap labor markets wherever they may be found.

JAMES T. HOUSEWRIGHT

"Specifically, we are faced with an improperly regulated international trade relationship which threatens the U.S. national economy and everything that implies for working men and women and the economies of all the nations of the free world."

Housewright said organized labor would "as it must, stand up for the welfare of its membership and the economy of our nation which we have in large measure helped to create."

"This does not mean," he stressed, "that we will attack the economies of nations of the free world or subordinate the rights of workers elsewhere." The record will show, he asserted, that the AFL-CIO "has done more than any other private sector organization to help workers throughout the world organize, professionalize trade-union structure and management, and fight for trade union freedom, often against the colonial policies of the extremists."

In Economic Message:

Nixon Puts Off Goal Of Full Employment

(Continued from Page 1)

prove accurate, the "real" economic growth rate—after subtracting for inflation—would be close to 5 percent.

Last year, for the first time since the 1958 recession, the gross national product declined in terms of stable dollars.

The chairman of the Council of Economic Advisers, Paul W. McCracken, told newsmen that he expects unemployment to drop slightly below the 5 percent mark by the end of the year, with the gradual decline continuing during the first half of 1972.

The President's economists have referred to a 4 percent jobless rate as the generally considered concept of "full employment"—a definition trade union economists have never accepted since it assumes that a permanent pool of several million unemployed workers is necessary to prevent inflationary pressures.

According to the White House analysis, it would be too "extreme" to adopt measures aimed at bringing unemployment below the 4.5 percent level by mid-1972. Such a course, the report asserts, "would entail risks on the inflation side."

At the same time, it would be "undesirable" to let unemployment stay at the present high level, even if this were the best way to curb inflation.

Therefore, the report suggests, a middle course should be followed even though "achievement of this goal would still leave the economy short of the ideal with respect to both unemployment and inflation."

The President's economists admitted that they were wide of the mark in last year's forecast which predicted that unemployment would stay below 5 percent. But while acknowledging that unemployment had brought "hardships," they argued that "the rise of the unemployment rate had not been as large as in earlier transitions from inflation and war."

The annual report traditionally summarizes the Administration's views on a broad range of economic issues.

This year, Pres. Nixon restated his opposition to both wage-price controls and so-called guidelines. But he emphasized that the government will use its full powers to curb what it considers excessive increases, including raising import quotas to increase the competitiveness of the marketplace.

And he reiterated his concern with construction industry wage and price increases, implying that the government will step in if unions and employers don't hold the line. In the President's words, "A workable voluntary plan will avert the need for government action."

The economic report put the Administration firmly opposed to congressional action to curb imports that have resulted in heavy job losses, although supporting more generous adjustment assistance to workers and employers adversely affected.

While not specifically backing away from the previous endorsement of quotas on some textile imports, the report stressed the Administration's strong preference for negotiated trade and tariff agreements.

In a departure from the previous year's report, the Council of Economic Advisers devoted a section to health care problems, noting both the rise in costs and the continued problems of availability of medical services, particularly in inner-city and rural areas.

The report did not deal with legislative proposals on health care but did endorse the concept of group practice.

"If more doctors were to practice in groups, where they could take advantage of timesaving equipment and allied health personnel, their productivity could be increased," the report suggested.

It also acknowledged that the Medicaid program, aimed at paying the health care costs for low-income families, "is often inadequate to meet the needs of the people it is designed to serve."

The President's Economic Report—in effect a preamble to the more detailed analysis of the Council of Economic Advisers—voiced confidence that 1971 will be a year of "vigorous and orderly expansion."

It rejected the concept of "fine tuning" of the economy, contending that "absolute precision" is neither possible nor necessary.

What is important, the President said, is that the general direction of the economy points to both lower unemployment and lower inflation. And the Administration's policies, he contended, will take the nation on that course even though the final goal of prosperity and price stability is still a long way off.

Virginia Port Post Goes to Negro Unionist

Norfolk, Va.—Myles E. Billups, 44, president of the Hampton Roads district of the International Longshoremen's Association, has been appointed a member of the Virginia Port Authority.

Billups, who began his career as a longshoreman here as a Hampton Roads dock hand in 1943, is an executive board member of the Virginia AFL-CIO.

Since 1953, he has represented the ILA at wage-scale conferences.

His appointment fulfills a campaign pledge by Republican Gov. Linwood Holton to appoint a representative of labor to the Port Authority and to increase the representation of Negroes in important state positions. Holton was endorsed by the Virginia AFL-CIO.

MYLES E. BILLUPS

DeLloyd Tibbs To Head AGMA

New York—DeLloyd Tibbs was named national executive secretary of the American Guild of Musical Artists succeeding Hyman R. Faine, who resigned to direct a new arts administration program at the University of California, Los Angeles.

Tibbs joined AGMA in 1956 as assistant secretary and was made associate secretary in 1967.

SOCIAL WELFARE CENTER was built by the Vietnamese Confederation of Labor at My Tho with funds from the Machinists. The center has two classrooms for kindergarten and first-grade students, offices and an infirmary staffed by a physician and a nurse. In the bottom photo, Pres. Tran Quoc Buu of the CVT, top right, describes a proposed maternity ward addition. Thomas V. Miller, director of the AFL-CIO Asian American Free Labor Institute, is at the left. Also present are John R. Mossler, U.S. AID director, center in coat, and Roger Burgess, AID labor assistance director, bottom right.

Activities Schedule For Studies Center

The AFL-CIO Labor Studies Center has five institutes scheduled for February and March. They are:

New Staff Program, Feb. 7-19.

Arbitration Institute (at the University of Illinois), Feb. 8-12.

Staff Development Program, Feb. 28-Mar. 19.

Arbitration Institute (at the University of California, at Berkeley), Mar. 1-5.

Labor Law, Mar. 8-12.

Staff Development Program Alumni Seminar, Mar. 26-Apr. 2.

Factory Layoff Rate Reaches 7-Year High

Factory layoffs increased sharply in 1970 to a rate of 18 per 1,000 workers, the highest in seven years, the Labor Dept.'s Bureau of Labor Statistics reported.

With layoffs in manufacturing at 13 per 1,000 jobs in 1969, the surge last year represented an increase of nearly 50 percent.

Sluggish economic conditions also contributed to the decline in new hires to a rate of 28 per 1,000, the lowest in six years and 9 per 1,000 less than in 1969.

But a slight upturn in the demand for factory workers was noted in December, the BLS said. Manufacturing layoffs declined to 17 per 1,000 from 21 per 1,000 in November, although new hires were unchanged over the month at 23 per 1,000, the lowest level in seven years.

The Labor Dept. also reported that job openings in manfacturing dropped to 76,000 in November—a rate of 4 vacancies per 1,000 jobs—from 93,000 in October.

There were 209,000 openings for factory workers in November 1969 with a vacancy rate of 10 per 1,000 jobs.

New Protections Sought By Consumer Assembly

Organized consumers, meeting in Washington at the fifth annual Consumer Assembly, set new priorities for programs aimed at rolling back prices, rooting out sharp practices and winning more legal protections for the consumer at the federal, state and local level.

High on the list of goals set for 1971 by the 700 delegates is a class action law to allow unrelated consumers to sue for damages. Other objectives include an independent consumer counsel at the federal level, auto insurance reform, and a place for the elderly in plans for the White House Conference on Aging, to be held in November.

The program presented experts on many phases of consumer action and speakers such as Sen. Edward M. Kennedy on national health insurance, member Nicholas Johnson of the Federal Communications Commission on TV commercials and dangerous consumer products, Federal Trade Commissioner Mary Gardiner Jones and Food & Drug Commissioner Charles C. Edwards.

Delegates representing about 200 unions and other organized groups approved objectives that include:

- At the federal level, better protection of consumers' rights, lower consumer prices and lower interest rates, more economic delivery of health services.
- At the state level, laws against consumer fraud, an end to the holder-in-due-course doctrine that permits the sale of store notes and frees merchants of any guarantee responsibility, fair interest rate ceilings, reform of home owners insurance laws.
- At the local level, programs to help low-income consumers protect their own rights, consumer education, consumer cooperatives, publicity on grievances, and speedy legal redress for victims of shoddy practices.

The Consumer Federation of America, which sponsored the assembly, elected Don S. Willner, an Oregon state senator, as its new president succeeding Howard T. Frazier. Jacob Clayman, administrative director of the AFL-CIO Industrial Union Dept., and first CFA president, was re-elected vice president for a one-year term.

Program participants from labor included Machinists Vice Pres. William W. Winpisinger, Vice Pres. Olga Madar of the Auto Workers, and Legislative Director Arnold Mayer of the Meat Cutters. Among other speakers were William R. Hutton, director of the National Council of Senior Citizens, and Bayard Rustin of the A. Philip Randolph Institute.

200 Unionists Serve in Key Service Role

Two hundred union members are serving their fellow citizens as full-time community service representatives, Director Leo Perlis of the AFL-CIO Dept. of Community Services reported.

"These workers fill a wide range of civic, social and cultural needs in communities all across the land," Perlis said. "Their hard work is a tangible expression of labor's determination to build a better life for all Americans in the community, as well as in the workshop."

Of the 200 AFL-CIO community service representatives, 173 are assigned to United Fund organizations or their equivalents in 138 cities or metropolitan areas.

Thirteen are assigned to similar statewide organizations in the eight states where they exist and seven are attached to the United Way of America, a national federation of 225 United Fund organizations.

Of the remaining seven, five serve with the American Red Cross and two with the Boy Scouts of Ameri-

In Democratic Caucus:

Liberals Lose Bid For Committee Post

The House Democratic caucus chose a southern conservative over a northern liberal for the only vacancy on the powerful Ways & Means Committee. It then rebuffed a liberal move to upset the unwritten rule of seniority and replace the chairman of the House District of Columbia Committee.

Both actions were taken by secret ballot after the caucus voted down a motion for an open rollcall vote.

The Ways & Means appointment went to Joe D. Waggonner, Jr., of Louisiana. He won an upset 119-104 victory over Donald M. Fraser of Minnesota, who is chairman of the liberal Democratic Study Group.

Waggonner's election adds to the already heavy conservative strength on the Ways & Means Committee, which has jurisdiction over all tax-related legislation.

The jurisdictional umbrella includes health care bills, social security, unemployment insurance, welfare reform, tariff and trade legislation. Its Democratic members also nominate the Democratic membership of all other House committees at the start of each Congress.

Sectional rivalries were involved in the vote, as well as ideological conflicts. The vacancy developed when Hale Boggs left the committee after his election as majority leader. Boggs is from Louisiana and the state's delegation sought to keep the seat by nominating Waggonner.

But Fraser had what most observers considered an even stronger sectional claim. He was backed by Democrats in a group of North Central and Great Plains states that were without representation on the committee despite impressive gains in the number of Democratic congressmen. By contrast, seven of the 15 Democratic seats had been filled by southern and border state congressmen.

The second showdown vote came when a group of liberal Democrats challenged the renomination of John L. McMillan of South Carolina as chairman of the District of Columbia Committee.

Their goal was the election of Charles C. Diggs, Jr., of Michigan, the fourth-ranking committee member, but the first step was the rejection of McMillan by the caucus.

To the Negro majority of the nation's capital, McMillan has appeared a hostile plantation overseer. And liberals on the committee complained that he assigned key bills to subcommittees stacked with conservatives, assigning only routine measures to subcommittees headed by liberals.

The long tradition of seniority won out as McMillan was confirmed by a 126-96 vote. But the margin was less than most observers had anticipated on a challenge to an incumbent committee chairman.

By decisive voice votes, the caucus voted down a series of "reform" proposals including an age limit and a length of service limit for committee chairmen.

The caucus did approve one change in the original list of Democratic committee assignments.

Freshman Rep. Herman Badillo of New York, the only Puerto Rican member of the House, had vigorously protested his appointment to the Agriculture Committee in place of the Education & Labor Committee assignment he had sought.

The caucus approved his switch to the Labor Committee after Rep. Teno Roncalio of Wyoming agreed to move to another committee to create a vacancy.

However, the caucus voted down a request by Bella Abzug, another New York first-termer, that the Armed Services Committee be enlarged to create an opening for her.

While committee assignments were being worked out, there was virtually no floor action in either the House or the Senate.

The Senate remained embroiled in debate over the bipartisan effort to change the rules so that only a three-fifths vote, instead of the present two-thirds would be required to limit debate and break a filibuster.

The first test of the issue will come when supporters of the rules change seek to muster a two-thirds vote to break the filibuster that has prevented a vote on the rules reform.

Insurance Union's Robert Ponsi Dies

Englewood, N.J.—Vice Pres. Robert L. Ponsi of the Insurance Workers, who helped create one AFL-CIO union of employes in the industry, died of cancer in Englewood Hospital after a few weeks of illness. He was 59.

Ponsi was a full-time officer of the union since merger of his former CIO union with the former AFL union in 1959. He was in charge of contract administration for members employed by John Hancock, Metropolitan Life and a few other companies.

Ponsi was a leader of the successful battle to forge a new union after the CIO expelled the United Office & Professional Workers. In 1957 he was elected a vice president of the Insurance Workers of America, and then of the IWIU. His wife and eight sons survive in Leonia, N.J.

Minimum Wage Boosted For 1.6 Million Workers

An estimated 1.6 million workers making less than $1.60 an hour had their pay raised on Feb. 1 as they reached the final step-up of the Fair Labor Standards Act.

They are among nearly 11 million employes added to wage-hour coverage in 1966 under a procedure that gradually brought them up to the $1.60 wage floor for workers previously covered.

The increase, amounting to about $324 million a year, applies chiefly to employes of smaller retail or service establishments, laundries and dry cleaners, hotels, motels and restaurants, schools, hospitals and nursing homes.

One group of workers brought under the Fair Labor Standards Act in 1966 remains stuck at a $1.30 wage floor. For some 400,000 farm workers, the law provided step-ups only to $1.30 an hour—a ceiling reached in 1969.

A TRADE UNION educational program is making it possible for these young Seafarers to gain high school equivalency diplomas while in training at the union's Harry Lundeberg School of Seamanship, Piney Point, Md. Mrs. Dorothy Forte, an instructor, is administering examinations for the diploma which is given under the General Educational Development program. Three young Seafarers already have received their diplomas under the union plan.

Administration Renews Proposal To Curb Transportation Strikes

Pres. Nixon has renewed his request for permanent legislation to deal with labor disputes in transportation industries and urged Congress to "face up to this problem" before the "next emergency."

An identical bill submitted last year met with what Labor Sec. James D. Hodgson wryly terms "enthusiastic indifference" by Congress.

Hodgson told newsmen he expects active consideration of the bill this year from both the House Commerce Committee and the Senate Labor Committee. And he promised that the Administration will be open-minded about considering alternative proposals that might emerge in congressional hearings.

The Administration bill would give the President a choice of three options to invoke in a "national emergency dispute" in the railroad, airline, maritime, longshore or trucking industry.

One of the options would be a "final offer selection" which AFL-CIO Pres. George Meany last year criticized as "a novel form of compulsory arbitration" which labor considers incompatible with "principles of democracy."

The AFL-CIO Executive Council is expected to discuss the issue at its mid-February meeting and Hodgson said he hopes to open a "dialogue" with both labor and management groups on the Administration proposal.

The bill would virtually repeal the Railway Labor Act and add a new section to the Taft-Hartley Act applying only to the five transportation-linked industries.

The 80-day no-strike injunction period of Taft-Hartley, which already applies to longshore, maritime and trucking disputes, could also be invoked for railroads and airlines.

If a dispute in one of the five industries remained unsettled after the injunction period, the President would have the power to choose one of these courses:

- Extend the no-strike period for up to 30 additional days.
- Empanel a special board to determine if partial operation of an industry were feasible, and if so allow a strike or lockout to continue for up to six months while maintaining essential services.
- Refer the "final offer" of each party to a neutral board which would choose the "most reasonable" of the proposals as the final and binding settlement. Unlike normal arbitration, no compromise or change would be possible. The Administration's theory is that the differences between the parties would be substantially narrowed if it were necessary to come up with a final position aimed at winning the board's acceptance.

The legislation would also establish a special commission to conduct a two-year study of labor relations in other industries.

Hodgson said the Administration had no expectation of passage of its bill in time to affect the current national railroad dispute. But, he said, the recurring need for special legislation to deal with rail disputes has added "a sense of urgency" to the push for permanent legislation.

As far as the railroad dispute is concerned—with a strike barred by law before Mar. 1—Hodgson was optimistic that voluntary contract agreements can be negotiated by four rail unions and management.

He said Assistant Labor Sec. W. J. Usery, Jr., has been working virtually full time assisting the negotiations and "tremendous progress" has been made.

2-6-71

Dispatchers to Vote On IAM Affiliation

The Air Line Dispatchers will vote within 60 days on whether or not to affiliate with the Machinists, Pres. Robert E. Commerce announced.

The IAM received a plurality of ballots cast in a recent referendum, but not a majority. Assistant Labor Sec. W. J. Usery, Jr., counted the ballots at the union's request and announced these results: the IAM 202, Transport Workers 176, Seafarers 170, with scattered votes for three other unions.

Philip Morris Contract Sets Tobacco Pattern

Richmond, Va.—The Tobacco Workers won contract benefits valued at $1.10 an hour from Philip Morris, Inc., in a three-year agreement the union sees as a pattern for forthcoming negotiations in the industry.

The agreement, approved by members of TWIU Local 16 in Louisville, Ky., and Local 203, Richmond, will give 5,000 employes wage increases totaling 85 cents an hour. It also adds a temporary cost-of-living allowance of 10 cents an hour to the permanent basic hourly rates and provides other improvements.

The company increased its payment to the family hospitalization and surgical insurance programs to 50 percent this year, rising to 60 percent next year and 75 percent in 1973. It agreed to grant one additional paid holiday and to establish a new insurance program by next Sept. 1. Vacation improvements provide for three weeks after eight years of service, four after 15 years, five after 25 years.

The new pact also provides that in the event of a layoff, workers will receive a week's pay for each year of continuous employment and retain their recall rights. Improvements also were written in for funeral leave provisions and pension vesting rights. Normal retirement age was lowered from 62 years to 60 without reduction in benefits and the early retirement age from 57 to 55 with benefits actuarially reduced.

The contract also includes gains for seasonal employes in the bonus incentive plan and other benefits.

TWIU Sec.-Treas. Homer Cole said that other major companies with union contracts are American, Brown & Williamson, Liggett & Myers and P. Lorillard.

5.4 Million Unemployed, Heaviest Toll in 10 Years

Congress Gets 8 New Chairmen

By David L. Perlman

Eight congressional committees have new chairmen this year, but the overall liberal-conservative lineup is little changed from the 91st Congress.

All of the new chairmen are close to the political viewpoint of their predecessors, and the biennial shuffle of committee assignments made only minor changes in the ideological power bases.

Liberal Democrats plus a sprinkling of moderate-to-liberal Republicans have strong majorities on both the House and Senate Labor committees.

The new chairman of the Senate Labor Committee, Harrison A. Williams, Jr., of New Jersey, had the same COPE voting record in the 91st Congress as the man he replaced, former Sen. Ralph W. Yarborough of Texas. Both had 11 "right" votes and no "wrong" votes on the AFL-CIO's list of key issues.

Jennings Randolph of West Virginia, who had the seniority to claim the chairmanship, elected to continue instead as chairman of the Senate's Public Works Committee.

On the Democratic side, Adlai E. Stevenson (Ill.) was added to the committee when he took his seat in the Senate late last year and there were no other changes. Republicans named Robert W. Packwood (Ore.), Robert Taft, Jr. (Ohio), and J. Glenn Beall, Jr. (Md.) to fill vacancies.

The House Education & Labor Committee was slightly expanded from 20 Democrats and 15 Republicans to 22 Democrats and 16 Republicans. Carl D. Perkins of Kentucky remains chairman and Albert H. Quie of Minnesota moves up to ranking Republican member. His predecessor in that spot, William H. Ayres of Ohio, was defeated for re-election.

New chairmen were also installed for the following Senate committees:

Appropriations—Allen J. Ellender of Louisiana took the chairmanship after the death of Richard B. Russell (Ga.).

Agriculture—Herman E. Talmadge (Ga.) moved up to the chairmanship which Ellender gave up to take the Appropriations spot.

District of Columbia—Thomas F. Eagleton (Mo.), the only Democratic holdover, succeeds Joseph D. Tydings (Md.), who was not re-elected.

MARCH FOR MOTHERHOOD was staged by these stewardesses, members of the Air Line Pilots Association during the National Airlines Golf Tournament Feb. 3 in Miami. The stewardesses picketed in protest of National's policy of refusing to rehire stewardesses after they become mothers and of discharging them when they refused to resign upon becoming pregnant. In some cases, discharged stewardesses have been denied unemployment compensation because state agencies had been informed they were guilty of misconduct.

Jobless Rate For January At 6 Percent

By John R. Oravec

Unemployment in January jumped to the highest level in a decade with 5.4 million workers out of jobs—an increase of 2 million over the year, the Labor Dept. reported.

Although the number of jobless workers rose 780,000 from December, this figure was transformed into a seasonal decline of 110,000 because the rise was less than usual between December and January, the Bureau of Labor Statistics noted.

The BLS said that on a seasonally adjusted basis unemployment dropped from 5,146,000 in December to 5,033,000, putting the jobless rate at 6 percent of the nation's labor force.

The 6 percent rate reflects a decline from 6.2 percent recorded in December. The government had initially reported a jobless rate of 6 percent at the close of the year, but the December rate went up two-tenths of a point on the basis of year-end revisions.

The nation's total employment declined 1.3 million from December to 77.2 million. But this drop was less than usual over the month and after seasonal adjustments was translated into an increase of 400,000 to 78.9 million, the BLS said.

The average duration of joblessness moved higher for the third consecutive month, the BLS noted, largely because of an increase in the number of persons who have been unemployed 27 weeks or longer.

The average length of unemployment was 10.4 weeks last month, compared with 9.7 weeks in December. The number of workers who have been out of a job less than five

Labor-Backed Program:

House, Senate Push Public Service Jobs

A labor-supported drive for a federally-financed public service jobs program got off to a running start in both the House and Senate.

House Speaker Carl Albert and Majority Leader Hale Boggs called a news conference to announce that the Democratic leadership has put a top-priority label on emergency public service job-creating legislation.

Pres. Nixon vetoed a multi-billion dollar manpower training bill last year largely because of its public service jobs provision, but Albert stressed that continued high unemployment makes the legislation essential.

Joining with the House leaders in pledging quick action were House Labor Committee Chairman Carl D. Perkins; Rep. Dominick V. Daniels, chairman of the subcommittee which will hold early hearings on the legislation, and Rep. James G. O'Hara (D-Mich.), principal author of last year's bill. All three have sponsored similar bills confined to public service jobs, with other manpower legislation to be dealt with in a later bill.

Meanwhile, at Senate hearings, mayors of 16 large cities testified for a companion public service jobs bill that carries a bipartisan label.

Its chief sponsors are Sen. Gaylord Nelson (D-Wis.), who presided at the hearings, and Sen. Jacob K. Javits (R-N.Y.), senior Republican on both the Employment subcommittee and its parent Senate Labor Committee.

The Nelson-Javits bill, which has 32 co-sponsors, would provide funds for an estimated 150,000 jobs immediately and the level of funding would be tied to the unemployment rate. It would enable public employers to hire people to fill jobs that are needed but are unfilled because city, county and state governments sim-

Nixon Submits First Half Of Revenue Plan

Pres. Nixon sent Congress the first half of his revenue-sharing plan and glowingly described it as the solution to the pressing problems of local and state governments.

Key congressional leaders have been notably cool to the proposal, pressing for alternative means of financing needed programs without surrendering a federal voice in how the money is spent.

The President has proposed to take a small part of federal tax revenue—1.3 percent of personal income taxes collected by the federal government—and distribute it to the states, primarily on the basis of population.

The states would then be obligated to pass about half the money

Mar. 1 Strike Deadline Set by Railway Clerks

By Eugene A. Kelly

The Railway Clerks broke off negotiations with the railroads and renewed a strike call as the United Transportation Union continued contract talks and two smaller unions reached tentative agreement with the carriers. The latter are the Maintenance of Way Employes and the Hotel & Restaurant Employes, representing dining car crews.

BRAC Pres. C. L. Dennis said his union's negotiations with management's National Railway Labor Conference have brought no progress and therefore, "with great reluctance," he set 12:01 a.m., Mar. 1, as the date on which his 200,000 members will be advised to stop work.

It was the third such strike deadline since the clerks and the three other unions began negotiating for nearly 500,000 railroad workers. The earlier walkouts were interrupted by a federal court injunction and a special law passed by Congress to interdict any strike or lockout before Mar. 1.

Dennis said "BRAC has found no value in continuing negotiations with railroad management for new contracts. We have explored, in a series of recent meetings, every possible basis for mutually satisfactory agreement. We have been unsuccessful in that search."

He said management "still seems unable to understand the pressing needs of BRAC members who work on the railroads. Until management changes its attitude, it is hard indeed to see a basis for settlement."

Dennis charged that "railroad management is waiting to have its problems solved once again by the

Crafts Urge Fairness On Wage Procedures

By Saul Miller

Bal Harbour, Fla. — The AFL-CIO Building & Construction Trades Dept. declared that it was "heartened by the interest" in stabilizing construction industry bargaining indicated by Pres. Nixon and pledged its support "of a program or procedure which is equally fair to all."

The department's executive council and the general presidents of the 17 unions affiliated with the department issued a statement pointing out that in the continuing series of consultations initiated by the President among unions, contractors and the government, they have not been advised "that any specific plan for stabilizing construction bargaining is in the making or any executive action by Pres Nixon will be taken."

But the unions and their leaders have a concern for any national problem, the statement said, "especially a problem in the construction industry." They added that the "total picture" in the industry should be carefully

(Continued on Page 3)

PEACE CORPS AND AFL-CIO cooperation in the use of skilled union tradesmen in developing countries is discussed at a strategy session in the federation's headquarters. From left are Director Bill Inglis of the Peace Corps office of volunteer placement; AFL-CIO Vice Pres. S. Frank Raftery, who also is a member of the Peace Corps National Advisory Council; Director Morris Paladino of the Asian-American Free Labor Institute, and Peace Corps Director Joseph H. Blatchford.

Maritime Trades Challenge Bid To Scrap Public Health Hospitals

Bal Harbour, Fla.—The threat to the future of the U.S. Public Health Service hospitals "stands in ugly contrast" to Pres. Nixon's pledge to expand and improve medical services, the AFL-CIO Maritime Trades Dept. charged.

The move against the hospitals was a key point in the legislative report by MTD Administrator William Moody to the department's executive board meeting here. The report focused also on piracy of American fishing vessels off the coast of South America and the attack by oil companies on legislation reserving all domestic shipping to American-flag vessels.

The MTD, headed by Seafarers Pres. Paul Hall, has an affiliation of 42 national and international unions representing 7.5 million workers. It released a report also attacking the "promise-performance gap" that characterizes the Nixon Administration and its role in the present economic recession.

Charles F. West, vice president of the Machinists, told the board meeting that the promises contained in the latest economic proposals from the Administration are as "phony as the old promises" of halting inflation without creating unemployment.

"I have the uncomfortable feeling," said West, "that we're going to have the burden of the (Administration's) deficit without the benefit of any significant forward thrust to the economy." On the PHS hospitals, the board was told that the Administration began "winding down" the network of hospitals in 1969 when it turned units in Detroit and Savannah into out-patient clinics, transferring all bed patients to private and public hospitals.

The remaining eight hospitals face a new "reappraisal" from the Dept. of Health, Education and Welfare, Moody said, that could well lead to their closing unless the movement is reversed.

"To even consider closing any hospital at a time when so many persons have need for greater care than the U.S. health-delivery system is currently able to provide, would be a cruel hoax on the nation," the MTD said.

On the South American piracy problem, the department urged suspending economic aid to any nation guilty of piracy against the U.S. fishing fleet, imposition of economic sanctions and using U.S. Naval vessels to guard American fishermen.

Discovery of oil beneath the North Alaskan slope has led oil companies to open a campaign against the Jones act, the department said, "a campaign that would permit them to bring in foreign-built, foreign-registered and foreign-crewed tankers to move oil from Alaska to the continental U.S." The MTD board sounded the alarm and said it would go all out to meet the challenge.

Another MTD goal set out by the board is to "see that in the implementation of the Merchant Marine Act of 1970, the performance matches the promises that the new legislation contains."

The new law, a major department goal last year, provides for the revitalization of the U.S.-flag fleet over a 10-year period.

Scouts Call Labor 'Working Partner'

The Boy Scouts of America regard organized labor as a "working partner" with good reason, according to Joel Gay, BSA liaison with the AFL-CIO Dept. of Community Services. Gay, writing in the January-February issue of Scouting magazine, notes that unions provide 25 percent of all scoutmasters and have made many other contributions in funds, free labor and leadership.

The article gives several examples of national union officials involved with the Boy Scouts.

- Joseph Keenan, secretary of the International Brotherhood of Electrical Workers, serves on the National Capital Area BSA Board in Washington, D.C., and holds a 1970 Silver Beaver award.
- Paul Hall, president of the Seafarers, has served on the National Council BSA board.
- Leo Perlis, director of the federation's Dept. of Community Services, received the 1970 Silver Buffalo award for his contribution, and that of his department, to scouting.

Union members have supported scouting in many important ways, Gay points out. Their payroll deduction gifts to United Funds account for a third of all money raised by united giving, which in 1969 provided 60.5 percent of the BSA budgets. Local unions have contributed to the Scouts by other means as varied as a fund-raising Lunch-O-Ree held in Chicago each year, a donation of land for a campground from San Francisco Machinists Local 1546, sponsorship of Scout troops by many locals and donations of money by others.

"But nowhere," Gay observes, "does labor's gift mean more than 'in-kind' gifts of free labor."

"Operation Ben Franklin," for example, saved BSA nearly a million dollars. The program, conceived by James S. Longacre, executive director of the Pennsylvania Council of the Operating Engineers, called for the development of the Resica Falls Scout Reservation by union apprentices.

"Operation Earthshake," a similar project conducted in upstate New York by six locals of the Operating Engineers, developed the J. Warren Cutler Boy Scout Camp.

Scouting units are also being developed to help many boys who have not been able to participate before. Gay gives examples of local unions and members who have helped with handicapped youths, troops with a language barrier, and boys in low-income neighborhoods.

Canadian Pacts Boost Pay 8.5%

Ottawa—Canada's Labor Dept. reported that major wage settlements negotiated during the last quarter of 1970 provided average annual increases of 8.5 percent.

This represented a drop from the 9.3 percent average of the third quarter and brought the average for all of 1970 down to 8.8 percent.

New Rules Ratified By Screen Actors

Hollywood—Four amendments to the bylaws of the Screen Actors Guild were approved by majorities above 90 percent in a nationwide referendum.

The principal changes establish a one-year period of associate membership for actors who hereafter join the union and require two consecutive years of membership in order to run for or hold union office.

Other changes clarify voting eligibility rules and provide suspension of members in arrears for two dues periods, equivalent to one year.

Federal Curbs Asked:

Credit Agencies Hit As Privacy Threat

Bal Harbour, Fla.—A "private intelligence network" of credit bureaus in the United States threatens the privacy of millions of citizens and should be curbed by effective federal laws, the AFL-CIO Maritime Trades Dept. declared.

The department released with the opening of its executive board meeting here a 101-page study declaring that the network of credit bureaus is an "octopus" that holds in its tentacles "secret dossiers on some 110 million Americans."

The report is the second in a series of studies on privacy. The first report, issued last year, dealt with the use of lie detectors.

The credit bureau study concedes that the business community must have adequate information to function effectively, but says that this is counterbalanced by the "legitimate right of the individual" to his privacy.

Credit bureaus, the report noted, collect not only economic data, but information on work records, personal conduct and family affairs. Tracing the history and structure of credit information and the use to which it is put, the report cites abuses in terms of accuracy and the lack of security in protecting files against unauthorized use.

A major tightening is needed of the Fair Credit Reporting Act passed last year, the report said, to curb the irresponsible practices of the credit rating and reporting business. Especially needed is a clear ban on the "circulation of material which constitutes an invasion of privacy" including information on political and religious beliefs.

"It is not enough that all information be accurate, relevant or up-to-date," the report asserts. "The issue of privacy stands on its own and should constitute an additional limiting factor on types of material which may be collected and distributed by commercial reporting agencies."

The report was prepared by an MTD committee headed by Edward J. Carlough, president of the Sheet Meal Workers.

Forum to Explore Invasion of Privacy

Bal Harbour, Fla.—A "people's forum" on the broad issue of protecting the public against invasion of privacy will be held in Washington in June under the joint sponsorship of the AFL-CIO Maritime Trades Dept. and the Transportation Institute, a research and education group representing a major section of maritime management.

The forum is one of a series planned by the two groups to permit "all elements of American society" to present their views on major national issues.

The Washington forum on privacy is being planned by Dr. Alan F. Westin, professor of public law and government at Columbia University and author of "Privacy and Freedom." Representatives of labor, industry and government will participate along with persons from various groups that make up American society.

$60,000 Backpay Won In Anti-Union Firings

Wilmington, N.C.—The Clothing Workers and the local labor movement won a five-year battle when the Block-Southland Mfg. Co. agreed to pay nearly $60,000 in lost wages to former employes who were fired unlawfully in an effort to block union organization.

The dispute began in 1965, when the ACWA filed charges with the National Labor Relations Board that the company threatened its employes and fired numerous union supporters to prevent the holding of a fair election.

In a long and bitterly contested lawsuit, the NLRB general counsel presented more than 100 witnesses and nearly 200 documents in a trial that lasted 44 days. The labor board found the company guilty and ordered it to bargain. The clothing firm appealed, but the U.S. Circuit Court of Appeals for the District of Columbia upheld the NLRB and the union.

The court found management had committed many illegal acts, including threatening to move its plant, firing union supporters and threatening to fire others, and advising employes they need not obey federal subpoenas.

Block-Southland finally agreed to obey an order to start bargaining on contract terms but it resisted a backpay order on the ground the fired workers had not tried hard enough to get other jobs. A trial examiner recommended backpay of $53,000 but this was appealed. The board reversed the examiner, and management then agreed to settle for the larger amount.

The campaign to win justice for the harassed employes was carried to the Wilmington community by Eula McGill and Rachel Barnes of the Clothing Workers with the solid support of the Wilmington AFL-CIO.

Twelve of the fired Block-Southland employes agreed to accept the wages due them but refused to return to work for the company. Two others earlier had accepted backpay of $3,851, union sources reported.

Firemen & Oilers' Anthony Matz Dies

Philadelphia—Anthony E. Matz, president emeritus of the Firemen & Oilers, was buried after a funeral mass in St. John's Church. He died at 68 after a brief illness.

Matz had been union president for 18 years when he retired in 1965 and was succeeded by William E. Fredenberger, now the president. He started work for the Baltimore & Ohio Railroad in the early Twenties, joined Local 880 in 1925, and was chosen successively as his union's general chairman on the B & O, international representative, eastern director of organization and vice president.

Fellow union members here gave him the Eleanor Roosevelt Humanities Award in 1965 for his service to labor and the community. That service included two assignments with the International Labor Organization, and his work in helping improve passenger train service for suburban Philadelphia.

For Apprentice System:

Building Trades Score Quota Plan

Bal Harbour, Fla.—Building trades unions sharply rejected the use of racial quotas in apprentice programs as "repugnant to all Americans" and said they would oppose any Labor Dept. regulations that would set up such quotas.

The executive council of the AFL-CIO Building & Construction Trades Dept. declared in a statement that the new federal regulations on equal employment opportunity in apprenticeship issued in the Federal Register by Labor Sec. James D. Hodgson could injure the national apprenticeship system. "We expect and intend to oppose it" at all levels, the department said.

The statement cited detailed figures showing marked progress in bringing minority groups into apprenticeship programs and declared that the council "is more than satisfied that the overwhelming majority of our local unions in the skilled trades are responding to the social problems surrounding equal employment opportunity. They have responded in a meaningful and successful fashion."

The department noted that last year participation of non-white apprentices in the construction industry equaled non-white participation in the adult male work force—they both were at the 10 percent level.

During the past five years non-white apprentices grew from 4.4 percent of all apprentices in 1966 to better than 11 percent entering in the first half of 1970.

On the new federal regulations, to which both the BCTD and the Metal Trades Dept. as well as their affiliated unions will file opposing views, the council said:

"The proposed revision directs that future apprentices be selected not on merit but on a racial quota determined by the minority population, the minority work force, existing minority apprentices, incumbent minority journeymen and the availablity of minorities with potential capacity to become craftsmen."

The statement termed the proposed regulations "unnecessary," "undesirable," "uneconomic" and "unworkable."

Citing the marked progress made in achieving equal opportunity in apprenticeship, the council noted the department's support of Outreach programs which have produced an "influx of qualified motivated minority youth" who have refused "the artificial security of quotas and have accepted the opportunity to learn the skills that will give them genuine security in an intensely competitive industry."

It pointed out that the number of minority apprentices in the building trades increased from 2.5 percent in 1960 to 8.6 percent at the end of 1969 moving to 9.4 percent in the first half of 1970 and to the estimated 10 percent figure by the end of the year.

During 1969, the total number of federally registered apprentices rose from 87,919 to 104,505, an increase of 18.9 percent. The number of minority apprentices, however, increased 37.3 percent moving from 6,631 to 9,102.

The council statement was based in part on a report from the Joint Building Trades & Metal Trades Apprenticeship Committee chaired by David S. Turner, secretary-treasurer of the Sheet Metal Workers. Turner, committee members John Joyce, treasurer of the Bricklayers, and Reese Hammond, research director of the Operating Engineers, met with the council on the new regulations and the apprenticeship problem.

In announcing the new regulations at the end of January. Hodgson acknowledged that there has been "significant equal opportunity progress" in apprenticeship programs over the past seven years, but said "there continues to be underutilization of minorities in apprenticeship in some circumstances. . . ."

The new rules would apply to all apprenticeship programs registered with the U. S. Bureau of Apprenticeship & Training and with 32 state apprenticeship agencies recognized by the bureau. There are about 10,000 apprenticeship programs registered either at the federal or state level.

WITH 10 PERCENT of the apprentices in construction trades last year coming from minority groups, the executive council of the AFL-CIO Building & Construction Trades Council rejected the idea of government-imposed racial quotas. Pres. C. J. Haggerty of the BCTD, seated at the head of the table, presided at the council meeting in Bal Harbour, Fla.

Kidney Center Goal of Unions In Cleveland

Cleveland—Organized labor here has taken the first step to establish a kidney dialysis center in the city. The Cleveland AFL-CIO and the Auto Workers have raised $12,000 from local unions and are forming a non-profit organization, the Community Kidney Dialysis Center.

In the kidney dialysis process, a machine performs the function of impaired kidneys, removing impurities from the blood. The machines cost $4,000 each and need supplies that can cost hundreds of dollars monthly.

Mel Witt, director of the central body's Community Services Dept., said the organization will seek matching state and federal funds. He noted that the state Bureau of Vocational Rehabilitation has agreed to provide $250,000 in matching funds when the unions have raised $50,000.

Witt said the center probably will be located in Federation Towers, the Cleveland AFL-CIO's senior citizens' apartment building.

"Labor has gone into this area because there is no other organization providing services to working men and women," Witt said. "We will provide services on an ability to pay basis."

He said the center will start with three kidney machines and expand as needed.

Crafts Urge Fairness On Wage Procedures

(Continued from Page 1)

examined before any "solutions are attempted" and that some action must be taken about unemployment, which is twice as high in the construction industry as the national average.

A program or procedure equally fair for all should not be "restrictive to one group and advantageous to another, not punitive for one and permissive for another, not representative of one and oblivious of another," the statement added.

The statement came at the conclusion of a three-day meeting of the department's executive council and sessions of the general presidents, including a meeting with Dr. John Dunlop of Harvard who has been meeting with union leaders, contractors and government officials at the President's request to seek a solution to industry bargaining problems.

Dunlop said after his meeting with the general presidents that he "found the discussion helpful" and would be holding further exchanges of views with industry and government officials as well as further discussions with the union leaders. He noted that he did not "ask the unions for any specific answers to any specific questions," that he had not made any yes-or-no request.

Dunlop is secretary of the Construction Industry Collective Bargaining Commission set up by the White House last fall. The four labor members are BCTD Pres. C. J. Haggerty, Carpenters Pres. Maurice A. Hutcheson, Pres. Peter T. Schoemann of the Plumbers & Pipe Fitters and Pres. Hunter P. Wharton of the Operating Engineers.

Nixon met with members of the commission, contractor representatives and other building trades union leaders last Jan. 18 and asked them to come up with a formula within 30 days "to stabilize wage-price trends" in the industry.

Following the session, a working committee was formed with Dunlop and Under Sec. of Labor Laurence H. Silberman as the public members. They designated Haggerty and BCTD Sec.-Treas. Frank Bonadio to represent the craft unions and Robert Higgins, president of the Electrical Contractors Association, and William Dunn, president of the Associated General Contractors, for the employers.

The union statement reaffirmed strong support for improving and strengthening collective bargaining and opposition to any proposals that would "erode, restrict or endanger" bargaining. It noted that a "wide range of problems" confronts the industry, problems "that need solutions structured for long-term benefit, not stop-gap schemes."

Wage rates, the statement continued, have in recent years frequently been portrayed as "out-of-focus," with little if any attention paid to the fact that a building tradesman averages only 1,200 to 1,400 hours of work a year—well below the 2,000 hours of a normal working year.

There is little consideration given also, the statement said, to the fact that wages rates in comparison to land cost, interest charges and the prices of materials play a minimum role in construction costs—less than 20 percent in home building and less than one-third in many multi-million dollar projects.

Iron Workers Build Ice Rink For Orphans

Greenville, R.I.—A lot of labor, and a lot of love, went into the skating rink that members of area unions built for the children of St. Aloysius Home.

Martin T. Byrne, business agent for Iron Workers Local 37, first offered to give a Christmas party for the 60 state wards who live at the home. Athletic Director Gus Allen and Sister Mary Ryan of the teaching staff suggested something more lasting, like a skating rink or a playground.

Byrne got a contractor to excavate a site behind the home and line it with plastic for use as a temporary rink. But the consulting engineer, Edward J. Latessa, proposed a permanent rink and the union agreed to provide the labor.

The job was done over several weekends with about 5,000 hours of donated work by the Iron Workers and members of several other unions. Six contractors donated equipment, and the volunteer committee got donations of money and materials.

The finished job would have cost about $50,000, Latessa estimated. The rink, built on an asphalt base, will serve in warm weather as two double tennis courts and for basketball, badminton and handball.

The volunteer builders turned out in force for a dedication ceremony by Bishop Russell J. McVinney of the Providence Catholic diocese, and a speech by state Lieut. Gov. Joseph Garrahy. The children then tried out new skates, also donated by Local 37, on ice conditioned by the Smithfield hockey team and the Greenville Fire Dept.

Young skaters from the Providence Figure Skating Association put on an exhibition for the spectators.

Credit Union Body Stalls Bargaining, Striking Office Workers Seek Aid

Madison, Wis.—Support of labor's 1,171 credit unions in getting management of the struck CUNA International, Inc. to bargain in good faith was asked by a little union of 88 headquarters office employes, picketing here in bone-chilling winter weather since Jan. 7.

Management of CUNA, Inc. and CUNA Supply Cooperative has "not moved one iota" since the original contract offer that launched the walkout, said Mrs. Marion Sachtjen, president of OPEIU Local 39. Most credit unions are affiliated with CUNA.

"We seek your support in this strike and urge you to discuss this matter with your local, state and national credit union officers," Mrs. Sachtjen said in a letter to all credit unions sponsored by labor organizations. She also sent a report on the strike issues to directors of the World Council of Credit Unions, CUNA International and CUNA Supply Cooperative.

"This is the first time in the history of all the international credit union organizations that labor negotiations have reached a deadlock and resulted in a strike," Mrs. Sachtjen noted. Union members were "mindful of this . . . before voting, 71 to 6, to reject the last management offer" and walk out, she said.

Negotiations began last Sept. 21 on a contract due to expire Dec. 31. Only three meetings were held before expiration "because management was not available," she said. On Dec. 22, the union offered to meet continuously through the Christmas holidays if necessary, but management spokesmen said they couldn't meet until Jan. 6, she reported.

At no time since negotiations began has the local had any direct negotiations with top management, Mrs. Sachtjen reported. She said this is in "marked contrast with past years and the experience of members at CUNA Mutual and CUMIS," similar organizations with union contracts.

When a "final" offer was made Jan. 6, nearly a week after the contract expired, it was for a 4.5 percent increase, or 13 cents an hour, in each year of a three-year contract. This was below the unit's proposal and well below the national average of 8.5 percent won by other unions, Mrs. Sachtjen observed.

"We feel our position is sound and reasonable" and that other credit union and labor representatives will put their influence behind settlement of the dispute, the union president said.

The management negotiating committee said in a letter to employes before the strike started "we understand many of our co-workers do not favor this strike and would like to continue to work. It will be CUNA's policy to continue to operate during the strike. Anyone who wants to continue to work . . . is free to do so."

Since then the headquarters office has continued to operate with strikebreakers, Local 39 members said.

State mediators have been unable to break the logjam in negotiations and federal mediators may be asked to intervene, the union said.

A UNION MAN all the way is Terry Sargent, recording secretary of Whittier, Calif., Typographical Union 899 who decided on these personalized license tags. Sargent also serves as his local's delegate to the Southern California Typographical Conference of which he is third vice president. Revenues from the sale of personalized tags are used by the state for air pollution control.

Steel Union Wins Pact At Foreign-Owned Mill

Pittsburgh—The Steelworkers have won a contract settlement in a 25-week strike at the Georgetown Steel Co. in Georgetown, S.C. The $30 million plant is the first foreign-owned steel mill in the United States.

USWA Pres. I. W. Abel announced agreement on the union's first contract with Korf Industries, with headquarters in Baden-Baden, West Germany. Terms of the four-year contract were approved by the 600 strikers and the men returned to work.

Also settled on similar terms was a strike for recognition and a first contract at the Korf-owned Andrews Wire Co. plant in nearby Andrews, S.C.

Abel said that after other attempts to settle the Georgetown strike failed, the union enlisted the aid of the West German labor movement. Negotiations resumed with USWA Vice Pres. Joseph P. Molony and International Affairs Rep. Meyer Bernstein on the bargaining team. Settlement was reached Feb. 4 and members returned to work Feb. 7.

The USWA organized the new plant last year and won a National Labor Relations Board election, 376 to 89. Negotiations stalled and the men walked out last Aug. 15. The union won an NLRB trial examiner's ruling that the company had failed to bargain in good faith and the NLRB obtained a court order requiring the company to negotiate.

The new $30 million "mini-steel" plant was the first of its kind to start operations in this country.

The German owners said they had deliberately sought out a "right-to-work" state where cheap labor would be available. The Georgetown mill was formally dedicated on the eve of the NLRB election. Sen. Strom Thurmond (R-S.C.) was among the invited guests.

Ironically, the firm—which left Germany because of problems with competitors—sent workers a standard anti-union letter during the election campaign. It warned the South Carolinians to beware of the "outsiders" from the union.

After a rally by strikers here Nov. 7, more than a dozen were clubbed and beaten by town police and some required hospital care.

The new union contract, effective at once, provides pay increases of 6 percent this year, followed by two other raises of 4 percent a year apart; a cost-of-living escalator clause, and a union dues-checkoff provision.

Other settlement terms include the reinstatement of all strikers on the basis of seniority, a four-step grievance procedure, a system of classifying and rating all jobs, shift differential pay, non-contributory hospital insurance starting in 1973, two extra paid holidays, jury pay and makeup pay for military training, time and one-half pay for overtime after eight hours, establishment of a joint union-company safety committee, and no discrimination because of race, creed, age, national origin or sex.

Unions Advised Of Ruling on Dues Checkoff

The AFL-CIO has advised unions in states with so-called "right-to-work" laws that they need not be saddled with revocable dues checkoff clauses during the life of labor-management contracts.

Stanton E. Smith, the federation's coordinator for state and local central bodies, wrote the central bodies calling their attention to the recent U.S. Supreme Court decision nullifying a provision of Georgia's "work" law that checkoff authorizations are revocable at the will of the employe.

The high court said that the Georgia statute "here impermissibly interferes with the process of collective bargaining fostered by the National Labor Relations Act by effectively incorporating into every checkoff arrangement the requirement that the checkoff arrangement be revocable at will."

Smith suggested that central bodies inform their local affiliates of the Georgia decision, noting that "state labor councils are frequently confronted with legislative attempts to prohibit irrevocable dues checkoff during the life of a contract by adding various restrictions to existing 'right-to-work' laws."

He added that in some cases state attorneys general may have illegally issued rulings prohibiting irrevocable checkoffs.

To Families of 26 Victims:

Georgia Explosion Reveals Gaps in Compensation Law

Woodbine, Ga.—Georgia mourned the death of 26 workers in an explosion that ripped through a chemical plant here. But the state's antiquated workmen's compensation law will provide only temporary help for their widows and children.

Despite efforts over the years by the state's labor movement to improve the law, it took an industrial tragedy to dramatize its deficiencies.

James O'Brien of the AFL-CIO Dept. of Social Security said that all benefits for the families of the workers killed in the explosion and fire that ravaged a Thiokol Chemical Corp. plant will be exhausted within seven years.

After that, they're on their own.

Until then, there will be a maximum of $42.50 a week and a single lump sum payment. For the 50 workers injured in the disaster, the maximum is $50 a week until their recovery or the allowable limit.

Georgia law, like those of o'her states, is supposed to provide benefits equal to two-thirds lost wages.

But the actual fixed dollar amount written into the law "makes a mockery" of the two-thirds formula, O'Brien charged.

Twenty of the dead Thiokol employes were members of the Chemical Workers employed recently on a training program in the plant where magnesium trip-flares were made for use by the armed forces in Viet Nam.

All were young, said Frank Ritzinger of the union, who went to Woodbine with ICWU Pres. Thomas E. Boyle and others on his staff. Most had families, and most were Negroes living in this wooded area 50 miles north of Jacksonville, Fla.

About 70 workers were stationed in a steel-reinforced concrete building just before noon Feb. 3 when a fire started from an undetermined cause. It spread to a dryer room and mushroomed into a blast that obliterated the building when it reached an oven, Ritzinger said.

The men were trained to evacuate the building as soon as a fire alarm sounded. They were outside the building, running for safety, when the explosion tore the building apart and rained flying debris all over them.

The fire and blast made charcoal of telephone poles on the 2,800-acre site and burned most of the bodies of the dead beyond recognition. Thirty others were burned critically and are still in area hospitals.

Georgia's new governor, Jimmy Carter, came to the scene and arranged for an assistant to help coordinate relief efforts. Carter said he would ask Pres. Nixon to declare the vicinity a disaster area. There was, however, no organized public effort to aid the families of survivors.

The ICWU made a donation of $25,000 to a relief fund, called on the employer to do likewise, and alerted local unions to the need of residents in the impoverished hollows of southeast Georgia.

The Georgia AFL-CIO two years ago succeeded in getting the legislature to improve workmen's compensation benefits and is supporting a bill in the present session to raise them still further.

O'Brien said the tragedy "points up the need for the National Workmen's Compensation Commission provided for in the recently enacted Occupational Health & Safety Act." The commission has not yet been established.

The AFL-CIO has for many years urged sharply improved benefits in workmen's compensation laws, and state organizations have worked diligently to improve state measures. But their efforts were "not welcomed at the state level" for the most part, O'Brien said.

"Our policy objective of the need for minimum federal standards in workmen's compensation is highlighted by this explosion," he declared, adding:

"Every responsible interested group supports the concept of providing full medical care for work-incurred injuries—the Dept. of Labor, the International Association of Industrial Accident Boards & Commissions, many responsible insurance firms, and of course organized labor.

"Full medical care is provided for industrial accident victims in other southern states. Georgia's neighboring state of Florida has long been aware of the problem and provides full coverage for victims of work injuries.

"If these Thiokol employes had been doing similar work in a government installation, the Federal Employes Compensation Act would provide a maximum benefit equal to two-thirds of their average weekly wage to a top of $400 a week.

"Widows would benefit until death or remarriage, and surviving children to age 18 or, if they attend college, until they become 22 or complete their studies."

Full medical benefits also are provided under the federal program, O'Brien noted. Vocational rehabilitation is available for injured workers, with costs of buying tools, of extra transportation and of living costs away from home also covered.

The law, O'Brien said, is designed to permit the injured worker to retain his home and family while training, and to return him to gainful employment as soon as possible.

"Unfortunately, under Georgia law injured workers are denied this great advantage of rehibilitation."

Steelworkers Reject Industry Offer As Can Contract Deadline Nears

Steelworkers negotiating new contracts for nearly 40,000 members in the can industry turned down an offer from four major companies as "grossly inadequate" and "an insult to the intelligence" of union members in a highly productive and profitable industry.

The offer, made by four major firms in separate but simultaneous negotiating sessions in Washington, was for a wage and pension package totaling about 45 cents an hour over a 21-month period—far below the wage and benefit proposals made by the union last November.

William Moran of Bethlehem, Pa., chairman of the union's container industry conference, said the vote by conference members to reject the offer was unanimous. The offer was made by representatives of the American Can Co., Continental Can Co., National Can Corp. and the Crown Cork & Seal Co.

Negotiations are continuing, and Moran said he is still hopeful an acceptable agreement can be negotiated with the industry leaders before the Feb. 14 expiration date of national agreements.

Steelworkers' headquarters at Pittsburgh announced that a tally of votes from nearly 200 local unions across the country showed that 98 percent of members voting have authorized a strike call if the USWA executive board and Pres. I. W. Abel conclude that one is necessary.

A substantial wage increase and a cost-of-living escalator provision are high on the list of priorities set by can industry workers in a policy statement adopted by local union presidents last October.

The statement says that "can workers are entitled to a substantial wage increase to reflect the prosperity of the industry, its enormous productivity, settlements in other industries and the urgent economic needs of our membership."

A negotiated wage increase "must reflect the inflation which has eroded our living standards" and past improvements in conditions, the statement said.

The local union presidents stressed that the Can Manual, determining job classifications for hourly and salaried workers, "must be updated, its loopholes plugged and its factors made suitable for the enormous technological improvements in our industry."

Contract provisions also are needed, the statement declared, to "prevent arbitrary and unwarranted job combinations and additions of duties." Pensions must be substantially liberalized, the insurance program should be improved and expanded, income security should be strengthened and all fringe benefits reviewed "as to eligibility, administration and amounts."

A major issue is the security of members in relation to new plants and so-called satellite plants, said the statement.

It listed such other objectives as better safety and health clauses, clearer protection against the contracting out of work and benefits keyed to the needs of office and technical workers.

Union Card Awarded Boston's Archbishop

Boston — The Textile Workers Union of America gave an honorary lifetime membership to Boston's Archbishop Humberto Medeiros who worked at the trade before he entered the priesthood.

The archbishop worked as a sweeper and bobbin tester in Fall River in the 1930s.

Housing Units Rise 18 Percent in Decade

The number of housing units in the United States increased 18 percent between 1960 and 1970, the U.S. Census Bureau reported.

This was greater than the 13 percent increase in population during the period, but less than the 26 percent increase in housing units between 1950 and 1960.

Talks Broken Off:

Railway Clerks Set Mar. 1 Strike Date

(Continued from Page 1)

Congress." He expressed the belief that Congress "has faith in the American free enterprise system" and the right to strike, and said "the moment Congress reasserts its faith in these two institutions, the railroads will stop playing games and begin to sit down to negotiate in earnest."

The BRAC president again offered to exempt from a strike "all passenger trains, national defense commodities, and coal destined for electric power plants."

While Dennis left Washington for the winter meeting of the AFL-CIO Executive Council in Florida, UTU Pres. Charles Luna led a committee of his union into meetings with management and Assistant Labor Sec. W. J. Usery, Jr.

Earlier the Waymen and the dining car employes announced tentative acceptance of a management offer on a 42-month contract with improved wages, vacations and holiday provisions. For the Waymen, the settlement calls for a wage increase of 43.6 percent, or $12 a day at the final step.

Pres. Harold Crotty of the union, meeting with his general chairmen in Detroit, said the increase is 6.1 percent higher than one recommended last November by a Presidential Emergency Board for a shorter period—36 months.

Wage increases for the first three years would follow the board's proposal: a wage boost of 5 percent as of Jan. 1, 1970, plus 32 cents an hour as of last Nov. 1, another 4 percent on Apr. 1, 1971, followed by 5 percent next Oct. 1, 5 percent on Apr. 1, 1972, and 5 percent six months later. A final increase of 25 cents an hour would take effect Apr. 1, 1973.

Other improvements include a ninth paid holiday—Veterans Day—beginning in 1973, and a fifth week of vacation after 25 years of service. Crotty called the terms a "good settlement" that would bring Waymen into a comparable position with workers in other organized industries.

Meanwhile, two other railroad union groups initiated action in their own negotiations. Six shopcraft unions took strike authorization votes among members and prepared to serve notices on individual railroads of a desire to negotiate wage and rule improvements locally.

They are the Boilermakers, Railway Carmen, International Brotherhood of Electrical Workers, Firemen & Oilers, Machinists and Sheet Metal Workers. All are members of the AFL-CIO Railroad Employes' Dept.

The Railroad Signalmen set a Mar. 5 strike date for 13,000 members on major railroads in support of a wage increase and skill adjustments that would raise the average hourly pay of $3.78 an hour by a proposed 54 percent over three years. The union also is asking a cost-of-living clause, shift differentials, away-from-home expenses, elimination of camp cars as living quarters, three more paid holidays for a total of 11, and improved vacations.

Pres. C. J. Chamberlain said the Signalman got their last wage increase on July 1, 1969.

Adjustment Aid Approved For 3 New Groups

Three more groups of workers who lost their jobs because of increased imports have been certified by the Labor Dept. as eligible for trade adjustment assistance

The latest certifications cover:

- The 230 members of the International Brotherhood of Electrical Workers who lost their jobs when the CP Electronics plant at Columbus, Ind., closed down because of increased imports of electronic transformers.
- The 150 employes of the former Wood & Brooks plant at Buffalo, N.Y., represented by the Furniture Workers, left jobless because of imports of piano keyboards.
- The 340 workers at the Caressa, Inc., plant at Miami which stopped making women's leather shoes and began importing them instead from Spain.

For up to a year of unemployment, the jobless workers are entitled to cash benefits of 65 percent of their average weekly wage up to a ceiling of $85. Additional benefits are allowed if necessary to complete training courses and for workers over 60 when separated from their jobs.

Senior Citizens Hit Nixon on Programs

Pres. Nixon's recent recommendations to Congress clearly show that "he has turned his back on the nation's elderly," Pres. Nelson H. Cruikshank of the National Council of Senior Citizens charged.

Cruikshank listed these actions by the Administration as "bad medicine" for older Americans:

- Insistence on limiting any further Social Security increase to six percent even though the Senate voted last year for a 10 percent increase, and the council, labor and many liberal groups point out that a 15 to 20 percent raise is needed if retired persons are to catch up with inflation.
- Plans to make Medicare beneficiaries pay additional out-of-pocket charges—a move that will make it even more difficult than it now is for the elderly to attain adequate health services.
- Nixon's call for only $5.3 million in the 1972 budget to fund the U.S. Administration on the Aging. This is a 40 percent slash from the $9 million provided in the 1971 budget for these programs.

"All of this is taking place," Cruikshank said, at the very time Administration spokesmen are boasting "this will be a great year for the elderly" merely because the White House has scheduled a Conference on Aging for November.

"The Administration's restrictive actions against aged Americans," Cruikshank concluded, "shows it is not interested in awaiting the deliberations of that conference."

CONVENTION

The Kansas AFL-CIO will hold its 1971 convention Oct. 20-22 at the Radisson Hotel in Wichita.

MERITORIOUS SERVICE AWARD of Labor Dept.'s Bureau of Apprenticeship & Training was presented to Ernest Green, center, director of the union-backed apprenticeship preparation program of the Workers Defense League. The presentation was made by the Labor Dept.'s apprenticeship administrator, Hugh C. Murphy, at the annual apprenticeship graduation ceremony of Local 3, International Brotherhood of Electrical Workers. Local 3 Business Manager Thomas Van Arsdale is at left.

Wealthy Backers Boost Party Campaign Funds

Princeton, N.J.—A big chunk of political campaign funds comes from where the money's at—some of the wealthiest families and individuals in the country, a number of whom contribute to both major parties.

This was revealed by a study of 1968 and some 1969 and 1970 campaign contributions by the Citizens Research Foundation and newsmen. In most cases contributions were broken down into scores of "independent" committees to get around laws restricting the amount of contributions to a candidate's own funds.

The study found at least 15 persons who contributed at least $50,000 each for an estimated total of almost $25 million. At least one contributor scattered his gifts to some 47 different campaign comittees. In addition, there were thousands of dollars in contributions that never got tabulated because of the lack of laws compelling their disclosure.

Chicago insurance executive W. Clement Stone appeared as one of the top contributors with $148,000 for the Republicans in 1970. Published reports say that in 1968 he and his family gave as much as $250,000 in Illinois to Nixon supporters and $750,000 elsewhere in the country.

"If a family has wealth in the neighborhood of $400 million," he was reported as saying, "what's a million in gifts?"

On a relatively more subdued level, here are some of the top campaign contributors according to Citizens Research:

Jack Dreyfus, head of the Dreyfus Fund: $76,000 to Republican groups, most of them committees for the Nixon candidacy; $63,000 to Democratic-backed groups, most of them suporting Senator Hubert H. Humphrey.

The Mellons of Pittsburgh: $173,462 to Republican groups.

The Rockefellers with $107,500, nearly all of it to Republican groups.

The Pew family of Philadelphia: $41,000 for the Republicans.

Max Fisher, Detroit industrialist: $100,000; part of it, as in many other cases, in the name of his wife.

In some cases, donors whose enterprises are in various stages of investigation by governmental bodies turned up. John R. King, former chairman of King Resources who has been named in a suit by the Securities Exchange Commission, contributed $75,000 to Republican committees.

Bernard Cornfield, ousted head of Investors Overseas Services, gave $25,000 to the Democrats.

Several contributions, now ambassadors abroad, were generous gift-givers to the GOP. Arthur K. Watson, ambassador to France, gave $49,000 and Guilford Dudley, Jr., ambassador to Denmark, gave $52,000.

Working Wives Now Number 18.4 Million

Four of every 10 wives were in the nation's labor force last March as the number of working wives rose to 18.4 million, about 780,000 more than in March 1969.

The portion of married women who have gone to work has been on a steady increase for the past decade, the Labor Dept. reported.

Married women accounted for the largest part of the increase in the labor force over the 12-month period ended last March, continuing a significant trend during the past four years.

The number of working wives rose an average of 520,000 annually between 1966 and 1970, compared with an annual average gain of 200,000 in the preceding four years.

The findings are the results of a survey conducted annually by the Bureau of the Census and the Labor Dept.'s Bureau of Labor Statistics.

In 1960, 30.5 percent of all wives were in the labor force. By 1965 34.7 percent of the wives were holding down other jobs and by 1970 the portion rose to 40.8 percent, the Labor Dept. said.

Most of the working wives are mothers. And as of last March—the latest month for which figures are available—10.2 million working wives had children under 18 years old, an increase of 460,000 from March 1969.

About one-fourth of all wives with children under 3 years old were in the labor force, the Labor Dept. noted.

The increase in employment in the 12 months ended last March was not enough to absorb the increase in the labor force, resulting in an increase of joblessness of 1 million—including husbands, wives and single persons.

Unemployment rolls for working wives increased to 1.6 million last March from 1.3 million in 1969.

New Senate Bill Seeks Jobs for Older Workers

Senators Harrison A. Williams, Jr. (D-N.J.) and Edward M. Kennedy (D-Mass.) have joined forces to introduce a bill that could ease the impact of unemployment for elderly Americans.

The two senators are prime sponsors of the Older American Community Service Employment Act, which would create some 47,500 community services jobs for low-income workers 55 years and older.

Williams, who has just completed four years as chairman of the Senate Special Committee on Aging, introduced similar legislation in the last session of Congress. Kennedy is chairman of the subcommittee on Federal, State & Community Services.

"In our work-oriented society, far too many older persons are relegated to lead empty and frustrated lives," Williams told the Senate.

"For most of these individuals," he added, "inactivity is the greatest enemy. Large numbers want to work to remain more active during their later years. Others need to work to supplement their retirement income."

The current economic slowdown, Williams said, has made it "increasingly difficult" for older Americans to find jobs. During the past two years, unemployment for persons 55 and older has jumped by nearly 92 percent. More than 500,000 persons in that age group have lost their jobs.

The Williams-Kennedy bill would authorize expenditures of $95 million in federal funds over the next two years. The money would pay up to 90 percent of the salaries of older workers employed in part-time community service jobs.

The jobs would include environmental work, and school programs such as health, library and recreation.

White-Collar Chrysler Pact Goes to Vote

Detroit—White collar workers at 99 locations of the Chrysler Corp. in the United States and Canada were voting on ratification or rejection of a new three-year contract won after a two-hour strike early this month.

The agreement went to members with the approval of two Auto Workers subcouncils representing 10,000 salaried workers. The vote was 63-2 in favor of recommending approval of terms paralleling an earlier agreement between the UAW and Chrysler for production and maintenance workers.

The vote, if favorable, will end 1970-71 contract bargaining with Big Three auto firms. The UAW said the company offer to the white collar employes provides the partial retroactivity provision won for production workers, and a salary formula on a par with other Big Three settlements.

The Revenue Alternatives

A **MAJORITY OF THE STATES** and nearly all of the nation's large cities are in financial trouble. There are job freezes, cutbacks of important services and new tax levies, all in a frantic attempt to keep on something resembling an even keel.

Against this background the President's no-strings revenue sharing proposal has excited new discussion as though some form of instant salvation had been discovered.

But along with the not-very-informed discussion of the revenue-sharing program there is new attention also to the alternatives.

The AFL-CIO has in the past explored the question of the federal grant-in-aid programs and found that public policy requires that the administration of and appropriations for present grant programs be strengthened. This point is made also in a recent article in the Wall Street Journal which said in part:

"Another way of helping state and local governments would be to enlarge substantially the amount of money Washington spends through the present system of tightly tied, categorical grant programs —money that goes for specific, individually approved proposals to build a hospital, remodel a city, enrich the school curriculum . . . in other words, just keep adding money to programs now under way.

"This is precisely what is about to happen to the environmental field—a huge increase in grants for specific sewage treatment plants. The same could easily be done in other critical areas, easing the state and local spending load."

A PROPOSAL that has received serious consideration, and support from the advisory commission on intergovernmental relations among others, would have the federal government take over completely the cost of public welfare and Medicaid—a move that could save state and local governments as much as $8 billion a year.

In addition to these and numerous other proposals, there is a real need for a careful review and reform of tax structures by state and local governments with the goal of placing more emphasis on the broader tax base of the states and to lessen the city tax burden through increasing use of progressive state income taxes.

The federal government can help by allowing a federal tax credit for state income taxes paid. Such credits, unlike the present method of allowing a deduction from taxable income, benefit all taxpayers, not just those who itemize. A tax credit is more equitable because deductions favor those in the higher income brackets.

The tax credit approach could be set so as to easily yield the same revenue the Administration is proposing—$5 billion with no strings.

THERE IS, of course, the possibility of combining a number of approaches—full funding of authorized grants, federal assumption of the costs of welfare and state income tax programs tied in perhaps with a tax credit system. These are real and meaningful alternatives to no-strings revenue sharing.

As the AFL-CIO has noted in earlier analysis of the problem, revenue sharing "may sound like a bold new approach, but when the gift wrapping is removed, holes and traps are revealed which could hamper our ability to provide the public services and facilities so badly needed."

As the state legislatures and city councils meet to grapple with their financial problems the "magic" of no-strings revenue sharing should indeed be closely examined. There are other and better ways to proceed.

'And Here's Something to Wash It Down!'

A Word Edgewise:

Nixon's New Revolution Viewed As One Giant Step Backwards

By John P. Roche

A **KEYSTONE** of Marxist thought is the concept of the "withering away of the state," a doctrine that suggests that once the socialist revolution has occurred, the state—a repressive capitalist enterprise—will simply have no function and disappear. Under Pres. Nixon's auspices, we are withnessing the Republican version of this theory, at least as far as the national government is concerned.

While the liberal Democrats are running around orating about Laos, Cambodia, and Vietnam, the Administration is setting to work to restore the Articles of Confederation. It is ironic that in historical terms the President can accurately talk of a "new American Revolution," since the original Revolution was designed to replace centralized British power with decentralized, fragmented state authority.

While only a lunatic—or someone who had never spent any time in the federal bureaucracy —would argue that "everything should be run from Washington," it is equally clear that if the national government had not acted more than a century ago, we would probably still have slavery in the United States. To say nothing of child labor, the open shop, filthy meat, thalidomide and other harmful drugs, and a stock market run with fewer scruples than the average numbers game.

In short, the national government moved in, not as the result of some centralist conspiracy, but to fill a whole series of vacuums in the power to govern which arose as the United States moved from a rural, agricultural nation to an urban colossus. It did so on an unplanned, ad hoc basis: Pres. Theodore Roosevelt, a good eater, had no reservations about signing the Meat Inspection Act of 1906. Having read Upton Sinclair's literally nauseating expose of the packing house industry, "The Jungle," Roosevelt presumably was more concerned about his own constitution than that of the United States.

As the states proved themselves increasingly incompetent to cope with the problems of modern American society, the people turned to the national government for succor. Take minimum wages, for example. Leaving aside the question of the constitutionality of state laws on this subject—on which the Supreme Court has wobbled a good bit —suppose New York established a reasonable minimum. What would be the consequences? Industry would take off to states that permitted virtually unchecked exploitation. (Our present welfare problem is, in a curious way, the opposite side of the same coin: New York City is supporting a significant segment of the Mississippi poor because of its higher welfare benefits.)

The only sensible answer to such problems is a nationally organized, funded, and administered system. It should be locally or regionally managed, but the only government in the United States that represents all the people should be in charge. (Despite the rhetoric that accompanied it, Pres. Nixon's welfare reform program struck me as merely a substitute for such a drastic, and drastically needed alteration in welfare, though I would support it as a way of getting a wedge in the door.)

To put it another way, I refuse to accept the widespread notion that the national government has constitutional leprosy. The average American, as I have said before, lives with two functioning levels of government: national and local. Whatever the authors of The Federalist and John C. Calhoun may have said, the state governments today are in low repute with the sovereign people. In a moment of candor, a distinguished governor once observed to me that an honest grand jury would indict half his legislature in half an hour. This pessimism was doubtless exaggerated, but it reflects the basic attitude of a significant segment of the electorate, which indeed might consider the governor's estimate as optimistic.

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Violence, Separatism Fail:

Force of Black Protest Shifts To Political, Social Struggles

The following is excerpted from "Black Protest Turns the Corner," by Norman Hill. It appears in the January 1971 issue of the AFL-CIO American Federationist.

THE RACIAL PROTEST of the 1960s, which was clearly the most turbulent aspect of that singularly unsettling decade, is now the property of historians. This is an obvious, though at the same time startling observation, since the events of the decade—the March on Washington, the violence, the rise of black nationalism—are so much a part of our personal experience as to make it strange that the era is now over.

The events of the era are also a part of our immediate political lives, for we are still reaping the benefits from the successes of the civil rights movement and we are only beginning to recover from the repercussions of its failures. It is perhaps too early to try to understand why things happened the way they did, but we must make the effort, for it we haven't learned from the past, we can't hope to influence the future.

Toward the end of the decade a new period began to emerge which was characterized by activities that are not suggested by the term "Black Power."

This new period saw such activities as trade union struggles similar to the santitation workers' strike during which Martin Luther King was murdered and also political action designed to bring liberals—whites as well as blacks—into power. Such activities were overshadowed by the obtrusive behavior of groups like the Black Panthers, but they may well represent the dominant form of black political action in the 1970s.

If such a period is in fact emerging, and I think that it is, it must be seen as part of a natural unfolding of black protest, a development which is a response to actual conditions and not some arbitrary event which simply happens and then fades into history. The conditions for the emergence of a period of black political action have existed since the passage of the major civil rights bills in 1964 and 1965. At that time Bayard Rustin argued that the civil rights movement would have to translate itself from a protest movement into a political movement.

The political strategy which Rustin proposed was coalition politics—the formation of a coalition of Negroes, trade unionists, liberals and religious groups which would become the effective political majority in the United States. Such a strategy is obviously in fundamental contradiction with a go-it-alone policy of racial separatism.

Clearly and tragically, the main thrust of the black protest movement in the years following the passage of the major civil rights bills was not in the direction Rustin had advocated. For a number of reasons a significant minority of blacks acted not only against their own interest, but in actual defiance of the historical circumstances which called for a period of political action.

No simple explanation can account for this development. In part it was the result of accumulated frustrations. The expectations of Negroes were outpacing their achievements; the relative social and economic positions of black and whites had not changed appreciably, and the problems that Negroes faced had grown more complex and intractable. These frustrations produced a politics governed more by emotionalism than self-interest. As a result, strategies which were clearly self-defeating won many followers and even laid claim to being called "militant."

ANOTHER REASON for the emergence of a counter-productive politics is that the 1960s, in large part because of the civil rights movement, was a period of great psychological and physical dislocation for Negroes. The mid-1960s marked the culmination of a period of racial protest and also racial migration. If the black protest movement aroused millions of previously apathetic blacks to demand equal treatment and recognition, the massive movement of Negroes from the South to the North and the West disrupted traditional social patterns and led to unrealistic expectations about the prospects for equality in the new environment. Thus, both the protest and the population movements were disruptive factors which energized the consciousness of blacks, caused them to hope for, indeed, to expect changes that were never before thought possible and unleashed anger that had been pent-up for generations.

Such emotions are clearly more conducive to protest than to politics. It is not surprising, therefore, that in the mid-1960s, when a general consensus existed that a new period was at hand in which the old tactics and strategies were no longer applicable, a significant minority of blacks rejected Rustin's political strategy in favor of black nationalism and violence. While these methods of protest were not politically effective —nationalism isolated blacks from necessary allies while violence precipitated a massive reaction—they were at least emotionally satisfying.

Today, if I am not mistaken, we are beginning to see the force of reality take its toll on the strategies of violence and separatism. However compelling they might be to some individuals, these strategies have clearly failed. I do not deny that they still have many proponents, particularly among black youth, but the direction of black protest is shifting to very realistic trade union and political struggles.

Bayard Rustin Says:

Ballot Box, Trade Unions Offer Surest Route to Social Change

THE BALLOT BOX and union card are the surest route to the kind of social and economic change needed to end racism in the United States, Bayard Rustin, the executive director of the A. Philip Randolph Institute, declared on network radio.

Rustin said the institute was created as a link between the trade union movement and the black community that will help build "an economic and social framework" in which minority workers will have full opportunity. He said that the "alliance between organized labor and the civil rights movement . . . has never been better" than it is today, and credited that alliance with producing "every single creative thing that has happened in the United States since the time of Franklin Delano Roosevelt, as far as Congress and government are concerned."

Speaking on the AFL-CIO produced, Labor News Conference, Rustin charged that Pres. Nixon's approach to the civil rights problem "has been a national disaster," noting the veto of the education bill at a time "when everyone in this country knows that one of the most important things is to find the means to educate the poor, the Puerto Ricans, the Chicanos and the blacks."

He said the Administration's proposed revenue-sharing plan won't improve the lives and conditions of poor and minority group Americans, unless there are strict federal guidelines to assure "that money is used creatively."

Rustin said that the Administration's Black Capitalism program is "laughable." He added, "anybody who proposes that black capitalists manipulating 15 cents can do away with poverty in the ghetto, when white capitalists manipulating billions of dollars permit white people to remain poor in Appalachia, is, of course, beside himself with some kind of mental disorder."

He said that the A. Philip Randolph Institute's Joint Apprenticeship Program has, in the past two years, "up-graded 2,500 young blacks and Puerto Ricans . . . in the building trades." He said the program is "across the board" in the various trades, and not only helps put young workers into apprenticeships, but also makes it possible for older and experienced workers to enter the trades as journeymen.

Rustin was questioned by Murray Seeger of the Los Angeles Times and Harry Conn of Press Associates, Inc. The interview is broadcast Tuesdays on Mutual radio.

By Press Associates, Inc.

"FREEDOM OF TRADE," "open market," "protectionists"—these are terms used by opponents of the legislation now before Congress to curb the exportation of American jobs. Yet, rarely are these terms—cliches of the first order—ever clearly defined within the context of today's realities.

How well do they stand up, for example, to Europe's "Common Market" concept? Surely, the British efforts to enter it in the face of its "stiff entry terms" must destroy any idea that Europe is a "free trade" or "open market" part of the world.

When these terms were coined many years ago, it was within an international order in the world of commerce that no longer exists. When we put up barriers against imports from Italy or Japan, it was to protect the profits of our manufacturers in a world that needed the exchange of products in a free market.

That is no longer true. Today, much of our problem with cheap imports stems from our own manufacturers who have gone abroad with their tax-favored dollars and their know-how to beat down competition in their own country and increase their equally tax-favored profits with the aid of cheap labor abroad.

Today's reality can no longer be concealed within cliches no matter how well intentioned they may be.

Take the experience of the Machinists, once a staunchly "free trade" union that turned back a "protectionist" resolution at its 1960 convention despite the fact that some of its own members were being hurt by the transfer of typewriters and other equipment from the United States to Europe and Japan.

Yet, the reality of unemployment today, much of it due to shifting of American industry abroad, has compelled it to reassess its position. As Robert G. Rodden, Machinists representative, pointed out at a recent trade seminar at the University of Kentucky:

"WE ARE GETTING the word that under current trade policies a sizable and growing proportion of our members is being economically crucified by foreign-made goods."

More and more companies, he reported, are sending work that used to be done in the United States out of the country. Many old established companies with up to 100 employes are simply closing down because they "can't compete with products made by workers paid 14 cents to 28 cents an hour in Taiwan or $2 a day in Mexico."

Other companies, though still producing "are slowly being driven to the wall, steadily reducing their work force, working shorter workweeks and are lowering weekly wages".

Even the procurement policies of the government, especially the Dept. of Defense, are contributing to "the export of American jobs overseas" as they permit foreign manufacturers to underbid American manufacturers for defense procurement.

This may save the Dept. of Defense a few dollars, but as Sen. Stuart Symington has asked: "If we do not maintain employment here, how can we maintain a tax base capable of absorbing high military costs?"

How can "free traders" continue to talk about "free trade" when American technical knowledge is being sent abroad to equip and train foreign workers to compete for jobs that once were done in the United States by American workers?

The loss of American jobs to foreign competition, much of it financed by a growing number of American corporations, has gone beyond the stage of easy, outworn cliches. The labor movement, after much soul-searching in the light of its free-trade past, has come to the conclusion that the American worker can no longer be expected to accept slogans that fly in the face of today's realities.

Learned editorialists, who are quick with the cliches of their youth, could profit by studying union reports on the jobs their members are losing.

BALLOTS and union memberships are the key to ending racism in the United States, declared Bayard Rustin, center, executive director of the A. Philip Randolph Institute, on Labor News Conference. He was questioned by Harry Conn, left, of Press Associates, Inc., and Murray Seeger of the Los Angeles Times. The AFL-CIO produced interview program is broadcast Tuesdays on the Mutual radio network.

How-to-Buy:

Get-Rich Distributor Schemes Mean Washed-Up Investment

By Sidney Margolius

WILL KOSCOT INTERPLANETARY send you into financial orbit? Might you and your friends make a living selling Bestline soaps to each other?

These are only a few of the hundreds of multilevel or pyramid-type distributorships that we have told you about before. They have involved more people with unfortunate results than any other promotion recently, reports T. E. Lyman, vice president of the Richmond, Va., Better Business Bureau.

Multi-distributorships have been especially tempting to working people and housewives seeking additional income, especially people who have suffered work cutbacks. But it is revealing to see how some supposedly experienced people have been attracted to these plans, such as businessmen, doctors, and even lawyers, a state attorney general, a marketing professor and a newspaper editor.

Typically, families are persuaded by the promoters to buy a "distributorship." The investors are assured that they can earn a five-figure income —at least. Often the investor must buy a quantity of the product.

Now some of these plans are running into legal or financial problems. Continental Marketing Associates, on which we previously reported, has been selling "distributorships" for "discount stores" which the promoters said they will open later. The investors got "purchase authority" cards which they then were supposed to give to potential purchasers, and get commissions on their purchases. The purchasers, if they did purchase, then got cards to get other people to purchase, and so on.

The only two stores that Continental ever did open, to our best knowledge, was one in Birmingham and a small one in Muscle Shoals, Ala. Even these stores reportedly have been pushed into bankruptcy by creditors.

Continental also acquired a site in Dothan, Ala., for a store. Its president said in an affidavit that it would open "in June 1969." But by late 1970, Robert Renwick, manager of the Birmingham BBB, told me no building even had been erected.

Similarly, a Georgia grand jury complained that Continental had sold founderships in Albany, Ga., for 14 months and had not begun construction on a store there. In fact, by August 1970 the company's activities in Georgia had virtually ceased, James W. Stephens, manager of the Atlanta BBB, reported.

ANOTHER NATIONWIDE promotion has been for Koscot "Kosmetics," including mink oil, described as "the most precious of kreams." It is certainly one of the most expensive kreams. But it has no more kosmetic effectiveness than any of the other commonly-used facial oils. (Minks, themselves, have very hairy faces.)

One woman who attended a Koscot recruiting meeting at my request reported: "It was like a revival meeting. The recruiters were mostly young fellows in their early 20s. They had a rapid-fire sales talk accompanied by a lot of activity such as pulling their ties off, flipping off their jackets, tossing chalk into the air. They talked fast, writing on the blackboard and erasing rapidly. They drew pyramids of various ranks of sellers and distributors, and had you making $100,000 in six months. The whole performance was an insult to my intelligence."

In actuality, of 1,600 Koscot distributors in New York State, only 79 earned more than $5,000 in 1970, Frances Cerra, Newsday's enterprising consumer reporter, revealed. In that state Koscot agreed to a court order directing the company, among other restrictions on its program, to offer distributors their money back.

Other states that have acted to restrict Koscot include North Carolina, Maryland, Wisconsin, Ohio, Michigan, New Mexico and Louisiana.

The "Bestline Marketing System" is another multi-distributor plan selling cleaning products. In Wisconsin alone, its attorney general says, in two years more than 2,000 people invested almost $3 million in distributorships and mandatory inventory purchases.

State officials pointed out that if the recruiting plan worked as the company claimed, with the original investor recruiting 48 distributors in two months and they did the same, in ten months there would be three million distributors stemming from that original investor. As a result of the state's legal action, Bestline did change its marketing plan.

LONG YEARS of service to the Newspaper Guild and its Wilkes-Barre Local 120 won the local's Stanley Kupstas Memorial Award for Joseph M. Walsh, retired editor of the Pennsylvania AFL-CIO News and former ANG vice president, now ill in a Wilkes-Barre hospital. Local Pres. John J. Wallace, left, presents the award to Walsh's wife, Agnes, shown with her daughter, Mrs. Phyllis Powell, and son, Phillip Walsh.

Hunger in America:

20% of Population Suffers Malnutrition

IT IS HARD for many Americans to realize that some people go hungry in this country. But hunger does exist, despite the indisputable fact that there is "enough food available for every American to eat well."

What the extent of hunger—and of malnutrition—is and what should be done about it are explored in a new Public Affairs Pamphlet, Hunger In America, by Maxwell S. Stewart.

"Hunger, and particularly malnutrition," Stewart writes, "is a complex phenomenon in America. The number . . . who are malnourished has been estimated at from 10 to 20 million. The reasons . . . are varied. Many, undoubtedly most, of the hungry and malnourished are poor. . . . But . . . many families, regardless of income, lack knowledge of the basic facts of diet [and] suffer from poor food habits. Finally, at least some of the responsibility must rest with food processors who have the power and the knowledge to provide more nourishing food and fuller information about it but have failed to do so."

Stewart reports several telling instances of hunger found among the poor and the elderly and the very young, and adds: "Since hunger and malnutrition are usually associated with poverty, the hungry children also suffer from a number of other handicaps such as bad housing, inferior education, and frequent illness. It is difficult to disassociate the effects of hunger from the effects of these other handicapping influences." Further, as Dr. Charles Lowe, chairman of the Committee on Nutrition of the American Academy of Pediatrics, has expressed it: "There is no evidence that feeding people makes them smart, but it is indisputable that hunger makes them dull."

Over the years, the federal government has developed two basic programs for feeding the poor. Stewart describes the operation, and the limitations, of free surplus foods distribution and of the food stamp program, "which permits recipients of welfare and other low-income families to purchase food coupons redeemable for a greater value at participating grocery stores."

BUT NOT ONLY the poor suffer from malnutrition. A 1968 Dept. of Agriculture survey—covering all sections of the country and all income groups—found that 20 percent of the population had a nutritionally poor diet.

Why should this be so? Among the reasons Stewart considers are sectional and cultural food patterns; recent changes in eating habits affecting a large part of the population—especially coffee breaks and snacks of filling but not particularly nutritious foods; and the lack of enrichment of many foods. Why, Stewart asks, doesn't the food industry develop for domestic distribution—as has been done for developing countries—"low-cost nutritionally balanced foods—with taste appeal"?

Stewart discusses how the food stamp program can be strengthened and the need for a greatly expanded school lunch program, set up in a way that "would avoid the stigma of poverty and would assure all children of at least two nutritious meals a day."

As a back-up to better programs of nutrition education, more uniform and informative labels of all foods is urged. One recommendation is that "food advertisers devote 15 percent of their budgets to public service nutrition advertising."

Reviewing all the elements needed to eliminate hunger and malnutrition, Stewart concludes: "Hunger is not a problem that will . . . . be solved by increasing food production. That has already been achieved without a noticeable diminution of the problem. It is not simply a matter of education. . . . Hunger is intimately associated with poverty, and the causes of poverty are deeply imbedded in the structure of our society. But we cannot wait for a restructuring of society. . . . We have the food; we must take simple and direct steps . . . to see to it that the food is made available to the hungry. To do this, we must, indeed, treat hunger as an immediate 'national emergency.' "

Hunger in America is available for 25 cents from the Public Affairs Committee, 381 Park Avenue South, New York, N.Y. 10016.

From Soup to Nonsense:

Human Financial Inadequacy More Embarrassing Than Sex

By Jane Goodsell

I KNOW a psychiatrist who says that his patients nowadays talk without the slightest embarrassment about the most intimate details of their sex lives, but they blush and stammer when they discuss their finances. Money, he claims, is so fraught with taboos and inhibitions that most people consider it too personal.

What's needed, I guess, is a survey like the Kinsey report to clear the air and help us to realize that other people, too, have their funny little monetary ways. As Masters & Johnson brought impotence into the open, so might this report deal frankly with financial inadequacy in the human species.

Lord knows, I'm not the one to tackle the job. I suffer from as many inhibitions as everybody else who was brought up to believe that money is not a "nice" subject for discussion. At an early age, I was taught that it is an unforgiveable breach of etiquette to ask or tell how much something cost.

As time went on, I kept my eyes and ears open, and I learned a thing or two. My big discovery was that everybody is abnormally interested in money.

And I learned other things:

That it is impossible to determine how much money someone has by how much he spends. Just as some people tell and don't kiss, others spend money they haven't got. Not all Maserati owners are solvent, and some bus riders have stock portfolios that would rate a whistle of admiration from Dun & Bradstreet.

IT IS FASHIONABLE nowadays for everybody to talk poor, but poverty is a relative thing. To some, it means that they don't know where their next Continental is coming from. Clothes aren't much of a tip-off either.

I learned that poverty seems romantic to the affluent young who claim that they don't want to be entrapped in mercenary values. I admire their idealism but I wonder at their logic. The real freedom is having enough money not to have to think about money. Too little and too much requires a lot of thought.

I have learned, too, that how people feel about money emanates from deep psychological roots, involving basic emotions about themselves, their parents, their peers and even (according to Freudian analysts) how they were toilet-trained as youngsters. Money is a very personal and emotional subject, and it is no wonder that people have so much trouble discussing it honestly.

Criteria for Professionals:

AFL-CIO Opposes Wage-Rule Revision

The AFL-CIO registered strong opposition to proposed changes in the professional criteria of the Fair Labor Standards Act that would exempt some highly paid workers from overtime and equal pay provisions of the wage-hour law.

Federation Economist Rudolph Oswald's testimony at a public hearing of the Labor-Dept.'s Wage Hour Division covered the status of paramedical and data processing employes, outside salesmen and highly paid technicians.

Oswald said that some workers in historically low-paying jobs could be excluded from federal wage-hour protections if arbitrary wage levels were used as the criteria for professionalism.

As an example, he compared the wages of janitors in the city of Chicago ($76 to $172 a week) to those of computer systems analysts in the same city ($140 to $280 a week).

"In other words, some janitors are paid more than some computer systems analysts" because, Oswald said, "wages are a continuum within any occupation as reported for a specific community, with considerable overlap between various types of occupations.

"If the criteria were established solely on the basis of earnings, some janitors would be excluded from coverage of the act."

He noted that maintenance electricians in Chicago are paid $112 to $280 a week.

"This hardly seems to offer any basis for exclusion of so-called high paid occupations as professionals."

The AFL-CIO has supported the present criteria contained in the regulations for defining a professional job: one that requires knowledge of an advanced type, knowledge in a field of science and learning, and knowledge acquired by a prolonged course of specialized intellectual instruction and study.

The regulations also stipulate that the work must require the consistent exercise of discretion and judgment in its performance and that the work be predominantly intellectual and varied in character as opposed to routine mental, manual or physical work.

"These regulations were basically developed over 30 years ago," Oswald observed. "They have been tested in the courts and not found wanting. They have been reviewed by Congress, and in 1966, as Congress substantially amended the act, they left this section intact except for adding references to academic administrative personnel and teachers in elementary and secondary schools."

In the health field, the AFL-CIO supports the definition of learned professions as those requiring a master's degree plus licensing by an appropriate professional association.

Oswald noted as an example that master's degrees are required of social workers for membership in the National Association of Social Workers. For a beginning job as a speech pathologist or audiologist, most states require a master's degree.

Other jobs, such as radiological technologist and other technologists cannot be considered bona fide professional occupations, Oswald said, if one applies the test contained in the regulations. He added:

"An analysis of wages actually paid in hospitals in 1969 indicates that technicians are not professionals, but rather highly paid craftsmen. Hospitals in Denver, Los Angeles and Atlanta—three cities chosen at random—paid their maintenance electricians and stationary engineers in the same salary range as they paid dietitians, medical librarians, medical record librarians, medical technologists, medical therapists and X-ray technicians."

On the application of the professional exemption to the data processing field, Oswald testified that there can be no single use of job titles as a criterion.

He said that the Bureau of Labor Statistics in its Area Wage Survey analyzes wages paid three classes of computer operators, three of computer programmers, and three of computer systems analysts, and that the highest class of analyst does not meet the wage-hour law's definition of professional.

In regard to outside salesmen, the AFL-CIO proposed a weekly earnings test similar to one already included in the wage-hour law.

This would mean that before an outside salesman's job could qualify for an exemption from the act, it would have to pay at least 1.5 times the minimum hourly rate under the act.

"With the current emphasis on elimination of poverty, the income of an outside salesman—in order to be exempted from the minimum wage and overtime requirements—should amount to at least $96 a week," Oswald said.

LEGAL PROTECTIONS are favored by women in lower-paying jobs such as these women factory workers. Women in higher-paying occupations—who usually are exempt from the laws—tend to view them as restrictive and favor an equal-rights amendment to the U.S. Constitution.

Protective Laws for Women Held More Effective Than Rights Clause

The "women's liberation" movement would be better advised to direct its efforts toward protective legislation for women instead of an equal rights amendment to the U.S. Constitution.

This is the view of Doris Gibson Hardesty, a former staff member of the AFL-CIO Dept. of Civil Rights, writing in the January edition of the Federationist, the AFL-CIO magazine.

Mrs. Hardesty charts the history of the proposed equal rights amendment first born in 1923, and concentrates on the stormy fight for enactment in the 91st Congress. For the first time in its long history, it was passed by the House—350-15. But it never got to the Senate floor.

The author suggests that such an amendment to the Constitution could very well open the door to exploitation and misuse of the majority of working women—who at least enjoy some protective legislation.

"The argument that it is easier to extend or amend existing laws, rather than to repeal them and create all-inclusive new ones, carries little weight with the women's movement," she writes.

"What the dispute over state protective laws comes down to is that the women in lower-paying and marginal jobs and those with family responsibilities want the protective laws continued, whereas women in higher paying blue-collar and professional jobs—most of whom are exempt from these laws anyway—consider them restrictive."

Mrs. Hardesty quotes Ruth Miller of the Clothing Workers who told a Senate committee that the real "forgotten majority" among women are the millions of women workers in the factories, fields and service industries of the nation.

Miss Miller told the senators that the leadership in support of the equal rights amendment is composed mainly of middle-class professional and semi-professional women, an infinitesimal percentage of the more than 30 million women in the work force.

Mrs. Hardesty has the figures to support that statement:

"The majority of women workers do fall into the category of lower-paying jobs. Of the 71.4 million women over the age of 16 in the United States today, 30.5 million are in the work force. Women comprise 38 percent of all workers.

"According to the Dept. of Labor statistics in 1969, women employed year-round and full-time earned 58 percent of the median pay earned by men."

The author points out that 20 percent of the women who work full time make less than $3,000 a year while only 8 percent of men working full time make that little. And only 3 percent of the women workers earn more than $10,000 annually, compared to 28 percent of the men.

"There is little doubt that economic inequities exist," notes Mrs. Hardesty. "But elimination of protective laws for women won't cure the problem, nor will a constitutional amendment."

Among those opposing the amendment in the 91st Congress were the AFL-CIO and a number of its unions with large female memberships: the Clothing Workers, Ladies' Garment Workers, Hotel & Restaurant Workers, Communications Workers, Electrical Radio & Machine Workers and the Meat Cutters.

"The traditional supporters of the amendment from among business and professional women's organizations had new allies," Mrs. Hardesty writes.

"The largest of the new groups and one of the most outspoken is the National Organization of Women (NOW), founded in 1966 by Betty Friedan. Miss Friedan, author of 'The Feminine Mystique,' seeks to liberate women from what she maintains is the slave mentality found in following women's traditional role of wife and mother."

ILO Urged to Study Social Impact Of Big Multi-National Metal Firms

Geneva—A full-scale study by the International Labor Organization of the impact of multi-national corporations on the lives of workers was urged by the ILO Metal Trades Committee at a 27-nation conference here.

A resolution urged the ILO Governing Body to have a survey made to determine the influence of the corporate giants of the metal trades on "conditions of work and life and industrial relations."

In making the request, the conference noted the "responsibility of the management of multi-nation corporations to recognize and respect the overall economic and social interests and social policies of the countries in which they operate."

The two-week conference, the ninth such meeting of the ILO's Metal Trades Committee, brought together 220 worker, employer and government delegates. It also adopted a proposal for creation of a special tri-partite group of experts to review the progress of the ILO in the metal trades field.

In another series of resolutions, the delegates called for ILO action to protect the health of the metal trades worker by combatting on-the-job pollution—caused by gas, radiation, noise, dust and other hazards.

The Governing Body was urged to take additional steps to insure that the international standards laid down by the ILO on working conditions, trade union rights and free collective bargaining are effectively applied in the metal trades throughout the world.

There was no repetition during the conference of Communist-bloc anti-American propaganda tactics.

"There appeared to be a general awareness that the U.S. delegation was not prepared to stand for any nonsense," said Ben Sharman, special representative of the Machinists.

"Delegates and ILO officials alike showed . . . that everyone was conscious of the U.S. stand against misuse of the organization," he said.

Sharman and Herman Rabhan of the Auto Workers' International Affairs Dept., were the worker members of the U.S. delegation. Rudolph Faupl, U.S. worker delegate to the 121-nation ILO, attended the sessions as representative of the worker members of the Governing Body.

Sharman also served as the worker delegates' spokesman on the conference committee dealing with vocational training.

He expressed satisfaction with the recognition of the need for "broad-based" programs that enable workers to adapt to changing conditions.

"Vocational training is not an end in itself," the conference stressed, "but a means of developing a person's occupational capacities and of integrating him into society."

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Chicago Trades President Dies

Chicago—Thomas J. Murray, president of the Chicago & Cook County Building & Construction Trades Dept., died here Feb. 11 at the age of 79.

Murray was also president of Local 134 of the International Brotherhood of Electrical Workers and had ben a delegate to every IBEW convention since 1919.

He had been a member of the Chicago Board of Education since 1958 and its vice president for 10 years. His own high school diploma was earned by attending night classes for eight years while working during the day.

Among his many civic activities were leadership roles in American Red Cross and Community Fund campaigns.

BRAC's Ligon, 64, Dies in Houston

Houston—David A. Ligon, vice president of the Railway & Airline Clerks since 1963 and a member of the union's national negotiating committee in recent wage talks, died here after a heart attack at 64. He became ill while negotiating in Washington and was under intensive care in a Houston hospital until his death.

A native of San Marcos, Tex., Ligon began a 45-year career as a clerk on the Missouri Pacific Railroad. Later he moved to Kingsville, Tex., where he joined the union. Elected to local posts, he later served as division chairman, first assistant general chairman for the MP's Gulf district, and in 1955 became general chairman for the union on that railroad.

Ligon is survived by his wife Irene and three children. He was buried after services in the South Main Baptist Church here.

BIG-CITY MAYORS meet with House Speaker Carl Albert and Majority Leader Hale Boggs to press the campaign for early passage of a public service jobs program. From left: Mayors Kevin White of Boston, James Tate of Philadelphia and John Lindsay of New York, Albert and Boggs. Along with other mayors of large cities, they also testified at Senate hearings on the job-creating legislation.

Revenue-Sharing Plan Submitted to Congress

(Continued from Page 1)

down to city, county and town governments to spend as they wish.

Still to be submitted to Congress is the second half of the Administration program.

This would abolish a number of federal grant programs to states and cities, now earmarked for specific purposes, and turn over the money "without strings." Nixon has argued that local government is "closer" to the people and abandonment of federal programs is touted as the Administration version of the "power to the people" slogan.

From Vice Pres. Agnew on down, Administration officials have been dispatched to "sell" the President's program to governors, mayors, newspaper editors and other "opinion-moulders" who might be able to overcome congressional hostility.

At the Ohio state capitol for example, Agnew told a gathering of 250 local and state government representatives that the choice is between the Nixon program or nothing.

"Let's not get hung up on why it isn't bigger," he chided them. Unless they get behind the program, "the result for Ohio is going to be a big fat goose egg."

But opinions were different in the halls of Congress. Federal assumption of the full costs of public welfare programs was reportedly drawing strong support as one alternative. Quick enactment of a public service employment program—which Nixon vetoed last year—was being pushed by mayors of nearly all large cities as well as by Democratic leaders in Congress.

Both supporters and opponents of the President's plan are generally agreed that states and particularly cities aren't able to meet the growing cost of public services.

The sharp difference is whether the federal government should do more to meet national needs or whether it should in effect bow out of the picture and eventually serve largely as a tax-collection agency for state and local governments.

Anti-Filibuster Forces Press for Rule Change

Supporters of a change in the Senate rule that requires a two-thirds majority to break a filibuster will make their first effort to get a vote on the rules reform issue on Feb. 18.

Under the "Catch 22" provision of the Senate's Rule 22, it takes a two-thirds vote to end the filibuster that has kept the Senate from voting on a bipartisan motion to reduce the margin needed to close debate to three-fifths.

A majority of the Senate has cosponsored the proposed rules change, but the sponsors don't expect to get the two-thirds majority they need to force a vote on the first try.

They do hope, however, to come close enough to keep the fight going with a realistic hope of overcoming the filibuster, either by wearing down opponents or winning new converts. In the past, the Senate leadership has let the debate continue through two or three cloture attempts and then insisted that the effort be abandoned so the Senate can proceed to other business.

Apart from confirmation of several nominations and formal appointment of committees, there has been no significant legislation on the floor of either the House or the Senate.

Congress prepared to take the first of a series of scheduled holiday breaks—covering the traditional Lincoln's Birthday to Washington's Birthday recess.

The schedule set for both houses includes a five-day break for the Senate during Easter week and a 10-day respite for the House. The big new schedule change is the adoption by both the House and the Senate of a month-long summer vacation—from Aug. 7 to Sept. 7.

The adoption of the summer vacation schedule marked the formal acknowledgement that Congress is basically on a year-around schedule and that sessions lasting until late fall or early winter have become the rule rather than the exception.

Public Service Jobs Bills Get High Priority

(Continued from Page 1)

ply don't have the money to fill them.

Testifying to the urgency of the unemployment crisis, especially in the inner-city areas, were the mayors of four of the nation's five biggest cities—John V. Lindsay of New York, Richard J. Daley of Chicago, James Tate of Philadelphia and Roman Gribbs of Detroit. Also on the witness list were the mayors of Baltimore, Milwaukee, San Francisco, Boston, Seattle, Pittsburgh, Atlanta, Wilmington, Phoenix, Louisville, Cleveland and Newark. They appeared as the legislative committee of the U.S. Conference of Mayors.

Their opening statement declared:

"No problem is more damaging to our cities than unemployment. Unemployment destroys our tax base, increases welfare rolls and cripples retail sales. In each of our cities rising unemployment levels have begun a disastrous spiral of economic decline."

Ironically, in view of Nixon's claim that his revenue-sharing plan is a means of turning power back to local governments which are "closer" to the people, one of the largest delegations of mayors that Washington has seen came to urge Congress to enact a needed program that the President had vetoed.

A number of the mayors also met with Albert and Boggs. Albert said at his news conference that the public service jobs bill—aimed at meeting a specific problem with a specific program—could be considered one of the alternatives to the President's revenue-sharing plan.

Lockheed Cutback Costs 6,500 Jobs

Burbank, Calif. — A layoff of nearly one-fourth of all Lockheed Aircraft employes was termed a "disaster" by union officials here.

Lockheed's layoff of 6,500 workers employed on its Tristar airbus followed the financial collapse of Britain's Rolls-Royce company which had contracted to build the engine for the new plane.

The cutback at Lockheed facilities at Burbank and Palmdale included 4,000 workers represented by the Machinists. Unless the engine problem is soon resolved, the repercussions pose the threat of additional layoffs at major subcontractors of Lockheed.

School Strike Hits Impasse in Newark

Newark, N.J.—A breakdown in negotiations stymied efforts of the striking Newark Teachers Union to win a new contract from a Board of Education whose president refused to resume talks until all 4,000 public school teachers return to the classroom.

The union scheduled a rally Feb. 14 in the Robert Treat Hotel here to mobilize community support behind its effort for an improved contract.

The teachers, members of Local 481, voted Jan. 31 to walk out on their fourth strike in six years. The walkout was in protest of the board's emphatic refusal to discuss any contract issues except wages and fringe benefits, the local reported.

After off-and-on bargaining, union negotiators said no agreement was possible because of the board's insistence on a "rollback" of conditions won in last year's contract. That was the first agreement the union was able to negotiate after winning bargaining rights away from the Newark Teachers Association, affiliated with the National Education Association.

The major stumbling block to agreement, the local said, is a 48-page list of demands by board negotiators. The board offers a four-year agreement with no wage increases of any kind, evaluation of teachers by parents and pupils, and elimination of a contract provision for binding arbitration of grievances, the union said.

During talks that began several months ago, the board demanded that the union not only drop the arbitration clause but also any mention of class size or ways to achieve a basic union objective, more effective schools. They called such proposals an invasion of management rights, the union said.

After the walkout started, 15 teachers reporting for picket assignments were attacked by a group of youths in paramilitary uniforms outside union headquarters and suffered injuries that required hospital treatment.

AFT Pres. David Seldon offered a $5,000 reward for information leading to the arrest and conviction of the attackers. Also he called on Mayor Kenneth Gibson and State Education Commissioner Carl Marburger to close the schools to "protect teachers and students" and to insist that the Board of Education "bargain in good faith" with the union.

Local 481 won the right to represent all Newark teachers in 1969 when it ousted the NEA affiliate from its last big-city stronghold on the East Coast. It took a strike to win the union's first contract, but fines and jail sentences were ordered by the court for some 200 members.

The union's appeal from a permanent injunction handed down last year still is pending. When union members began to picket selected schools, sheriff's deputies served contempt-of-court notices on Mrs. Carole Graves, union president, and two other officers.

Mrs. Graves and two executive vice presidents, Frank Fiorito and Donald Nicholas, were released on $1,000 bond pending a hearing Feb. 11.

More than 70 teachers on a picket line at the South 8th Street School, scene of a confrontation last year between union members and some parents, were joined earlier in the week by Bayard Rustin, labor-civil rights leader. Rustin said the union's difficulties reminded him of clashes in the deep South between civil rights activists and Klan-type attackers.

Overtime Ruling Issued In N.Y. Phone Dispute

New York—An arbitrator ruled in a dispute between the Communications Workers and the New York Telephone Co. that the company has the right to transfer employes from other Bell companies on a temporary basis but must give equal opportunities for overtime work to local employes.

The dispute over the out-of-town repairmen and opportunities for overtime pay resulted in a 14-day strike which spread to 50,000 Bell workers in the state. The strikers agreed to return for binding arbitration by a panel headed by Mitchell M. Shipman, attorney-arbiter.

The Shipman panel issued an award spelling out the conditions under which management may transfer employes temporarily. Highlights are:

- All qualified crafts except installation workers in work locations with "borrowed" employes will have the opportunity to work 16 hours of overtime per week during the period of temporary imports.
- In the course of a week, no borrowed employe shall "receive more overtime opportunity than a New York Tel employe in the same classification at the same work location." If he does, the company shall "correct the equalization the following week."

The award provides that overtime be given also in Manhattan, Bronx and Brooklyn locations where no borrowed employes work, and in some other locations.

The award improves the daily travel allowance, sets up a union-management committee to resolve daily problems prior to grievance procedure, and sets a ceiling of 650 on workers that can be imported from out-of-town locations. The company was ordered to phase out the import program by next June 19 for splicers and linemen, and by Apr. 17 for all other crafts.

Pres. John T. Renck of CWA Local 1106, Queens, was the union's panel member. He dissented from the finding that the contract gives management transfer rights but concurred in the other provisions. Charles C. Cushing, retired company vice president, concurred with Shipman in all respects.

Young Named to Legislative Post

Kenneth Young has been appointed to a newly established post of assistant director of the AFL-CIO Dept. of Legislation.

Young has been an AFL-CIO legislative representative since 1965. He came to the AFL-CIO staff after having served as publicity director of the Electrical, Radio & Machine Workers. Previously he was assistant publications and public relations director of the AFL-CIO Industrial Union Dept. and research and education director of the Insurance Workers.

New Lineups:

Key Committees In House, Senate

Many bills of special interest to union members will be considered by the House and Senate Labor Committees, the House Ways & Means Committee and its counterpart, the Senate Finance Committee. New members of the committees are indicated by an asterisk (*).

Meany Asks Speed on Black Lung Aid

AFL-CIO Pres. George Meany has called for prompt action on proposals to amend the Coal Mine Health & Safety Act's criteria for determining whether state workmen's compensation laws provide adequate coverage for pneumoconiosis—black lung disease.

In a letter to Labor Sec. James D. Hodgson, Meany requested that the proposed regulations be published as early as possible.

"Prompt action concerning this matter is essential if the 49 state legislatures meeting this year are to be given an opportunity to enact the state legislation needed for implementation of the new federal law," Meany said.

COMMITTEE CHAIRMEN for the 92nd Congress include, from left: Harrison A. Williams, Jr. (D-N.J.), Senate Labor Committee; Russell B. Long (D-La.), Senate Finance Committee; Carl D. Perkins (D-Ky.), House Labor Committee, and Wilbur D. Mills (D-Ark.), House Ways & Means Committee.

Congress Gets Eight New Chairmen, Political Lines Show Little Change

(Continued from Page 1)

Veterans Affairs—This newly-created committee will be headed by Vance Hartke (Ind.). The ranking Republican is Strom Thurmond (S.C.).

The following House committees have new chairmen this year:

Armed Services—F. Edward Hebert (La.) replaces the late L. Mendel Rivers (S.C.).

Government Operations—Chet Holifield (Calif.) replaces the late William L. Dawson (Ill.)

Public Works—John A. Blatnik (Minn.) succeeds George H. Fallon (Md.), a primary election casualty.

House Administration—Wayne L. Hays (Ohio) replaces Samuel N. Friedel (Md.), another primary election victim.

In the House, conservatives retained strong influence on two of the most powerful committees—Ways & Means, which has legislative jurisdiction over a broad range of tax-related bills, and Appropriations, which allocates the money to fund programs Congress has approved.

There was a conservative pick-up in the closely-divided Ways & Means Committee, with the election of Joe D. Waggonner, Jr., as the Democratic replacement for Hale Boggs, the new House majority leader. Both are from Louisiana but Waggonner's COPE record of 7 "right" and 46 "wrong" votes contrasts with the 82 "right" and 20 "wrong" votes of Boggs.

In the Appropriations Committee, however, there was a significant liberal gain which holds out the hope of an eventual change in the committee's traditional conservative domination.

The committee is the largest in Congress and last year had 30 Democrats and 21 Republicans. Its power is parcelled out in 13 subcommittees headed by senior members, each with seldom-challenged authority over allocations of money for government programs in its jurisdiction.

This year the Democratic leadership decided, reportedly over the strong protest of conservative Committee Chairman George H. Mahon of Texas, to enlarge the committee to 33 Democrats and 22 Republicans.

Combined with existing vacancies, this created six Democratic and three Republican spots to be filled. Republicans named conservatives with a combined COPE voting record of 10 "right" and 74 "wrong" votes. But two of the appointees were replacements for equally conservative congressmen defeated for re-election.

Democrats named five northern liberals and a moderate southerner, with a combined voting record of 113 "right" and 17 "wrong" votes. Their influence will be minimal at first but will be increasingly felt as they move up the seniority ladder in the years ahead.

A small group of liberal Democrats and Republicans attempted to challenge the tradition of party responsibility for committee assignments by seeking to block the formal election of John L. McMillan (S.C.) to another term as chairman of the District of Columbia Committee.

A much larger group had fought the designation of McMillan in the Democratic caucus, where he won out by only a 126-96 vote.

Rep. Jerome R. Waldie (D-Calif.) argued that the national interest justified a departure from the custom that each party choose its committee members and the majority party designates the chairman, without contest on the floor.

Most Democratic liberals who had opposed McMillan in caucus balked at this move and warned that once the principle of party responsibility was broken, a conservative coalition of Republicans and Democrats could use the same device to freeze out liberals.

The attempt to block the election of McMillan was overwhelmingly rejected on a procedural vote, 258-32. Only 17 Democrats and 15 Republicans supported the effort.

Struck Furniture Firm Ordered to Open Talks

Austin, Tex.—A court order directing the Economy Furniture Co. to negotiate a contract with the Upholsterers was hailed by AFL-CIO Pres. George Meany as a "hard-earned victory" for 280 strikers who have been walking a picket line for 26 months.

"We congratulate you," Meany said in a message read to a union rally at the Montopolis Community Center here by Santo Ruiz, who helped organize the Economy plant in 1968 and is now a representative of the AFL-CIO Dept. of Civil Rights.

"We are confident," Meany wrote, that the decision of the 5th U.S. Circuit Court of Appeals in New Orleans "will shortly lead to successful negotiations and a sound contract."

In the meantime, he said, "we support the efforts of your local and international union and continue to urge all union publications to take note of your plight." He urged AFL-CIO members everywhere to support the "landmark struggle for human justice."

Two years ago the AFL-CIO Executive Council voted unanimously to support UIU Local 456 and to condemn the refusal of Pres. Milton Smith of Economy Furniture to bargain with the union after it won a representation election in 1968.

The vote in the National Labor Relations Board election was 252 for the UIU, 83 against. Smith filed objections, which were overruled, and the union was certified as legal bargaining agent on Oct. 14, 1968.

Smith filed exceptions and his employes walked out in protest against his delaying strategy. That was on Nov. 27, 1968, and the case has pursued the usual slow legal course ever since.

Three appeals court judges on Jan. 27 sustained the labor board's decision in 1970 that the strike was an unfair labor practice strike caused by company tactics, that Smith must reinstate the strikers, dismissing strikebreakers if necessary, and negotiate with the union. The court granted the NLRB request that the order be enforced.

The rally here brought together the labor, civic and Mexican-American communities which have made the strikers' cause their own. Pledges of continued support for a "Don't Buy Economy" campaign came from speakers including Cesar Chavez of the AFL-CIO United Farm Workers, Treas. Leon Forman of the Upholsterers, Sec.-Treas. Roy R. Evans of the Texas AFL-CIO and a dozen others.

Travis County Commissioner Richard Moya introduced Chavez, who told the audience of 6,000 "you supported us in California" in the grape and lettuce strikes "and we will support you" until a contract is won.

After the rally Chavez led pickets at the Economy plant and a store of Montgomery Ward & Co., which the union identified as a major retailer of Economy furniture. Then Chavez and Evans and others met with Gov. Preston Smith. The governor listened to the visitors but was non-committal in his views, the union men said later.

Dispatchers Elect Paull Secretary-Treasurer

The Air Line Dispatchers announced the election of George A. Paull, United Air Lines dispatcher at Dulles International Airport, as secretary-treasurer for a term ending Dec. 31, 1972. He succeeds James B. Boyd, who was not a candidate for re-election.

Pres. Robert E. Commerce said Paull, 49, has been a member of the union for nearly 25 years.

Added Spending and Taxes Proposed:

Nixon Seeks Wider Controls To Improve Nation's Ecology

Pres. Nixon outlined the Administration's 1971 version of an environmental program that offers some new and and some old approaches to curb air, water and land pollution and enlarges on proposals he made last year.

Several key elements of the program listed in an 18-page message to Congress include:

- Strict enforcement of air pollution control standards with taxes imposed on sulphur oxide emissions and leaded gasolines.
- Increased public spending for sewage treatment plants.
- A crackdown on the misuse of pesticides.
- A national land use policy.
- Controls on ocean dumping.
- Regulation of noise pollution.

Nixon said he would ask Congress to allow the federal government to charge anyone who pollutes the air with sulphur oxide. The funds derived from the fees would be used to expand environmental programs.

Russel E. Train, chairman of the Council on Environmental Quality, said that sulphur oxide is "probably the single most serious pollutant in the atmosphere today." It causes an estimated $8 billion in damage every year to health, crops and industry, he added. Electric power and public utility plants are the most common producers of sulphur oxide.

The President also said he would again propose a tax on leaded gasolines to make unleaded or low-leaded gasolines less expensive to use. Nixon, however, did not specify how the revenue from the added gasoline taxes would be used.

To cut down on water pollution, the President said, appropriations of $2 billion for each of the next three years will be proposed for the construction of waste treatment facilities, with state and local governments contributing an equal amount.

A bill introduced a week earlier by Sen. Edmund S. Muskie (D-Me.) calls for annual federal appropriations of $2.5 billion for the next five years under a similar 50-50 matching basis with the states and cities.

The combined expenditures under the Muskie plan would be $25 billion over five years versus $12 billion over three years in the Administration plan.

The President's message also seeks authority for the head of the Environmental Protection Agency to levy fines of $25,000 a day on violators of water quality standards and to seek court-imposed fines of up to $50,000 a day for repeated violations.

Nixon also urged stricter controls on the use of dangerous pesticides, to be regulated by the EPA, including authority to ban their sale and use.

Streamlining of the existing pesticide law, which mainly oversees the registration and labeling requirements, was urged by Nixon since "there is no authority to deal with the actual use of pesticides."

The national land use policy is linked to a $100 million federal appropriation over the next five years with the states matching that amount.

The objectve is to "encourage states, in cooperation with local governments, to plan for and regulate major developments affecting the growth and the use of critical land areas." Nixon said.

These areas include land around airports, highway interchanges, major recreational areas and new communities. States failing to take action on the program by 1974 would be ineligible for future land use grants.

The President also called for a federal-state program to control environmental damage from mining. States that currently have no such regulations would have to adopt laws on the reclamation of land used for strip mining and underground mining, including acid-mine drainage. If the states do not act, the federal government would step in.

A national policy would also be established to place "strict limits on ocean disposal of any materials harmful to the environment" and requiring EPA permits for dumping in the oceans, rivers or Great Lakes.

The President announced that legislation will be introduced to set noise standards on transportation, construction "and many other sources" that disturb people "and can produce deafness and other health affects."

Nixon also noted that he has requested a $200 million appropriation "to begin a new program for the acquisition and development of additional park lands in urban areas."

"Merely acquiring land for open space and recreation in not enough," he stressed. "We must bring parks to where the people are so that everyone has access to nearby recreational areas."

Surplus federal properties would be turned over to state and local governments without cost for this purpose, he said.

He also said he would seek full funding of the Land & Water Conservation Fund at $380 million, with $280 million of it to be used by states and localities for parks and recreation areas near major cities.

While expressing concern about power shortages that affected wide parts of the country last year, Nixon said there must be a plan to balance the demands for an adequate power supply and environmental protection.

He called for a law that would regulate the location of power plants and require electric utilities to submit to state or regional agencies 10-year projections of power and facilities requirements.

The agencies would give preliminary clearance for power plant sites and transmission line routes five years before construction starts. Specific plans would be certified two years in advance of construction. Public hearing would have to be held at both the five-year and two-year periods.

'We're Off!'

Arkansas First to Meet Jobless Aid Standards

Little Rock, Ark.—Arkansas has updated its unemployment compensation law to increase benefits to two-thirds of the state's average weekly wage and extend coverage to thousands of additional workers.

The sweeping changes in the jobless aid program enacted by the legislature cap a long campaign by the Arkansas State AFL-CIO. Gov. Dale Bumpers signed the legislation Feb. 3.

The action makes Arkansas the first state to completely implement the provisions called for by the federal Employment Security Amendments of 1970. And only one other state—Hawaii—currently has a benefit ceiling meeting the standard of two-thirds of the state's average weekly wage.

Jobless benefits will be boosted in Arkansas from the current 50 percent of the state's average weekly wage in two steps: to 60 percent effective July 1 and to 66⅔ percent July 1, 1973.

Weekly wages in the state averaged $99 in 1969, the last year that complete statistics are available. That level is somewhat higher now.

With the enactment of the law, many workers not previously covered for unemployment compensation will now be eligible for jobless benefits.

The extended coverage will take in agricultural processing workers, route salesmen and agent drivers, employes of state hospitals, colleges and universities, workers employed by nonprofit organizations, and workers employed overseas by American-owned firms.

Although much of the extended coverage is required by the new federal legislation, the Arkansas program goes beyond the federal requirements. For example, the federal law calls for states to protect workers in nonprofit establishments that have four or more employes. But the Arkansas law applies to nonprofit organizations that have one or more workers for at least 10 days of a calendar year.

The legislation also improves the financing of the state compensation program by increasing the taxable wage base.

With the law becoming effective July 1, Arkansas beats the federal deadline on extending jobless benefits by six months.

2-13-71

Unemployment Highest in Decade With 5.4 Million Seeking Work

(Continued from Page 1)

weeks dropped to 2.3 million from 2.4 million in December, but those out of work 27 weeks or longer jumped from 334,000 to 413,000 in January.

Seasonally adjusted, the jobless rate declined for all major categories of workers—adult men, adult women and teenagers, the BLS said.

The rate for men 20 and older dipped from 4.6 percent in December to 4.3 percent. For adult women, the rate was 5.7 percent, one-tenth of 1 percent below December. Unemployment for teenagers was down two-tenths of 1 percent in January to 17.6 percent.

While the jobless rate for white-collar workers dropped three-tenths of 1 percent to 3.5 percent, the blue-collar rate was down only one-tenth of 1 percent to 7.6 percent.

Joblessness for white workers at 5.6 percent, and Negroes, 9.5 percent, showed no change from December.

Declines in the seasonally adjusted jobless rates were noted in most major industries, the BLS said, despite an actual reduction in employment in all sectors.

The jobless rate in manufacturing was at 7.2 percent in January, down from 7.6 percent the month earlier, with an eight-tenths of 1 percent decline in the durable goods sector and a one-tenth of 1 percent drop in nondurable goods.

Unemployment in contract construction was 11.2 percent, down eight-tenths of 1 percent from December. In wholesale and retail trade the rate was 6.1 percent, down six-tenths of 1 percent.

Joblessness rose five-tenths of 1 percent in transportation and utilities to 4.6 percent and one-tenth of 1 percent in finance and service industries to 5 percent.

Overall nonfarm payroll employment declined 1.7 million from December to 69.5 million. Because this was a smaller drop than usual for the month, seasonal adjustments resulted in an increase of 225,000 to 70.5 million.

Most of the gain came in retail trade, where employment returned to the October 1970 level after dropping sharply in November and December.

Manufacturing employment at 18.8 million, dipped slightly, and contract construction dropped 85,000 to 3.2 million in January.

Since January 1970, total nonfarm payroll employment has declined 475,000, the BLS said. A 1.2 million drop in manufacturing was partly offset by a 725,000 net increase in other industries. The largest portion of the decline in manufacturing occurred in the durable goods industries, where employment plunged 900,000, a drop of 8 percent.

The workweek for nonsupervisory employes on nonfarm payrolls declined to 36.7 hours in January from 37 hours the month earlier. But after seasonal adjustment, this represented an increase of two-tenths of 1 hour to 37.1 hours.

In manufacturing, the average workweek rose one-tenth of an hour to 39.7 hours seasonally adjusted—still six-tenths of an hour below January 1970.

Factory overtime in January also was up one-tenth of an hour at 2.7 hours, yet six-tenths of an hour below the year-ago month.

Average weekly earnings in the year since January 1970 rose $6.09 or 5.2 percent, the BLS reported. It noted, however, that the December-to-December increase of 3.8 percent had been more than wiped out by the 1970 rise in consumer prices of 5.5 percent, leaving a 1.6 percent decline in real wages.

CWA Members Vote Union Shop

Madison, Wis.—The way was cleared for the Communications Workers of America to negotiate a union shop with the Wisconsin Telephone Co. as the result of a vote conducted by the Wisconsin Employment Relations Board.

Under Wisconsin law, no union security clause may be negotiated unless a majority of the unit's members vote for it and two-thirds of those eligible cast ballots.

The CWA members easily exceeded both requirements. Of 7,714 eligible employes, 6,463 cast ballots and 5,204 voted for the union shop. Edward V. Peil, CWA's Wisconsin director, said 85 percent of those eligible cast ballots, with 80 percent of them voting "yes."

IUE Whirlpool Strikers Okay New Contract

Evansville, Ind.—Striking members of the Electrical, Radio & Machine Workers stayed out for 16 weeks to win what the IUE called a "catchup" raise and other contract improvements from the Whirlpool Corp.

Union negotiators refused to approve a company offer made after more than 50 meetings called by federal mediators, but agreed to report it to the strikers. They voted, 2,970 to 2,019, to accept improvements valued at about $1.05 an hour and returned to work.

The new 40-month agreement provides a wage increase of 40 cents an hour now, with another 5 cents in June. An additional 10 percent raise goes to 600 skilled craftsmen. All workers get 20 cents more an hour in the second contract year, 20 cents additional in the third year, and a final boost of 10 cents in the final four months.

AFL-CIO News

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, February 20, 1971 | No. 7

Council Presses Challenge To Major Nixon Programs

NEWSMEN QUESTION AFL-CIO Pres. George Meany at a press conference following a session of the federation's Executive Council, and television cameras record the event. The council is holding its mid-winter meeting at Bal Harbour, Fla.

Cites Alternatives To Answer Needs

By Saul Miller

Bal Harbour, Fla—Major Nixon Administration proposals on revenue sharing, welfare reforms and government reorganization were sharply challenged by the AFL-CIO and a series of specific alternatives were spelled out to meet the nation's pressing needs.

In the opening sessions of the winter meeting of the federation's Executive Council here at the Americana Hotel, the 35 members carefully reviewed the major White House programs and said they would not do.

On the Administration's high-priority revenue-sharing program the council urged "complete rejection," saying "we are firmly convinced that such no-strings money will not add one federal penny to the money available to the states and localities." The council spelled out in detail a nine-point program that would bring important and immediate results to the hard-pressed local governments. **(Story, this page.)**

AFL-CIO Pres. George Meany told reporters at a press conference that the revenue-sharing was a "gimmick" of sorts proposed by an Administration that has failed to do the things that the country needs.

He applied the "gimmick" description also to the President's proposal for government reorganization, termed by the council as "at best a mistake." Meany said it serves no particular purpose and that the present structure properly financed and directed can do the necessary job. (Story, Page 3.)

On welfare reform the council called for "substantial improvement" in the Administration's program and made it clear that the AFL-CIO would not support a measure that did not protect welfare recipients from job and wage exploitation. **(Story, Page 4.)**

The council made clear also its opposition to the budget proposals of the Administration on aid to education, and especially the block grant approach, as a "blatant effort to repeal" a wide range of federal aid programs. **(Story, Page 5.)**

It sharply criticized the Nixon Administration's renewed call for anti-strike legislation in transportation-linked industries. Labor is opposed to compulsory arbitration "no matter how novel the disguise," the council said. **(Story, Page 3.)**

And in statements on nursing homes and veterans hospitals, the council exposed shameful conditions in both and called for immediate correction, including more funds for the VA hospitals than the Administration had proposed.

(Continued on Page 3)

Steelworkers' Pact Cracks Can Combine

The Steelworkers won their first contract in 1971 bargaining by breaking through a four-company container industry combine to achieve a settlement with the National Can Corp.

The terms include an unlimited cost-of-living escalator clause, guaranteed to give workers at least 12.5 cents an hour in 1972 and again in 1973.

Three other firms in the industry's once-solid Big Four were struck when they failed to improve a combined offer before their contracts expired at 12:01 a.m. Feb. 15. They are the American Can Co., Continental Can Co. and Crown, Cork & Seal Co., with 33,000 union-represented employees.

(Continued on Page 12)

Rejects Revenue-Sharing:

Labor Offers Plan To Aid Cities, States

Bal Harbour, Fla.—Labor called for a massive step-up in federal aid to cities and states, but warned against dismantling successful programs under the guise of revenue sharing.

To meet the "urgent and immediate need" of local and state governments, the AFL-CIO Executive Council proposed:

- Full federal funding of existing grant-in-aid programs—a step that would immediately channel an additional $6 billion into cities and states. That action alone would bring in more new money than they receive under the Administration's revenue-sharing plan.
- Quick enactment of a new program of federal grants to states and cities to create public-service jobs.

"This is realistic revenue sharing," the Executive Council said, "which would substantially reduce unemployment and allow the states and localities to meet community needs."

- Federal assumption of the full costs of public welfare. This would channel federal funds "where the need is greatest."
- A federal tax credit for state income tax payments, in place of deducting such taxes from taxable income.

This would encourage states to make more effective use of income taxes and would be a form of revenue-sharing since there would be no restrictions on how the states use their tax revenue.

The revenue proposals were part of a nine-point program advanced by the council as an alternative to the Administration proposal **(Text, Page 7.)**

Other recommendations included tax reform at all levels of government, new financing methods such as a federal Urban Bank to provide low-interest loans for housing, transit and other community facilities, and consolidation of local government units.

The council called for a "careful review" of the existing program of federal grants for specific purposes.

President Seeks Power To Settle Rail Dispute

By Eugene A. Kelly

Pres. Nixon asked Congress to give him emergency powers to block a railroad strike in current contract negotiations which have already produced settlements for three unions and progress toward settlement by a fourth.

The President sought a joint resolution of Congress granting him the authority as he submitted a report on the government's mediation efforts in the dispute involving 500,000 railroad workers.

Legislation enacted by Congress Dec. 10 broke a brief walkout by union members and barred any strikes or lockouts before Mar. 1. Contract terms have since been accepted by the Maintenance of Way Employes and the Hotel & Restaurant Employes. The Railway & Airline Clerks have reached tentative agreement.

The fourth union, the United Transportation Union, resumed

Nursing Home Abuses Spur Demand for Action

Bal Harbour, Fla.—Government action to enforce humane minimum standards and upgrade the performance of the nation's nursing homes was demanded by the AFL-CIO Executive Council.

The council declared that it was "shocked and ashamed" at the abuses prevalent in nursing homes "where all too often helpless and desperate people seeking refuge have found only heartless indifference, cruelty, neglect and financial exploitation."

The federation spelled out an eight-point program to correct "these atrocious cruelties and abuses of public and private funds" including inspection, minimum standards, licensing of administrators, fire and safety standards, planned programs of rehabilitation, encouragement of non-profit institutions and gradual phasing out of the profit-motivated homes.

The quality of service in nursing homes can be upgraded, the council said, by providing decent wages and working conditions along with adequate training programs.

"Any program that spends nearly $2 billion of public funds must be controlled and decent standards must be enforced to insure that patients will receive adequate care," the council said. "The AFL-CIO strongly opposes the use of federal funds to finance unregulated nursing homes that fall short of meeting humane standards."

(Continued on Page 2)

LABOR'S PROGRAM for the 92nd Congress was discussed and adopted during the mid-winter session of the AFL-CIO Executive Council. The council is the federation's governing body between biennial conventions.

Rejects Revenue-Sharing:

Labor Offers Plan To Aid Cities, States

(Continued from Page 1)

The aim, it said, should be elimination of overlapping, increased efficiency, and simplified procedures for state and local officials. But, the council statement stressed, "the purposes, performance standards and requirements of the programs" should be preserved.

Cities and states would be in better financial shape today, the council noted, if the Nixon Administration hadn't opposed "full funding or even 'adequate funding" of federal grant-in-aid programs.

The President repeatedly vetoed appropriations bills providing additional money for these programs, and also vetoed last year's manpower bill which would have launched a public service jobs program.

Against this background, the council sharply challenged the Administration's current two-part proposal for revenue sharing.

Under the "general revenue-sharing" plan, the federal government would hand over about $5 billion a year to the states with no "strings" on how the money could be used.

"The AFL-CIO urges complete rejection of this proposal," the council declared. "We are firmly convinced that such no-strings money will not add one federal penny to the money available to the states and localities. It will merely be a substitute for the full funding of existing programs, which could quickly provide the state and local governments with at least $6 billion of additional federal funds rather than $5 billion."

The statement added that "there is no reason to believe that each of the 50 states and 81,000 cities, boroughs, townships and school districts is in a better position to weigh and balance national priority needs and use federal funds to meet them more effectively and efficiently."

As to the Administration's still vague "special revenue-sharing" proposal, the council noted that it apparently contemplates dismantling scores of existing programs and replacing them with six broad functional areas with little supervision over how the money is spent.

"We fail to see how this experiment will ease the financial burden of state and local governments," the council said. "Moreover, we see great potential damage in dismantling the categorical programs and in weakening or eliminating the purposes, performance standards and federal requirements of these programs."

In its criticism of no-strings federal grants, the Executive Council noted that the "strings" presently placed on federal grants include the obligation to comply with civil rights and labor standards.

Nursing Home Abuses Spur Call for Action

(Continued from Page 1)

The nursing home industry is big business, the statement noted, with operators taking in about $3 billion in 1970 and charges of $500 a month, or more, fairly common. More than 90 percent of the nursing homes are operated for profit and in the light of failure by government agencies to enforce standards, "venality, indifference and brutality are widespread," the council said.

A number of investigations have found that some operators sign lifetime contracts to care for patients in return for their estates: some doctors make "gang visits" at homes and charge for "personal consultations;" some patients are used by doctors and drug companies to test new drugs; nutritional standards are often abysmal and state and local inspection programs are "often hopelessly understaffed and underfinanced."

"The federal government," the council added, "has made scarcely any effort to establish and maintain humane standards or to police the expenditures of millions of dollars in federal funds paid to private nursing homes on behalf of patients covered by the Medicaid program."

Cursory federal inspections have disclosed, the statement said, instances of nursing homes collecting Medicare and Medicaid benefits for "people already dead."

IUD Pledges Support Of Bargaining Goals

Bal Harbour, Fla.—The AFL-CIO Industrial Union Dept. pledged "its full resources and total moral support" to its affiliates involved in collective bargaining in 1971 for improved living standards for their members.

The department's executive committee said that bargaining this year will aim to rectify the "alarming erosion" of the standard of living for millions of American workers by winning a fair share of the fruits of their labor—"a wage that enables them and their families to live in dignity."

The committee's statement singled out the "misguided, corporation-oriented national economic policies" that have produced "runaway inflation" and totally "unacceptable levels of unemployment."

The benefits of success in 1971 bargaining by the Steelworkers, Communications Workers and other unions "will be felt by every American," the IUD said. "The whole nation will share in the greater productivity and prosperity that results from a more equitable distribution of our economic resources."

In other resolutions the committee:

- Called on Congress to act speedily on legislation that would provide minimum standards for funding, vesting and portability of pensions, together with reinsurance "to guarantee workers that the benefits promised to them will be paid at the time of their retirement."
- Pledged full support to a national solid waste disposal program that will make full use of American technology, provide a program of federal research and enlist union and management energies, without causing disruption of workers' livelihoods.
- Urged speedy enactment of responsible and effective legislation to provide "a realistic international trade policy which will give adequate protection to American workers and the industries for which they work."
- Asked an adequate budget and administration of the new Occupational Health & Safety law and pledged to back the IUD's interest in the continuing problem by establishing a department Division of Occupational Health & Safety Affairs.

Unions Urged To Expand Aid In Counselling

Bal Harbour, Fla.—AFL-CIO affiliates were urged to extend union counselling programs, on company time when possible, to help solve personal and family health and welfare problems of their members.

The federation's Executive Council pointed out that the program developed by the AFL-CIO "has been of great help to thousands of trade unionists and their families" in meeting needs and problems not covered by the union contract.

The council said that the federation, through its community services activities, is prepared to assist affiliates in connection with training and agency relations involved in the program dealing with such areas as family relations, alcoholism, legal aid, drug abuse, child welfare, public welfare, strike assistance, unemployment relief and others.

The counselling program provides information, assistance, referral and follow-through services.

Shocking Deterioration Charged in VA Hospitals

Bal Harbour, Fla.—The AFL-CIO charged that "shocking deterioration" has taken place in Veterans Administration hospitals and produced "critical deficiences in medical care" for the nation's veterans.

The federation's Executive Council said it was "appalled" that in face of greater need for medical services for the veterans of Viet Nam, the VA hospital system is being contracted. It pointed to the Administration's budget request for a 5 percent increase at a time when hospital costs are rising at the rate of 15 percent a year.

"This is a curtailment budget which will result in further deterioration of medical care for veterans," the council said.

The statement called for a "thorough-going investigation of VA hospitals" by Congress to include staffing, overcrowding and the physical condition of the facilities, as well as action by Congress to substantially increase appropriations for the hospitals.

The council noted that in the Viet Nam war nearly 300,000 Americans have been wounded and declared that they are entitled to the best medical care available. "They are not getting that care today," the council asserted, pointing out understaffing and shortages of key personnel, overcrowding and deferral of equipment purchases.

"Defects in the VA medical care system have caused alarming waste of precious months and years of the lives of returning veterans who have been deprived of the care they need and abundantly deserve for recovery and rehabilitation," the statement said. It added:

"At one time the VA hospitals were the best in the world. Our returning veterans deserve no less today. The VA hospitals must be restored to their former standard of excellence."

Retail, Meat Unions Open Merger Talks

Bal Harbour, Fla.—The Retail Clerks and the Meat Cutters have named committees to "pursue merger discussions on a formal basis" after exploratory discussions by the executive boards of the two unions at meetings here.

The boards adopted resolutions providing for committees "empowered to discuss all details and draft concrete proposals to effectuate such a merger" and directed them to "prepare a formal report" for submission to the executive boards.

The joint announcement said that the unions see "a substantial possibility of a mutually beneficial merger." The Retail Clerks have more than 650,000 members, the Meat Cutters more than 550,000.

Both unions have sent letters to their locals informing them of the development and pointing out that "many bridges will have to be crossed prior to an ultimate merger agreement. However, because of the enormous benefit which could flow from a mutually acceptable merger, your international executive board . . . believes that every effort should be made to cross these bridges and try to arrive at an early agreement if possible."

The Retail Clerks represent workers in retail store operations throughout the country. The union is headed by Pres. James T. Housewright and Sec.-Treas. William W. Maguire. The Meat Cutters represent butchers in retail food stores, workers in the meat packing industry and fur and leather as well as those in poultry and fish processing plants. It is headed by Pres. T. J. Lloyd and Sec.-Treas. Patrick E. Gorman.

The joint announcement said that the merger committees will comprise top officials of the two unions and that it is expected they will meet shortly.

23 Consumer Bills Introduced in House

A package of 23 consumer-protection bills has been introduced in the House by 133 Democratic congressmen.

It includes legislation establishing an independent consumer agency and a bill allowing consumers to band together in "class action" suits in federal courts against manufacturers.

Steps Urged to Outlaw Commercial Blood Banks

Bal Harbour, Fla.—The AFL-CIO called for expanding the volunteer blood program and stopping the use of commercial blood banks as the only reliable means of reducing the transmission of serum hepatitis.

The Executive Council, taking note of the rise in transfusion hepatitis cases and the reports of scientists that there is at present no satisfactory method of detecting the presence of hepatitis in blood, urged the outlawing of all commercial blood banks by government action at the federal, state and local levels.

Blood banks, the statement pointed out, attract undesirable donors and the risk of hepatitis rises markedly in contrast to volunteer donors.

The council urged federal licensing of all blood banks as well as federal standards and inspection programs for an assured blood supply and mandatory labeling of all blood units as to the relative hepatitis risk.

Labor Challenges 3 Nixon Programs

Council Spells Out Alternatives To Meet Nation's Pressing Needs

(Continued from Page 1)

Meany, at a series of press conferences, said the Nixon record on fighting inflation was "still a double goose-egg" and that the Administration's economic game plan had "flopped."

On Viet Nam, however, Meany gave the President a "good mark" on winding down the war without repudiating U.S. commitments and bringing home large numbers of American troops.

The AFL-CIO president said that any proposal to freeze wages in the construction industry was unfair and would not work.

Later, Labor Sec. James D. Hodgson told newsmen that he had a meeting scheduled here on Feb. 20 with the executive council of the Building & Construction Trades Dept. "to see if there is some way these leaders can participate in a program looking to stabilization of wages, prices and work in a great and growing industry—construction."

Queried on labor's political action role and the upcoming 1972 elections, Meany made a distinction between politics and partisanship.

Organized labor is "much more political today" than it was a few years ago, Meany told reporters, but it still is in the Gompers tradition of non-partisanship.

The Gompers policy, Meany carefully explained, was "non-partisan" but not "non-political."

"This is still our policy," he stressed, and "we are not tied to any political party."

It is a "fact of life," he added, "that we support more Democrats than we do Republicans, but that has to do with the record that people make and their attitude. It just happens there are more Democrats who feel friendly to the things we're interested in."

Asked about his statement last August that the Democratic Party was in a state of disintegration, Meany replied "that statement was certainly true last August; perhaps it's less true today. What happened in November had a sobering effect on them, I think, and they are reacting accordingly."

As to the Labor Day celebration at the White House last year, Meany pointed out that organized labor always tries to cooperate with the President of the United States as a matter of simple respect for the office and nothing political should be read into it one way or another.

But on the "exploitation" of the Labor Day meeting by the Republican National Committee, Meany declared:

"I think this was crude and certainly not the way you handle a house guest. You don't bring a house guest to your home and have dinner with him and then use it politically in some way. Actually, it was a very shallow sort of thing because what they (the Republican National Committee) sent out had no significance except that labor leaders were at the White House. And labor leaders were at the White House because the President invited them to the White House."

Meany told the reporters that a number of Democratic senators visited with the council during its current sessions, including Senators Birch Bayh of Indiana, Hubert Humphrey of Minnesota, Edmund Muskie of Maine and Henry Jackson of Washington.

The council gave a strong endorsement to two proposed amendments to the U.S. Constitution. **(Story, Page 4.)**

It reiterated its support for replacement of the electoral college system by direct election of the President and Vice President.

And it urged adoption of an amendment lowering the voting age to 18 in all state and local elections, as well as elections to federal office.

At a meeting of the administrative committee of the Committee on Political Education, a number of reports were made on registration and other "nuts and bolts" matters in preparation for the '72 election.

The committee—composed of the Executive Council, the COPE Operating Committee and 25 union presidents—was told by Meany that a "tremendous" job had been done in 1970 and that he was encouraged by the outlook for 1972.

Special attention will be given this year and next on registering voters 18 through 20 years of age who will be eligible to vote in federal elections. Reapportionment of congressional districts on the basis of the 1970 census will also get major attention.

A new program of monthly one-half-hour COPE reports on tape recorder cassettes will be put together for 1971 and 1972 aimed at meetings, small groups and radio use.

Bayard Rustin and Norman Hill of the A. Philip Randolph Institute reported on the progress of Negro registration in the South and the institute's program in 45 cities in 20 states, noting that one million Negroes were registered in the South in the last year who had never before been registered or voted.

Matt DeMore, retired secretary-treasurer of the Machinists, reported on the activities of Concerned Seniors for Good Government, a program designed to bring senior citizens into political activity.

In addition to its consideration of major Administration programs, the council also adopted statements on extension of union counselling programs and the control of blood banks in light of the spread of serum hepatitis. (Stories, Page 2.)

It went on record as supporting legislation to make January 15, the birthdate of the late Rev. Martin Luther King, Jr., a national holiday.

It heard a report on developments in Viet Nam from Tran Quoc Buu, president of the Vietnamese Confederation of Labor. **(Story, Page 5.)**

The council had before it a number of statements and reports on economic policy matters, collective bargaining and social security, health care and foreign policy to consider before winding up its sessions here.

INTERMISSION during AFL-CIO Executive Council session brings together Vice Pres. A. Philip Randolph, left, Pres. George Meany and Vice Pres. Frederick O'Neal.

Cabinet Reorganization Called Mistake 'At Best'

Bal Harbour, Fla.—Pres. Nixon's government reorganization plan is "at best a mistake," the AFL-CIO declared, and "lack of commitment at the highest levels of government," not structure, hinders progress.

The federation's views were spelled out by its Executive Council which declared that the current system of departments, "responsible for and responsive to specific constituencies," can be further improved and made more efficient, but should not be scrapped for a plan "not yet even off the drawing board." **(Excerpts, Page 6.)**

The council's statement came on the President's proposal to reduce the number of Cabinet-level departments from 12 to 8, continuing State, Treasury, Defense and Justice as presently constituted and placing the others into four catch-all departments covering human resources, community deevlopment, natural resources and economic development.

The council expressed its "serious reservations and deep skepticism" over the proposed consolidation, warning that instead of promoting efficiency the plan would "serve to divide and destroy programs long sought and laboriously achieved."

The statement singled out "any attempt to deprive workers . . . of a single, centralized, responsible, Cabinet-level department where workers and their unions can take problems and get understanding response."

Noting the role of AFL Pres. Samuel Gompers in the creation of the Labor Dept. 58 years ago, the council said the department should be retained so that the "voice of labor" can be "heard at the highest level of government." It asked continued similar voices for farmers, consumers and business.

As to consolidation, the council noted that placing diverse existing programs into four sprawling catch-all departments "is far more likely to produce administrative monstrosities than efficiency."

The council said it hoped that the reorganization plan was "not a politically inspired device to distract the nation from difficult decisions that must be made as it reorders priorities." It concluded that "in no wise do we view this proposal as returning 'power to the people.' In our view it would have a reverse effect and diminish the power of the people to have a continuing, effective voice in the operations of their government."

'Emergency' Disputes Plan Assailed As Compulsion in 'Novel Disguise'

Bal Harbour, Fla.—The Nixon Administration's renewed bid for anti-strike legislation dealing with so-called emergency disputes in transportation was strongly denounced by the AFL-CIO Executive Council, which declared its flat opposition to compulsory arbitration "no matter how novel the disguise."

The Administration proposal, labelled the "Emergency Public Interest Protection Act," would virtually repeal the Railway Labor Act and add new sections to the Taft-Hartley Act that would apply only to the five transportation-linked industries: rails, airlines, longshoring, maritime and trucking.

The Administration's proposed bill, which failed in the 91st Congress, would add three new legal devices to the 80-day, no-strike injunctions now provided by Taft-Hartley:

- An additional 30-day injunction.
- An authorization for partial operation.
- A new variation of compulsory arbitration called "Final Offer Selection," under which the union and the employer would each make a final offer, and an arbitration panel would choose one or the other without change or modification.

The 80-day no-strike injunction which already applies to longshore, maritime and trucking disputes, could also be invoked for railroads and airlines.

"We do not support any proposal for compulsory arbitration of contract terms in private industry," the Executive Council statement said. "It is a violation of the basic principles of democracy to compel employes in private industry to work on terms which are imposed on them by the government."

The council charged that the so-called nationwide rail crises in recent years are "solely attributable to the fact that the carriers have succeeded in blocking—through the courts—every attempt at a selective or partial strike, thus transforming every impasse into a nationwide strike or lockout."

"They have done this obviously and deliberately to provoke Congressional intervention," the statement said.

The soundest solution, the council said, "is to revise the Railway Labor Act to make it clear that unions have the legal right to strike a particular carrier or carriers; and that the railroads have no right to transform these limited disputes into nationwide strikes or lockouts."

The council added, however, that it favors allowing the government to require limited operation of struck lines to insure the continued movement of passenger trains and essential commodities. It expressed support for legislation along these lines introduced by Sen. Harrison A. Williams (D-N.J.) and Rep. Harley O. Staggers (D-W. Va.).

The council statement noted that "the labor relations of rail carriers and airlines have, since 1926, been regulated by special legislation applicable only to those industries, and never by the Labor-Management Act," the council noted.

The two industries, it said, still require legislation tailored to their specific needs and "while we agree that revisions are needed in the Railway Labor Act, we flatly oppose compulsory arbitration of contract terms, no matter how novel the disguise."

If railroad workers are denied the right to strike, then Congress should move immediately to nationalize the country's railroads, the council continued, declaring: "We believe that if the railroad workers are nationalized then the companies must be nationalized."

The council said it could see no justification for imposing special emergency procedures on the maritime, longshore and trucking industries.

"Certainly no maritime strike would warrant even the invocation of the present Taft-Hartley provisions. The inclusion of the longshoring industry for special treatment is likewise curious, inasmuch as a study sponsored by former (Labor) Sec. Shultz concluded that there has been 'minimal' economic damage from past longshore strikes."

The council said it was "at a complete loss" as to why the Administration proposes to subject trucking labor relations to special coercive procedure since "no Administration has ever found it necessary even to seek an 80-day Taft-Hartley injunction in that industry."

1970 Unemployment Tops Billion Man-days

Man-days lost by unemployment in 1970 were 17 times greater than the loss from strikes, an analysis of Labor Dept. figures shows.

With joblessness averaging over 4 million for the year, the lost man-days of work exceeded a billion. This compared with an estimated 62 million man-days lost due to strikes during 1970.

Oil Workers Buy Building for Offices

Denver—The Oil, Chemical & Atomic Workers bought a seven-story building in a $1.8 million transaction and will occupy it after extensive remodeling. The deal included the trade of present OCAW headquarters and other real estate for a building at 1636 Champa St. in downtown Denver.

REPORTERS COVERING AFL-CIO Executive Council session were among the participants in a seminar on Collective Bargaining and the News Media, sponsored by the Institute of Collective Bargaining & Group Relations. AFL-CIO Sec.-Treas. Lane Kirkland is shown addressing the seminar, which was set up by Theodore W. Kheel, director of the institute and a well-known mediator.

Newsmen, Unionists Exchange Ideas On Improving Coverage of Labor

By Alexander Uhl
Press Associates, Inc.

Bal Harbour, Fla.—One of the basic criticisms of newspaper coverage of the labor movement is that it is too restricted to "crisis" reporting on strikes and picket lines and not broad enough to give the American people a real view of organized labor and its role in the community.

Here at Bal Harbour, the Institute of Collective Bargaining & Group Relations has held a two day seminar on "Collective Bargaining and the News Media" which threshed out the problems of reporting contract negotiations and the labor movement in general. A lot of news reporters and representatives of labor and management got a lot of criticism off their chest.

In general, the news reporters wanted more information handed out to them instead of having to sit behind closed doors for half a day, only to be given a "no comment" when the doors finally opened. In the end, however, most of them conceded that contracts can't be negotiated in a gold fish bowl with the public peering over the shoulders of both sides in the negotiations.

But labor representatives went into the whole question of coverage of labor more deeply. They saw the negotiating table as merely one aspect of the problem of labor reporting and they were highly critical of the lack of interest that most newspapers have in telling their readers about the labor movement as a force in the community rather than a group of workers solely looking for higher wages.

AFL-CIO Sec.-Treas. Lane Kirkland, while conceding that organized labor hasn't always been completely cooperative with the press, contended that there are great areas of information made available to the press by the AFL-CIO and its affiliates that simply are not reported. These involve labor's role in pressing for progress in housing, communications, civil rights, the social services, social security, minimum wages, national health problems, pollution—the full gamut of social and economic legislation that concerns the welfare of the country in general.

Instead, Kirkland said, there is too much "crisis" reporting, overplaying of relatively unimportant matters at the expense of the "real story," attention to "flamboyant characters"—in general the police beat approach to labor news rather than attention in depth to the real role of unions and the perpetuation of outmoded "myths."

Al Zack, AFL-CIO public relations director, also cited numerous examples, where reporters for the commercial press have ignored constructive news while in search of stories that frequently were inaccurately reported or played out of proportion to their real significance.

Papers read by labor reporters at the conference were largely devoted to complaints of "too much secrecy" or of their inability to get their managing editors to give them the time and space to make in-depth reports on labor activities and the background of labor's needs and concerns, not only in terms of the leadership but of the rank and file.

As one reporter put it: "The next time we have one of these sessions, perhaps our managing editors should be invited to participate."

Theodore W. Kheel, noted mediator, who hosted the seminar, stressed the communications gap between the negotiating table and the general public including union membership. He noted that the press has become "part of the negotiation" so that its reporting must be timely and accurate to help make collective bargaining more effective. The press, he said should "not do anything to prejudice the position of either side at the bargaining table."

Participants in the seminars and discussions included Harry Bernstein, labor editor of the Los Angeles Times; William Eaton of the Chicago Daily News; James P. Gannon of the Wall Street Journal; Neil Gilbride of the Associated Press; Michael O'Neill of the New York Daily News; Victor Riesel, nationally syndicated columnist; Eugene Roberts, national news editor of the New York Times; Damon Stetson of the New York Times; Patrick Owens of Newsday, and Ed Townsend of Business Week.

Among labor participants were Pres. Jerry Wurf of the State, County & Municipal Employes, who strongly championed the right of public employes to free collective bargaining; Gordon Cole, editor of the Machinist; Leon Stein, editor of the Ladies' Garment Workers' paper, Justice, who stressed the importance of going down into the shop for labor news; Ray Pasnick, public relations director of the Steelworkers; Irwin Klass, of the Chicago Federation of Labor, and Bayard Rustin of the A. Philip Randolph Institute.

At the conclusion of the seminar, it was announced that the institute will make an annual award of $1,000 to the journalist "who has contributed most to an understanding of collective bargaining" in the current year. The award will be named after the late Louis Stark, noted labor reporter for the New York Times.

Council Backs 2 Amendments On Elections

Bal Harbour, Fla.—Two proposals to amend the U.S. Constitution won a strong endorsement at the AFL-CIO Executive Council meeting here.

The council reiterated labor's support for direct election of the President—an amendment that passed the House 339-70 in the 91st Congress but was blocked by a Senate filibuster.

It also urged approval of an amendment enabling 18-year-olds to vote in state and local elections, as well as for federal offices.

"We believe that 18-year-olds should have the vote," the council said, "and also that it is impractical to have one age standard for voting for federal office and another for state office."

On the direct election amendment, the council resolution declared:

"The electoral college never functioned as intended and has long been a dangerous anachronism. It poses a constant threat that a candidate receiving fewer votes than his rival may become President."

Constitutional amendments require two-thirds approval of the House and Senate, followed by ratification by three-fourths of the states.

2 South Dakota Unions Chosen in Elections

St. Paul—AFL-CIO unions won two representation elections conducted by the South Dakota labor commissioner, federation Regional Dir. Carl Winn announced. The Steelworkers were chosen in a vote among 113 employes of the South Dakota State Cement Co. in Rapid City. The State, County & Municipal Employes won bargaining rights for 331 employes of Redfield, S.D., State School and hospital.

Protections Urged:

Welfare Plan Held Far Short of Need

Bal Harbour, Fla.—The AFL-CIO called for "substantial improvement" in the Administration's welfare reform program including protection of welfare recipients against being forced into jobs with substandard wages.

"The AFL-CIO will not support any welfare reform legislation," the Executive Council declared, "unless it contains protections as to both suitability and wage standards of the jobs to which recipients may be assigned."

The federation's statement called also for reaching "as rapidly as possible a national minimum welfare payment of no less than the government-defined poverty level." The Administration's proposal calls for $1,600 a year. The poverty level is defined by the government as $3,700 annually.

The statement said also that the AFL-CIO favors "a single welfare program with a single standard of minimum payments and uniform nationwide administration" under federal control. It said "federalization of the welfare program should be achieved as quickly as possible" to help relieve states and localities of a "crushing financial burden they can no longer shoulder."

It urged that state and local government workers employed in the administration of welfare programs be fully protected on job rights, wages, hours and bargaining rights and other conditions in terms of any "adverse consequences" resulting from changes in administration.

The federation called also for exempting mothers of school-age children as well as of pre-schoolers from the work and training requirements of the Administration bill except for the hours when the children are in school.

The statement reaffirmed that the AFL-CIO will not support so-called welfare reform "which makes the present program worse by adding new punitive features and creates opportunities for harsh exploitation of whose who must depend on welfare."

The bill passed by the House last year removed minimum job and wage protections from the welfare reform bill, the statement noted, and this action must be reversed by the new Congress. Besides suitability of employment—a provision of long standing in unemployment compensation legislation—the statement said that reform measures "must provide that jobs to which welfare recipients are assigned must pay wages at a rate equal to the prevailing wage in the locality or the federal or state minimum wage, whichever is higher. Hours and working conditions on such jobs must measure up to those prevailing for comparable work in the locality."

The council statement pointed out that about 25 percent of the poor are persons who work full time all year and that the need here is a minimum wage of at least $2 an hour.

About one-fifth of the poor are the elderly and their need is for substantially improved social security payments.

Nearly 30 percent of the poor are in families headed by a woman and the Administration proposal, the council said, "falls far short of what is needed to provide the answer to their poverty."

Label Trades Elect Murphy To Key Post

Bal Harbour, Fla.—The executive board of the AFL-CIO Union Label & Service Trades Dept. has elected Edward P. (Bud) Murphy secretary-treasurer of the department to fill the vacancy caused by the death of Joseph E. Lewis.

Department Pres. Richard F. Walsh announced that Murphy had been elected unanimously to fill the post until the department's next convention in November 1971.

Murphy, 54, who joined the department in 1952 and was assistant to the secretary-treasurer from 1954 until the board's action, has been manager of the annual AFL-CIO Union-Industries Show for the past 20 years.

Born in Cleveland, he became a business agent at age 21 for the Retail Clerks in that city. In 1941 he became a consultant to Joseph D. Keenan at the War Production Board and then served three years in the South Pacific in the U.S. Air Force.

CONGRATULATIONS are extended to Edward P. Murphy on his election as secretary-treasurer of the AFL-CIO Union Label & Service Trades Dept., succeeding the late Joseph E. Lewis. From left are Union Label board members John O'Hare, retired president of the Tobacco Workers; Department Pres. Richard F. Walsh, who heads the Theatrical Stage Employes; Murphy; Wesley A. Taylor, secretary-treasurer of the Bookbinders, and Joseph P. McCurdy, president of the United Garment Workers.

Council Assails Plan:

Block Grants Called Threat to School Aid

Bal Harbour, Fla.—The Administration's proposal to consolidate federal education aid funds into block grants is a "blatant effort to repeal the wide range" of federal aid enacted in the Sixties, the AFL-CIO charged.

The Administration's approach "solves no existing problems . . . provides virtually no additional funds" but would destroy hard-won laws to aid elementary and vocational education, impact aid, programs for the handicapped and the school lunch program, the federation's Executive Council declared.

The block grant approach would consolidate federal funds and make them available to state authorites to spend as they see fit. This, the council said, would mean ignoring or neglecting the serious educational needs of various minority groups, economically disadvantaged children or those physically, mentally and emotionally handicapped.

Specific federal programs and grants in these areas came about as "part of a creative solution to specific problems" and Congress pinpointed these areas and provided specific grants to meet special needs and for no other purpose. "Under the Administration proposal these federal funds would become diffused in the total school budget," the council observed.

The block grant program "does open up the possibility of serious new problems," the federation pointed out, including aid to non-public schools, the needs of critically pressed urban school systems and curbing racial discrimination.

It is "undoubtedly true," the council continued, that there is some overlapping and duplication of effort among existing specifically targeted programs, and the AFL-CIO would welcome sincere efforts to bring about "useful consolidation." It added:

"But to eliminate the categorical programs altogether and to finance loosely restricted block grants to the states would be a step backward rather than forward. That we are not prepared to accept."

The council called on Congress to "firmly reject any educational block grant proposal of the Administration" and to fulfill existing federal commitments by fully funding present programs at the levels authorized by Congress.

In a background paper prepared for the council by the AFL-CIO Dept. of Education, the Administration's "strategy in education" is analyzed and the education aid programs adopted by the Kennedy and Johnson Administrations reviewed.

In the Nixon Administration, the paper points out, "the gap between legislative authorizations and funding has widened even more." It cites a drop of elementary school aid from 96 percent of the amount authorized in 1966 to 45 percent in 1969 and 1970. Other programs have suffered a similar fate.

The paper reviews also the development in higher education, the Administration role in school desegregation and the new relationship between education and private enterprise. The Dept. of Education report concludes that:

"The AFL-CIO approaches the Administration education proposals from the perspective of a deep historical commitment. In light of this perspective, the Administration appears intent upon the destruction of the constructive gains which have been won over the past years."

Boy Scouts Get Grant to Train 200 Workers

The Labor Dept. has awarded the Boy Scouts of America a $700,000 contract to help train 200 disadvantaged jobless and underemployed workers in economically depressed areas as scout officials.

The 21-month contract was granted under the New Careers component of the Public Service Careers program, Assistant Labor Sec. Malcolm R. Lovell, Jr., said in announcing the grant.

Forty-five Boy Scout councils across the country, yet to be designated, will handle the selection, training and placement of the 200 persons in the program.

This is the first time that the Labor Dept. has funded such a venture. It is also the first time that the Boy Scouts are receiving federal funds for this type of operation.

Half of the funds will be used for administration, development and operation of the program. The remainder will go for the cost of training and placement of the 200 trainees.

AMERICAN LABOR'S support of Viet Nam's trade union movement has strengthened democratic forces in the war-torn nation, Pres. Tran Quoc Buu of the Vietnamese Confederation of Labor told the AFL-CIO Executive Council. Sec.-Treas. Lane Kirkland and Pres. George Meany listen to Buu's report.

LABOR-MANAGEMENT agreements on uniform national work rules in the construction industry and penalties for violation of jurisdiction dispute procedures are announced at a joint press conference in Bal Harbour, Fla. Facing the newsmen are, from left: Benjamin B. Frost, incoming president of the National Constructors Association; John F. O'Connell, who chaired the NCA negotiating committee; Pres. Charles H. Pillard of the International Brotherhood of Electrical Workers, and C. J. Haggerty, president of the AFL-CIO Building & Construction Trades Dept.

Crafts, Contractors Reach Pacts On Rules, Jurisdictional Disputes

Bal Harbour, Fla.—The AFL-CIO Building & Construction Trades Dept. and the National Constructors Association have signed agreements that set up for the first time uniform national work rules and a system of financial penalties in the area of jurisdictional disputes.

The agreements were announced here in a joint press conference that Pres. Charles H. Pillard of the International Brotherhood of Electrical Workers said pointed up the ability of the unions and contractors to resolve their problems voluntarily and without outside interference. Pillard headed the Building Trades Committee that worked out the agreement.

The association is made up of 34 members who employ as many as 250,000 building trades workers and do 80 to 90 percent of the heavy industrial construction—power plants, oil refineries, factories, etc. John F. O'Connell was chairman of the NCA committee.

The objective of the "productivity compacts" signed after a year of intensive negotiations is to boost field labor productivity and eliminate costly and disruptive strikes and picketing over arguments between rival unions as to which craft performs various kinds of work, the joint release said. It noted:

"Jurisdictional disputes, long the bane of the construction industry, are the subject of a separate and unique contract. It requires adherence to procedures of the National Joint Board for the Settlement of Jurisdictional Disputes and creates, for the first time, a set of financial penalties to be levied on transgressing contractors or unions.

"A contractor who makes an unreasonable misassignment can be assessed up to $10,000 for the first such act and higher penalties for subsequent unreasonable assignments.

"Similar fines can be levied against an international union that fails to take 'prompt and appropriate' action against a local that strikes or pickets a job in 'furtherance of a jurisdictional dispute.' These penalties range from $2,500 for a small international that permits a jurisdictional strike to $10,000 for a large union that fails in halting a jurisdictional picket line."

The plan calls for an impartial umpire with power to decide if the rules are violated, to fix the amount of the penalty and to take action against the offender.

Separate trusts are to be set up by labor and management to receive money paid by each side in fines, with the employer trust to be used for research into manpower and recruitment and the building trades trust to be used in research into the origin and prevention of labor disputes.

The agreements between the BCTD and the NCA are open to other contractors in the industry who sign letters of assent with the department, the joint release said.

C. J. Haggerty, president of the Building Trades Dept., said the pacts had been sought for many years and praised their achievement.

NCA spokesmen noted that new types of heavy industrial construction and new concepts make it necessary for these agreements to be reached. It was estimated that up to 3 percent of the total manhours worked in heavy construction were lost because of disputes over rules and jurisdiction.

An impartial umpire will be appointed before Apr. 1, 1971 when the one-year agreement will become effective.

Viet Nam Union Leader Hails Aid of U.S. Labor

Bal Harbour, Fla.—The president of the Vietnamese Confederation of Labor (CVT) extended thanks to American labor for helping the CVT fill a "political vacuum" in that war-torn country.

CVT Pres. Tran Quoc Buu told members of the AFL-CIO Executive Council that the federation always has understood the problems and needs of the free labor movement in Viet Nam, and that through the Asian-American Free Labor Institute it has assisted the CVT in solving many problems.

"The free world has been concentrating its efforts on the defeat of the Viet Cong through military and police measures," said Buu.

"In the process of achieving this objective, a political vacuum has been created which the Communists are attempting to fill—this is why we are in a sort of vicious circle which starts as a political threat leading to a military struggle, but which returns in the end to the problem of finding a political solution to the problem of Viet Nam."

Buu said that while free trade unions have been relegated to a "subsidiary and peripheral position," the Communists have been giving full attention to the problems of the people "attempting to create a political apparatus parallel to their military activities in Viet Nam.

"Our major problem for the future will be one of finding ways and means to bring about not only a defeat of the political plans of the Communists, but to secure a democratic politicial solution for the country," Buu said.

"It is the CVT as a mass organization that can become a decisive factor in creating this political organization."

For many years, he told council members, the Communists have attempted to bring about a general strike to destroy the CVT and create chaos that could lead to the downfall of the present regime and prevent any democratic solution favorable to the free world.

"But we of the CVT have resisted and defeated all those attempts of the Communists to seize power through a general strike."

He said the CVT is the only mass organization capable of being the keystone in the development of a stable and democratic structure and that "in the last analysis, military achievements are futile without a political goal.

"We of the CVT need the understanding, encouragement and support of the free world, especially the world of free labor as symbolized by the great trade union of America, namely the AFL-CIO. We are both engaged in a common cause."

Screen Actors' Staffer Jack Stewart Dies

Los Angeles—Jack Stewart, veteran field representative of the Screen Actors Guild, died at his West Los Angeles home at 73. He had been hospitalized briefly for tests.

Well known in the motion picture industry, Stewart was a delegate to the Los Angeles County AFL-CIO and chairman of its veterans committee. During his youth he was a champion swimmer who once swam 26 miles from Catalina Island to the mainland.

Government Reorganization

AT THIS TIME we must express our serious reservations and deep skepticism concerning the President's proposal to divide and re-shuffle existing government departments' responsibilities and functions. Instead of promoting efficiency through realignment and consolidation of governmental functions, the reorganization plan would serve to divide and destroy programs long sought and laboriously achieved by the American people through their elected representatives in the United States Congress.

Specifically, we oppose any attempt to deprive workers and representatives of a single, centralized, responsible Cabinet-level department where workers and their unions can take problems and get understanding response.

Fifty-eight years ago Samuel Gompers, president of the American Federation of Labor, told Congress: "We want a department in the government of the United States that shall be distinctly a labor department, dealing with labor questions and all that comes under that term."

Congress responded by creating the U.S. Dept. of Labor on Mar. 4, 1913, "to foster, promote and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment."

The position taken by Samuel Gompers 58 years ago—and for many years previously—remains the position of organized labor. All of the experience of the last 58 years justifies that position.

ON THE BASIS of what the nation now knows about the President's government reorganization plan, we can only conclude that plan is, at best, a mistake. We trust it is not a politically inspired device to distract the nation from difficult decisions that must be made as it reorders priorities to give more attention and more resources to specific problems of employment and economic growth, social welfare, health, education, housing, environment, and equal opportunity.

America has the resources—and a governmental structure that has stood the test of time—to meet these problems. It is a lack of commitment at the highest levels of government that hinders progress. We genuinely fear that this proposed massive reorganization of the structure of government is not a commitment to progress and will serve only to further hinder progress.

In no wise do we view this proposal as returning "power to the people." In our view, it would have a reverse effect and diminish the power of the people to have a continuing, effective voice in the operations of their government.

The power of the people in a democracy, of course, lies first in the ballot. But just as vital in the American system is their right to petition their government—in an effective manner—for the redress of grievances.

The current system of departments, responsible for and responsive to specific constituencies has been developed and improved through years of experience. We believe it can be further improved and made more efficient. But we do not believe in scrapping a viable method for one that is not yet even off the drawing board.

A Word Edgewise:

Sickness—Not Ideals—Drives Young Extremists to Violence

By John P. Roche

OFF AND ON over the last two years I have used this space to suggest that men and women of goodwill have been sadly, even tragically, mistaken when they assigned high ideals to young extremists.

Rather, I have contended, one has to consider the extremism of the Weathermen and similar groups as a variant of social pathology, as a witless commitment to violence similar to that described by Dostoevsky in "The Possessed." These were not "revolutionaries" in any significant political sense—they were twisted young people striking out blindly at any institutions that tried to restrain their ego trips.

For saying such things I have regularly been accused of "cynicism," of inability to "bridge the generation gap," and of numerous similar sins. And invariably when a lunatic act of violence occurred, high theory would be invoked to explain it. A clergyman would explain gently that, while he, of course, did not approve or justify violence, we had to understand the motives of those involved, who were engaged in a form of "prophetic witness" or "dramatic homily" against the repressive, war-making state.

This discourse could easily go on for hours, and by the time the Reverend had completed his non-justifying explanation of, say, a bombing, one might think that, if anything, the bomber should get a medal, or be added to the Calendar of the Saints. "We are all guilty—perhaps even guiltier than the bomber because we stand silent in the face of evil, racism, imperialism, and repression."

I have attended half a dozen sessions of this sort, and I never cease to be amazed that perfectly decent people seem to get pleasure from pleading guilty to sins they never committed.

Of course, if an ordinary, run-of-the-mill bank robber turned up in court to announce that, properly understood, he had not been robbing a bank—he had been engaged in a "prophetic witness" against the evils of capitalism—I doubt if he would be lionized by progressive priests, rabbis, and ministers. For some reason or other, the normal rules of common sense are abandoned when it comes to dealing with the destructive activities of young extremists.

Admittedly I have considerably more first-hand experience with these types than the average clergyman. When I returned to teaching from the White House, the militants set out to drive me off the turf and it took me about 30 seconds to realize that I was not dealing with idealistic candidates for beatification—I was facing a bunch of storm troopers.

Their "prophetic witness" consisted largely of chanting obscenities in unison, of turning radios on in class, and finally of trying to burn my office.

IN ANY CASE, I am still teaching and they have gone. And I confess a deep sense of pity and anger: pity because they were sick kids, mostly equipped with self-destruct buttons (drugs); anger because all the high-level theorizing about their "dedication and idealism" diverted attention from their sickness. They were permitted in essence to sentence themselves to death while their elders blathered about their uniqueness.

While I am not the Christian I should be, the thought of those youngsters lying comatose, stoned in doorways on Telegraph Hill or in Greenwich Village or Harvard Square, brings tears to my eyes.

I have wandered a bit from the central point: that extremists have a low ideological thrust, that they are fundamentally nihilists addicted to violence almost for its own sake.

Now Dr. Gallup has turned up with fascinating data. In a poll confirming the obvious fact that most students shun extremism, there were two footnotes: first, students who identified themselves as "far left" gave a very favorable rating to the Ku Klux Klan and the John Birch Society; and, second, a large number of students who considered themselves "far right" thought very highly of the Panthers and the Weathermen.

As I said, storm troopers understand each other.

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Council Cites 9 Points:

Alternative Measures Offered To Revenue-Sharing Proposal

THE AFL-CIO EXECUTIVE COUNCIL took a sharp look at the Nixon Administration's proposed revenue-sharing plan and found it the wrong answer to the very real financial problems of cities and states.

Federal programs should be strengthened, not dismantled, the council said. To accomplish this, it urged the following nine-point alternative to the Administration version of revenue-sharing:

1. Full funding of existing federal grant-in-aid programs is essential. If the gap between authorizations and appropriations had not widened over the past few years, federal aid to the states and localities would now be $6 billion higher. In addition, a greater degree of certainty should be built into the system, so that state and local officials can plan expenditures and implement programs, with an assurance that the federal money will be forthcoming.

2. Immediate adoption and implementation of a program of federal grants to states and local governments to create public-service jobs is essential. This is realistic revenue sharing which would substantially reduce unemployment and allow the states and localities to meet community needs.

3. The federal government should take over the costs of public welfare. This would assure a flow of federal funds to where the needs are greatest and would ease the financial burdens of the states and local governments.

4. A careful review of present federal categorical grants is needed. Such a review should be done with the aim of consolidating overlapping grants, increasing their efficiency and making it easier for state and local officials to be aware of and obtain the federal aids available to them. However, the purposes, performance standards and requirements of the programs should not be destroyed in the process of consolidating and streamlining the grants.

In some programs, it may be appropriate to eliminate state and local financial matching.

5. The unfinished business of tax reform must be undertaken at all levels of government. The great reliance of the states and localities on unfair and unproductive tax structures has contributed substantially to their failure to meet their public needs.

Much more emphasis must be placed on income taxes, based on ability to pay. The tax-break, in many localities, given to industrial and commercial property at the expense of the home-owner and renter through inequitable assessments is scandalous and must be corrected.

Much also remains to be done to achieve justice in the federal tax structure, by eliminating the loopholes of special privileges for corporations and wealthy families and by rejecting any and all efforts that would move the tax structure further away from the principle of ability to pay.

6. A federal tax credit for state income tax payments should be established, in place of the present method of deducting such taxes from taxable income. This would add a big element of equity to the tax structure, realistically share revenues and encourage the states to make more effective use of income taxes.

7. A study of consolidation of inefficient local government units should be pursued. Many of the 81,000 local spending and taxing units of government present an obstacle to raising and using public funds efficiently. This proliferation of local governments has led to difficulties in enforcing and collecting local taxes and to high tax-administration costs.

Many localities are too small to raise the revenue needed for public facilities and services, and taxing jurisdictions determined by historic or geographic accidents—or overt attempts to "zone" out the poor—are usually unresponsive to modern economic and social needs. Many others represent boundary lines that are obsolete and do not reflect present economic realities.

8. New financing methods or institutions, such as a federal Urban Bank, should be explored to provide states and localities easier access to long-term, low-interest loans for the construction of public housing, urban transit systems, and other community facilities.

9. Finally, there is a long list of policies and proposals for the needed modernization of state and local governments. For some states, constitutional reform could be the most important step; for others, tax reform; still others might require a shift in responsibilities between the state and local governments. The consolidation of inefficient local government units, such as some local school districts, would be a forward step.

4 Centers Activated:

Labor Program Aids Veterans In Job Placement and Training

ORGANIZED LABOR'S program to help veterans find jobs or training that fit their skills or interests is now under way at four military separation centers in the San Francisco area, an AFL-CIO manpower official reported.

More than 1 million men and women will resume civilian life this year and face an already tight job market in which 6 percent of the work force is out of work, said Julius Rothman, president of the AFL-CIO Human Resources Development Institute. The pilot Veterans Assistance Program, he said, is geared to help those not returning to school or job commitments find apprenticeship slots or jobs that match their military training and experience, particularly in the building trades.

Appearing on the network radio interview Labor News Conference, Rothman said the federal government's program to equip servicemen and women with civilian job skills is "happenstance," at best. "If a returning veteran happens to be at a base where there happens to be a program, he may be eligible for training, but there is no provision to send him to a base where training facilities are available."

However, efforts by the Department of Defense and Labor to "increase the national awareness of the veteran as a job candidate" can help ease the problem, he added.

Rothman renewed the call for federal job-creating legislation along the lines of the Manpower bill enacted by Congress last year, but killed by Pres. Nixon's veto. The Administration's proposed revenue-sharing plan is not a valid "alternative to the actual creation of public service jobs," he said.

"You can't assume that if the states and localities are given funds to spend, with no strings attached, they are going to create any new jobs," he declared.

Rothman stressed that "unless the federal government particularizes and earmarks funds," the effort "will not zero-in on the unemployed, who are in need of jobs, and who would be the beneficiaries of a public service employment program."

Rothman noted that "there are very definite limitations on the Administration's interest in veterans and veterans' programs." He pointed out that the government's Jobs for Veterans program operates on a budget of only $200,000.

"Now if they really wanted to go on it," Rothman suggested, "they could staff a program that would be somewhat better-heeled, so that it could operate more efficiently."

ABOUT 25 PERCENT of the 1 million veterans returning to civilian life will resume their education while others will pick up on jobs they left off, Rothman said.

However, a very substantial number of young men are coming out of service with no skills related to civilian jobs, he stressed.

"Many times they have only limited education, and will come into a situation where we already have 5 million unemployed," Rothman said. "In a situation like that this new veteran needs help. This is what we hope to do with the AFL-CIO Veterans Assistance Program, perhaps for only a small part of the whole group, but we hope to make a contribution to the effort."

Reporters questioning Rothman, who is also associate director of the AFL-CIO Dept. of Urban Affairs, were Donald Finley of United Press International and Frank Swoboda of Business Week magazine.

By Press Associates, Inc.

THE LAST MAJOR revolution against the rules and procedures of the House of Representatives took place in 1910 when the powers of Speaker Joseph (Uncle Joe) Cannon (R-Ill.) were pretty effectively muted.

Hopes of congressional liberals of both parties for a new shakeup in the 92nd Congress apparently are not going to be realized, but the rumblings that could lead to a future groundswell are there.

We've had rumblings that led to change before.

Immediately after the Civil War, for example, one-party Republican rule dominated Congress. By 1875 when the Democrats took control of the House—but not the Senate—there developed a total lack of leadership in Congress and in the Executive Branch.

This 15-year vacuum led to a dramatic assumption of power by Speaker Thomas B. Reed (R-Me.) in 1889. As speaker he was also chairman of the Rules Committee with power to name committees and chairmen of the committees and even to recognize or not recognize members on the floor.

"Reed Rules," which were also followed by Democratic speakers, were established for the purpose of giving direction in the House and a degree of party responsibility that had been lacking. It did make the House a more effective body.

At the same time, these rules also made it possible for a heavy-handed dictator to emerge. He did in Joe Cannon. Insurgent Republicans joined wtih Democrats to find ways to curb the power of the speaker, who had the power to frustrate the entire nation.

In 1909, in a series of close procedural votes, reformers did win some minor skirmishes. In 1910 Rep. George Norris (R-Neb.) succeeded in winning adoption of a resolution providing that members of the Rules Committee would be elected and the speaker would not be a member of it.

There were further liberalizations of the rules, too, but one by-product of the revolt was to make seniority a more dominant factor in the make-up of the House.

Today, seniority seems to be the biggest single issue in congressional reform. Efforts of Democrats in this Congress to restrict the age and tenure of committee chairmen did not win approval of the House Democratic Caucus.

The seriousness of age as the sole factor in determining committee chairmanships appears to have grown through the years. At the time of the Cannon revolt, the average age of committee chairmen was 50. It has since grown steadily to 65.9.

THE AVERAGE TENURE of committee chairmen in the House has risen, too, from 1.4 years in 1911-1920 to 7.5 years in the 1960s.

The House Democratic Caucus, while not fundamentally restricting the seniority rule this year, made these changes:

- The chairman of a full committee cannot be the chairman of more than one subcommittee of that committee.
- No member can be chairman of more than one legislative subcommittee.
- No member can be a member of more than two committees with legislative jurisdiction.

The House Republican Conference took more decisive steps in making their rules more democratic. Of course, the Republicans had less at stake in voting only for minority rankings on each committee.

Under the Republican procedure, the ranking Republican on each committee will be elected by vote, not merely seniority. If Republicans gained control of the House, the system would apply to selection of committee chairmen.

The procedure, while a vast improvement, isn't all that democratic. The Republican Committee on Committees will nominate a member to be the ranking GOP member on each committee, not necessarily on the basis of seniority.

While neither the Democratic nor the Republican action could be characterized as even mildly revolutionary, without question there are rumblings.

RETURNING VETERANS are now getting help in finding jobs or training that fit their skills or interests through a new union-sponsored program at four military separation centers in the San Francisco area, Pres. Julius Rothman, center, of the AFL-CIO Human Resources Development Institute, reported on Labor News Conference. He was questioned by Donald Finley, left, of United Press International and Frank Swoboda of Business Week magazine. The AFL-CIO produced interview program is broadcast Tuesdays over Mutual radio.

How-to-Buy:

Important Tax Changes Affect Low-Paid, Part-Time Workers

By Sidney Margolius

THERE ARE IMPORTANT changes in the tax rules this year which you ought to know about before you send in your return on 1970 income due April 15. These changes especially affect low-income and part-time workers, including any of your children who may have worked part-time. They can have up to $1,725 in income without owing any taxes.

You should see that your child files a tax return if he worked part-time, in order to recover federal income taxes if they were deducted from his pay.

But in addition to part-time workers, many low and moderate-income families with several children will not owe any federal income tax this year, and may be eligible for refunds, because of a special "low-income allowance."

On your return for 1970 income, you have a choice of three ways to take deductions:

- You can itemize deductions.
- Or you can take a blanket deduction of 10 percent of your adjusted gross income up to $1,000 ($500 on the separate return of a married person).
- Or you can use the optional tax tables to take a minimum standard deduction which now includes an additional allowance for low-income taxpayers.

The new minimum standard deduction is the total of two amounts: a "basic allowance" and an "additional allowance." The basic allowance consists of $200 for each taxpayer plus $100 for each exemption on his return. The additional allowance, designed to help low-income taxpayers, is $900 minus $100 multiplied by the number of exemptions.

Note that these two allowances always add up to $1,100. For a single person who has only himself as an exemption, the basic allowance is $300 and the additional allowance, $800. For a couple, the basic allowance is $400 and the additional allowance $700, and so on.

Now if you add to these allowances the 1970 exemption of $625 per person (increased from the century-old $600), you see that a single person can have nontaxable income for 1970 of as much as $1,175 ($1,100 plus $625). A couple can have $2,350 of nontaxable income ($1,100 plus $1,250). Similarly, a taxpayer with three exemptions can have $2,975 of nontaxable income; one with four exemptions, $3,600; five, $4,225; six, $4,850; seven, $5,475; eight, $6,100.

But: if your income is over these amounts, the "additional allowance" is reduced on 1970 returns by $1 for each $2 of excess income until it melts away completely.

IF YOU ARE a moderate-income taxpayer who might benefit from the new allowance you don't need to figure it out yourself, although it helps to understand it. The optional tax tables that come with your tax forms have the minimum standard deduction, including the low-income allowance, already built-in for families of various sizes.

But what the average family with income under $10,000 does need to decide is whether itemizing deductions would save taxes compared to using the optional tax tables with their built-in standard allowance. (Families with incomes of $10,000 or over, or who have more than $100 of dividends or interest, can't use the optional tax tables in any case. They must either itemize or take the 10 percent standard allowance.)

Let's see how a typical family would decide which of the alternative deduction methods would be best. Mr. and Mrs. Smith have two children and adjusted gross income of $8,000. First they estimate that their potential deductions would total $900 if itemized. This obviously would be better than the $800 the 10 percent blanket deduction would give them.

But would the new additional allowance help them? First the Smiths estimate what their tax would be on their $8,000 income if they itemized. With their itemized deductions of $900 and their four exemptions of $625 each, they can subtract a total of $3,400 from their gross adjusted income. This leaves $4,600 of taxable income. The normal tax on this $734. Then they look at the optional tax table for returns claiming four exemptions and find that the tax shown there for an adjusted gross income of $8,000 would be $757.

Thus, they would get no help from the minimum standard allowance. So the Smiths itemize deductions.

But take a family with less income and more exemptions. Joe Jones, with a wife and four children, suffered a work cutback in 1970. His gross adjusted income was $5,000. The Joneses add up their potential deductions and find they come to $800 if itemized; obviously preferable to a 10 percent standard deduction of only $500.

But as they see by checking the optional tax tables for six dependents, they would get some help from the minimum standard allowance. The tax shown in the tables is only $37 instead of the $63 they would pay if they itemized deductions.

EDUCATIONAL PROGRAMS for pre-school youngsters were examined in a three-day symposium sponsored by the Clothing Workers at the Johns Hopkins University in Baltimore. Among the leading speakers were, from left, Pres. Lincoln Gordon of Johns Hopkins, Rep. Patsy T. Mink (D-Hawaii), ACWA Vice Pres. Sam Nocella and ACWA Pres. Jacob S. Potofsky. The symposia are funded by a $110,000 grant to the university from the union in memory of the ACWA's late Executive Vice Pres. Hyman Blumberg.

1,300 Die in '70:

Choking Accidents Show Need for Care

ACCIDENTAL DEATH from choking is an all too prevalent happening, reports Robert M. Oswald, national director of Red Cross safety programs. "But what is more important," he emphasizes, "is that many deaths of this sort could have been prevented if someone had administered proper first aid."

Last year, 1,300 persons in the United States died from ingesting or inhaling food or foreign objects that clogged their breathing passages. Half of these occurred among children under five years of age. Another third were persons over 45.

The Red Cross safety director explained that with young children, danger from choking stems from their tendency to put practically everything into their mouths and their inability to properly chew food.

Infants are inclined to swallow automatically, he said. If a child pops a marble or button into his mouth, he may try to swallow it rather than spit it out as an adult would. If the tot has not yet begun to talk, the situation may go unrecognized until serious complications or death result.

TO PREVENT CHOKING accidents among children, Oswald advises parents to take exceptional care to keep small objects—coins, safety pins, toys and similar items—out of reach of infants. Toys should be sturdy so that small parts may not be detached and swallowed. Older children must be taught not to give a baby objects he can put in his mouth.

Food, improperly chewed, can also be a choking hazard to a youngster, says the Red Cross. "Children under five should not be given nuts, raw fruits or raw vegetables. Meat should be finely chopped for them," said Oswald. "These foods require the grinding action of molars and infants cannot adequately chew them." He also warns that a child should not run while eating or be stimulated to laugh or cry with food in his mouth.

Among adults, one of the most prevalent reasons for choking accidents is careless or lazy chewing habits, especially among denture wearers. Raw foods and meats should be masticated thoroughly before swallowing. Older persons tend to lose sensitivity in the mouth with age. For this reason, bones are sometimes swallowed while eating foods such as fish and fowl.

Denture wearers are warned to chew their food approximately twice as long as when they had normal teeth.

"This isn't exactly what I had in mind when I asked for a larger pay check, sir."

From Soup to Nonsense:

Little, Unexpected Pleasures Offer Life's Golden Moments

By Jane Goodsell

DISCOVERING that you can still do something (turn a double somersault, make a cat's cradle, sing all the verses to your old school song) that you'd thought you'd forgotten how to.

Bumping into an old beau when you are looking your very best.

Finding a $10 bill in an old purse you were about to give to a rummage sale.

Doing something (reading a classic, walking to work, taking French lessons) because it's good for you, and discovering that you enjoy it.

Yanking on a knotted shoelace and having it come unstuck.

Getting an unbirthday present from somebody who impulsively got the urge to do something nice for you.

Having your checkbook balance on the very first try.

Doing a good deed anonymously and having it found out.

Discovering that you've lost five pounds by accident without dieting.

Being mistaken for somebody younger or prettier or thinner than you are.

Making up after a fight with somebody you love.

Finding something you desperately need (a safety pin, an airmail stamp, an inner reserve of strength) that you thought you didn't have.

Guessing correctly who-dun-it in a detective story.

WAKING UP to realize that your scary dream was just a scary dream.

Being asked a hard question (what's the population of Philadelphia? who wrote "Thanatopsis? what's the name of that song?) and knowing the answer.

Remembering in the nick of time something important that you almost forgot to do.

Doing something rude or stupid or embarrassing, and realizing that nobody noticed.

Making just enough dressing to stuff a turkey without any left over.

Post-Census Redistricting:

New Gerrymanders Threaten Fair Vote

Thanks to a series of Supreme Court decisions in the 1960s, the principle of one-man, one-vote representation is now firmly established.

No longer can one congressional district have a population of 700,000 while another has only 250,000. No longer can a rural county of 35,000 and a city of 150,000 have the same representation in the state legislature.

But two knowledgeable trade union political analysts have a timely reminder in the February issue of the American Federationist that the problem of unfair representation has been only half-solved by population equality of districts.

The authors of "The New Gerrymander Threat" are Gus Tyler and David I. Wells. Tyler is director of the political department of the Ladies' Garment Workers and a recognized authority on practical politics as well as political theory. Wells, assistant director of the department, was the initiator of lawsuits challenging redistricting actions of the New York legislature. The suits have added importantly to the body of federal court decisions on apportionment.

Their article in the AFL-CIO's magazine could not be more timely, for this is the post-census year when every state will be required to redraw its political districts to account for population shifts and 14 states will either gain or lose congressional seats.

While court precedents will assure that the new districts will be equal in population, there is no assurance that the result will be fair representation.

As the authors point out, skillful gerrymandering of district lines to favor a particular party "can turn the popular vote topsy-turvey" even with equality of population.

The origin of the word "gerrymander" dates from an early 19th Century Massachusetts governor, Elbridge Gerry, who devised a district resembling a salamander in order to stack the political cards.

Modern-day politicians are no less imaginative. Tyler and Wells note that congressional districts carved out in New York City by a Republican legislature after the last census gave birth to such descriptions as The Jaws of the Wrench, The Upside Down Crocodile, and the prize of them all—The Camel Biting the Tail of the Buffalo Which Is Stepping on the Tail of the Dachsund.

Even without such extreme cartographic contortions, district lines often can be shaped for partisan advantage—and have been, of course, by Democrats and Republicans alike.

The authors demonstrate this vividly with a map showing four adjoining districts. Overall, there are an equal number of Party X and Party Y voters, but the bulk of Party X voters are concentrated in a heavily populated segment.

By careful drawing of boundary lines, one version would give Party X three of the seats but an alternate version would give three seats to Party Y. Or an equitable apportionment can easily be drawn up, giving each party two relatively safe districts.

Taylor and Wells view with some concern the Supreme Court's disregard of the gerrymandering issue and its acceptance of the carving up of political subdivisions so long as mathematical equality of population is achieved.

Fortunately for the political health of the nation, the 1970 elections largely rectified the one-party domination of legislatures and governorships that the Republican Party had established in most states outside the South.

The Federationist article makes the often overlooked point that divided control often leads to "bipartisan gerrymandering" which is designed to protect incumbents and political power bases.

"This type of gerrymandering," the article suggests, "can now be anticipated in many major states" and "curtails the voters' political effectiveness almost as severely as the partisan variety."

How then to achieve fairness?

Taylor and Wells suggest the combination of an independent commission with a set of firm guidelines "to reduce the extent of human discretion in the districting process."

They propose these rules:

- All districts must be geographically contiguous.
- No city block may be divided.
- All districts must be equal in population except where minor deviations are required by the above two rules, but no deviation may exceed 2 percent of the average population of all the districts.
- Divisions of counties, cities and towns must be limited to the minimum necessary to keep within the population requirements. Cities or towns shall be divided in preference to counties, and more populous units in preference to less populous ones.
- Consistent with the above rules, the total length of boundary lines shall be as short as possible.

Gerrymandering Comes in Many Shapes...

With Unequal Districts...

District 1 —
Population: 1,000,000; Party "X" wins by 3-1 margin
District 2 —
Population: 333,334; Party "Y" wins by 5-3 margin
District 3 —
Population: 333,333; Party "Y" wins by 3-1 margin
District 4 —
Population: 333,333; Party "Y" wins by 7-1 margin

■ Party "X" wins 1 seat; □ Party "Y" wins 3 seats

With Equal Districts.

(Each District Has 500,000 Population)
District 1 — Party "X" wins by 3-1 margin
District 2 — Party "Y" wins by 3-1 margin
District 3 — Party "Y" wins by 7-5 margin
District 4 — Party "Y" wins by 7-5 margin

■ Party "X" wins 1 seat;
□ Party "Y" wins 3 seats

But Apportionment Can Be Equitable.

(Each District Has 500,000 Population)
District 1 — Party "X" wins by 7-5 margin
District 2 — Party "X" wins by 2-1 margin
District 3 — Party "X" wins by 7-5 margin
District 4 — Party "Y" wins by 5-1 margin

■ Party "X" wins 3 seats;
□ Party "Y" wins 1 seat

(Each District Has 500,000 Population)
District 1 — Party "X" wins by 3-1 margin
District 2 — Party "X" wins by 3-1 margin
District 3 — Party "Y" wins by 2-1 margin
District 4 — Party "Y" wins by 5-1 margin

■ Party "X" wins 2 seats; □ Party "Y" wins 2 seats

Schmidt Plant Signs Contract With Bakers

Baltimore—The Bakery & Confectionery Workers announced the signing of a first contract covering the Schmidt Baking Co. plant here as the aftermath of an 18-week strike and boycott, and also a recognition agreement with Koester's, the biggest independent bakery firm in the Baltimore area.

Members of B&C Local 68 voted unanimously to accept a 30-month contract which will give Schmidts 175 production and maintenance employes, mostly ghetto dwellers, a raise of 75 cents an hour over the contract term.

The agreement includes a 27-item fringe benefit package featuring full Blue Cross-Blue Shield medical coverage for the workers and their dependents, fully company-paid.

Also provided are a full union shop, a dues checkoff system, an improved pension plan and extra pay for night work.

Schmidt workers walked out of the previously non-union shop last July 21 in sympathy with fellow workers in Cumberland, Md., and in protest against their own conditions. They stayed out until Nov. 24, when Schmidt and the Stroehmann Brothers chain settled with the union after a labor boycott of their products.

Union Business Manager Henry Koellein said that after the settlement was announced, Koester's Bakery agreed to recognize the union on the basis of a cardcheck of its 300 workers. The check will be conducted by the National Labor Relations Board. Koester's for more than 20 years had resisted all attempts by its employes to organize, the union said.

Papermakers' 3-Year Pact Settles Strike

Alton, Ill.—The Papermakers & Paperworkers won wage increases totaling 98.5 cents an hour in a three-year contract that ended a 25-week strike against the Alton Box Board Co.

The wage package calls for boosts of 44.79 cents an hour the first year, 28.22 cents the second and 25.50 cents the third year for members of UPP Locals 975 and 976.

The agreement also provides an additional paid holiday each year, an improved vacation schedule and lower hospital insurance costs.

Local 975 Financial Sec. Robert E. Martin said that under the new pact, employes will get a one-week vacation for one year of service, two weeks for three years, three weeks after eight years, four weeks for 15, five weeks for 25 and six weeks for 30 years of company service.

After the second year of employment, the family insurance plan will cost employes $7.80 a month, with the company paying the difference. Insurance costs in the past have ranged up to $31.19 a month, Martin said.

During the strike a U.S. district judge struck down as unconstitutional Alton's anti-strikebreaking law, which was invoked in the dispute. The Alton-Wood River AFL-CIO and city officials are cooperating to draft a new law that they expect will be upheld in court.

Unionists Aid Rescuers In Los Angeles Quake

Los Angeles—Union members had no monopoly on sacrifice and service when a killer earthquake slugged the Los Angeles area Feb. 9, but 300 union cooks and waitresses and a union chef shared the spotlight in different ways.

The cooks and waiters heard a broadcast appeal for help from restaurant chain owner John Scoby and made their way to four of his restaurants.

They stayed on duty, feeding rescue workers and quake refugees, until the food ran out or regular employes were able to make it back through disrupted traffic and damaged streets.

The chef was Frank Carbonaro, of the San Fernando Veterans Administration Hospital in which many of the more than 60 temblor victims lost their lives.

Carbonaro, 68, is recovering in another hospital after being trapped in the rubble of the three-story VA kitchen building for 58 hours. He has a broken hand and suffered extreme fatigue but feels lucky to be alive, he told officers of his union, Hotel & Restaurant Local 694 in Sherman Oaks, Calif.

With rescue operations still in full swing, Pres. Ed Miller of the Hotel & Restaurant Union sent Anthony Anselmo, his administrative assistant, to the West Coast. Anselmo called together representatives of all culinary locals and they established an Earthquake Crisis Fund to channel relief to members who need it most.

At least a dozen restaurants were demolished by the quake and many employes were unable to work, the union representatives told Anselmo.

The restaurant union has learned to meet such emergencies since the San Francisco earthquake of Apr. 18, 1906. Shortly after that date the international union sent Vice Pres. W. Edward Horn to the Bay area with $5,000 in gold in a leather satchel to help wherever he thought it best. Members in other locals sent almost $12,000 in relief contributions also.

In the middle '60s, Miller said, his union contributed $25,000 for the relief of Alaskan members hit by a damaging shake.

On the day of the quake here Carbonaro reported for work on the 6 a.m. shift at the VA hospital. He was starting to prepare breakfast for patients and staff when the lights went out and the building began to sway.

The elderly chef was found a day after rescue workers were sure there were no more survivors.

Sec. Herman Leavitt of Culinary Local 284 estimated that at least 400 members of his local suffered damage to their homes, as did many others throughout the area. Local 694 Business Agent Ed Ivy found his house was destroyed.

Outreach Plans To Train 910 Minority Youth

Eleven Outreach projects in six states have been renewed under Labor Dept. contracts totaling $1.1 million to prepare 910 minority group youths for apprenticeship entrance examinations in the building and construction trades.

The new one-year contracts are for Outreach programs in Albuquerque, Chattanooga, Cincinnati, Dallas, Fort Worth, Houston, Salt Lake City, San Francisco, Sacramento, Oakland and Santa Ana, Calif.

Under previous contracts sponsored by local and area AFL-CIO Building & Construction Trades Councils, 1,574 trainees were placed as apprentices in 18 building trades.

The Outreach program gives the youths 10 weeks of training to help them pass written and oral examinations administered by joint apprenticeship committees representing contractors and trades unions.

The program sponsors also counsel and assist the youths until they complete their apprenticeship.

The AFL-CIO building trades councils are directly involved with the contracting of the programs in 10 of the 11 areas.

The largest Labor Dept. grant will go to the Oakland-based Bay Area Construction Opportunity Program where 230 youths will be readied for apprenticeships under a $285,622 contract. The Bay Area program had placed 546 apprentices—498 from the minorities—under earlier contracts.

Other major contracts are for Santa Ana, 130 apprentice candidates under a $169,200 grant; Sacramento, 100 youths, $136,573, and San Francisco, 125 candidates, $135,669.

The additional contracts are for Cincinnati, 50 youths, $83,989; Salt Lake City, 30 youths, $52,062; Chattanooga, 30 youths, $51,927; Houston, 60 youths, $50,225; Fort Worth, 50 youths, $48,979; Dallas, 60 youths, $48,703; and Albuquerque, 45 youths, $48,048.

'Turn it On!'

Attendance Policy Held Biased Against Union

A Kansas firm's "perfect attendance award" system has been found by a National Labor Relations Board examiner to be far from perfect.

The firm, Electronic Research of Overland Park, not only discriminated against employes who testified as witnesses for a union at an NLRB election hearing in 1969 but repeated the offense in 1970 in spite of a board order to treat all employes alike.

Trial Examiner Alvin Lieberman reported that some employes were subpenaed to appear at the 1969 hearing on an election petition filed by the Auto Workers. Other employes appeared on behalf of the company.

A worker who obeyed the NLRB subpena was charged with being absent from work, which broke his attendance record. He did not get an award under the company's system, but other employes subpenaed by the company were given credit for work time and one received an award. The examiner in the case found such discrimination unfair and issued a cease-and-desist order. He was upheld by the board.

Now it turns out that the company applied the same discriminatory treatment to workers who testified at the hearing on the first complaint. And this time management added a new twist—it docked the pay of some employes for being absent but didn't dock others who appeared as company witnesses.

Of the three who were docked for their absence, one lost a cash attendance award for the month, the examiner found. Three other employes who testified at the company's request got their full pay and one qualified for perfect attendance.

This was the same sort of illegal discrimination the company had been found guilty of earlier, Lieberman ruled. He followed the NLRB's decision in the first case in recommending steps the company should take to remedy its unfair conduct.

The examiner ordered Electronic Research to post notices agreeing to give employe Betty Colton the perfect attendance award, or the cash equivalent if she prefers, to which she would have been entitled if she had not complied with an NLRB subpena to testify. Also he directed that she and two fellow workers be paid the wages lost when the company docked them for obeying official subpenas.

Under the firm's perfect attendance award program, management gave merchandise prizes of increasing value for monthly, bi-monthly, half-yearly and yearly perfect attendance. To be eligible for any of the awards, an employe was required to work a full 40-hour week and a normal eight-hour day.

New AFL-CIO Pamphlet Analyzes 91st Congress

The 91st Congress compiled a "good" record and would have had an even longer list of accomplishments if it hadn't been for Administration policies and presidential vetoes.

That's the evaluation of the AFL-CIO Dept. of Legislation and its director, Andrew J. Biemiller.

It appears in the foreword to a new 116-page pamphlet, Labor Looks at the 91st Congress.

The new booklet, latest in a continuing series of legislative reports, deals with 99 bills and issues that concerned the trade union movement during the past two years.

It reflects the broad scope of labor's legislative concerns.

There are concise reports on job-related bills such as occupational health and safety, unemployment insurance, collective bargaining rights and regulation of pension plans.

But there are reports, too, on tax reform and farm subsidies, on housing and education, on food stamps and school lunches, civil rights and consumer protection.

The foreword cites some of the "outstanding achievements" of the 91st Congress: the occupational health-safety law, tax reform, extension of the Voting Rights Act, collective bargaining for postal workers, and more money for education.

It hails the rejection of the nomination of "two anti-labor anti-civil rights judges" for the Supreme Court "as a result of the vigorous fight waged by a liberal-labor-civil rights coalition."

And it analyzes the setbacks—those resulting from White House action, such as the veto of the manpower public service jobs bill, and those resulting from the bottlenecks within Congress.

End of the session filibusters and logjams blocked action on social security increases, welfare reform, trade legislation, consumer protection and led to "butchering of the food stamp program."

These and other issues remain for the 92nd Congress, the report notes, along with such high-priority measures as national health security, and improved minimum wage and electoral reform.

The pamphlet closes with a listing of labor's "agenda for the 92nd Congress."

Single copies of Labor Looks at the 91st Congress, Publication 77L, are available free from the AFL-CIO Pamphlet Division, 815 16th Street, N.W., Washington, D.C. 20006. Multiple copies are 15 cents each or $13.50 for 100.

Community Action Unit Elects Martin, Rothman

Roger F. Martin, general manager of the Air Line Pilots, has been elected president of Joint Action in Community Services, a national organization that helps disadvantaged workers find jobs, housing and meet other needs.

Directors of JACS also elected Julius Rothman, associate director of the AFL-CIO Dept. of Urban Affairs, as vice president of the volunteer organization.

Labeled Misleading, Inadequate:

Revenue Sharing Scored by Mayors

The nation's mayors branded Pres. Nixon's revenue-sharing plan both misleading and inadequate, and charged that the Administration's proposed budget would shortchange the cities.

A joint report by the U.S. Conference of Mayors and the National League of Cities warned that enactment of the Administration proposals could result in less federal money for municipalities and states.

The President's budget, the report said, "falls at least $5.7 billion short of meeting the state and municipal revenue gap."

Furthermore, it is "misleading about the actual amount of new money the President is asking for, raises more questions than it answers about how the special revenue-sharing process will be reconciled with the present management of programs it will embrace, and reveals the Administration's intention to persist in holding back spending already appropriated funds in the current fiscal year for critical urban programs."

The money Congress has appropriated but the President is refusing to spend, the report revealed, includes $200 million each for urban renewal and water-sewer grants, $192 million in public housing contract authority "and a staggering $732 million" that should be available for model cities programs.

The two municipal organizations represent more than 15,000 cities and their attack on the budget and criticism of the revenue-sharing proposal apparently demolished White House hopes that pressures from "back home" would overcome congressional opposition to the Administration plan.

In fact, the mayors' report charged, the budget includes glaring examples of "reverse revenue sharing."

Thus, the budget proposal for summer youth programs calls for local governments to double their contribution from 10 percent to 20 percent.

At the same time, it proposes to "sharply cut" federal funds for the program by $32.2 million.

"In effect," the mayors said, "through this form of reverse revenue sharing, the Administration is looking to the scarce resources of local governments to help salvage the program and thereby lessen the federal government's commitment to this priority national program."

As for the Administration's multi-billion dollar "special revenue-sharing" plan, the mayors stress that "all but a small portion of the money promised . . . is merely a re-labeling of funds already being transferred to state and local governments for categorical programs."

Without the revenue-sharing gimmick, the report suggests, federal grants-in-aid to states and cities could be expected to continue their steady rise. But under the Administration's budget-revenue package, the increase next year would be less than half what it was over the past year.

Davis Heads Labor Unit Of Partnership for Arts

Musicians Pres. Hal C. Davis has been named chairman of the National Labor Committee of the Partnership for the Arts—an ad hoc group seeking increased federal support of the nation's financially troubled art institutions.

"I need not emphasize the value of this effort to us, both as American citizens concerned with our national cultural climate and as professional musicians devoted to our art," said Davis, who succeeded Herman D. Kenin as president of the union.

The Musicians said approximately 6,000 of its members play with symphonic orchestras.

Davis noted that the country is in the midst of a cultural explosion with a 66-percent increase in the number of concerts given by major orchestras within the past 10 years.

"But since these and related activities are not self-supporting, the greater activity leads only to greater deficits.

"Certainly we as a nation can afford to put our support for the arts at least on a par with some other nations in the world who do not enjoy our wealth," he said.

The immediate goal of the Partnership for the Arts is a $30-million appropriation from Congress to the National Endowment for the Arts for fiscal 1972. Although Congress already has authorized the amount, the actual money available depends on the sum appropriated by the House Appropriations Committee.

Davis urged members of the Musicians and other unions and state and local central labor bodies to write members of Congress urging full funding of the endowment.

The long-range goal of the Partnership for the Arts is an annual federal funding level of $200 million for the endowment. While this sum sounds large, Davis observed, it fails by a sizable margin to meet federal support levels for the arts in such nations as Austria, Canada, West Germany, Sweden, Great Britain and Australia.

The formation of the Partnership for the Arts is an outgrowth of a successful campaign to secure an $18-million appropriation from the New York State Legislature for the support of the arts.

New ILPA Leaflet Expands on Ethics

"The Ten Commandments of the Labor Press" refers to the code of ethics subscribed to by all trade union publications affiliated with the International Labor Press Association.

It also is the title of a new ILPA pamphlet which interprets the code, so that there can be no misunderstanding of the rigid standards for solicitation and acceptance of advertising. The code and its strict enforcement is viewed as a protection for gullible businessmen—and for the reputation of the trade union movement.

The pamphlet sells for 25 cents from the International Labor Press Association, 815 16th Street N.W., Washington, D.C. 20006. For orders of 200 or more, the price is 15 cents a copy.

3 of 4 Unions Settle:

Nixon Asks Options In Railroad Dispute

(Continued from Page 1)

negotiations Feb. 15 after the Clerks came to terms with management. Sources close to the talks said some disputed issues have been cleared tentatively and prospects of agreement are encouraging. Bargaining was scheduled to resume Feb. 22 after a four-day recess.

Nixon asked for legislation that would let him choose either of two methods to prevent another walkout. One would allow him to put into effect the recommendations made last November by a Presidential Emergency Board. The other would allow a limited strike or lockout, with the affected workers denied unemployment compensation.

The Emergency Board recommendations were for wage increases totaling 32.5 percent in seven steps over a three-year period, and modification of some of the work rules the railroads call "restrictive."

The wage increases provided in the three settlements reached so far parallel the board's recommendations.

Nixon told Congress that the board's proposals "offer a balanced approach" toward settlement. He asked authority to use that approach or to take the alternate choice allowing a limited strike or lockout after Mar. 1 "so long as such action does not endanger the health or safety" of the nation or any section of it.

Under the alternative, a disputes panel would be set up to determine whether a limited strike or lockout would endanger the national health or safety. Nixon proposed that the panel be empowered to allow a total shutdown of some, but not all railroads, provided alternate services exist.

The President proposed suspension of unemployment benefits for employes affected by a limited strike. He said this would be a move "toward an equalization of the economic pressures of such a strike."

His message ruled out a third alternative, a partial shutdown of all railroads.

The Maintenance of Way union gave Pres. H. C. Crotty full authority to sign the new contract. It gives the union's 100,000 members wage increases averaging 46.5 percent over the period Jan. 1, 1970, through June 30, 1973. Among other benefits are Veterans Day as a ninth paid holiday starting in 1973 and a fifth week of vacation after 25 years of service.

Vice. Pres. Richard W. Smith of the Hotel & Restaurant Employes reported acceptance of a similar agreement giving 3,000 dining car crew members wage boosts averaging 46 percent, plus the cash equivalent of an extra holiday.

The Railway Clerks sent the terms of its proposed settlement to the union's general chairmen for a vote. The proposal incorporates most of the terms of the other two agreements and provides an additional 25-cent wage increase. This would come in two parts—15 cents an hour on Jan. 1, 1973, and 10 cents more on Apr. 1, 1973.

The Clerks' pact is retroactive to Jan. 1, 1970.

Still pending are negotiations between other railroad unions and management. These include six shopcraft unions, the Railroad Signalmen, Firemen & Enginemen, now part of the UTU, and the Locomotive Engineers.

The Signalmen set Mar. 5 as their deadline for settlement but the lengthy mediation procedures of the Railway Labor Act could extend that date by several months.

Alaska Trades Council Wins Outreach Pact

The Anchorage Building & Construction Trades Council has been awarded a new Labor Dept. contract for $85,359 to prepare 50 minority group youths for apprenticeships.

The new one-year Outreach project will operate in Anchorage and Fairbanks with recruits coming from the two metropolitan areas and rural sections of Alaska.

Under a previous Outreach contract, the Anchorage BCTC exceeded its goal by 13 in placing 30 minority apprentices. Of 159 applicants the council accepted for training, 43 became apprentices, including 16 carpenters, 8 bricklayers, 4 plumber-pipe fitters, 3 painters, 2 asbestos workers and the remainder in other crafts.

Forty percent of the minority-group apprentices are Negroes and 60 percent are Alaskan natives—Indians, Aleuts and Eskimos.

UNITED TRANSPORTATION UNION resumes negotiations with railroad management at the Labor Dept. in an effort to reach contract agreement before a Mar. 1 strike deadline. The Railway & Airline Clerks, Maintenance of Way Employes and dining car employes came to terms earlier. Left to right, foreground, UTU Assistant Presidents C. F. Lane and W. R. Meyers and Vice President J. W. Jennings and Q. C. Gabriel; across the table, Assistant Labor Sec. W. J. Usery, Jr., National Mediation Board Chairman George Ives, and J. P. Hiltz, Jr., industry negotiator.

U.S. MARITIME ADMINISTRATOR Andrew E. Gibson addresses the executive board of the AFL-CIO Maritime Trades Dept. at its Bal Harbour, Fla., meeting. Shown seated are department Pres. Paul Hall and MTD Administrator William Moody.

Maritime Trades Urge Protection Against Job-Destroying Imports

Bal Harbour, Fla.—Adequate protection against a glut of foreign imports that is costing millions of American jobs has been urged by the AFL-CIO Maritime Trades Dept.

The growing impact of foreign products on workers in U. S. industries is documented in a 135-page study released by the MTD's executive board as it wound up its midwinter sessions here.

The report, "Foreign Imports: Their Impact on the Jobs of American Workers," presents the findings of a year-long study by a special committee of the MTD. It was presented by the committee's co-chairmen, Pres. George Baldanzi, of the United Textile Workers and Pres. Charles Feinstein of the Leather Goods, Plastics & Novelty Workers.

It is keyed to the theme that "the economics of imports is the economics of people. Specifically it is the economics of millions of U. S. workers who are forced out of their jobs because of the overwhelming crush of imported goods that are flowing, nearly unrestrained, into the country daily."

The massive impact of imports on jobs is shown in the estimate by George Shultz, director of the federal Office of Management & Budget, that in 1969 some 2.5 million workers would have been needed to produce domestically the goods that were imported from foreign manufacturers.

"It remains significant that 1969's unemployment stood at roughly the same figure—2.5 million," the report notes. "And that army of jobless Americans had risen to some 4.6 million by the end of 1970."

The report challenges the argument of "free traders" that the American consumer is entitled to the chance to buy foreign-made goods because they cost less.

"The argument is fallacious," the report asserts. "The American jobs unfilled because of imports mean American consumers economically unable to consume—and that goes for consumption of foreign imports as well as the output of their employed fellow Americans."

The report also points out that the American consumer usually does not benefit from lower production costs in foreign plants operated by U.S.-based multinational companies.

It cites as an example the pricing policy of the Singer Co. which manufactures sewing machines in the United States and overseas, noting that the company's basic zig-zag model machine sells for $88 "whether it is made in the United States or abroad."

"The consumer doesn't share a penny of the profits that Singer is realizing from the machine made with low foreign wages and production costs," the report observes.

The report presents a documented portfolio of the jobs lost and industries shattered by the steady rise in imports, which more than doubled in value—from $15.1 billion to $36.1 billion—in the last decade.

The direct effect imports are having on workers in a variety of industries is examined in the study—including leather, textile, stone, glass and clay, toys, electronics, rubber, beverage, shipbuilding, paper and wood, stone cutting, bookbinding, photo-engraving, watch and jewelry. In nearly all cases, some of the members of the 42 unions affiliated with the MTD have been directly affected.

"No one can consider the nation's current trade crisis, and the historic setting which led to it, without feeling outraged," the MTD committee declares. "The single most effective action that could improve the trade scene immediately is enactment of legislation that would impose quota limits on products brought into the United States.

"The major industrialized nations have retreated into 17th Century mercantilism in which each country promotes its own exports and discriminates against the other fellow's as a matter of economic policy," the MTD study finds. "The United States can't endure commercially as an island of 'free traders.'"

In proposing import quotas as the most effective method of coping with the problem, the report notes that:

"Japan and other nations already have long-standing policies of rigorous restrictions that make it difficult for the United States to export items. Quotas are a means of self-defense, not an offensive measure that will trigger a 'trade war.'"

Serving on the committee with Baldanzi and Feinstein were Pres. Peter Bommarito of the Rubber Workers; Pres. Mort Brandenburg, Distillery Workers; Sec.-Treas. Milton Gordon, Dolls, Toys & Novelties Union; Sec. Richard Livingston, Carpenters; Pres. Lester H. Null, Sr., Pottery & Allied Workers, and Sec.-Treas. Reuben Roe, Cement, Lime & Gypsum Workers.

CWA Executive Board Sets 25% Pay-Hike Goal

Bal Harbour, Fla.—The executive board of the Communications Workers is recommending a wage increase proposal of 25 percent in coming negotiations with the Bell System affecting nearly 500,000 employes.

The board's recommendations will be turned over to the CWA Bell System Bargaining Council which will formulate the national proposals Mar. 15-16 in Washington.

The first cluster of CWA contracts signed in 1968 will expire next Apr. 30 and May 1. Twenty of the 35 Bell System units will be involved in the initial negotiations.

CWA Pres. Joseph A. Beirne said the recommendations are based "on a complete review of all economic criteria in the industry."

"The review of our economic document demonstrates a 25 percent increase in wages right now would be justified," he stressed.

Noting that "gross inequities in wages and serious economic hardships are now being borne by communications workers," Beirne said that the thrust of the board's recommendations to the bargaining council concentrates on wages.

Results of a major research study, conducted months in advance of the scheduled opening of negotiations, will figure prominently in the deliberations of the bargaining council next month, the CWA said.

Among the first CWA-Bell contracts due to expire are those with Chesapeake & Potomac Telephone Co., Indiana Bell, New Jersey Bell, Northwestern Bell, Pacific Northwest Bell, Pacific Telephone & Telegraph, Western Electric, Wisconsin Telephone, Cincinnati & Suburban, Illinois Bell, Michigan Bell, New England Tel & Tel and Ohio Bell.

3 Firms Struck:

Steelworkers Crack Container Combine

(Continued from Page 1)

The new three-year agreement with National Can covers nearly 4,000 USWA members in 20 local unions across the country. It provides wage increases that range from 75 cents to $1.02 an hour by the third contract year plus an additional 25 cents an hour or more if prices continue to rise at their present rate. Improvements in pension benefits raise them to a new high of $8.50 a month times years of service. The terms also include an additional paid holiday to be determined by local agreements and improvements in the health care plan.

USWA Pres. I. W. Abel called the agreement "an excellent settlement . . . responsive to the needs of the membership."

At a news conference in Bal Harbour, Fla., Abel cautioned that the National Can settlement cannot be applied to other industries in terms of money. But the cost-of-living clause is a mandatory goal of the union in all other 1971 contracts, he said.

"We will not take a contract without an escalator," he emphasized. The clause is a top-priority item in the unfinished can negotiations at three other major firms, Abel stressed.

Chairman William Moran of the union's Container Industry Conference said the major features of the National Can settlement will be sought when negotiations resume with the other can companies. They were broken off a day before the contract expiration deadline.

Wages under the new National Can agreement will be increased a minimum of 50 cents this year, another 12.5 cents next year and a final 12.5 cents an hour in the last contract year.

The union said salary hikes will range from 50 cents an hour for job classifications 1 and 2 to 60.5 cents for job class 23 in the first contract year; from 12.5 cents an hour to 20.9 cents in the second year, and from 12.5 cents to 20.9 cents in the final year.

The new cost-of-living provisions contain several innovations. One is an agreement that if 1972 living cost increases do not total 12.5 cents, the company will give its employes a special cost-of-living supplementary adjustment to make up the difference.

The supplement will be effective Mar. 1, 1972, and again on Nov. 15, 1973.

Pensions will be increased by $15 a month for past retirees, effective this year. Next year the monthly benefit factor will be raised to $8.50 times years of service, and a special pension supplement of $130 will become applicable to employes who retire during the first year of the new contract.

The pension plan also is changed by what the parties call the "magic number eligibility formula." It provides that an employe at age 50 or above whose age and years of service total 70—or any employe whose age and service total 75—will be eligible for retirement benefits. Also, employes who would have been eligible under this formula during the first contract year will be deemed eligible on Mar. 1, 1972.

Other contract improvements call for company payment of up to $7 in Part B Medicare costs, payment of "reasonable and customary fee coverage" in the medical program for retirees up to age 65, major medical plan improvements to be added in 1973, and pension benefit entitlement after 15 years of service as of Mar. 1, 1973.

The settlement was the first for the union since it moved into 1971 negotiations on behalf of 650,000 members in the steel, aluminum, copper and container industries.

National Can had been allied with the other three major can firms until the final stage of bargaining. The struck companies issued a joint statement saying National's "unilateral action" in signing with the union came as a "complete surprise" to them.

The union set up picket lines at nearly 200 locations of the struck companies. The bulk of its members are concentrated in California, the Chicago area, New Orleans, Florida and Pennsylvania.

The last strike against the can industry, in 1965, produced a settlement after a 2.5-week shutdown.

PICKET LINES went up at nearly 200 locations of three big can companies when Steelworker contracts expired and 33,000 union members refused to work without agreements. Above are some of the 2,800 strikers at a Crown, Cork & Seal Co. plant in Baltimore. Also struck were American Can and Continental Can. National Can signed an agreement and its plants remained in operation.

Meat Cutters Renew Drive For Food Bill

Bal Harbour, Fla.—The Meat Cutters union is renewing the fight for passage of effective anti-hunger, food stamp legislation and has denounced the Nixon Administration's action on the issue as "absolutely disgraceful" and "a shame to the nation."

A statement approved by the union's international executive board pledged the Meat Cutters' support to those senators and congressmen who led the unsuccessful fight against hunger in the last Congress and "who have promised to continue the war in the newly convened 92nd Congress."

The executive board said the watered-down food stamp bill eventually passed in the 91st Congress "will assure the continuation of hunger and malnutrition in the United States."

"Even worse, the congressmen forced the enactment of a work requirement which denies food to little children because a hippie brother will not work or because an unemployed aerospace engineer will not take a dishwasher's job at $1.30 an hour," the statement said.

Nixon Sends Congress His Health Plan Version

Pres. Nixon has asked Congress to patch up the present health care system as a bargain-basement alternative to the national health security program endorsed by labor and sponsored by a bipartisan group of senators and congressmen.

The Administration's plan would provide federal subsidies only for low-income families—as a replacement for the present Medicaid program.

Those with the very lowest incomes—under $3,000 a year for a family of four—would receive free care. A partial subsidy would be provided for families with incomes up to $5,000—with the amount the family itself must pay rising as its income nears the $5,000 ceiling.

All private employers would be required to provide a minimum package of health insurance for full-time workers and their dependents, and to pay most of the premium cost.

Unions, of course, could seek to negotiate improved benefits and full employer payment. Otherwise, workers would pay a portion of the premium cost—35 percent when the program got under way in mid-1973, dropping to 25 percent in 1976.

The minimum standards of coverage would be set by law and would provide a wide range of basic health services plus protection against "catastrophic" costs. But the benefits would be subject to substantial deductibles—of $100 a person plus two days of hospital charges and 25 percent of medical bills up to $5,000 per person.

The President's message gave a strong endorsement to the group practice form of prepaid medical services, emphasizing points the trade union movement has repeatedly cited about improved efficiency, lower cost and better health through emphasis on preventive medicine.

The legislation would provide modest funding for planning new group practice programs—which it terms "health maintenance organizations"—and loan guarantees for construction costs and working capital. It would also provide incentives to locate health care facilities in scarcity areas, including inner cities as well as rural areas.

In addition, employers would be required to offer workers their choice between conventional health insurance and enrollment in health maintenance organizations where such service is available.

The Administration also proposed incorporating the voluntary insurance Part B of Medicare into the basic Medicare coverage now provided without extra cost to persons over 65. Instead of paying for the now voluntary insurance after retirement, workers would pay for it during their earning years as part of the social security-medicare tax. To meet the extra cost, the annual wage ceiling on which workers and employers pay social security taxes would be raised to $9,800.

The White House message also proposed a change in the method of federal aid to medical and dental schools, along with an increase in the federal subsidy.

It called for a payment to the school of $6,000 for every student who graduates to "encourage schools to educate more students and to educate them more efficiently."

The Administration's plan was widely regarded as a last-ditch effort to head off a universal system of national health security in which the government would pay half the cost and would act to hold down the soaring prices of medical care.

Nixon stopped short of the "socialized medicine" scare cry the American Medical Association has used over the years to attack national health insurance proposals.

Instead he came up with a new term, "nationalized health insurance," and warned that it "could easily lead to complete federal domination of all of American medicine."

By contrast, he labeled his plan a "national health partnership" in which "our government and our people, business and labor, the insurance industry and the health profession can work together."

2-20-71

Abel Pledges Improved Steel Pacts, Bids Government Keep Hands Off

Bal Harbour, Fla.—Steelworkers Pres. I. W. Abel renewed his pledge to members that the union will win "substantial improvements" in steel industry bargaining this year and urged the government not to interfere with the course of negotiations.

Abel issued a statement of his views on the importance of upcoming steel negotiations and expanded on them in answer to questions at a press conference here.

The Nixon Administration, he said should allow the Steelworkers to engage in free collective bargaining.

He declared that the union, will resist as "unjust" any attempt by the government to limit bargaining or to single out Steelworkers for special pressures designed to "hold the line" on contract benefits.

Abel said he would oppose controls of any kind that would impede an agreement freely arrived at by labor and management.

In his statement he said the cost of living for steelworkers and all workers "has been going steadily upward, and as a result many of the economic gains we have made in recent years" have been jeopardized.

"Our need is to protect the gains achieved, and to participate in a growing economy. Furthermore, we need a cost-of-living clause in our new contracts so that we may not fall behind."

Abel noted that the President's Council of Economic Advisers "has at last recognized the validity of cost-of-living escalator clauses, such as we intend to have written into our future agreements."

When the union negotiated its 1968 contracts, he said, "we had no crystal ball to guide us on the future of the national economy. . . . We certainly had no inkling that the economic policies of the Nixon Administration would promote higher prices for consumers and increase unemployment at an alarming rate. In other words, we could not have predicted the Nixon recession."

As a result of these "ill-considered economic policies," Abel declared, "America's working people have had to carry a heavy burden. It is the responsibility of our trade unions to lighten that burden . . . as best we can. The USWA will seek to do that in its 1971 collective bargaining."

Abel concluded: "We do believe that the policy-making officials of government and industry should pay attention to the needs of industrial workers and follow a course that may produce not only a fair settlement but a needed uplift for our sagging economy."

Union agreements with nine big basic steel companies employing 350,000 USWA members expire Aug. 1. The union has called an industry conference of its basic steel locals for Mar. 29 and 30 in Washington to draft contract goals.

CONVENTIONS

The Washington State AFL-CIO will hold its 1971 convention Aug. 23-26 at the Ridpath Hotel in Spokane.

The New Hampshire AFL-CIO will hold its 1971 convention Oct. 1-3 at the Thunderbird 88 Hotel in Nashua.

Council Spells Out Agenda To Halt Slump, Meet Goals

FIELDING QUESTIONS from AFL-CIO Executive Council members at the council's winter meeting is Labor Sec. James D. Hodgson, seated between Federation Sec.-Treas. Lane Kirkland and Pres. George Meany. AFL-CIO Vice Pres. I. W. Abel is at right. In the rear are, from left, Assistant Labor Sec. W. J. Usery, Jr., Under Sec. Laurence H. Silberman, and J. Curtis Counts, director of the Federal Mediation & Conciliation Service.

Program Seeks Decade of Growth

By Saul Miller

Bal Harbour, Fla.—Organized labor has spelled out a broad, wide-ranging program to bring the nation out of recession and into a decade of prosperity and impovement in the quality of American life.

The program was detailed by the AFL-CIO Executive Council at its winter meeting here in the Americana Hotel in a series of statements, reports and analyses of the many problems facing the country, the nature and quality of the Nixon Administration's solutions and the federation's own answers.

The key to the immediate concern of reducing unemployment and increasing the buying power of American workers lies in a realistic program of public investment by the federal government in cooperation with the states and cities that will meet today's needs and provide a solid base for future growth, the council said.

Tied in are programs to improve health care, fight poverty, provide for the security of older citizens and children, insure protection for the consumer, do battle with air polluters and help solve the problems of waste disposal.

The overall approach includes also the problems caused by the export of American jobs by multi-national corporations and the increasing flow of job-displacing imports.

There is always, the council pointed out, the overriding concern of world peace and freedom and the continuing challenge by the Soviet Union in the Middle East, Western Europe and Southeast Asia.

The council's approach was underscored by AFL-CIO Pres. George Meany in a series of press conferences that touched on many of these problems and programs as well as other matters of major interest to the AFL-CIO and American workers.

In reply to numerous questions on wage-price controls, Meany strongly reaffirmed the federation's stand on equality of sacrifice and made clear his opposition to imposition of a freeze or controls in the construction industry alone. He noted the general failure of Administration economic policies and strongly urged the White House to take note of AFL-CIO economic programs and recommendations.

On relationships with unions not in the AFL-CIO, Meany noted cooperation with the Auto Workers on a number of issues, talks with the Teamsters on Farm Workers' problems, and indications from the Chemical Workers of an interest to reaffiliate. He stressed that the AFL-CIO is a voluntary organization and those unions that left can always reapply to the federation.

On the question of membership in the International Confederation of Free Trade Unions, Meany said the AFL-CIO will not go along with policies of working with Communist unions and believes in an international trade union movement that is based on free trade unions—an impossibility in Communist nations.

On the problem of the nation's economic health, now and in the years to come, the council took these positions:

- Charged the Administration's new economic "game plan" will bring a "mini-expansion" that will fall short of creating the necessary jobs or increase in buying power and called for action on a nine-point program that will bring a "sustained upturn." **(Story, this page.)**
- Called for a long-range, planned national effort of public in-

'Invitation to Exploit Workers':

Meany Assails Suspension Of Davis-Bacon Wage Law

By David L. Perlman

Suspension of the Davis-Bacon prevailing wage law is "an open invitation to unscrupulous employers to exploit workers," AFL-CIO Pres. George Meany charged.

Pres. Nixon invoked "national emergency" powers to suspend indefinitely the 40-year-old law that safeguards fair labor standards on federally-financed construction projects.

Nixon claimed that the Davis-Bacon Act has contributed to "severe inflationary pressures" by spreading "excessive" wage increases.

Until the President decides to reinstate the law, contractors bidding for an estimated $25 billion a year in federal construction work will no longer have to agree to pay their workers prevailing area scales of wages and benefits.

The contractor paying the lowest wages and providing the fewest fringe benefits will have an advantage over his competitors. That's the situation Congress sought to overcome when it passed the Davis-Bacon Act in 1931 and strengthened it in 1964 to include the value of fringe benefits.

Meany warned that the principle that taxpayers' money shouldn't be used to exploit workers is endangered by Nixon's action.

"We consider it unfair," the AFL-CIO president said. "We resent it. We think construction workers do not deserve to be treated in an arbitrary, one-sided fashion."

Meany accused Nixon of attempting to overcome a national problem brought about by the Administration's own "unwise" economic policies "by penalizing a single segment of the working population."

Presidents of four building trades unions said at a joint press conference that Nixon's action would have a "negligible effect" on inflation but would be a windfall for non-union contractors.

Pres. John H. Lyons of the Iron Workers told newsmen that union members will continue to have

(Continued on Page 12)

Nixon Economic Policy Hit as Empty 'Rhetoric'

Bal Harbour, Fla.—The Nixon Administration's new economic policies are "based on rhetoric and wishful thinking arithmetic rather than on specific programs to create jobs and increase consumer buying power," the AFL-CIO charged.

In a detailed analysis of Administration policies, the federation's Executive Council concluded that the new "game plan" is an "experiment to 'psych' the economy toward prosperity by mid-1972 through mini-expansion measures presented in an upbeat barrage of optimistic rhetoric."

The Administration abandoned its previous policies, the council pointed out, "in the midst of its tragic consequences" of a prolonged recession with increasing unemployment and an accelerated rise of living costs. Reviewing the level and nature of unemployment, its spread through all sectors of the economy, the rise in the consumer price index and the shrinkage of the buying power of workers' paychecks, the council said:

"The government has not taken decisive actions to turn the eco-

(Continued on Page 9)

Administration Scored On Weak Health Plan

Bal Harbour, Fla.—The Administration's proposals for health care reform were branded as "piecemeal and inadequate" by the AFL-CIO Executive Council as it pledged firm support for passage of the National Health Security bill before Congress.

Pres. Nixon's approach to health care relies mainly "on discredited private insurance which has been largely responsible for the high-cost, low-quality medical care we have today," the council observed in a statement.

It noted that the President had recognized nearly a year ago that the nation was suffering a massive breakdown of the health care system. But, the council pointed out, "he has met that crisis by vetoing a hospital construction bill and a measure to provide for training more family doctors, and he threatened to close down vitally needed Public Health Service hospitals."

Nixon's proposals fall far short of meeting the "massive crisis" that the President himself has recognized, the council statement declared.

Expressing concern for the nation's current health care problems, the council cited the ever-rising costs confronting the patient and the difficulties posed for the medi-

FOUR DEMOCRATIC SENATORS visited with the AFL-CIO Executive Council at its winter meeting. Sen. Edmund S. Muskie (Me.), top left, and Sen. Hubert H. Humphrey (Minn.), top right, are shown as they addressed the council. At lower left, Sen. Henry M. Jackson (Wash.) discussed a problem with Vice Pres. Peter T. Schoemann and Legislative Director Andrew J. Biemiller, and at lower right, Sen. Birch Bayh (Ind.) is greeted by Vice Presidents David Sullivan and Thomas W. Gleason.

Election Law Reform Seen Vital To Spur Voting, Reduce Costs

Bal Harbour, Fla.—Immediate reforms are needed in the American political process to bring more of the eligible voters to the polls and to enable candidates to reach the people, the AFL-CIO Executive Council declared.

"Artificial barriers to voting must be eliminated to permit the greatest possible participation in all elections," the council said in urging Congress to take prompt action to revise current election laws.

The council also renewed its call for provisions to meet election costs—including a federal subsidy—so that majority party candidates have "equitable opportunities to reach voters" while "minimizing dependence on wealthy individual contributors." It expressed particular concern over the rising costs of television as a major factor in boosting political campaign expenses.

Since the purpose of elections is to determine the will of the majority, "then all feasible steps should be taken to facilitate the right of every eligible voter to cast his ballot," the council stressed.

The council statement urged Congress to:

- Maximize the number of eligible voters who go to the polls.
- Insure that major party candidates have a fair opportunity to reach those voters with their message.
- Prevent any group from utilizing its economic resources to secure political dominance.

To broaden the election franchise, the council statement urged Congress to require employers to provide workers time off with pay to vote.

It also called for a uniform absentee voting system and establishment of a federal agency that would work with states to stimulate registration and voting.

In citing the need for federal legislation to regulate campaign spending, the council said that "abuses of financing by wealthy individuals—who often are candidates themselves—must be curbed."

Ceilings on campaign expenditures by candidates, individuals, their families and political committees should be imposed along with stricter reporting requirements on spending, the statement stressed.

"A substitute must be found for the present dependence on contributions by wealthy individuals," the council said. "The AFL-CIO has long favored some form of federal subsidy for elections."

This subsidy would take many forms, the council suggested, including:

- Direct treasury grants to political parties, with a formula allocating specific sums to presidential and congressional nominees.
- Free television and radio time allocated to presidential and senatorial nominees.
- Free mailing privileges for nominees for the House and Senate.

"We are confident that these steps will greatly improve the election process," the council said, "and we urge the Congress to make a prompt start on these essential revisions of the election laws."

AFL-CIO Renews Call For Public Service Jobs

Bal Harbour, Fla.—Labor renewed its call for a large-scale public service jobs program and told Congress the benefits to the nation would offset the cost.

The AFL-CIO Executive Council said the goal should be creation of at least 500,000 federally-financed jobs this year with local and state governments and non-profit agencies.

It would help break the back of the recession, the council said. And it would also provide "badly needed services" in such areas as parks, schools, health and recreation centers, libraries, public safety agencies and pollution control.

A smaller-scale bill passed by Congress late last year was vetoed by Pres. Nixon in what the council termed "a shocking disregard for the plight of the unemployed as well as a denial of the pressing problems of state and local governments."

Unemployed workers hired for new public service jobs "would not displace those presently employed," the council stressed. "They would be filling job vacancies which would not otherwise be filled."

The program should offer public service employes "a ladder for upgrading and job improvement," the AFL-CIO said.

Terming creation of public service employment an "investment" that would bring dividends to the nation, the Executive Council added:

"The dollar cost of such a program will be offset by savings in welfare costs, the tax payments of employed workers and the social benefits generated by the productive employment of otherwise idle workers in expanding needed services to the public."

Surveys have showed that millions of potential job openings exist in the public sector of the economy.

"The job potential exists," the AFL-CIO declared. "The unemployed are ready to go to work. All that is lacking is a federal program, with adequate funds."

Screen Actors Boost Initiation Fee by $50

Los Angeles — The membership of the Screen Actors Guild has voted an increase in the union's initiation fee from $200 to $250. The ballot count showed 10,644 in favor of the increase and 1,364 opposed, in a nationwide mail referendum.

In a letter to the membership recommending the increase, the Guild's board of directors cited a 1970 operating deficit of $61,000 and the fact that the union has avoided a dues increase since 1958.

Frontier of the '70s:

Public Investment Held Key to Growth

Bal Harbour, Fla.—America needs a breakthrough on public investment as the new frontier of the 1970s "to strengthen the foundation of American society" and provide for a "new period of national economic expansion."

A long-range, planned national effort of public investment must be the hallmark of the decade, the AFL-CIO Economic Policy Committee reported to the Executive Council.

The comprehensive report declared that "planned public programs during the remainder of the 20th Century are required to revitalize the nation's urban areas as centers of American civilization and to improve the quality of life of the American people." **(Excerpts, Page 7.)**

The report traced the national developments and trends in population, urbanization, the revolution in technology, the neglect of the public investment areas since a brief period in the 1930s, and the lagging federal efforts through most of the postwar years except for the short burst of activity in 1964-66.

The federal government "holds the key to workable solutions to most of the public investment needs of American society," the report stressed, "since they usually involve nationwide social issues that cut across the boundary lines of the states, cities, counties and school districts."

State and local governments cannot solve the nation's vast public investment needs in isolation and "neither can private enterprise, even with the promise of tax subsidies," the federation committee stressed, although cooperation at all local government levels and from business firms and private groups is needed.

Each era of economic expansion in the nation's history has been "accompanied by growing investments and employments in new industries," the report pointed out, citing the railroads, agricultural implements, steel and oil industries in the last third of the 19th Century and all sorts of public utilities in the first two decades of the 20th Century.

During the 1920s growth was accompanied by the development of the auto and radio industries and after World War II there was television, aircraft, electronics and advanced technology.

In the 1970s the new emphasis is on public investment that includes a number of approaches, the report to the council said. These would include:

- Full funding of present federal public investment programs and additional funds for short-term projects as the key to reconversion to offset the declining military defense proportion of total national production.
- A national inventory of public investment needs based on estimated future population growth and present backlogs in each major category including housing, schools, health care facilities, day-care centers, parks, pollution controls, community facilities and public services—all keyed to the concept of a federal urban bank to provide long-term, low-interest loans.
- An Office of Public Investment Coordination to aid public investment planning and execution by government agencies at all levels.
- Available bank credit allocated by the Federal Reserve to help housing and community facilities construction.
- A land-use policy for rational development of urban areas, new towns, parks, etc., and to curb land speculation.
- Development by the Administration of a capital budget to assist the government in planning, financing and carrying out public investment programs.
- Administrative simplification of the large number of federal grant programs to consolidate overlapping efforts without undermining their purposes, goals and standards.
- **Eliminating loopholes in the federal tax structure that favor corporations and wealthy families and thus creating some additional revenues for public investment programs.**
- Federal assumption of the costs of welfare programs to ease the burden on state and local governments and help them develop more productive and equitable tax structures.
- Establishment of a national health security system as well as expansion of health care facilities and services.

'Drastic Cuts' Deplored In Housing Programs

Bal Harbour, Fla.—The AFL-CIO warned against dismantling the nation's housing and community development programs, and termed the Administration's budget proposals "grossly inadequate."

The federation's Executive Council criticized both the budget allocations for housing and related programs and the Administration proposal to consolidate funds for separate programs into a single "block grant" community renewal program.

One effect of such a consolidation, the council noted, would be to terminate some $4 billion in congressional authorizations — money that Congress has not yet appropriated for programs it has approved.

Such "drastic cuts," the AFL-CIO charged, "are bound to hurt the future of housing and community development in America. This is economy applied at the wrong time and in the wrong place."

The statement stressed that housing and community programs can help overcome unemployment and at the same time help cities catch up on a backlog of unmet needs.

It urged that appropriations for these purposes be "substantially increased." And it especially criticized as inadequate budget requests dealing with contract authority for interest subsidies and low-rent public housing, as well as funds for urban renewal grants and water and sewer facilities.

As for the proposed abolition of separate housing programs, the council statement warned against diverting funds to "vague and untested programs."

"The pattern of national action for a decent home for every American family . . . needs to be fulfilled, not frittered away," the AFL-CIO declared.

Council Outlines Agenda to Halt Slump

Wide-Ranging Program Seeks Decade of Growth, Prosperity

(Continued from Page 1)

vestment — America's new frontier in the 1970s—that will be the hallmark of the decade. **(Story, Page 2.)**

● Urged a battery of realistic policies and measures to deal with U.S.-based multi-national corporations and the export of American production and jobs. **(Story, Page 4.)**

● Demanded prompt action by Congress to raise the minimum wage to "at least $2 an hour immediately" as a major step in the elimination of poverty. **(Story, this page.)**

● Renewed labor's call for a public service jobs program and told Congress the benefits of creating 500,000 new jobs would offset the cost. **(Story, Page 2.)**

● **Prescribed a $2 billion public works program in areas hardest hit by unemployment to help lick the recession. (Story, Page 10.)**

● Asked more federal funds for housing and community development and warned against dismantling existing programs. **(Story, Page 2.)**

● Urged Congress to advance the effective date of the extended unemployment compensation program and provide full federal financing. **(Story, Page 5.)**

In terms of improving workers' buying power and 1971 wage negotiations, the council:

● Said workers need substantial wage increases this year to offset rising prices and achieve at least some improvement in buying power. **(Story, Page 9.)**

● Called for full collective bargaining rights for all federal workers and lifting of unnecessary Hatch Act restrictions on their political freedom. **(Story, Page 10.)**

● **Summoned all AFL-CIO state and local central bodies to set up special committees to help returning servicemen find jobs. (Story, this page.)**

On the problems of the gaps in social policies and the quality of American life, the council:

● Termed the Administration's health care proposals "inadequate" and reiterated labor's support for the National Health Security bill that has been introduced in Congress. **(Story, Page 1.)**

● Called for a two-step, 35 percent increase in social security benefits to provide economic security for retired workers and their families. **(Story, Page 11.)**

● Backed legislation to expand child care centers, with priority to the children of working mothers and the poor. **(Story, Page 4.)**

● Opposed moves to dismantle the Office of Economic Opportunity as the command post for the anti-poverty effort. **(Story, Page 9.)**

● **Pledged a trade union effort, from the plants to the legislative halls, for full enforcement of the new Occupational Health & Safety Act. (Story, Page 8.)**

● Voted strong support for a concerted national program to the problem of solid waste disposal and all forms of pollution. **(Story, Page 5.)**

● Endorsed auto insurance reform legislation and called on Congress to pass a package of other consumer protection bills. **(Story, Page 11.)**

● Received a report from the federation's Dept. of Civil Rights stressing labor's commitment to programs to increase the number of skilled minority group workers, but warning against "irresponsible" promises that can't be met because of lack of job opportunities and training. **(Story, Page 4.)**

● Called for better methods of financing political campaigns and revision of election laws to eliminate unnecessary barriers to voting. **(Story, Page 2.)**

● Sharply denounced a threat by the Union Carbide Corp. to lay off 625 workers in retaliation against a federal order to comply with air pollution regulations. **(Story, Page 5.)**

● Urged Congress to block the Administration's proposal to close the nation's eight remaining Public Health Service hospitals. **(Story, Page 5.)**

On foreign affairs, the council:

● **Warned that the Soviet Union has intensified tension and conflict in Southeast Asia and the Middle East and is maneuvering to undermine NATO. (Story, Page 8.)**

● Expressed support for the struggle of Polish workers to overcome food shortages, high prices and Communist government control of their trade unions. **(Story, Page 8.)**

● Urged the U.S. government to bring economic and political pressure against the Soviet Union on behalf of Soviet Jews seeking to emigrate to Israel. **(Story, Page 8.)**

● Called on North Viet Nam to adhere to the Geneva Convention by providing humane treatment of American prisoners of war. **(Story, Page 8.)**

On problems affecting the functioning of the federation and its affiliates and the general welfare of the trade union movement the council took these actions:

● Issued an organizing committee charter for school supervisors with the proviso that if after two years the committee was successful in building a wider organization it would be chartered as a national union. The supervisors asked the AFL-CIO for a charter last year. They are organized in New York City, San Francisco and Chicago school systems on the teaching or pedagogical side.

● Approved a council subcommittee report not to issue a charter at this time to the International Brotherhood of Police Officers. Meany told reporters that a substantial proportion of the membership of the police group came from locals of State, County & Municipal Workers and that SCME was "naturally concerned."

● **Set up for the spring of this year a conference on jobs with particular emphasis on the export of jobs by multi-national organizations. Meany stressed that the federation is very much concerned by the situation and that the conference is planned to focus national attention on the problem.**

● Endorsed and supported a boycott of the Metlox Manufacturing Co. of Manhattan Beach, Calif., for waging a concerted anti-union campaign for the past seven years against the Potters. The company makes Metlox dinnerware. **(Story, Page 5.)**

● Received a report on the operation of the AFL-CIO Internal Disputes plan showing continuing success of the plan in settling complaints between unions. **(Story, Page 10.)**

● Heard a progress report on the AFL-CIO Labor Studies Center and announcement of a new 11-week certificate program to be offered twice a year. **(Story, Page 10.)**

● Ruled in a case involving the Retail, Wholesale & Dept. Store Union and the Leather Goods & Plastics Workers that the latter was in violation of the AFL-CIO constitution in chartering a local expelled by the RWSDU. A council subcommittee was set up to work out a satisfactory agreement between the unions.

● Heard reports on federation organizing activities and community service programs from Vice Presidents Paul Hall and James A. Suffridge.

● Voted donations and funds to a number of organizations including the Committee for National Health Insurance, the National Housing Conference, National Council of Senior Citizens, Committee for Economic Progress, Institute for Collective Bargaining, Southern Regional Council, AIFLD impact programs, CARE, Citizens Committee for Peace and Freedom in Viet Nam, National Solid Waste Corp.

The next meeting of the council will be held in Atlanta, Ga., May 11-13.

EXECUTIVE COUNCIL members Richard F. Walsh, James A. Suffridge and Joseph D. Keenan, left to right, confer between sessions at the council's winter meeting.

Furniture Union Wins in Carolina

Florence, S.C.—An anti-union wall came tumbling down when workers at the La-Z-Boy Chair Co. voted 260-173 for the Furniture Workers to climax a seven-month organizing campaign.

An in-plant committee was aided by UFWA staff members, the AFL-CIO and the Industrial Union Dept. Two workers on leave spread word of benefits received at the organized main plant of the firm at Monroe, Mich. They were Willie Rudd, Memphis, and Lela Henderson, of the Monroe plant.

The company "used every trick in the book," said UFWA Pres. Fred Fulford. "They offered raises, they ran fish fries, held captive meetings, and constantly laid off some workers and hired new ones." Most of the new hires were signed up promptly by the workers' committee he said.

Central Bodies Urged To Aid Returning GIs

Bal Harbour, Fla.—The establishment of Veterans' Assistance Committees by all state and local central bodies to help returning servicemen find jobs was urged by the AFL-CIO Executive Council.

The state and local labor bodies were asked to cooperate fully with the Human Resources Development Institute—the manpower arm of the AFL-CIO—"to help returning servicemen and servicewomen find worthwhile places as full participants in the nation's economic life."

The HRDI has developed the Veterans' Assistance Program, in cooperation with the U.S. Departments of Labor and Defense, in an attempt to smooth the way for young veterans returning to civilian life at a rate that will soon reach one million a year.

Most of the returning veterans are in the 20-24 age group. About one in three already is married.

"While a few will be able to resume careers that were merely interrupted by military duties, and a few more will be able to utilize service-taught skills in civilian occupations, the overwhelming majority are poorly equipped to compete for jobs in today's specialized workforce," the council said.

"Through no fault of their own, they have few, if any, marketable skills. About one in five has less than a high-school education. More than one in 10 is a member of a minority group. Many will be returning to urban centers where unemployment rates already are extremely high."

The HRDI program is being launched initially at four separation centers in the San Francisco Bay area. Returning servicemen seeking help will receive guidance from HRDI representatives at each center. They will then be referred to the Veterans Assistance Committee of the city central labor council nearest their home or to the nearest of the 50 HRDI offices across the nation.

The AFL-CIO already is deeply involved in another program for returning service personnel, "Jobs for Veterans," a cooperative effort on the part of labor, management, private organizations and government.

To implement this program a National Advisory Committee of 100 citizens, including 14 labor representatives, has been appointed. State and local committees are being established to further the aims of the program.

"There is no conflict between 'Jobs for Veterans,' which attempts to focus attention on the national problem of unemployment among veterans, and the AFL-CIO Veterans' Assistance Program, which uses labor's unique channels to find specific opportunities for individual veterans," the Executive Council said.

"Both programs are needed, and both are fully endorsed and supported by the AFL-CIO Executive Council."

'At Least' $2 an Hour Sought as Wage Floor

Bal Harbour, Fla.—The AFL-CIO urged prompt action by Congress to raise the minimum wage to "at least $2 an hour immediately" as a major step in the effort to eliminate poverty.

The $1.60 an hour adopted in 1966 "was barely tolerable at that time," the Executive Council declared, and "it is utterly inadequate in 1971."

An increase in the minimum wage to at least $2 an hour—extended to the 17 million workers still not covered by the federal law—would bring a full-time, year-round worker to $4,000 a year, the council pointed out—"not much above the government-defined poverty line of approximately $3,700 for a nonfarm family of four."

But, the council said, it would represent "quite an improvement over the $3,200 such a worker earns" at the present minimum rate. Nearly two-thirds of the 24 million poor persons are in families headed by a worker in the labor force, the council noted, a worker who earns low wages, works part time or is unemployed. About one-quarter of the poor—and over 30 percent of all the children growing up in poverty—are in families headed by a full-time, year-round worker "whose wages are so low that his family is impoverished."

Updating and improving the wage-hour law has been going on continuously since it was passed 33 years ago, the federation observed. It noted that the minimum wage has been updated four times from 25 cents an hour to $1.60 and the coverage of the act extended twice.

Now, besides action to hike the floor to at least $2 an hour, the act should be extended to all workers, the council stressed, including employes of smaller retail establishments, many state and local government employes, many hired farm workers, household domestics and others. The act now protects 46 million workers but 17 million nonsupervisory wage and salary employes lack coverage.

There are 6 million workers, also, who are denied the full hours protection of the law because of specific exemptions, and the council declared that "this hodgepodge of exemptions should be eliminated."

Minnesota College Unit Votes for State-County

Bemidji, Minn.—Employes of Bemidji State College voted to be represented by the State, County & Municipal Employes in an election conducted by the Minnesota State Mediation Dept. The tally was 77 for SCME, 3 for no union.

PROGRESS IN REGISTRATION of new Negro voters is reported to the AFL-CIO Executive Council and other members of the COPE administrative committee by Bayard Rustin, executive director of the A. Philip Randolph Institute. From left are Federation Sec.-Treas. Lane Kirkland, Pres. George Meany, Rustin, and COPE Director Al Barkan. One million Negroes who had never registered nor voted before were enrolled through the institute's program in the South and in 45 cities in 20 states last year.

'Battery of Realistic Policies':

AFL-CIO Urges Regulation Of Multi-National Firms

Bal Harbour, Fla.—The AFL-CIO Executive Council called for a "battery of realistic policies and measures" to deal with U.S.-based multi-national corporations and the export of American production and jobs.

These policies should be based, the council stressed, on the premise that "trade is a complex network of international relationships" and that new government policies are needed to meet new and changed conditions. **(Excerpts, Page 6.)**

The changes in international economic relationships since the late 1940s, the council said, "are the major factors in the deteriorating American position in world trade."

The council proposed a seven point program:

- To stop helping and subsidizing U.S. companies in setting up and operating foreign subsidiaries such as repeal of the provision that permits deferral of U.S. taxes on the income of U.S. companies from their foreign subsidiaries.
- To supervise and curb substantial outflow of American capital for the investments of U.S. companies in foreign operations.
- To press in appropriate international agencies for fair labor standards in world trade.
- To regulate and slow down—as a stop-gap measure—the flow of imports into the U.S. of a variety of goods and product lines, in which sharply rising imports are displacing significant percentages of U.S. production and employment.
- To prevent the further deterioration of America's trade position by rejecting any new preferential tariff agreements or other special arrangements that actually benefit multinational firms.
- To reject further tax bonanzas to business in the name of encouraging exports.
- To encourage the use of U.S.-flag ships and remove freight discrimination against U.S. exports.

As to the situation which has developed, the council said that "modern nations with managed national economies subsidize exports, add barriers to imports, adjust currency values and change their tax structure to benefit their national interests." This holds for the European Common Market "with a common trade barrier to the rest of the world," as well as Japan with an administered economy geared to expanding exports.

"Multi-national firms and banks, often U.S. based, now juggle global operations to benefit from the laws of each nation," the council declared, "but their global management, decision-making and transactions are intra-corporate, frequently reaching beyond the law of any single nation."

In 1970, the council noted, U.S. firms invested $12.5 billion in foreign subsidiary facilities, coming on top of previous billions every year for two decades.

These developments have retarded U.S. exports and spurred imports, the statement said, displacing production and exporting jobs and employment opportunities.

The old theories of free trade and protectionism are gone, the council concluded. "It is neither possible for the American economy to hide behind tariff walls nor to pretend that free, competitive trade relations are possible. U.S. policies that were designed for the world of the 1930s and 1940s have become outmoded. They now contribute to undermining the U.S. economy at home and abroad."

Skills Training Stressed As Key to Minority Jobs

Bal Harbour, Fla.—It is irresponsible to promise a large number of jobs to minority workers while providing neither the jobs nor the means of acquiring the skills to enter the construction industry, the AFL-CIO Executive Council was told.

It received a report from the federation's Dept. of Civil Rights headed by Donald Slaiman stressing that a program keyed to apprenticeship, recruiting of qualified minority journeymen and upgrading programs is the answer to increased minority participation in the building trades.

This program, aided "by the end of the recession in construction," can produce significantly increased participation of minority youth and workers in skilled trades without reducing standards and skills or harming the conditions of the workers already in the industry, the report said.

Slaiman briefly traced the evolution of the civil rights struggle from the 1954 Supreme Court decision on school desegregation and pointed out that reduction of racial discrimination is not enough and cannot alone "solve the problems of millions of minority citizens, nor the crisis in our cities."

A healthy economy and full employment, adequate housing, education aid and a more effective manpower policy, plus the continuing job of reducing discrimination are the keys for minorities, and in terms of economic programs "we have not had these in the past two years," the report said.

On the question of segregated locals of AFL-CIO affiliates, Slaiman reported continuing progress with only a dozen affiliates still having some separate locals, in most cases one or two, and in the process of merging these.

Progress in the Outreach apprenticeship programs continues along with plans to issue union cards to minority journeymen, the report noted, despite "misguided efforts" to ignore and undercut many of these programs.

It cited the failure of the Administration's Philadelphia Plan as compared to success of these other programs.

The department's report was accompanied by a statement to the AFL-CIO council from the Executive Council of the Building & Construction Trades Dept. on the Administration's new apprenticeship regulations. The statement called attention to the rise in minorities in building trades apprentice programs and the "large number of onerous and impractical requirements" in the newly proposed government regulations.

"While the final draft of the proposed regulations eliminated some irrelevant and impractical provisions, the core requirement pertaining to quotas, statistical validation and lottery selection remained, but in more complicated and somewhat more obscure form," the BCTD statement said.

Citing the support of the construction trades unions for the AFL-CIO civil rights programs and policies, the statement said the unions have tried to meet their specific responsibilities "in this difficult area." It added that experience has proved that quotas will not work.

Needs of Poor For Child Care Given Prioity

Bal Harbour, Fla.—Legislation to provide a nationwide program of comprehensive child development was given strong endorsement by the AFL-CIO Executive Council.

The council stressed, however, that "first priority" should be given day-care centers for children of working mothers and the poor.

"The extent of federal financing of any child-care center can be determined by the level of family income," the council statement said. "Federal aid should be directed toward promoting a partnership between parents, community groups such as local unions, employers providing day-care services and local government."

The council noted that there are 13 million women with children under 18 in the labor force, and that more than 4 million of these have children under 6. The number of working mothers has increased by more than seven times since 1940.

"Too often, mothers seeking employment face the choice of remaining home or leaving their children with neighbors," the council said.

Council Backs Repeal Of Detention Powers

Bal Harbour, Fla.—The AFL-CIO Executive Council has called for repeal of a section of the McCarran Internal Security Act that gives the President emergency detention powers without a hearing or due process.

The council acted on a report of a subcommittee on resolutions referred to the council from the last convention, including the proposal for repeal of detention provisions.

The subcommittee, chaired by Vice Pres. James A. Suffridge, reported that no action was required on four other resolutions because the particular legislative issue was no longer in existence and referred others to the federation's officers and departments for continuing follow-up. The latter category included legislation for Panama Canal Zone employes and certain uses of civil defense personnel.

The move to repeal the Emergency Detention Act—Title II of the Internal Security Act—was pushed in the 91st Congress, and a measure introduced by Sen. Daniel Inouye (D-Hawaii) and 23 others passed the Senate but failed to move in the House. Inouye has introduced a similar bill in the current Congress.

The section singled out for repeal provides that the President, or his agent, can detain persons "if there is reasonable ground to believe that such person will engage in or probably will with others engage in acts of espionage or sabotage."

More than 110,000 citizens and non-citizens of Japanese ancestry were placed in 10 concentration camps in 1942 without due process of law of hearing because of the war hysteria. The memory of this experience and violation of civil liberties in combination with the McCarran Act passed in 1950 during the hysteria fostered by Sen. Joseph McCarthy (R-Wis.), led Inouye and others to seek repeal.

The McCarran Act was passed over the veto of former Pres. Harry S Truman who declared that it "would strike blows at our liberties."

Among the issues on which the council subcommittee recommended that no further action was needed were bills dealing with compulsory railroad industry retirement, postal workers salaries and apprenticeship programs in the Government Printing Office.

Outreach Plan Sought To Recruit Journeymen

Bal Harbour, Fla.—A journeymen's outreach program—much like the effective Apprenticeship Outreach projects that have brought thousands of minority group youths into the building trades—was recommended in a report to the AFL-CIO Executive Council.

The report also called for upgrading of partially qualified minority mechanics through training "in ways consistent with the practices and requirements of each craft."

A grant from the council last March to the Joint Apprenticeship Program of the Workers Defense League and the A. Philip Randolph Educational Fund financed the study that formed the basis for the report.

The study was conducted by a 29-member committee representing AFL-CIO Building & Construction Trades unions, civil rights organizations, government, industry and university officials. Co-chairmen were Bayard Rustin, executive director of the A. Philip Randolph Institute, and Donald Slaiman, AFL-CIO civil rights director.

Three key elements in the report note that:

- There are non-apprenticeable routes of entry into the trades which could be made available to minority workers.
- Programs for minority workers should not result in diluting journeyman skills and union standards.
- Graduates of minority training and upgrading programs should be fully-qualified mechanics with marketable skills—not second-class mechanics.

The committee suggested that the successful Apprenticeship Outreach program provide the mechanism for the development of the journeyman program for minority workers.

It noted that Apprenticeship Outreach, operating in more than 80 cities across the country, has helped place 7,813 minority youths in building trades apprenticeships through last October.

The report stressed the importance of compliance by local affiliates with BCTD policy to recruit qualified minority craftsmen "who are able to work as journeymen and become full union members."

"Special outreach efforts to recruit minority journeymen should be initiated where they have not yet been started," it added.

Cooperation from communities and contractors also is vital to success of the journeyman Outreach effort, the report stressed.

Labor Board Names 2 Regional Directors

The National Labor Relations Board named new regional directors—Wilford W. Johansen for the Los Angeles-southeast California area and Thomas W. Seeler in Buffalo. Both are attorneys with a dozen years of NLRB service.

Johansen, 42, succeeds Ralph E. Kennedy, now an NLRB board member, in Region 21. Seeler, 44, takes the post of Merle D. Vincent, Jr., who retired in January. Johansen has been deputy assistant general counsel in Washington, D.C. and Seeler was assistant St. Louis regional director.

Layoffs Called Retaliation for Pollution Curb

Bal Harbour, Fla.—The AFL-CIO joined with the Oil, Chemical & Atomic Workers in condemnation of a Union Carbide Corp. threat to lay off 625 workers at its Marietta, O., plant in retaliation for a federal order to comply with air pollution regulations.

"It is a clear effort to use the workers and other Marietta citizens as pawns in its efforts to avoid compliance with the law," the federation's Executive Council said in a statement.

The council urged Pres. Nixon to stand behind the order issued by William D. Ruckelshaus, administrator of the Environmental Protection Agency, and urged the Senate Public Works subcommittee on air and water pollution to hold immediate hearings and make public all the facts with a view toward strengthening legislation.

"Corporations like Union Carbide must not be allowed to evade the law by resorting to campaigns of fear such as are now going on in Marietta," the council said.

Union Carbide officials have maintained that the layoffs are necessary for the company to comply with the government's order to meet clean-up deadlines first promulgated in March and April 1970 and ignored to date.

But as the Executive Council noted, Union Carbide is the second largest chemical company in the country with assets of nearly $3.5 billion. In 1969 its sales totalled $2.9 billion and its profits after taxes $186.2 million.

"The company does substantial business with the U.S. government, including operation of several nuclear plants owned by the Atomic Energy Commission for fixed fees running into millions of dollars annually without risk of corporate capital."

For the past 10 years, the Executive Council noted, the company has bombarded the Ohio Valley with 256,550 pounds of sulfur dioxide and 44,568 pounds of particulate matter each day from a power plant at Marietta.

The plant burns high sulfur content coal from a nearby strip mine to supply power for a ferroalloys plant and a plastics plant.

Ruckelshaus issued the order last Jan. 8 after federal officials had attempted for four and a half years to persuade Union Carbide to diminish its daily air pollution.

Gary Guildsman Cited for Service

The Newspaper Guild named Pres. James A. McGill of its Gary, Ind., local union as the winner of this year's Guild Service Award for transforming a weak local into an active and strong union.

McGill is a photographer for the Gary Post-Tribune who has won local, national and international awards for his pictures. Elected president in 1968, McGill led the Gary local to the two highest wage settlements in its history, to action on behalf of minority hiring and equality for women workers, and to active participation in ANG and area affairs.

McGill also won a scholarship of up to $1,000. He plans to attend a three-week staff training course starting Feb. 28 at the AFL-CIO Labor Studies Center.

GROUP PHOTOGRAPH of the AFL-CIO Executive Council was taken during its winter meeting in Bal Harbour, Fla. From left, first row: Vice Presidents Richard F. Walsh, Peter T. Schoemann, M. A. Hutcheson, Peter Bommarito, Sec.-Treas. Lane Kirkland, Pres. George Meany, Vice Presidents I. W. Abel, Joseph Curran, A. Philip Randolph, Matthew Guinan. Second row: Vice Presidents John F. Griner, David Sullivan, John H. Lyons, Jacob S. Potofsky, Joseph D. Keenan, Hunter P. Wharton, Alexander J. Rohan, William Pollock, Lee W. Minton, Paul Jennings, Max Greenberg, Louis Stulberg, C. L. Dennis. Third row: Vice Presidents Paul Hall, S. Frank Raftery, Charles Luna, James A. Suffridge, Peter Fosco, A. F. Grospiron, Thomas W. Gleason, Joseph A. Beirne, Floyd E. Smith, Jerry Wurf, Frederick O'Neal, Karl F. Feller.

Metlox Dinnerware Boycott Endorsed

Bal Harbour, Fla.—A boycott of Metlox Manufacturing Co. products by the Potters was endorsed by the AFL-CIO Executive Council with a call for every affiliated union to put Metlox dinnerware on its unfair list.

The company in Manhattan Beach, Calif., has "stubbornly and illegally refused to bargain in good faith" since the Potters were certified by the National Labor Relations Board to represent employes seven years ago, the council noted.

Metlox has been found guilty of unfair labor practices and "now stands before the U.S. Court of Appeals accused of contempt," the statement charged. It asked all unions to publicize the boycott of Metlox products, including dinnerware sold under the name of Poppy Trail and Vernonware.

Major Campaign Pressed to Solve Pollution, Solid Waste Disposal

Bal Harbour, Fla.—The AFL-CIO Executive Council called for a concentrated attack on the problem of solid waste disposal and proposed a five-pronged program to deal with all forms of pollution.

The nation "stands now at the beginning of a national attack on solid waste," the council noted. "A long, difficult road lies ahead before America no longer need fear the danger of being engulfed by this debris."

Pointing out that the United States produces more than 4 billion tons of solid wastes a year and spends $4.5 billion to handle them in an inadequate fashion, the council approved a statement calling for a "broad and systematic program rather than a fragmented approach like the so-called ban-the-can or ban-the-bottle campaigns, which are self-defeating."

The nation is "beginning at last to take some affirmative steps" toward abatement of water and air pollution, the statement observed, but it "lags far behind in dealing with solid wastes—the vast and uncontrolled debris of industrial expansion and population growth."

Solid wastes are not merely local dilemmas, but "constitute a most serious national environmental problem. They contribute substantially to air and water pollution, complicate land use, endanger public health, spread esthetic blight, and squander the diminishing stockpiles of natural resources," the council stressed.

To meet the challenge, the council:

- Endorsed the program set down in the Resources Recovery Act of 1970 "as the promising beginning of a concerted effort to deal with solid wastes," and pledged active support for its full funding.
- Called for strengthening amendments to the act to require agencies using federal grants for disposal facilities to report the kinds, quantities and disposal methods used. Reports would also be required on all solid wastes containing toxic materials, and federal grants would be "conditioned on regional design and operation" in an effort to lower costs, improve efficiency and reduce site-acquisition problems.
- Urged the President to appoint a representative of organized labor to the National Commission on Materials Policy "since this commission's conclusions and recommendations could exert pervasive influence on the course of raw material technology and future employment patterns."
- Identified the key to achievement of the overall goal as the "rapid development of technologies" resulting in "efficient, economical methods of collection, separation, re-cycling and re-use of solid wastes." Needed also is "full protection of the human values involved," including the jobs and livelihood of workers in private economy, including the disposal field.

The council urged all union members to "effectively step up their efforts to help stop pollution, and to place high on their list the increasingly dangerous threat from solid wastes."

It noted that "containers do not litter; people litter. We support practical programs for eliminating litter of all kinds."

A good start, the council said, is to take part in campaigns to clean up litter. While labor participates in campaigns like the Union Label & Service Trades Dept.'s drive to promote the use of litter bags in autos, "we will not lose sight of the fact that the long-term, absolutely essential solutions to the grave problem of solid waste lie in technological development of re-cycling and re-use."

The statement said the labor movement "supports oragnizationally and financially the constructive efforts of the National Center for Solid Waste Disposal for the re-cycling and reuse of solid wastes."

Most solid wastes, it noted, come from mining operations, construction projects and agriculture. But 350 million tons come annually from municipal and industrial sources, with 70 percent of the waste handled by localities or private contractors, the remainder at industrial sites.

Move Backed To Save Eight PHS Hospitals

Bal Harbour, Fla.—The AFL-CIO Executive Council urged Congress to reject a Nixon Administration proposal to close the eight remaining Public Health Service Hospitals which provide comprehensive health care for U.S. merchant seamen, government and military personnel and their dependents and citizens who live near the hospitals.

The council said the Administration's plan to transfer PHS patients to Veterans Administration Hospitals can "hardly be considered seriously."

"The VA hospitals are understaffed, undermaintained and underfunded," the council said. "As any veteran knows, the VA hospital system does not have the capacity to meet the medical care needs of veterans, let alone the needs of more patients."

The council noted that the costs per patient day in the PHS hospitals —located in eight major port cities —averages $55-$60 per day, only a little more than half of what private voluntary hospitals are charging in the same cities.

"Moreover, the per diem cost of PHS hospitals includes medical staff salaries for medical services which are not included under private voluntary community hospitals," the statement observed.

Quicker Action Asked To Extend Jobless Aid

Bal Harbour, Fla.—The AFL-CIO Executive Council called on the 92nd Congress to advance the effective date of extended unemployment compensation and to provide for 100-percent federal funding of the benefits to relieve the states of additional financial burden.

The council also urged that the "trigger point" for the extended benefits be reduced from 4.5 percent to 4 percent of insured unemployment because insured unemployment is far less than the actual national unemployment rate.

Under present law, as enacted by the 91st Congress, the unemployment compensation program could be extended up to 13 weeks for jobless workers who exhaust their regular state benefits during periods of high unemployment—or when the insured unemployment rate is at least 4.5 percent for three consecutive months.

"This figure is too high," the council declared. "In December, when the national unemployment rate soared to 6.2 percent, the insured unemployment rate was 4.4 percent."

Although states were permitted to make the program operative any time after Oct. 11, 1970, only nine have done so, and the federal program would not take effect until Jan. 1, 1972.

"Unemployment levels had soared to a nine-year high as the nation started the new year," the council noted. "State legislatures, in the past month and a half, have demonstrated only a modest interest in establishing immediately effective state extended-benefit programs. In fact, many proposals are being submitted to state legislatures which would delay the implementation of state extended benefit programs until January 1972 . . . the latest effective date permitted by the federal legislation."

The Executive Council said postponing the effective date of state programs until the last possible minute will impose unnecessary and severe economic hardships on jobless workers and their families.

"We call on all state legislatures to take immediate steps to implement the state phase of unemployment compensation extended benefits."

The Trade Problem

INTERNATIONAL economic relationships have been changing substantially since the late 1940s and at a stepped-up pace in the past decade. These changes are the major factors in the deteriorating American position in world trade.

Modern nations, with managed national economies, subsidize exports, add barriers to imports, adjust currency values and change their tax structures to benefit their national interests. The European Common Market has become a strong group of industrial nations with a common trade barrier to the rest of the world and special preferential arrangements with some countries. Japan is now an industrial giant, with an administered economy at home, geared to expanding exports abroad.

Multinational firms and banks, often U.S.-based, now juggle global operations to benefit from the laws of each nation. But their global management, decision-making and transactions are intra-corporate, frequently reaching beyond the law of any single nation.

U.S. firms have invested billions of dollars in foreign subsidiaries every year for two decades; in 1970, the outlay for foreign subsidiary facilities was $12.5 billion. Such foreign investments, license and patent agreements, joint ventures and other foreign affiliations of American companies have been changing the patterns of the U.S. economy in world trade.

As a result of these developments: U.S. exports have been retarded. Imports have been spurred. Production has been displaced. Jobs and employment opportunities have been exported.

THE OFFICIALLY REPORTED U.S. trade balance was only $2.7 billion in 1970—including as much as $2 billion in government-financed exports. The composition, as well as the balance of American trade has changed so that the U.S. is importing a sharply increasing volume of manufactured goods.

As much as half or more of what is reported as U.S. trade is now composed of intra-corporate transactions between U.S.-based multinational companies, their foreign subsidiaries and other foreign affiliates in both industrial and developing countries.

The increasing domination of the U.S. position in world trade by the impact of managed national economies, the internationalization of technology and the operations of multinational companies have made old theories of free trade and protectionism obsolete. It is neither possible for the American economy to hide behind high tariff walls nor to pretend that free, competitive trade relations are possible.

U.S. policies that were designed for the world of the 1930s and 1940s, have become outmoded. They now contribute to undermining the U.S. economy at home and abroad.

A battery of realistic policies and measures is needed. The United States government must now make economic conditions at home a starting point for U.S. policy and posture in international economic relations. Policies should be based on the premise that trade is a complex network of international relationships and measures are needed to deal with the foreign investments of U.S. companies and banks. At the same time, action is required to slow down the flood of imports that displace U.S. production and employment.

'Put the Cornerstone in Place!'

A Word Edgewise:

Historical Analysis of Japan Unlocks Puzzle of Pearl Harbor

By John P. Roche

EXCUSE THE DELAY, which has put me a month or so behind the professional book reviewers, but I have finally finished John Toland's superb history of the decline and fall of the Japanese Empire—The Rising Sun (Random House)—and it is 870 pages of tight, fascinating reading.

One reason it took so long was that I kept going to the book shelves to check alternative sources, to see what Samuel Eliot Morison or Joseph Grew or Barbara Wohlstetter had written about the same issues. I am addicted—to use the title of a recent article I wrote—to the Jigsaw Puzzle of History; I love to put the pieces together.

It would be futile in this space to attempt a full review of Toland's book, which is based on an exhaustive reading of Japanese, American, and other sources. Helped by his Japanese wife, Toland also conducted a number of intriguing interviews with surviving Japanese statesmen, generals, admirals, and other observers. To mix metaphors, this is the literary equivalent of a stereo performance—nowhere has the Japanese situation been better portrayed.

Observing the operations of the U.S. Air Force in World War II, I once inquired sardonically where one could buy Japanese war bonds. A redneck captain from Alabama, who was obviously not amused by Irish humor, threatened me with a summary court-martial. I was extricated by my colonel (an Irishman from San Francisco), who needed me in the office, not in the stockade.

But the doubt lingered on: if our army was efficient, what did an inefficient army look like? Now I know—my God, what those poor Japanese soldiers, sailors and airmen had to put up with. And if one of them had come up with a wisecrack like mine, he would simply have been shot.

But the most interesting dimension of The Rising Sun is not the war history itself, but the careful analysis of the background of the war. Ever since December 1941, I have been puzzled by two fundamental questions.

First, why did Adolf Hitler declare war on the United States on Dec. 11?

Had the Nazis simply laid low, the United States would have gone roaring off into the Pacific to avenge Pearl Harbor and left the Wehrmacht undisturbed. This would have thrown off the whole Roosevelt-Churchill strategy of concentrating on Europe first, Asia second. Two possible explanations are that 1) Hitler was working for British Intelligence; or, 2) he was crazy. One must, I think, settle for the latter.

The second question, which Toland has finally answered to my satisfaction, was: Why did the Japanese hit Pearl Harbor and the Philippines, when they could have bypassed them and gone into Southeast Asia and the Dutch East Indies?

Any American historian who has studied the period 1939 through 1941 recognizes the tremendous force of isolationism. The notion that F.D.R. could get Congress to declare war on Japan because the latter had invaded French Indochina, Malaya or Java, is simply untenable. F.D.R. was, indeed, busy trying to force the Nazis to force us to defend ourselves in the Atlantic, but the sinking of American warships on the high seas (convoying British ships) touched off little more than rhetoric in Congress. And a good deal of it was directed to the question: "What was that destroyer doing in dangerous waters?"

TOLAND SHOWS that there was an almost total ignorance of American political realities in the highest echelons of the Japanese government. Pres. Roosevelt had been busy promising ambiguous assistance to the British, French and Dutch in the event the Japanese moved.

The key men in Tokyo believed F.D.R. and assumed that all he had to do was push a button and bombers would leave Clark Field to sortie against Japanese lines of communication; that the minute Japanese troops hit the beach in Malaya, our battle fleet would leave Pearl Harbor to attack the Japanese home islands.

Not realizing that Roosevelt's hands were tied, that he was in truth a "paper tiger," the Japanese high command determined that American power in the Pacific had to be neutralized to guarantee the success of their major objective, the attack on the British, French and Dutch. This failure of perception is—given the intelligence of the Japanese—a precedent all presidents, and state departments, should worry about when they prepare rhetorical "signals."

For Challenge of '70s:

Vast Public Investment Needs Depend on Federal Government

The following is excerpted from a report of the AFL-CIO Executive Council's Economic Policy Committee adopted by the council at Bal Harbour, Fla., Feb. 18, 1971.

THE FEDERAL GOVERNMENT, representing all of the American people, holds the key to workable solutions to most of the public investment needs of American society, since they usually involve nationwide social issues that cut across the boundary lines of the states, cities, counties and school districts.

Moreover, with all of its defects, the federal tax system is much more productive and equitable than state and local tax structures. In addition, only the federal government can establish national priorities, goals and nationwide performance standards.

No state or local government can solve the nation's vast public investment needs in isolation. Neither can private enterprise, even with the promise of tax subsidies. The basis for meeting these needs requires national policies and nationwide measures, with adequate federal funds and standards—and the cooperation and backing of the states, local governments, business firms and private groups.

A long-range, planned national effort to meet the needs of the American people for public facilities and services can also provide the basis for economic growth in the period ahead.

The following steps are essential to America:

1. The first prerequisite is the full funding by the federal government of present public-investment programs—plus a temporary acceleration of funds for short-term projects, to lift sales, production and employment in this period of economic stagnation.

Such immediate step-up in the appropriation of federal grants to state and local governments and federal agencies for the expansion and improvement of public facilities and services could be the key to reconversion—to offset the declining military defense proportion of total national production. It would provide opportunities to employ the talents and skills of unemployed scientists, engineers and technicians, as well as job opportunities for returning GIs, production, maintenance, construction and other categories of unemployed workers.

2. To sustain the planned expansion of public investment, the federal government should develop, coordinate and maintain a national inventory of public investment needs, based on estimated future population growth and present backlogs—in each major category, such as low- and moderate-cost housing, schools, health-care facilities, day-care centers, parks, pollution controls, other community facilities and public services. Each state and metropolitan area should be encouraged, with the assistance of federal planning grants and technical aid, to develop a similar inventory of needs.

The inventory would also be a shelf of public works, with an accelerated pace in times of general economic recession.

To facilitate such programs, a federal urban bank or similar mechanism may be required to provide long-term, low-interest loans.

3. An Office of Public Investment Coordination should be established in the Executive Branch of the federal government to encourage, assist and coordinate public investment planning and execution by state and local governments and federal agencies.

4. Congress should direct the Federal Reserve System to allocate a significant portion of available bank credit, at reasonable interest rates, to effectuate the construction of housing and community facilities.

5. A land-use policy is needed to provide the basis for the rational development of urban areas, new towns, parks and recreational facilities—and to curb land speculation.

6. We urge the Administration to develop a capital budget, as an integral part of the annual federal budget, to assist the federal government in plannng, financing and executing public investment programs. Such a business-like budget for the federal government would establish a federal investment account, including outlays for the creation, improvement or acquisition of assets or the acquisition of recoverable claims—separate from the account for general housekeeping expenses and national security.

7. Proposals to dismantle the system of federal grants-in-aid to the states and local governments—as well as proposals to supplant the expansion of such programs with no-strings federal funds that lack program purposes, national priorities and standards—should be rejected. However, administrative simplification of the large number of federal grants requires the consolidation of many overlapping grants, without undermining their purposes, goals and standards.

8. Justice in the federal tax structure—and additional revenue—should be achieved by eliminating the loopholes of special tax privileges for corporations and wealthy families. Congress should also prohibit the implementation of the Treasury Dept's. tax bonanza to business, in the form of accelerated depreciation, which will amount to annual revenue losses of $2.7 to $4.1 billion in the next several years. Efforts to move the federal tax structure further away from the principle of ability to pay—such as the proposal for a national sales tax under the name of a value-added tax—should be rejected.

9. Federal efforts are needed to assume the costs of welfare payments and lift this burden from the backs of state and local governments. The federal government should also encourage and assist states and local governments in developing more productive and equitable tax structures.

10. The provision of health care for the American people should be greatly improved by the establishment of a national health security system, as well as the expansion of health care facilities.

Administration Goes Slow:

Unions Gear Up to Make Use Of Job-Safety Law Provisions

UNIONS ARE GEARING UP to use the federal job-safety law enacted last year "intelligently and vigorously" to safeguard the lives, limbs and health of workers, AFL-CIO safety expert George Taylor declared in a network radio interview.

Taylor, executive secretary of the federation's Standing Committee on Safety & Occupational Health, urged the Nixon Administration to show "more tangible evidence of firm intent . . . to take this program forward in high gear" than it has since it was signed into law last December. Taylor stressed that the effective date of the new law is only two months off, but key officials and panels responsible for shaping health and safety standards and enforcing them still haven't been named.

"The Administration is weighing this program . . . against the internal budgetary decisions" already made for other programs, he said. He added that "on the basis of our examination of the budget and our knowledge of what's needed . . . the authorization received by the Dept. of Labor is not enough" to establish and sustain the kind of program that is needed.

Questioned by reporters on Labor News Conference, a network radio interview produced by the AFL-CIO and broadcast Tuesdays on the Mutual Broadcasting System, Taylor turned aside the suggestion that the Labor Dept. "will be flooded with complaints" from workers of in-plant violations of the law "that will swamp the whole operation." Such worry, he said, is based on the invalid assumption that "our people are going to act irresponsibly."

He said the labor movement recognizes and accepts its responsibility to help workers and in-plant safety committees understand the law so that they "can use it on a day-to-day basis in the plant."

Reporters questioning Taylor on Labor News Conference were Sam Sharkey of the Newhouse Newspapers and Robert Barr of Fairchild Publications.

By Press Associates, Inc.

ON FEBRUARY 6, 1961—less than one month after he had assumed office—Pres. John F. Kennedy transmitted to the Congress the draft of a bill to extend the coverage of the Fair Labor Standards Act and to increase the minimum wage.

"Our nation," wrote the President in his letter of transmittal, "can ill afford to tolerate the growth of an underprivileged and underpaid class. Substandard wages lead necessarily to substandard living conditions, hardships and distress."

The Kennedy proposal called for raising the minimum wage from $1 an hour to $1.25. In making his recommendations, the President declared:

"Since the last increase in the minimum wage, both living costs and productivity have increased to such an extent that the proposed bill merely reflects an adjustment to keep pace with these factors."

This reflects the philosophy of the original Fair Labor Standards Act of 1938 which, in its Declaration of Policy, declared that this nation, as rapidly as possible, must eliminate labor conditions "detrimental to the maintenance of the minimum standard of living necessary for health, efficiency and general well-being of workers."

When he called for the passage of such legislation in 1937, Pres. Roosevelt stressed this concept even more simply—that a man who works should receive sufficient compensation to adequately feed, clothe and house his family.

The first minimum wage of 25 cents an hour fell far short of this goal but the basic philosophy was recognized.

The current minimum wage—$1.60 an hour—still can provide only a poverty-level standard of living of $3,200 a year, even if a worker puts in a 40-hour week, 52 weeks a year.

Early this year the Dept. of Labor announced that a non-farm family of four persons living in the continental United States is in poverty if it has an annual income of $3,800 or less—a rise of $200 over the level of a year before.

The poverty levels are based on the living costs and are used as a guide in determining eligibility for manpower programs aimed at improving the employability of the poor.

Other new poverty levels set by the department went up to $5,600 for a non-farm family of seven.

With living costs rising rapidly, the pressures for raising minimum wages are intensified.

MINIMUM WAGES cannot be disentangled from the welfare issue since so many on welfare are among the working poor. It has been estimated that if the minimum wage floor were raised to $2 an hour the number of Americans living at the poverty level could be cut in half.

Ever since the original minimum wage law was passed in 1938 the greatest stumbling block to making the legislation meet the goals of its sponsors has been conservative business interests.

Yet, what actually happened over the years as the minimum was raised and coverage extended was that the lowest-wage workers in our economy received a critically needed lift and the increased buying power was absorbed easily and beneficially into the economy.

Consistently, studies by the Dept. of Labor have shown few ill effects traceable to the higher minimum on the part of industry.

Almost typical was a study made in 1960 on the impact of raising the minimum wage to $1 an hour. Specifically, six communities were selected for intensive surveys because a large proportion of their workers were affected by the new minimum. Four of these were in the South, one in the Southwest and one in the North. Increases were required for 17 to 49 percent of their covered employes.

The surveys showed that every one of these low-wage communities prospered and benefitted after the increase in the minimum. Following the increase the communities had upturns in total employment and in the number of firms in business in both covered and uncovered industries.

When the 92nd Congress debates proposals to raise the minimum wage and extend coverage to the 11 million workers now outside the current legislation, it will have to consider these facts.

PROTECTION OF WORKERS at the plant level through the new Occupational Health & Safety Act was pledged on Labor News Conference by George Taylor, center, executive secretary of the AFL-CIO's Standing Committee on Safety & Occupational Health. He was questioned by Sam Sharkey, left, of Newhouse Newspapers, and Robert Barr of Fairchild Publications. The public affairs programs is broadcast Tuesdays on Mutual radio.

Drive Pressed For Exit Rights Of Soviet Jews

Bal Harbour, Fla.—The federal government was urged to take the initiative in bringing economic and political pressure against the Soviet Union on behalf of Soviet Jews wishing to migrate to Israel and other countries.

A statement by the AFL-CIO Executive Council also appealed to free trade unions everywhere to rally public opinion and governmental support for demands that the USSR comply with the principles of the Charter of the United Nations, the Declaration of Human Rights and the International Convention on the Elimination of All Forms of Radical Discrimination.

The international convention provides for "the right of everyone to leave any country, including his own, and to return to his own country," the council noted. This right to freedom of exit also is embodied in the UN Charter and the Declaration of Human Rights.

"Only an aroused world opinion—stimulated by appropriate UN action and political and economic pressure by our own and other liberty-loving countries—could impress upon the Soviet Union the urgency of taking the shackles off the right of their Jewish minority to leave the country for a homeland open to their own free choice," the Executive Council's statement said.

Fair Treatment Of Prisoners Asked of Hanoi

Bal Harbour, Fla.—Basic human dignity demands that North Viet Nam fulfill commitments to the Geneva Convention by insuring fair treatment of American prisoners of war, the AFL-CIO Executive Council declared.

The council also called for Hanoi to identify the prisoners, permit them to correspond regularly with their families and allow a neutral agent to inspect the prisons.

"North Vietnamese recognition of its commitment to these principles will brighten the prospect for peace," the council declared. "It would also lay the groundwork for North Vietnamese acceptance of the American proposal to free all prisoners of war."

The council reaffirmed support of the Red Cross campaign urging Americans to write to the President of North Viet Nam expressing concern for the prisoners and pleading for their humane treatment.

The POWs and their families are tragic victims of the war, the council stressed. "The agony of not knowing the fate of American men missing in action or presumed captured is indeed heavy for their families, their friends and their fellow countrymen."

Activities Schedule For Studies Center

The AFL-CIO Labor Studies Center has five institutes scheduled for March and April. They are:

Human Resources Development Institute Training Seminar, Mar. 1-3.

Arbitration Institute (at University of California at Berkeley), Mar. 1-5.

Reading Development Program, Mar. 1-Apr. 1.

Labor Law, Mar. 8-12.

Union Action in Civil Rights, Apr. 25-30.

PLIGHT OF POLISH WORKERS suffering from food shortages and Communist government control of their unions is deplored during wreath-laying ceremonies at the Kosciusko statue in Washington. Harry Goldberg of the AFL-CIO Dept. of International Affairs, at the microphone, pledges the federation's support for the suppressed Polish people.

U.S. Labor Stands With Polish Workers

Bal Harbour, Fla.—Polish workers in the struggle to overcome food shortages, high prices and Communist government control of their trade unions won the support of the AFL-CIO Executive Council.

The Polish people—especially the workers—resent the Soviet domination, the council said, adding, "They are bitter over Communist tyranny; they are fed up with the stagnating economy and its spiralling food shortages and prices."

"In Poland, as in all other lands under totalitarian rule, there are no free trade unions to defend the interest of the workers," the council statement declared.

And only two days before the December workers' revolt, "the leadership of the so-called Polish unions declared on Warsaw radio their support of the price increases ordered by the government," the council noted.

"Such 'trade union' leaders never could be trusted by the Polish workers and never should have been accorded even the slightest trust by the leadership of bona fide unions of any country," the council stressed.

Not until armed forces and tanks failed to crush the workers' revolt did the government promise higher minimum wages and family allowances.

But food, clothing and housing shortages continue, the council observed in calling on the White House to establish a relief program to help the Polish people.

The council also urged trade unions around the world to press for the release of workers arrested in the December demonstrations.

In Washington, nearly 200 persons gathered at the Kosciusko statue—erected in memory of the American Revolutionary War hero—to protest bloody attacks on the Polish workers.

Along with representatives from Polish-American organizations, government officials and trade unionists were members of other American ethnic groups, including Czechoslovaks, Hungarians, Bulgarians, Rumanians and Lithuanians.

Trade union solidarity with the Polish workers was reaffirmed in a message by Harry Goldberg of the AFL-CIO Dept. of International Affairs.

"In their struggle for human digity, the Polish workers occupy one of the front trenches today in the unending struggle between freedom and tyranny," Goldberg observed. He pledged the federation's support in their efforts.

Bricklayers to Prepare 500 As Apprentices

The Bricklayers are setting up a new training program to prepare 500 unemployed and underemployed workers for apprenticeships in the skilled masonry trades.

The program will provide 18-week courses in 28 states and the District of Columbia under a $757,928 grant from the Labor Dept. Six weeks of classroom instruction and 12 weeks of on-the-job tutoring will be given the trainees.

Assistant Labor Sec. Malcolm R. Lovell, Jr., who announced the new contract, said that half the trainees will be selected from among chronically disadvantaged workers.

The union will subcontract the operations of the program wtih its locals, joint apprenticeship committees and labor-management groups in the 29 major jurisdictions.

From the $757,928 federal contract, $375,745 is allotted for on-the-job training; $214,170 for trainees' allowances, and $168,013 for supplemental instruction by the Dept. of Health, Education & Welfare.

Thirty-three journeymen bricklayers will serve as coach-instructors to teach theory and practical requirements of the trade. They will also give follow-up instructions to the trainees.

Five field coordinators will be used to develop and negotiate contracts with local groups for the training program.

California Labor Hits Utility Rate Hike

San Francisco—Californians will pay higher electric bills because the state's Public Utilities Commission granted an "exorbitant and inflationary" rate increase, the State AFL-CIO charged.

John F. Henning, executive secretary-treasurer of the California labor federation, noted that the commission gave the Pacific Gas & Electric Co. a bigger rate increase than its own staff had recommended.

It will mean $51.6 million added to electric bills, Henning said.

World Tensions Heightened:

Soviet Moves Cited As Threat to Peace

Bal Harbour, Fla.—The Soviet Union has "intensified tension and conflict in Southeast Asia and the Middle East" and is maneuvering to undermine NATO, the AFL-CIO warned.

These moves conflict "with the paramount goal of American foreign policy, the Executive Council declared—"the preservation of peace with freedom."

The continued growth of Soviet military power and political influence is "the most disturbing feature of the present world situation," the council said, and could pose "a serious threat to world peace."

On Southeast Asia, the council said that the end of the U.S. combat role "is in sight" as the withdrawal of American troops continues and Vietnamization makes "encouraging progress." The statement noted that on Cambodia and Laos, the U.S. has taken "appropriate measures to safeguard American lives" and assure the continued withdrawal of U.S. troops.

The situation in the Middle East, the council said, "remains serious" and not even a "stable truce . . . is in sight." It singled out the role of the Soviet Union in support of Egypt and other Arab governments and said "clearly, Moscow aims to perpetuate hostility and strife between Israel and her neighbors in order to win a firm grip on the Arab countries and make them militarily and economically dependent on the USSR."

The council reaffirmed its "wholehearted solidarity" with Israel and Histadrut and urged full diplomatic and political support by the United States in Israel's bid for a just peace. The statement expressed its concern that the Administration budget contains inadequate requests for credits for Israel.

The greatest diplomatic victory for the USSR, the council stressed, was the treaty signed with West Germany, a treaty that for the first time has a western power recognizing "the postwar Soviet conquests and hegemony in Eastern Europe."

The West German government had pledged all sorts of cooperation with the Soviet Union which "has given nothing in return," the council said, including negotiating a settlement on Berlin.

In addition, the USSR continues to seek the dismantlement of American bases, withdrawal of U.S. troops from Europe and the break-up of NATO. To "thwart these Soviet maneuvers," the statement continued, "it is most urgent that Western Europe be strengthened through closer economic and political cooperation."

It concluded that "in this precarious situation there can be no room for a neo-isolationism in our country. American troops should stay in Europe as long as the Soviet Union pursues its imperialist designs. American military might, which is the cornerstone of the western defense system, must be maintained at a level capable of deterring and defeating aggression."

First Contract Signed With Savings Firm

Portland, Ore.—The Office & Professional Employes announced the signing of their first contract anywhere in the nation with a savings and loan association, and their first area contract covering bank employes—both at the First Federal Savings & Loan Association in Vancouver, Wash.

Negotiators for OPEIU Local 11 concluded a one-year pact providing wage increases of 8.5 to 10 percent, starting salaries of $400 a month to $960, medical, dental and optical coverage, fully paid by the employer, a pension program and other benefits.

The union's Local 13, St. Louis, won another first contract at the North County Bank & Trust Co. in Jennings, Mo. It provides a 37.5-hour workweek, wage gains ranging from $660 to $1,680, ten paid holidays, a union shop and other advances over a three-year period.

Unions Asked to Prod Safety Act Enforcement

Bal Harbour, Fla.—Organized labor must shoulder much of the responsibility if workers are to realize the full potential of the Occupational Health & Safety Act, the AFL-CIO Executive Council stressed.

Federal agencies charged with the enforcement of the law are not equipped with funds or manpower to undertake the safety program, the council said, adding that states are similarly unprepared.

Labor's efforts will have to take on a wide scope—in plants, state legislatures, Congress and the federal executive departments, the statement said. The law will go into effect next Apr. 28.

"Organized labor must do all in its power to see that programs under this act be fully funded, adequately staffed and firmly enforced," the council declared.

It said labor must watch closely as enforcement plans are formulated by the Departments of Labor and Health, Education & Welfare and note the conduct of the program—from the standpoint of organization, enforcement, standards-setting, manpower training and research.

"We must similarly watch the individual states in their response to the provisions of this act allowing them to develop plans and programs to meet and maintain the guidelines of eligibility for their participation in the enforcement process within their boundaries," the council said.

"At a plant level, we must equip ourselves to understand and use intelligently and with discernment, the important protections and rights which are provided for workers."

The Executive Council emphasized that accredited labor representatives must be well-trained and capable of dealing efficiently with particular work-environment problems.

"The Occupational Health & Safety Act can be made into an instrument to save thousands of lives, and prevent millions of job-incurred injuries and illnesses, but it requires both our vigilance and our responsible action," the council said.

Executive Council Declares:

Buying Power Lag Justifies Substantial Wage Increases

Bal Harbour, Fla.—American workers squeezed between rising prices and declining buying power have no other choice but to press for—and win—substantial improvements in union contracts this year, the AFL-CIO Executive Council declared.

The council adopted a report by its Economic Policy Committee on wage negotiations in 1971 emphasizing that sizable wages hikes are needed to offset constantly rising prices "and to try to improve, to some degree, the buying power of workers."

"The rising living costs of the past five years have washed out all or most of the buying power of workers' wage- and fringe-benefit gains," the report emphasized.

"Wage and salary earners and their families are being squeezed by increasing prices. Many . . . are being squeezed further by cuts in working hours, which reduce weekly earnings, and by layoffs."

The report noted that "some government and business officials have tried to focus the blame for inflation on workers' wage increases." Yet "the record clearly shows that workers and their families have been among the major victims of inflation."

At the same time, workers have been the principal victims of the Administration's misguided "game plan" to combat inflation by an economic slowdown. That slowdown, the council said, "produced a recession, rising unemployment and cuts in working hours" along with an accelerated rise in living costs in 1969-1970.

Confronted by a recession and inflation at the same time, the report noted that the AFL-CIO had "repeatedly urged the government to combat inflation effectively, without creating a recession and rising unemployment."

The council recalled that the federation urged the government to adopt "selective, pinpointed measures" to treat the causes of inflation — to set up selective credit controls, to impose interest rate ceilings on loans, and to direct the banks to allocate available credit."

In addition, labor time and again urged the government to "plan for a swift and socially useful conversion from military production." The council said these policies would curb inflationary pressures.

But "such policies have not been adopted," it said. "The Administration chose to choke off economic expansion in 1969 by tight money, high interest rates and cuts of federal construction projects—resulting in a combination recession and accelerated inflation."

In early 1971, the statement pointed out, the Administration "seemed to shift its course to modest economic ease and optimistic rhetoric, in the hope that unemployment and inflation somehow will both go away."

The council, reiterating what it had stated on "numerous occasions" since early 1966, assured that, if the President determines that the nation warrants "extraordinary overall stabilization measures, the AFL-CIO will cooperate, so long as such restraints are equitably placed on all costs and incomes—including all prices, profits, dividends, rents and executive compensation, as well as employes' wages and salaries."

It stressed: "We are prepared to sacrifice as much as anyone else, for as long as anyone else, so long as there is equality of sacrifice."

The council also emphasized that living costs "continue to rise at a rapid pace. And they continue to erode workers' buying power, squeezing workers' families and preventing the needed expansion of consumer markets."

It added: "At the collective bargaining table, therefore, there is no other recourse for workers and unions than to seek substantial wage gains, to offset prior increases in living costs and to try to achieve an advance in real earnings."

The statement stressed these facts of economic life:

- Living costs rose by 6 percent in 1970, following increases of 5.4 percent in 1969, 4.2 percent in 1968 and 2.8 percent in 1967.
- The buying power of the average worker's weekly after-tax earnings declined in 1970 for the second consecutive year. It was less than in 1968 and even below 1965. Affected were some 48 million nonfarm workers.
- Deferred wage increases under existing contracts covering about 5.3 million workers will average 7.8 percent in 1971.

The council's statement said workers and their families need wage and salary increases "to maintain and improve their real incomes. The national economy needs increased workers' buying power to boost consumer expenditures" accounting for nearly two thirds of total national production "to lift the economy out of stagnation."

It declared that despite "outcries in the news media about the size of collective bargaining settlements," wage increases have been modest in the overwhelming majority of cases "in the face of the accelerated rise of living costs."

While gross weekly earnings of the average nonsupervisory worker were $119.78 in 1970, the average worker needed $10,664 before taxes to maintain a modest but adequate standard of living, with few luxuries, for an urban family of four.

"That comes to about $205 a week for a full-time worker," about $85 a week above the average wage, the report noted. With the rise in living costs since the spring of 1970, that cost is now about $11,000 or $211 a week, it said.

Even the Labor Dept.'s lower family budget was approximately $134 a week for 52 weeks. At present prices the cost is about $138 a week, nearly $20 more than the average wage.

Nixon Economic Policy Hit as Empty 'Rhetoric'

(Continued from Page 1)

nomy around from recession and stagnation to a sustained upturn."

Noting that industry is operating at about 75 percent of capacity, that a surge in consumer spending has not materialized and that only increases in residential construction and state and local government projects are evident, the council said that was not enough "to carry the entire national economy at a rapid pace."

The council outlined a program of government actions to reduce unemployment, boost productivity and reduce cost-price pressures in the economy. They included:

- Full funding of government programs that could add at least $6 billion to the economy's spending stream, plus an additional $2 billion program of federal grants to step up short-term public works construction and repairs in areas of high joblessness.
- Legislation to create at least 500,000 public service jobs through federal funds to state and local governments as well as private nonprofit organizations.
- A rapid expansion of money and credit including a reduction in FHA-VA mortgage rates to 6.5 percent immediately and no more than 6 percent by the end of the year; a reduction by the Federal Reserve system of the discount rate it charges commercial banks to 4 percent; a cut by the nation's major banks of their prime interest rate to 5 percent.
- Congressional action to prevent enforcement of the Administration's announced 20 percent speed-up in depreciation writeoffs, putting an end to this application of "trickle-down economics."
- Increased buying power for workers through a rise in their real incomes to provide the hike in consumer spending that is basic to any real economic growth in 1971.
- An immediate 15 percent across-the-board increase in social security and railroad retirement benefit payments.
- **Advancing the effective date of the extended unemployment compensation benefit program from Jan. 1, 1972, so that it can be implemented immediately to assist long-term jobless workers.**
- Action to curtail the high rate of business mergers and conglomerate takeovers which would help curb the price-raising ability of the dominant corporations.
- Practical measures to dampen the soaring pressures on living costs of physicians' fees, hospital charges, housing costs and auto insurance rates.

The council reaffirmed AFL-CIO policy that if the President determines that the economic situation "warrants extraordinary overall stabilization measures," the federation will cooperate so long as the restraints "are equitably placed on all costs and incomes," and that the "equality of sacrifice" is assured.

UTU Dispute Continues As Deadline Nears

Insistence of railroad management on a "complete sacrifice" of work rules by the 180,000-member United Transportation Union is delaying a a contract settlement, the president of that union said as negotiations faltered.

The talks between management and the UTU, only one of four unions without a settlement, broke off after an all-night session arranged by the Labor Dept. and the National Mediation Board. Assistant Labor Sec. W. J. Usery said he expects the talks to resume before a no-strike deadline set by Congress expires Mar. 1.

UTU Pres. Charles Luna told newsmen "the carriers still want us to pay for the raises they gave three other unions, and would give us, through the complete sacrifice of our rules." Members of his union are unwilling to make such a trade for working conditions they achieved in past contracts, Luna said.

The UTU represents railroad trainmen, firemen and enginemen, conductors, switchmen and others. It has said it is willing to negotiate rules changes where the need for change exists, but not in sacrifice for wage increases needed to help members keep up with the cost of living and rising productivity.

Three other unions have settled for wage hikes of about 46 percent over three and a half years, and one rules change affecting the Railway Clerks. The other unions are the Maintenance of Way Employes and dining car crews represented by the Hotel & Restaurant Employes. Clerks general chairmen were voting on the settlement as the AFL-CIO News went to press.

Downgrading of Anti-Poverty Drive Brings Condemnation of Federation

Bal Harbour, Fla.—Administration efforts to downgrade the status of the anti-poverty program brought strong condemnation from the AFL-CIO Executive Council.

The council called for continuance of the Office of Economic Opportunity as a "command post" which would be "a visible symbol to the poor and to the country of the nation's will and commitment to end poverty."

Under the Administration's government reorganization proposal, there would no longer be a single agency within the government whose primary concern would be the problems of poverty.

OEO programs would be scattered between the proposed Dept. of Human Resources and the Dept. of Community Development.

An Executive Council statement on the proposal urged both Congress and the Administration to continue the national effort to eliminate poverty and to strengthen and adequately fund existing programs.

"We are opposed to any effort to downgrade the status of the anti-poverty effort through political interference at the state level, or by turning over to the states the responsibility for direction of this program," the council statement said.

"We are opposed to transferring successful anti-poverty programs to old-line agencies solely in the name of efficiency and to increasing the burden of local communities for the funding of community action programs."

The council pointed to specific Administration actions which it said indicate a substantially reduced anti-poverty program:

- Reduction of the OEO's budget for the coming fiscal year and the reduction in funds requested for more than 850 community action agencies.
- Requiring an increase from 20 percent to 25 percent of the local-share contribution for community action which "will put an additional burden on already strained local budgets and can result in the reduction or even elimination of community action programs.
- An attempt to decentralize the Legal Services Program and the reluctance of the OEO director to override Gov. Ronald Reagan's "politically motivated veto of California's Rural Legal Assistance Program which cast doubt on the future of a program whose effectiveness in providing a more equitable status for the poor before the law has been acclaimed by the legal profession."
- Use of anti-poverty funds to increase the role of private enterprise in the field of education through performance contracting and educational vouchers.

"These so-called 'experiments' can only serve as a deterrent to the assumption by the federal government of its responsibility in support of quality education for all children, but especially the poor," the council said.

The Executive Council's statement noted that the AFL-CIO has supported the anti-poverty program from its inception, but has understood the limited character of the program.

"We are fully aware that poverty will not be eliminated unless the full spectrum of government and private resources are committed to this effort.

"In the final analysis, it is jobs or good pay, decent housing, quality education, adequate health and social services, and the elimination of discriminatory practices which will bring an end to poverty."

Fire Fighters Name Organization Director

The Fire Fighters named Staff Rep. Percy Clark as director of organization for the 150,000-member union. Clark was a member of St. John, New Brunswick, Local 771 and served as an IAFF vice president before joining the staff in 1969.

Labor Studies Center Offers New Program

Bal Harbour, Fla.—The AFL-CIO Labor Studies Center will offer an 11-week certificate program under its newly revised curricula for the 1971-72 year, the Executive Council was told.

Marking a major step forward in the development of the center, the new program will incorporate a number of week-long institutes and a three-to-four-week core program offered during the two first years of operation.

In the report to the council, AFL-CIO Education Director Walter G. Davis and Studies Center Director Fred K. Hoehler said the consolidation of these programs will bring a needed coordination to the curricula.

Basically, the plan is to realign the schedule into two key areas: Special Groups and Special Purpose Institutes, and into the Certificate Program.

The "special" sessions and institutes—some scheduled periodically—will include such programs as the seminars for Building Trades Business Agents, Critical Problems in State Government, Man and His Environment, Teacher Training, Preparing the Union Member for Government Service, Collective Bargaining in the Federal Service, Effective Union Action for Civil Rights, and Staff Development.

The Certificate Program will be offered twice a year, in the fall and in the winter-spring terms. The student will have the option of completing the course in the 11-week period or taking selected institutes over several years for the certificate award. A student will also be able to attend any of the institutes with no relation to the program as a whole.

Several one-week institutes and a four-week staff development session make up the program. The week-long institutes are Labor Law, Collective Bargaining, Arbitration, Communications, Income Maintenance—Fringes and Social Insurance, Critical Problems for the Labor Movement, and Development of American Society.

Disputes Plan Success Laid To Mediation

Bal Harbour, Fla.—Six of every 10 complaints filed under the AFL-CIO Internal Disputes Plan are settled by mediation, the federation's Executive Council was told.

In a report on the plan, commonly known as Article XX, the figures show 1,086 complaints since it was initiated in 1962, with 634 settled or in the process of mediation. There were 110 cases filed in 1970, a slight drop from the previous four years.

Violations were found by impartial umpires in 279 cases and there were 141 appeals from the decisions to a special subcommittee of the council, which denied 108.

Only 74 complaints of non-compliance were received by the subcommittee since the plan's existence and compliance was achieved in 44 cases; three are still pending.

Since the last report the removal of sanctions and restoration of rights as provided for in the plan was granted to the Leather Goods, Plastics & Novelty Workers and the Brotherhood of Railway Carmen.

Unions continuing under sanctions are the Air Line Pilots, National Maritime Union, International Typographical Union and the Printing Pressmen.

FEDERATION VICE PRESIDENTS I. W. Abel, Paul Jennings and Floyd E. Smith discuss AFL-CIO Executive Council affairs at the council's mid-winter meeting in Bal Harbour, Fla.

Consumer Price Index Edges Up in January

By Tom Castor

The cost of living continued to rise in January, the Labor Dept. reported, with the Consumer Price Index edging up three-tenths of 1 percent on a seasonally adjusted basis which takes into account post-Christmas sales and other developments.

On an unadjusted basis however, the index rose only one-tenth of 1 percent, the lowest monthly rate of increase in four years, according to the Bureau of Labor Statistics.

"If you are seeking to assess changes in prices on a long-range basis, the seasonally adjusted figures should be cited," Assistant BLS Commissioner Joel Popkins explained. "But consumers pay on the basis of the unadjusted figures."

While the CPI showed a smaller increase in January, the index for wholesale prices recorded its largest increase since last July—seven-tenths of 1 percent. And wholesale prices are regarded as an indicator of what's in store for consumers in the months ahead.

The January figures were the first to be issued by the BLS using 1967 for the index base. The base previously used was 1957-59. The U.S. Office of Management & Budget established the new reference base for use by all government statistical agencies in line with a long-standing policy that index bases should be updated periodically, the Labor Dept. said.

Although rebasing the index does alter its changes over time expressed in index points—or dollars and cents—it does not alter the percentage changes.

January's increase brought the Consumer Price Index to 119.2 on the new base which means the average consumer paid $11.92 in January for the same goods and services that cost him $10 in 1967.

Based on the January CPI, approximately 67,000 workers will receive cost-of-living pay increases.

Buying power of the nation's rank-and-file workers rose during the month only because of reductions in federal income tax withholding rates, according to the BLS.

While gross weekly earnings were virtually unchanged from both December and January 1970, real take-home pay for family workers was up seven-tenths of 1 percent from December and two-tenths of 1 percent from a year earlier because of the reduced withholding rates.

This meant that in terms of 1967 dollars, the typical worker with three dependents had real spendable earnings of $90.22 a week—an increase in buying power of 63 cents over the previous month but only 22 cents over January 1970.

Although prices declined on used cars, clothing and some grocery items during January, this was more than offset by an increase of six-tenths of 1 percent in the costs of all consumer services—chiefly medical care, insurance, home maintenance, utilities and public transportation.

To Spur Economy:

$2 Billion Sought For Public Works

Bal Harbour, Fla.—A $2 billion public works program, concentrated in communities hardest hit by unemployment, was prescribed by the AFL-CIO Executive Council to help revive the nation's ailing economy.

A federally-funded program of that magnitude, the council said, would quickly create about 150,000 jobs "in on-site construction in areas of high unemployment, and in the production and distribution of construction materials such as steel, lumber, cement and equipment."

Furthermore, the council suggested, as the money circulated through the economy "there would be a multiplying boost to production and jobs" to bring the total of new employment above the 300,000 mark.

Urging "quick congressional action," the Executive Council stressed that "states, local governments and federal agencies have great backlogs of needed public works projects" that could get under way or be accelerated as soon as money is available.

Federal funds, the council said, should be used to step up construction and repair of such needed facilities as water supply and sewer systems, health care and recreation centers, waste treatment plants and public buildings.

On the same day that the AFL-CIO council issued its statement, congressional leaders in Washington held a press conference to announce support for an accelerated public works program and to pin a top priority label on legislation introduced by Rep. John J. McFall (D-Calif.) and Sen. Jennings Randolph (D-W.Va.).

Appearing together at the news conference were House Speaker Carl Albert, Majority Leader Hale Boggs and Rep. John A. Blatnik (D-Minn.), chairman of the House Public Works Committee and one of the co-sponsors of the bill.

The legislation would pump new federal construction funds into communities whose unemployment rate is 50 percent above the national average.

Albert said the bill is necessary because of the failure of the Nixon Administration's economic policies which have plunged the nation into "a serious recession."

Blatnik announced that House hearings will begin Mar. 15 and he and the Democratic leaders expressed the hope that the legislation will be sent to the floor of the House by mid-April.

The Senate Public Works Committee, which Randolph heads, has already begun field hearings on the legislation.

The AFL-CIO Executive Council statement stressed that "public investment projects can pick up the slack caused by economic stagnation and the leveling off of business investment outlays for plants and machines."

It noted that with 5 million Americans out of work, large and small communities throughout the nation have been hit by "disastrous" levels of unemployment.

"American society needs improved public facilities," the council said.

"The American economy needs a boost to sales, production and employment. A $2 billion accelerated public works program could provide both," the statement stressed.

Full Collective Bargaining Rights Pressed for All Federal Workers

Bal Harbour, Fla.—Congress should extend full collective bargaining rights to all federal employes, the AFL-CIO said.

An Executive Council statement hailed the breakthrough last year when postal workers were given the right "to bargain freely through their unions on most of the issues available for negotiation in private industry."

By contrast, other federal workers have only limited bargaining rights under a presidential executive order that can be changed unilaterally at any time.

"Now that Congress has moved in the field of postal labor relations, it should act promptly on a similar system for wage board and classified employes," the council said.

The AFL-CIO statement on labor-management relations in the federal government also called for:

- Amendment of the Hatch Act, which sharply restricts the political rights of federal workers.

The council noted that a bipartisan commission three years ago proposed numerous changes in the law to remove unnecessary barriers to the citizenship rights of federal workers. Amendment of the Hatch Act is "overdue," the AFL-CIO said. It urged Congress to eliminate restrictions on federal workers "while retaining guarantees against political coercion."

- Improved retirement benefits, especially for long-service federal employes who are victims of layoffs.

The council called for legislation enabling employes hit by a cutback in jobs to retire with full pension after 25 years of service regardless of age, or at age 50 with 20 years of service.

All employes, it said, should be eligible for full retirement when the combination of age and years of service totals at least 80.

- Updating of the Federal Employes' Compensation Act, which is the equivalent of workmen's compensation for government employes.

Needed changes, the council said, include "improved benefits for surviving spouses and children, job security for workers who recover from injuries incurred while on duty, and increased vocational rehabilitation allowances."

- New legislation to deal with inequities Congress sought to end last year—in two bills Pres. Nixon vetoed.

There is still a need, the AFL-CIO said, to provide a new pay step-up system for hourly-paid blue-collar workers, and to give their unions a greater participation in the wage-setting procedure.

And—despite the presidential veto—fire fighters at federal installations are entitled to the retirement benefits for hazardous employment given other groups of workers who risk their lives and health.

The legislative program adopted by the council was termed by Pres. John F. Griner of the American Federation of Government Employes "the most sweeping, forward-looking set of proposals concerning federal employes ever presented" and "proof" of the value of AFL-CIO affiliation.

Griner, an AFL-CIO vice president, said Congress will be "as forcefully informed as possible that federal employes want the government to enter the 20th Century in its labor-management relations."

Sheet Metal Union Wins Virginia Unit

Harrisonburg, Va.—The Sheet Metal Workers overcame a strong company campaign to win representation rights among 492 employes of the space conditioning plant of Dunham-Bush, Inc. The vote, in the fifth National Labor Relations Board election here over a six-year period, was 243 for the union, 204 against.

Employes who formed an organizing committee reported management used captive audience meetings, letters to the home and references to a plant closing elsewhere to counter their vote-union campaign. A contract proposal will be submitted after the union is certified, they said.

Four previous campaigns had been stymied by management opposition. The victorious employe drive was aided by staff representatives of the Sheet Metal union and the AFL-CIO, Assistant Regional Dir. John Lorden said.

Two-Step Proposal:

35% Boost Asked In Social Security

Bal Harbour, Fla.—A two-step, 35 percent increase in social security benefits has been urged by the AFL-CIO Executive Council to provide "economic security for present and future retirees."

The council termed the failure of Congress to improve social security benefits last year "a great disappointment" and stressed the need for speedy action this year.

Senior citizens are "the nation's most tragic and perennial victims of inflation," the AFL-CIO said.

The statement strongly urged Congress to improve on both the "entirely inadequate" 6 percent benefit increase the Administration has recommended and the 10 percent proposal being considered in the House Ways & Means Committee.

Last year's rise in living costs alone came to 6 percent, the statement noted. But it stressed also that as long as the basic level of benefits remains inadequate, merely tying a cost-of-living escalator to the social security law risks "condemning the aged to a perpetual substandard way of life."

The Executive Council pointed to the rise in premium costs of Medicare's supplementary medical insurance program as another burden on the elderly—and to the fact that Medicare presently covers less than half the health care costs of persons over 65.

The council sharply protested the Administration's announced plan to require Medicare beneficiaries to pay a larger share of health care bills. That would cut further into their meager retirement income, the statement observed.

Labor's social security program, the Executive Council announced, includes the following goals:

- An immediate and first-step, 15-percent, across-the-board increase and an additional 20 percent next year. Inclusion of a cost-of-living mechanism would be a good step only if it is clear public policy that there will be periodic increases in benefits in addition to those related to rising living costs.
- An increase in the minimum benefit to $100.
- At age 65, a 100 percent widow's benefit.
- Less than a full actuarial reduction in benefits for those who retire between ages 62 and 65.
- An increase in the amount of income a person can earn and still get full social security benefits.
- Liberalization of the definition of disability and reduction of the disability waiting period.
- **A provision permitting men who retire at age 62 to compute their average earnings up to that age rather than to age 65 as required in present law. There is now such a provision applying to federal workers.**
- No reduction in public assistance payments when social security benefits of recipients are increased.
- No reduction of social security benefits for workmen's compensation benefits received.
- Medicare coverage for the disabled.
- Prescription drug coverage under Medicare.
- An increase in the earnings base on which contributions and benefits are based to $9,000 in 1971, $12,000 in 1972 and $15,000 in 1973 and thereafter automatic adjustment of the base in accordance with rising wage levels.
- Gradual use of general revenue contributions to help finance the cost of social security benefits.

NEW COPE PROGRAM of half-hour, monthly reports on tape recorder cassettes was approved by the AFL-CIO Executive Council. The audio reports on politics, economics and legislation will be used at union meetings, with small groups and for radio, Pres. George Meany explained. Left to right, Sec.-Treas. Lane Kirkland, Meany, John T. Gordy Jr., cassette consultant and former president of the National Football League Players Association, Public Relations Director Albert J. Zack, COPE Director Al Barkan and Vice Pres. I. W. Abel.

Call for Auto Insurance Reforms Tops Agenda of Consumer Needs

Bal Harbour, Fla.—The AFL-CIO called for the use of group coverage plans and the "no-fault" principle on accident compensation to help meet the "crisis in auto insurance."

"The outlines of constructive auto insurance reform" have been laid out in legislative proposals introduced by Sen. Philip Hart (D-Mich.), the federation's Executive Council said, "and we are glad to endorse this approach."

The AFL-CIO position on auto insurance was spelled out in a council statement detailing a number of important legislative actions to provide full and adequate consumer protection. The progress in the past two years on consumer legislation was "disappointingly small," the council said.

Among the bills that narrowly missed passage in the 91st Congress and should be acted on promptly in the current Congress are those creating an independent consumer protection agency and allowing consumer class action suits.

On auto insurance, the council noted that the comprehensive study conducted by the Dept. of Transportation has been largely completed and Congress should be in a position "to act concretely" on the introduction of the "no-fault" principle into the basic system of compensation to accident victims, the encouragement of group coverage and the provisions designed to reduce the costs of auto repair.

The council called for these other approaches and measures to round out a comprehensive approach to consumer protection:

- Introduction of the principle of testing for safety in such existing safety statutes as the Hazardous Substances Act and the Flammable Fabrics Act and legislation dealing with cosmetics and medical equipment. "Recent evidence of possible consumer injuries from widely-sold new enzyme laundry detergents is a clear case in point."
- Greatly stepped-up resources for the Food & Drug Administration and speedy enactment of legislation for continuous full-time inspection of fish processing plants in light of the recent alarm over mercury contamination of tuna packs and other fish.
- Action to remedy consumer complaints of faulty billing practices and computation of finance charges on revolving credit accounts as well as excessive charges for credit life insurance sold in connection with consumer loans.
- Warning to state legislatures that provisions of the proposed Uniform Consumer Credit Code are inadequate especially on finance charges permitted creditors and the failure to make significant improvements in wage garnishment provisions.
- Amendment of the truth-in-packaging act to require disclosure of prices per unit of quantity.
- Making product-testing results compiled by federal agencies fully available to the public in readily understandable form.
- **Requirement of label information on product durability, labeling of expiration dates for food and other perishable products and disclosure of ingredients and nutritive value.**
- Legislation to overcome ineffective guarantees and warranties by manufacturers on the reliability and performance of their products.
- Stronger powers for the Federal Trade Commission to deal with consumer deception and fraud. "Increased penalties, expanded jurisdiction over commerce, power to issue temporary injunctions and binding regulations plus authority to obtain redress for injured consumers are essential ingredients."

Administration Scored On Weak Health Plan

(Continued from Page 1)

cal professional by the current outmoded delivery system.

"What America needs as the heart of its medical care philosophy is a single primary goal — good health for all its people," the council's statement declared. The profit-making motive of the market place is not an acceptable philosophy for medical care, it added.

Costs of medical care have been rising at least twice as fast as other consumer prices, the statement pointed out.

The average worker last year spent $324 on medical care for himself, $324 for his wife and $324 for each of his children—an increase of more than 10 percent per individual over 1969, the council observed. It also noted that Blue Cross premiums have more than doubled since the late 1950s.

"Private insurance companies are unwilling or incapable of dealing with increased costs," the statement continued. "They have acted simply as a pass-through mechanism, paying for whatever care was offered—good or bad, needed or unneeded, efficient or inefficient."

While National Health Security will have effective fiscal controls, the council pointed out that the program will not constrict individual liberty. Doctors will be free to choose whether they want to participate or not, and patients will be free to choose their physicians and health delivery systems.

The program will encourage reforms in the current "non-system" of fragmented, disorganized, inadequate and spotty health care operations, the council said.

"Hospitals will be encouraged to increase efficiency; to cooperate in planning, purchase and utilization of new equipment, and to eliminate unnecessary, wasteful and duplicate expenditures. Doctors will be given a financial stake in keeping their patients well. Care will be provided at the best—not the most expensive—location.

"Under National Health Security, every resident of the United States will be eligible to receive virtually the entire range of personal health care services without deductibles or co-insurance.

"An essential feature of National Health Security is the Health Resources Development Fund which will be used for health manpower education and training, group practice development and other means to expand and improve health care personnel, facilities and services," the council said.

The council stressed that the AFL-CIO's decision to support the National Health Security legislation was made after careful study of other proposals.

Alternative measures proposed by the American Medical Association and private insurance carriers were branded "thinly disguised efforts to protect vested interests and insurance company profits."

"They are bandaids, where surgery is required," the council said.

Cheating on Wage Laws Mounts to $55 Million

The Labor Dept. reported that employers unlawfully withheld $55.2 million in wages from the pay envelopes of 263,000 American workers in the seven months ending last Jan. 31.

The money was due under laws requiring payment of the minimum wage, overtime, equal pay, age discrimination and fringe benefit provisions under the Fair Labor Standards Act, the Age Discrimination in Employment Act, and other laws.

Minimum wage underpayments accounted for $18.2 million due 132,000 workers, the department said.

Violators of the time-and-a-half requirement underpaid 151,000 workers of $29 million in overtime payments due, the report said.

Labor Dept. investigators found that 17,000 employes were deprived of $7.6 million due under the equal pay law requiring that men and women performing equal work receive equal pay.

Under the Age Discrimination Act, protecting persons 40 to 65 from job discrimination because of their age, 310 employes were found to be owed $308,000.

Wage-Hour Administrator Robert D. Moran said the minimum wage violations point up "the plight of America's working poor" whose cases "have investigative priority in the Wage-Hour division."

The AFL-CIO has for years urged the Labor Dept. to enforce the law vigorously and push for action against employers who violate it—a duty of the department's enforcement section.

The laws "mean nothing" unless the victims of underpayments are aided in recovering the money due them, the Federation's Dept. of Research has pointed out. Not much more than a third of the money withheld by cheating or careless employers ever is recovered, its figures show.

The continuing incidence of pay violations is paralleled by a rise in the illegal hiring of minors, Moran reported. In the seven-month period, 8,340 minors were employed in violation of child labor laws—a 22 percent rise over Fiscal 1970.

Moran pledged continuous enforcement of laws protecting wage earners. He expressed special concern about violations of the equal pay and age-discrimination laws.

"Both of these are based," he said, on "age-old myths concerning reduced capability of women and older workers." The myths keep many workers at wages lower than they deserve, he said.

Moran announced that the "working poor" will continue to have priority in his agency's compliance activities.

Too many workers do not receive their full benefits under the law, he said. He stressed education programs as a "successful complement" to investigation and, when necessary, litigation.

Laws in behalf of wage earners are enforced by a staff of nearly 1,000 compliance officers in more than 400 communities.

Suspension Called 'Unfair':

Meany Hits Voiding Of Davis-Bacon Law

(Continued from Page 1)

their pay scales protected by negotiated contracts. But non-union contractors could pocket bigger profits because they wouldn't have to pay the prevailing rates.

Similar views were expressed by Presidents Peter T. Schoemann of the Plumbers & Pipe Fitters, Hunter P. Wharton of the Operating Engineers and Joseph T. Power of the Plasterers.

Administration sources pictured the suspension of the Davis-Bacon Act as a less drastic action than another course the President was considering—imposition of a wage freeze on the construction industry.

Employers in the industry had strongly urged a freeze on wages and their trade associations generally made it clear that they considered suspension of the Davis-Bacon Act an inferior second choice.

"The Davis-Bacon Act should have been repealed 20 years ago," the Associated General Contractors said. "We regret that the President did not take more decisive and effective action."

The White House did not rule out further steps if unions and employers in the construction industry do not reach a "voluntary" agreement on curbing wages. And testimony before the House Banking Committee by Treasury Sec. John B. Connally clearly hinted at the possibility.

In an apparent switch in Administration policy, Connally endorsed a bill by Committee Chairman Wright Patman that would extend for another two years the about-to-expire stand-by authority of the President to impose controls on wages, prices, rent and credit.

Last year, Administration sources scoffed at the stand-by controls as a Democratic attempt to embarrass the President and said they were not wanted and not needed.

Connally said the President would not impose "general wage-price controls" on the entire economy without "a further specific mandate from Congress." But he carefully did not rule out presidential action dealing with a single industry such as construction.

Labor Sec. James D. Hodgson told newsmen at the White House that the President suspended the Davis-Bacon Act because there was no "positive assurance" of a voluntary agreement to hold down construction costs.

Since building trades unions appeared to be "most upset" at the prospect of "being singled out for wage controls," the President decided that "he didn't want to enforce controls on a reluctant group."

Hodgson said he hoped the building trades unions won't be "unduly upset" by the suspension of the prevailing wage law.

"This is not an anti-union action," he argued. "This is not even an anti-Davis-Bacon action."

He said the Administration has "strong hopes that this will have the effect of moderating the wage increase pattern and encouraging a voluntary agreement."

The suspension period is "indefinite," Hodgson said, "as long as the emergency continues."

It will affect new construction contracts but will not require renegotiation or rate changes in existing contracts and projects already under way.

Nixon said in a formal statement that he made the decision to suspend the law "most reluctantly."

He said "the purposes of the Davis-Bacon Act can once again be realized when construction contractors and labor unions work out solutions to the problems which have created the emergency."

Nixon also called on states and cities with similar prevailing wage statutes to follow his lead and suspend their operation.

Meany charged that the President has ignored four of the five elements that go into the cost of building—materials, land, financing and profit, as well as labor costs.

The "fastest-rising" cost ingredient is the price of land, Meany noted. The President's action leaves untouched the costs of building materials and the profits of employers. It leaves "the important cost of financing in the hands of the money lenders whose profits have been soaring in the past several years."

America's need, the AFL-CIO president said, is for "full employment at fair wages and decent conditions, not punitive action against workers."

Nixon said in his statement that suspension of the Davis-Bacon Act "puts the construction industry on the same footing with other industries that now sell products to the government," with wage rates set by "customary market forces."

But in fact a system of prevailing wages does exist for government purchases of goods, through the Walsh-Healey Public Contracts Act, and for government purchases of services through the Service Contracts Act. Both these laws remain in full effect.

40 Years of Act Hailed by Council

Bal Harbour, Fla.—The AFL-CIO Executive Council hailed the 40th anniversary of the Davis-Bacon Act in a statement issued just a few days before Pres. Nixon suspended the law.

It is as important today as it was when it was enacted, the council said.

Without the safeguards of prevailing wages and benefits, competition for contracts could turn into competition to pay the lowest wages, the statement warned. It stressed the need to maintain both the basic principle of the law and its effective enforcement.

UNREGISTERED VOTERS are signed up at a booth operated by the Okeechobee County AFL-CIO at an American Legion Free Fair. The booth is the result of a campaign by the Florida State AFL-CIO to encourage central labor councils to boost voter registration rolls, especially among teenagers.

Court to Review Right To Bargain for Retirees

The Supreme Court agreed at the request of a union and the National Labor Relations Board to review a lower court ruling that labor organizations have no right to bargain over benefits for retired workers.

The AFL-CIO, in a friend of the court brief, had stressed that such a right is crucial to unions and the 14 million workers now covered by contracts that provide retirement benefits. The federation urged the high court to overturn a ruling by the 6th U.S. Circuit Court of Appeals in Cincinnati.

The court will hear arguments next term on the appeals court ruling that "persons on retirement are not employes of the employer and not in the (union) bargaining unit."

The case involves the Allied Chemical & Alkali Workers of America and the Pittsburgh Plate Glass Co. The union has for 21 years been bargaining agent for hourly-paid employes at PPG's chemical division plant in Barberton, O.

PPG originally had agreed in a 1964 contract with the union, to increase its monthly contribution to $4 toward the cost of medical insurance premiums for retirees. When Congress in 1965 voted to provide Medicare benefits for all persons over 65, PPG decided without consulting the union to cancel its retiree medical plan and instead to pay the $3 monthly cost of supplementary medical insurance under Medicare.

The local protested, but management refused to bargain on the subject. It claimed that it had no obligation to do so under the National Labor Relations Act because retirees are not employes within the meaning of the act.

PPG eventually wrote each retired worker that he could choose between the insurance provided under the union contract or the company's payment of $3 under Medicare. The union then filed a refusal-to-bargain charge.

An NLRB examiner agreed with the employer but the board, with one member dissenting, reversed the examiner and ordered PPG to bargain with the union. The employer appealed and was upheld by the appeals court in an opinion written by Judge Anthony J. Celebrezze, former secretary of Health, Education & Welfare and former mayor of Cleveland.

The AFL-CIO brief filed with the Supreme Court called the appellate decision unsound because it relieved the employer of his duty to bargain. If the ruling gains acceptance, it said, "countless subjects . . . important to labor and management will be removed from the bargaining table if either side declines to discuss" them.

In another case, the high court agreed to decide if the Equal Employment Opportunity Commission was justified in investigating charges that the Pullman Co. had discriminated against Negroes in hiring conductors.

Earl A. Love, a Pullman porter for 45 years, filed a charge of discrimination with the Colorado Civil Rights Commission in 1963. Love asserted that he was qualified to be promoted to conductor but had been passed over for a whiteman. No action was taken, and he filed again in 1965. Eventually the commission waived jurisdiction over the case and asked the EEOC to proceed.

When Love filed suit, Pullman claimed his suit was outlawed because he had not filed his original complaint within the 30-day period allowed by law. Two lower courts upheld the company.

Anti-Filibuster Forces Slate 3rd Cloture Try

Senators trying to break a month-long filibuster against rules reform prepared for a third try on Mar. 2 and hoped to lick the problem of absenteeism with the help of the Senate's Democratic and Republican leaders.

On their first two tries, they were beaten by the very Senate rule they are trying to amend—a requirement for a two-thirds majority to limit debate and break a filibuster.

Rules reform supporters are seeking a compromise formula of 60 percent—which would require seven fewer votes to close debate if every senator were present.

The first try to break the filibuster against the rules change proposal fell nine votes short of two-thirds. The majority for cloture was only 48-37.

The next attempt came only slightly closer, 50-36, eight votes short of two-thirds.

On both votes, absenteeism was high and Senate Majority Leader Mike Mansfield and Republican Leader Hugh Scott both said they will write every senator urging the importance of being present for the Mar. 2 vote. If it comes close to the two-thirds mark, supporters of rules reform hope that some of the senators who have voted against cloture can be persuaded to switch.

Before the second cloture vote, Sen. Frank Church (D-Ida.), a leader of the bipartisan reform drive, appealed in vain to the hard-core opponents to let the issue come to a vote and permit the Senate to work its will.

"Surely after 30 days of debate, a month of reiteration of arguments so familiar to us all, there comes a time when the Senate ought to be permitted to vote," Church urged.

Sen. James B. Pearson of Kansas is the chief Republican sponsor of the rules reform, and both party leaders have voted for cloture.

President Asks Congress to Up Aid to Students

Pres. Nixon asked Congress to provide more money for loans and grants to college students from lower-income families.

His higher education message proposed an overall spending increase from $970 million in the current fiscal year to $1.5 billion in the year starting July 1. Most of the added money would go to the various student aid programs.

The President reiterated the goal that "no qualified student who wants to go to college should be barred by lack of money."

Administration sources said the added funds would make it possible for low-income students to receive up to $1,400 a year in federal grants, work-study payments and subsidized loans.

For students in the middle-income level, the Administration proposal seeks to expand the amount of private educational loans by establishing a federally chartered National Student Loan Association.

Nixon advanced somewhat similar proposals last year, but Congress did not act on his legislative request. Higher education will have a high congressional priority this year, however, since the existing federal aid law expires at the end of June.

In his 1970 message, Nixon proposed to scrap the separate National Defense Education Act direct loan program—a move that stirred considerable opposition. This year, Nixon said the NDEA program should be continued.

The President, however, spurned the plea of colleges for more direct federal aid. Instead he proposed to establish a National Foundation for Higher Education to promote improved performance of colleges.

45 Big Areas Hit by High Unemployment

Five major labor areas have been added to the Labor Dept.'s list of job centers with "substantial" unemployment—6 percent or more—bringing the total to 45, highest since April 1963, according to Asst. Labor Sec. Malcolm R. Lovell, Jr.

Added to the list since January were Sacramento, Calif., with 6.7 percent unemployment; Utica-Rome, N.Y., with 7.6 percent; Johnstown, Pa., 7.1 percent; Providence-Pawtucket, R.I., 6.6 percent, and Scranton, Pa., 6.3 percent.

Twelve smaller areas were added to the substantial unemployment list in February bringing the total for smaller areas to 634.

Eleven of the job centers on the list are suffering from unemployment rates of between 9 percent and more than 12 percent in contrast to two job centers in these high unemployment categories in February 1970.

Five Postal Unions Sign Merger Pact

AFL-CIO News

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, March 6, 1971 | No. 9

Unity Move Submitted to Referendum

The largest unaffiliated union of postal workers has joined with four AFL-CIO unions in a merger agreement described as "a giant step toward one big union of postal employes."

If ratified in a mail membership referendum later this year, the merger would heal a 13-year breach between the AFL-CIO's United Federation of Postal Clerks and the National Postal Union.

The NPU, formed in 1958, holds local bargaining rights in a number of big cities and reports 80,000 members. The UFPOC, with nearly 180,000 members, has nationwide exclusive bargaining rights for all postal clerks.

The Postal Clerks earlier had reached merger agreements with three smaller AFL-CIO affiliates—the Post Office & General Service Maintenance Employes, the Post Office Motor Vehicle Employes, and the Special Delivery Messengers. All hold nationwide bargaining rights for their crafts.

A joint statement by the five union presidents said the merger agreement came about because "the common concerns of postal workers today outweigh their occupational or organizational differences."

Pres. Francis S. Filbey of the Postal Clerks and NPU Pres. David Silvergleid said the merger committees of both organizations had unanimously endorsed the merger and they predicted "overwhelming approval" in the ratification referendum.

The agreement spells out the structure of the new organization and a drafting committee will put it in constitutional form for the ratification vote.

The new union will be known as the American Postal Workers Union, subject to approval of the change by the AFL-CIO Executive Council.

Its initial membership, the union presidents said, will be about 320,000. It will endorse the industrial union concept, while providing craft departments to deal with specialized problems.

The merger agreement provides for voting at national conventions "in direct proportion to membership strength and with a guarantee of representation for all local, area and state units."

After the initial organization, national officers will be elected by membership referendum. The new organization's per capita tax for local unions will be set at $1.70 a month.

Minimum Pay Violations Hit $93 Million for Year

NINETEEN STORIES UP, Iron Workers in downtown Cleveland painted this reply to Pres. Nixon's suspension of the Davis-Bacon Act, which requires that prevailing wages be paid on federal construction projects. Earlier, the Iron Workers had inscribed a Valentine's Day message for the secretaries of the Federal Office Building next door. But the President's action changed their mood.

Chiseling Trims Pay Of 465,000

By Eugene A. Kelly

The nation's employers were caught underpaying 465,000 of their workers by $93 million in minimum wages due last year, Labor Sec. James D. Hodgson said in his annual report to Congress on the economic effects of federal wage-hour laws.

The report disclosed that despite some progress through education and enforcement programs to reduce cheating and carelessness, underpayments discovered by investigators still affect an increasing portion of the workforce.

As for the economic effects of the 1970 changes in the minimum wage, Hodgson told Congress that "in view of overall economic trends, it is doubtful" whether they had "any substantial impact on wage, price or employment trends."

"Of much greater significance," he added, ". . . is the fact that the 15-cent boost" that became effective on Feb. 1, 1970, "did help 2 million workers recover some of the purchasing power eroded by the steady upward movement of prices."

That increase raised the wage floor to $1.45 an hour for certain groups of retail and service employes brought under coverage for the first time by the 1966 amendments to the Fair Labor Standards Act. They reached the final step—$1.60 an hour—on Feb. 1, 1971.

The AFL-CIO Executive Coun-

Labor Council Formed Among VA Employes

A council of AFL-CIO unions representing a majority of the 174,000 employes of the Veterans Administration has been formed to seek a national collective bargaining agreement with the VA and to complete the organization of the agency's 265 hospitals and offices.

John F. Griner, president of the American Federation of Government Employes, was elected president of the council. The AFGE bargains for most of the nearly 100,000 VA employes represented by AFL-CIO affiliates.

58% of Workers Covered:

Bargaining on Rise In Federal Service

By David L. Perlman

Federal employment continued to be one of the big growth areas of the trade union movement as both the number and percentage of government workers represented by unions rose to new highs during 1970.

A U.S. Civil Service Commission survey showed that as of last November 1,542,000 federal workers—58 percent of the total federal workforce—were covered by exclusive union recognition agreements.

Of these, 1,292,000—84 percent—were represented by AFL-CIO affiliates. And AFL-CIO unions also represented 87 percent of all employes working under a written union contract—the next step beyond exclusive recognition.

The 1970 survey continued the unbroken upward curve of unionization of the federal civil service. In 1969, the percentage of union-represented federal workers was 54 percent; in 1968, 52 percent—and as recently as mid-1966, it was less than 40 percent.

There has been little change over the years in the postal service, traditionally the most solidly organized group of government employes. Thus the increase has come about from dramatic gains in the non-postal area and, last year particularly, in the predominantly white-collar classified civil service.

The number of non-postal workers represented by unions reached a record 916,000 in 1970—48 percent of the total federal workforce.

Actually, this clearly represents a majority of eligible employes since supervisors and administrators not eligible for bargaining units make up at least 10 percent of the total workforce.

Work Rules Issue Snags UTU, Rail Bargaining

Work rules for 180,000 railroad men remained the key issue as contract negotiations between management and the United Transportation Union were rescheduled by the Labor Dept.

Union representatives said they would not accept any settlement abandoning work rules that affect the jobs and income of several thousand members.

Meetings between the UTU and management seemed at the breaking point after a 15-hour session mediated by Assistant Labor Sec. William J. Usery, Jr. But union representatives accepted a government request to make another try for a settlement. Both sides were meeting with Usery as the AFL-CIO News went to press.

Usery told newsmen, "I wouldn't say I'm more hopeful" of an agreement. "We're talking about work rules which are very complex and difficult, and I hope we can work them out."

The rules involve working conditions and pay. They specify the length of train runs and the pay rates for those runs; meal and lodging allowances for men in road

26 Unions Set Goals In Nonferrous Metals

Denver—Unions representing 100,000 workers in the nonferrous metals industry—copper, lead, zinc, brass, wire, nickel and titanium—drafted proposals for 1971 coordinated contract bargaining with employers operating mills, mines, smelters and factories.

A three-day conference attended by more than 700 delegates from 26 international unions approved the coordinated approach that showed its worth in 1967. The conference adopted resolutions:

- Condemning the Nixon Administration for suspending union wage rates on government construction jobs.
- Opposing compulsory arbitration advocated by Pres. Nixon for the railroad, airline and trucking industries.
- Supporting the current strike of 33,000 can workers against American Can, Continental Can and Crown, Cork & Seal Co.

"We will not allow the copper industry to deter us from getting a fair settlement," Steelworkers Vice Pres. Joseph P. Molony said in opening the conference.

"We need a very substantial wage increase to catch up with inflated prices," Molony said. "Also we need a cost-of-living escalator clause that will protect the wage increases we negotiate." He called for improvements in existing pensions, insurance, vacations and other benefits that union members call substandard.

(Continued on Page 2)

Copper Unions Set Goals for Industry Talks

(Continued from Page 1)

Molony declared that profit records show the nonferrous metals industry can "well afford to meet" the needs of its employes and still show a "hefty return on invested capital."

The delegates, meeting in separate workshops and then in joint session, adopted a series of bargaining goals for all the unions involved in 1971 bargaining. They studied reports by the USWA's research department and its insurance, pension and unemployment benefits department. At the final session they named the local union representatives they want to represent them on the 1971 National Nonferrous Coordinated Bargaining Committee.

Conference Sec. Lawrence F. Sefton, Toronto, reported that delegates from Canadian unions adopted a set of goals similar to those drawn up by U.S. delegates.

Major copper contracts expire June 30 but talks on local issues, separate from national problems, will take place from 60 to 90 days in advance.

The contracts replace those won three years ago, when coordinated bargaining was launched in copper negotiations. A nationwide strike against nonferrous metals firms began July 15, 1967, and ended nearly a year later when the last of the 26 cooperating unions approved company contract offers. Some settlements were delayed until local issues were settled satisfactorily.

The final contract package was for about $1 an hour in wages and benefits. The negotiations and strike were coordinated by the AFL-CIO and its Industrial Union Dept.

EXPANDED FACILITIES of the Air Line Employes headquarters were opened in Chicago. Pres. Victor J. Herbert said the facilities were doubled in size to meet the needs of a growing membership. The group, affiliated with the Air Line Pilots, represents ticket and station agents, cargo handlers, crew schedulers and office workers on 10 major airlines.

Surgeon Cites Demand For Health Care Plan

Quality health care services for all Americans and the control of soaring medical costs can be achieved through the National Health Security program, Dr. Michael E. DeBakey told the Senate Health subcommittee.

The noted heart surgeon said that public demand is growing for a government-financed medical program because of the "inaccessibility of basic health services and the pricing of health care beyond the reach of millions of our people."

He called for passage of the National Health Security bill, which has the support of the AFL-CIO, the Committee for National Health Insurance and other labor and civic groups, as the best answer to the nation's medical care crisis. De Bakey is a vice chairman of the committee.

"If the Congress will grasp this opportunity to create a sound program of national health insurance with effective quality and cost controls," DeBakey told the subcommittee headed by Sen. Edward M. Kennedy (D-Mass.), "we can deal with the dynamics of the present medical care system and make health services available to all the American people."

He ruled out other piecemeal approaches as being costly and ineffective.

By maintaining "one program for the elderly, another for the poor, and a continuation of often limited private health insurance coverage for the majority of the population," the amount of money needed to finance personal health care will continue to escalate beyond all reasonable limits, DeBakey observed.

"The Congress and the nation must recognize that only a national health insurance program will provide the support and leverage necessary to create new, cost-effective methods of delivering health care," he stressed.

DeBakey said that this will not be achieved by subsidizing private insurance companies "as the present Administration has proposed."

Under the Administration's proposal for "partnership" with private insurance companies, DeBakey said that the inefficiencies and duplications of the present health care system "will survive virtually unaffected."

He also suggested that the National Health Security program would restore funds for government-financed medical research and training that are currently being drained off by other piecemeal health programs.

The labor-backed proposal has wide bipartisan support in both chambers of Congress. The Senate bill has 25 co-sponsors, and 74 congressmen are backing the House version.

Pres. Leonard Woodcock of the Auto Workers, who is chairman of the Committee for National Health Insurance, deplored the Administration's proposal for health insurance as "a backward and intolerable imprisonment of medical care financing in the operations of the insurance industry."

Woodcock told the Senate subcommittee that the Administration's scheme would penalize workers, enrich insurance companies and make medical care less accessible for some Americans at more cost to all.

Unorganized Workers Trail Union Pay Gains

Factory workers under union contract continued to win bigger wage increases than employes of nonunion establishments, the Bureau of Labor Statistics reported in a summary of wage developments in manufacturing for the first nine months of 1970.

The summary by the Labor Dept.'s statistical arm spelled it out—an average increase of 8 percent, or 25.7 cents an hour, in union shops as against 5.9 percent or 16.2 cents an hour, in nonunion factories.

For 1969 as a whole, the average increase was 7.4 percent in union establishments, 6.1 percent in the others.

BLS said nearly 7.5 million factory workers got general wage increases from January through September of 1970—3.1 million in new settlements, 4.4 million from second or third-year increases over a contract term, from cost-of-living escalator provisions, or from both.

BLS reported that the average effective wage gain, including immediate, deferred and living-cost increases, totaled 5.9 percent—18.7 cents an hour—for the nine-month period, slightly above the 5.8 percent gain for all of 1969. In union shops alone, the average effective increase was 5.8 percent for the first three-quarters of 1970, up from 5.7 percent for full-year 1969. But nonunion workplaces slipped from 6.1 percent in 1969 to 5.8 percent for the following nine months.

The bureau said that among 3.4 million nonunion workers in the survey, 37 percent got some form of wage boost, from January through September of 1970 as against 67 percent in the same period of 1969.

A comparison of immediate wage increases received by production and maintenance workers in manufacturing showed these figures:

- Wage increases of less than 6 percent went to 17 percent of employes in union shops, 57 percent of the workers in nonunion workplaces.
- Conversely, 81 percent of workers under union contract benefited from hikes of 6 to 11 percent and up, as against 43 per cent for employes of nonunion shops.

The data on immediate increases involved nearly 1.9 million employes under union contracts, 1.2 million with no contract protection.

In cents per hour, BLS reported raises of less than 15 cents for 36 percent of the union-represented workers and 48 percent of the nonunion employes. Raises of 15 to 40 cents and over went to 64 percent of the union employes and 53 percent of the others, the report showed.

Longshoremen Charter New Indiana Local

Indianapolis — The Longshoremen accepted a charter for a new northern Indiana local union in a presentation ceremony at the Capitol with Gov. Edgar D. Whitcomb (R) participating.

The charter, issued by ILA Pres. Thomas W. Gleason, was presented by the governor to AFL-CIO Regional Director F. J. Pat McCartney and officers of newly chartered Local 1969. The local will serve the ports of Burns Harbor, Calumet and East Chicago.

The state plans general cargo sheds, a truck terminal, grain elevator and other facilities at the new port on Lake Michigan.

Uniform Registration Urged:

Voting Laws Stunt Election Turnout

Low voter turnout will continue to be a problem for organized labor and the country in general until there are revisions in registration and voting laws, including making registration permanent.

This was the view expressed by Al Barkan, director of the AFL-CIO Committee on Political Education, writing in the February issue of the Federationist.

In an article titled, "Voting Laws: A Promising Climate," the COPE director notes that about 17 million more Americans will be potential voters in 1972 due to Supreme Court interpretations of new laws on age and residency requirements for presidential and federal elections.

"The recent developments suggest a new climate of opinion more hospitable not only to broadening the electorate, but also to uniform national registration and voting laws that would bring order to the jungle of present laws," Barkan writes.

"Until that is done, the labor movement's monumental efforts to register its members and get them to the polls will continue to represent a holding action, with every increase bearing a high cost in money and manpower."

"For example, as long as an election board can limit time of registration to regular business hours and to only one, or a few, central locations, numbers of our members and other citizens will simply not undergo the inconvenience it takes to register and thus will be ineligible to vote."

Barkan cites the results of a special voter identification survey in 26 states, which revealed that 69 percent of all union members were registered, a slightly higher percentage than among the public at large.

But many were repeaters, members who had moved and had to be registered at their new address or who for other reasons had been dropped from registration rolls.

"So even after a gruelling registration campaign, 31 percent of our members still were not eligible to vote by the time election day rolled around," the article observes.

"And on election day, slightly less than 50 percent of all union members cast ballots, while only 46.4 percent of all eligible voters turned out. (We believe that since a higher percentage of union members register, then a slightly higher percentage of them vote.)"

In fact, Barkan maintains, voter registration always has been the key to voting performance.

He estimates that in presidential elections more than 80 percent of registered voters turn out. Even in "off-year" elections, like the 1970 general election, COPE estimates that 72 percent of registered union members went to the polls.

The AFL-CIO Executive Council has gone on record as favoring permanent, personal registration so that once a citizen is registered, he stays registered.

The council also has urged state central bodies to work for long-term, grass-roots, registration through precinct, neighborhood or mobile procedures.

Idaho was cited as an example of such a program. That state already has authorized a house-by-house canvass for registration and the voting rolls reflect it with Idaho getting 91.4 percent of its eligible voters registered in 1968.

Sen. Daniel K. Inouye (D-Hawaii) has introduced legislation that would provide for this system by a national law.

In addition to permanent and grass-roots registration laws, Barkan proposes a number of revisions, including:

- Elimination of any residency requirements for presidential elections. This would account for those who change addresses within the present 30-day limitation.
- A closing date for registration much nearer election day than most laws now provide, the date to be determined by the minimum amount of time needed to process new registrations and transfers.
- Total elimination of literacy tests and of state laws that bar from voting such groups as Indians or those living on federal lands.
- Lowering of the voting age to 18 for all elections. This would eliminate the pandemonium that could be caused at the polls by conflicting state and federal laws.
- Requiring local election commissions or agencies to keep current records of registered voters within their geographic areas and a master alphabetical list as well as precinct lists, with these records available to organizations that are recognized as having a legitimate interest in them.
- Requiring registration areas to furnish to interested parties precinct maps, locators and other devices used in determining registration status. These should be furnished free or on a cost basis.

Ayres Named to Post On Jobs for Veterans

Former Ohio Congressman William J. Ayres has been appointed special assistant to the chairman of the Jobs for Veterans Program in the Labor Dept.'s Manpower Administration. Ayres, who served in Congress 20 years, was a member of the House Veterans Affairs Committee.

Manufacturing Job Openings Show No Gain

Job openings in manufacturing showed little improvement in December from the month before and continued to lag well behind the level of a year earlier, the Labor Dept. reported.

The job vacancy rate remained unchanged from November at 4 per 1,000 jobs but well under the rate of 9 per 1,000 jobs in December 1969.

The total number of factory job vacancies in December was 77,000—about the same as the month before, the Labor Dept. said. In December 1969, there were 185,000 openings for factory jobs.

The department noted that unemployment and layoffs in manufacturing have climbed over the year while employment and new hires have dropped off. It said the decline in the job vacancy rate reflects the economic slowdown and cutbacks in defense and aerospace spending.

The factory layoff rate in January was 18 per 1,000 workers, seasonally adjusted, the same level as the month earlier. This compares with 15 per 1,000 workers in January 1970.

New hires in manufacturing remained at a seven-year low in January at 23 per 1,000 workers, seasonally adjusted. There were 33 new hires per 1,000 workers in January 1970.

Takes Effect Apr. 1:

Job Rules Specified In Crafts Agreement

Eleven specific work rules are spelled out in an agreement between the AFL-CIO Building & Construction Trades Dept. and the National Constructors Association.

The two parties had earlier signed an agreement aimed at eliminating jurisdictional disputes in the construction industry. Both agreements go into effect Apr. 1.

In a joint statement, the BCTD and NCA said the two precedent-setting agreements are "designed to maintain and improve the competitive position of contractors operating under union agreements in the construction of heavy or large-scale industrial projects throughout the United States."

The NCA is made up of 34 major construction firms that have a combined annual building volume of about $14 billion.

The new work rules agreement aims for a reduction of overtime, bars illegal stirkes and lockouts, specifies hiring practices of contractors, covers the production volume and use of tools by workmen, and upholds the practices set up under collective bargaining contracts.

Both sides termed the agreements a historic breakthrough in labor and management relations in the construction industry.

Pres. Charles H. Pillard of the International Brotherhood of Electrical Workers, who headed the committee of BCTD union presidents in the negotiations, said that the rules agreement proves the ability of labor and management to solve industry problems without outside pressure.

J. F. O'Connell, chairman of the NCA negotiators, predicted that both the contractors and workers would benefit through increased efficiency that will help make NCA companies more competitive in acquiring contracts.

"This will mean more work for the contractors and more jobs for the Building Trades union members," he added.

The success of the agreements will depend on the cooperation of management, labor and the federal government, O'Connell said. If somehow there is a failure, it cannot be blamed on the unions alone, he stressed.

A summary of the work rules agreement signed by representatives of the BCTD unions and the NCA members specifies that:

- The employer will have the full responsibility in the selection of craft foremen and general foremen.
- Workers will remain at a specified worksite from starting to quitting time.
- There will be no restrictions on the full use of tools or equipment nor a limit on workers' production.
- Practices not covered by collective bargaining agreements will not be recognized.
- Slowdowns, standby crews and "featherbedding" practices will not be allowed.
- Stewards will be qualified workmen practicing their trade and will have no supervisory functions.
- No illegal strikes, work stoppages or lockouts will be allowed.
- If a local does not furnish qualified workers within 48 hours, the contractor can obtain workers from any source.
- Workers will not log overtime except under special circumstances when it will be kept to a minimum.
- Contractors may institute shift work under specially negotiated rates in applicable agreements. Employers will have the right to determine the crafts and the number of workers assigned to each shift.

The one-year agreements are effective through Mar. 31, 1972, but will be extended automatically unless both parties agree to terminate them.

BCTD union presidents participating in the negotiations on the work rules agreement were M. A. Hutcheson of the Carpenters; R. Wayne Williams, Elevator Constructors; Hunter P. Wharton, Operating Engineers; John H. Lyons, Iron Workers; Peter Fosco, Laborers; S. Frank Raftery, Painters, and Peter T. Schoemann, Plumbers & Pipe Fitters.

Pilots' Contract Averts Western Airlines Strike

Los Angeles—The Air Line Pilots reached agreement with Western Airlines on a new two-year contract after seven months of negotiations. The settlement headed off a strike that could have taken place any time after midnight Mar. 4.

ALPA Pres. John J. O'Donnell said contract terms call for scheduling guarantees, protections against merger and route abandonments, and new higher pay in line with recent agreements on other trunk carriers. Western serves primarily the western states, Alaska, Hawaii, Canada and Mexico.

'Why, Thank You!'

ABANDONMENT of supersonic air transport development would deal a permanent blow to the American economy, Machinists Pres. Floyd E. Smith testifies at House hearings on the SST appropriations. Instead of exporting the planes of the future, he warned, the United States would be importing aircraft and exporting jobs.

Unions Ask Congress To Vote SST Funds

Unions representing the men who build and fly America's aircraft urged Congress to provide the funds to continue development of a supersonic transport plane.

Machinists Pres. Floyd E. Smith told a House Appropriations subcommittee that America's economy will be dealt a blow that will be felt with increased intensity in years to come if the nation abandons the SST and forfeits its technological leadership to other nations.

And the president of the Air Line pilots, Capt. John J. O'Donnell, told the panel that professional pilots are convinced that the SST is the plane of the future and that the initial development cost to the taxpayer will be more than repaid in the production phase.

If there is any question of safety or hazard to the environment, he pledged, the pilots will be the first to speak out against moving into commercial production. But development should not be abandoned on the basis of unsupported "suppositions."

Smith stressed the importance of the aerospace industry in the American economy and the damage already done by the sharp cutbacks that have taken place.

Aerospace centers have become "economic disaster areas," the IAM president said. During the past 18 months, 300,000 aerospace workers have lost their jobs and a "chain reaction" in supporting industries has spread the effect throughout the nation.

"Each one of these 300,000 statistics is a human being with a name and an identity," Smith emphasized.

"I know these people," he told the congressmen. "I've been to their homes. I've seen the way of life they've tried to build for their families. It's a good way of life. But now, because of conditions beyond their control, many of these people are losing everything they've worked for through the years."

Funding the final development of the two SST prototype planes "will not resurrect the aerospace industry," Smith acknowledged. It will provide only 14,000 jobs directly.

But, he added, it will generate at least 42,000 jobs in supplying firms. It would reverse the chain reaction of unemployment caused by aerospace layoffs which caused "machinists, lathe operators, tool and die makers, electricians, engineers and others to lose their jobs in a wide range of subcontracting companies."

In the production phase, Smith said, American-built supersonic transports will provide direct employment for at least 50,000 workers, with a "ripple effect" of at least 100,000 more jobs in supporting industries and employment gains in years ahead.

Smith cited the AFL-CIO Executive Council's strong support of SST development at the same time the federation has taken a leadership role in combatting pollution and damage to the ecology.

As to the long-range impact on the U.S. economy, Smith warned that "if we tramp the brakes down on our SST development at this point, other nations will not only shoot rapidly ahead in aerospace technology but will inevitably take over world markets we have long dominated."

He reminded the House panel that "America has already lost too many of its industries because of national policies that encourage the export of jobs."

The nation's "once proud shipbuilding industry has been reduced to that of a fourth-rate power," Smith observed. "It's becoming increasingly difficult to buy a U.S.-made television, radio, typewriter, calculator or many other kinds of goods."

And he warned that the same fate threatens the aerospace industry "if Congress now permits the SST to die by default."

Job Safety Unit Meets to Map Enforcement

Labor Sec. James D. Hodgson is holding a series of meetings with the National Safety Advisory Committee to work out plans for implementation of the Occupational Health & Safety Act which goes into effect on Apr. 28.

The act will affect working conditions for about 57 milllion workers in 4.1 million shops and plants. It gives broad powers to the Secretary of Labor to set job health and safety standards and to see that they are enforced.

Organized labor has expressed its determination to see that the act is strictly enforced in an effort to decrease the heavy annual toll of deaths, injuries and disease on the job.

Labor members on the advisory committee are Alan Burch, safety director of the Operating Engineers; Walter J. Burke, secretary-treasurer, Steelworkers; Arthur P. Gildea, secretary-treasurer, Brewery Workers; Elwood Swisher, vice president, Oil, Chemical & Atomic Workers and George H. R. Taylor, economist, AFL-CIO Dept. of Research.

Consumer Aid Program Held Short of Need

Pres. Nixon has asked Congress to enact what he terms a "Buyer's Bill of Rights," but sponsors of consumer legislation in Congress have somewhat different ideas as to its content.

Nixon's consumer message proposed watered-down versions of some of the legislation on the labor-consumer agenda for the 92nd Congress, but completely omitted other items.

His principal new proposal was for legislation authorizing the Food & Drug Administration to set federal safety standards for consumer products.

The principle of federal product safety standards was proposed by the National Commission on Product Safety last year after a two-year study and was strongly supported by the AFL-CIO Executive Council and consumer groups. But the commission had recommended that the standards be set and enforced by a strong independent agency. A bill to that effect has already been introduced by Sen. Warren G. Magnuson (D-Wash.), chairman of the Senate Commerce Committee.

Magnuson said the FDA's reluctance to enforce a law banning unsafe toys for children "hardly gives confidence" that it would develop the needed "commitment to an adequate product safety program."

Likewise, the President opposed an independent consumer protection agency—a major goal of the labor-consumer coalition.

He said an independent agency "would only add to the proliferation of agencies" and the consumer advocacy role should be assigned to the Federal Trade Commission as an "interim measure" pending reorganization of the executive branch.

An independent agency bill won overwhelming Senate approval last year, on a bipartisan 74-4 vote.

The President also proposed a new "study" of the problem of "class-action" suits in which groups of consumers can join together in legal action against manufacturers and merchants.

The President's message did not touch on such major consumer issues as automobile insurance—on which Senate hearings are already scheduled—and on fish inspection, one of labor's continuing goals.

While rejecting the concept of an independent agency, Nixon announced that he has established by executive order a White House Office of Consumer Affairs to coordinate federal consumer activities. Its director will be Mrs. Virginia H. Knauer, who also keeps her title as the President's special assistant for consumer affairs.

Mrs. Knauer joined Health, Education & Welfare Sec. Elliott L. Richardson in briefing newsmen on the President's consumer message.

She described it as "by far the greatest, most important" such message any President has sent to Congress. And she said it typifies Nixon's commitment to a better world "where quality, justice, compassion and understanding are key elements in the marketplace."

Musicians' Accord Covers Radio-TV Spots

New York—The international executive board of the Musicians has recommended acceptance of a new agreement covering musicians' services for spot announcements on radio and television.

The agreement was reached with the Association of National Advertisers, Inc., and the American Association of Advertising Agencies, Inc.

Health Security

HEALTH CARE PROBLEMS in America are frightening—to the patient, who must pay ever larger portions of his family budget for medical care, and to the medical professional, who must try to care for the health of his patients hindered by an outmoded delivery system.

What America needs as the heart of its medical care philosophy is a single primary goal—good health for all its people. The profit-making philosophy of the market place—to make money for those who provide and finance medical services—is not an acceptable philosophy for medical care.

The AFL-CIO believes that the National Health Security bill is the only truly comprehensive program of national health insurance that meets the challenges of care, financing, costs, development and reform. Indeed, the goal of Health Security is health.

The American Medical Association's "medi-credit" plan and the private insurance carriers' "Healthcare" proposal are thinly disguised efforts to protect vested interests and insurance company profits. They are bandaids, where surgery is required.

There are other proposals—such as the bills introduced by Senators Javits and Pell and the proposal of the American Hospital Association—which are much more substantive.

But, generally, all of the proposals, except National Health Security, lack at least one of the following: equal access to health care for all people, comprehensive coverage, restricting of the health care system, effective incentives for quality and efficiency or controls on costs or they depend on inadequate private insurance as carriers or intermediaries or both.

IT HAS BEEN nearly a year since Pres. Nixon declared there is a "massive crisis" in the area of health care and a threat of a "breakdown" of the medical care system. In that time, he has met that crisis by vetoing a hospital construction bill and a measure to provide for the training of more family doctors, and he threatened to close down vitally-needed Public Health Service hospitals.

After taking one action after another to forestall urgently needed health care measures, the President has at long last delivered a health message.

We have noted one or two constructive features such as the President's belated recognition that prepaid group practice can deliver better medical care at less cost and his proposal to eliminate the onerous Medicare premium the elderly must now pay.

But it is evident that the President's approach, taken as a whole, is both piecemeal and inadequate. It places main reliance on discredited private insurance which has been largely responsible for the high-cost, low-quality medical care we have today. Under the President's proposals, there is no indication that either the private insurance organizations or the providers of medical care would be subject to effective cost controls or quality incentives.

His proposals fall far short of meeting the "massive crisis" in health care the President has himself recognized.

The AFL-CIO urges the Congress to enact the bipartisan National Health Security program during this session so that it will be able to go into operation in 1974. Further, we pledge our unstinting efforts to that goal. It is and will remain our No. 1 legislative goal until victory has been won.

—From an AFL-CIO Executive Council statement on Health Security Program adopted Feb. 19, 1971.

'This Won't Do!'

A Word Edgewise:

New Left Radicals Resurrect Joe McCarthy Smear Tactics

By John P. Roche

THE OTHER NIGHT I was musing about the extent to which we have come full circle in the last 20 years. It began when a group of my students in constitutional law raised the question of the constitutional status of the Massachusetts "Anti-Viet-Nam War Bill," a measure that forbids the use of troops from the commonwealth in "undeclared" wars.

Without getting involved in the details here, I indicated that the odds were very high that Massachusetts would not get to first base, that the federal courts would deny the state's right to litigate such a political question. As precedent I cited an effort made in the early 1950s to get the Supreme Court to declare the North Atlantic Treaty unconstitutional, an effort that never got off the ground.

One of the students asked if "radicals" had brought the case, and I replied, without even thinking, "oh, no—in those days the isolationists were on the right."

This is rather abstract stuff; sending lawyers off to courtrooms is hardly an exercise in violence. But recently there has come to my attention a far more sinister parallel between the acts of right-wing extremists in the early '50s and of New Lefties today.

It is the use of organized techniques of infamy against the dissenter; that is, of spreading the word around the man's community that (while legally he cannot be convicted of anything in particular) he, his wife, his family, his friends are Bad People. In the Joe McCarthy era, the dissenters were labeled "Commie sympathizers." Today they are denounced as "tools of the military-industrial complex," "murderers of Vietnamese children," and "war criminals."

Twenty years ago I knew decent men—whose offense, for example, had been to support Henry Wallace or Alger Hiss—who were given the full treatment. Their kids were shunned or beat up at school. Sometimes they lost their jobs, and a number of women, who were particularly sensitive to neighborhood pressures, had grave psychiatric problems. Some moved abroad, a larger number changed jobs and communities, and vowed never again to discuss politics.

Even though I disagreed strongly with the views many of these individuals held (I was convinced, for example, that Hiss was guilty and that the United States had Communist spies), I was appalled at this savage use of infamy as an instrument to maintain conformity. The Joe McCarthyites treated human being as "things."

Just as in our time left-wing extremists refer to policemen as "pigs," the vicious anti-Communists were fond of the term "rats." And the thought of a little boy being roughed up at school because some right-wing yahoo had called his father a "comsymp," simply enraged me. Fortunately, this wave of irrationality passed.

Now it has been revived with all the advantages of modern technology. The latest issue of Measure, the publication of Sidney Hook's University Centers for Rational Alternatives, gives the facts:

"A few weeks ago, many residents of Morningside Heights near Columbia University . . . found in their mailboxes a leaflet appropriately entitled 'Know Your Neighbor' (which announced that N.N., a scientist) 'is an important war researcher. Weapons scientists have too long believed themselves entitled to an anonymity and privacy which insulate them from the concern of those whom their work endangers or whose scientific studies they pervert. Call or write Mr. N.N. (address and telephone no. provided). . . .'"

A FEW WEEKS LATER another leaflet came out—this one in Berkeley, Calif.—with the same sort of message, a photograph of the scientist under attack, and a map of the location of his home. Even the Joe McCarthyites at their worst never mastered in this fashion the logistics of a psychological lynching. And given the fact that it takes only one twisted mind and a bomb, more than psychological pressure is involved.

Finally, there was recently a mock war-crimes trial of which I have personal information. A distinguished Asian scholar at a mid-western state university was tried in absentia by a self-constituted tribunal. Although he has one of the best track records on Viet Nam of anyone I know, he still refuses to approve of an American bug-out in South Viet Nam.

Following a ludicrous set of public charges, this "People's Court" predictably found him to be a war criminal and issued a leaflet so stating. By normal standards of academic freedom, it was outrageous, yet to date neither his colleagues nor the university administration have uttered a peep.

Obviously a man who dissents must be ready to take some heat, but it is time that the groups which denounced this kind of smear when Joe McCarthy employed it raised their voices against infamy as a New Left weapons system.

To Meet Nation's Needs:

Labor's Economic Policies Aim To Spur Jobs, Growth, Equity

The following national economic program is excerpted from a statement adopted by the AFL-CIO Executive Council at its recent winter meeting.

1. Full funding of government programs to meet America's public investment needs in such areas as education, health care, low- and moderate-income housing and community facilities could add at least $6 billion to the economy's spending stream. In addition, a $2 billion program of federal grants to states, local governments and federal agencies is needed to step up short-term public works construction and repairs in areas of high unemployment.

Such action is essential to lift sales, production and employment and could be a key to reconversion, by offsetting the declining defense proportion of national production with an increased emphasis on public investment. It would also boost government revenues as employment and incomes rise.

2. Immediate congressional legislation is needed to provide sufficient federal funds to state and local governments and private non-profit organizations to create at least 500,000 public service jobs this year for the unemployed.

3. America needs a more rapid expansion of money and credit, at lower interest rates, to stimulate economic expansion.

The Secretary of Housing & Urban Development should use his authority to drive down interest rates dramatically—to reduce the maximum rate on FHA-VA home mortgages immediately to 6.5 percent and to further reduce that rate to no more than 6 percent no later than the end of the year.

We urge the Federal Reserve to take leadership in reducing interest rates, rather than following the weakening trend in the money markets, by reducing the discount rate it charges commercial banks to 4 percent.

The nation's major banks should immediately and dramatically cut their prime interest rate—the basic price of money—to 5 percent, a move that would result in reducing all interest rates.

We urge the Congress to direct the Federal Reserve to channel credit where it would most benefit the economy and to curb the flow of credit for such activities as conglomerate take-overs, land speculation and foreign subsidiaries. The Congress should also empower and direct the Federal Reserve to provide available credit, at preferential lower interest rates, for urgently needed community facilities, health care projects and low-income housing.

4. Enforcement of the Administration's announced 20 percent speed-up in depreciation write-offs of the costs of machines and equipment—as well as ending the requirement that business actually replace machines at about the same rate they are written off—should be barred by congressional action. This tax bonanza to business, if enforced, will cost the government $2.7 billion in the first full year, rising to over $4 billion a year in five years. Middle- and low-income taxpayers will be forced to pay for these tax losses.

Since depreciation write-offs are listed as a cost of doing business, the speed-up will provide an inflationary rise of reported costs, on which prices are based.

5. Increases in the buying power of workers' wages and salaries are a basic prerequisite for economic growth in 1971—to provide workers with a share in the benefits of economic progress and to establish the foundation for the needed expansion of consumer markets. Rapid economic growth in 1971 will not be possible without a substantial boost of consumer sales, which account for almost two-thirds of the national economy. And the needed rise of consumer expenditures cannot possibly be achieved, unless increases in the real incomes of workers are attained.

6. We urge the Congress to adopt an immediate 15 percent across-the-board increase in social security and railroad retirement benefit payments—to improve the living conditions of the elderly and provide a lift to consumer sales.

7. The Employment Security Amendments of 1970 established a national extended unemployment compensation benefit program, effective Jan. 1, 1972, to assist long-term jobless workers. The AFL-CIO urges the Congress to advance the effective date of this program so that it can be implemented immediately and to provide for full federal funding of the extended benefit payments.

8. To curb the price-raising ability of the dominant corporations, government action is needed to curtail the high rate of business mergers and conglomerate take-overs, which have been greatly increasing the concentration of economic power in a narrowing group of corporations and banks.

9. The specific causes of soaring pressures on living costs, such as physicians' fees, hospital charges, housing costs and auto insurance rates, should be examined for the development of practical, sensible measures to dampen these pressures.

We state again, as on numerous occasions since February 1966: If the President determines that the situation warrants extraordinary overall stabilization measures, the AFL-CIO will cooperate so long as such restraints are equitably placed on all costs and incomes—including all prices, profits, dividends, rents and executive compensation, as well as employes' wages and salaries. We are prepared to sacrifice as much as anyone else, as long as anyone alse, so long as there is equality of sacrifice.

Under 3-Year-Old Law:

Number of States Seen Lagging On Meat Inspection Standards

THREE YEARS after the hard-won federal meat inspection law went on the books, nearly one-third of the states still fail to measure up to federal standards, a union spokesman reported in a network radio interview.

Arnold Mayer, legislative representative of the Meat Cutters, said there is "some question" whether the 35 state programs declared "at least equal to the federal program" by the U.S. Dept. of Agriculture "are up to par." He added that "experience will tell" how well the wholesome Meat Act of 1967 is working and whether or not further strengthening is needed.

Questioned by reporters on Labor News Conference, Mayer said the "watered-down" food stamp bill passed by the last Congress "was actually a disgrace." He said that not only did the measure fail to improve the food stamp program, but it also added "a vicious work provision that causes all sorts of problems to presently employed people."

He pointed out that the new "must-work provision" requires an adult receiving food stamps to take any job offered, regardless of his skill or work experience, "as long as it pays $1.30 an hour," which is 30 cents an hour less than the minimum wage set by federal law.

He said that the work provision applies to "any adult member of the household—be it an uncle, or an aunt, or what have you," and the "whole family is wiped off food stamps."

THE RESULT of that requirement "in a labor market where there are so many unemployed," Mayer declared, is to create "another cheap labor group—another group that can be easily exploited—a group that is almost a captive labor force."

He said the fight to improve and reform the food stamp program will be renewed in Congress this year. He said that if the issue can gain bipartisan support in Congress and widespread "public concern and interest," it has a good chance of passage in the current Congress.

Mayer was questioned by Marjorie Hunter of the New York Times and Robert Walters of the Washington Evening Star. The interview program is broadcast Tuesdays on the Mutual Broadcasting System.

By Press Associates, Inc.

CONSUMER-ORIENTED members of Congress learned a vital lesson at the conclusion of the 91st Congress—don't wait too long to press for legislation. In the 92nd Congress, they moved long before Pres. Nixon issued his own consumer message.

Aside from early initiatives on the consumer front, though, a new factor has been added in the House of Represenatives in the strong leadership exhibited by new Speaker Carl Albert.

Albert is calling frequent leadership meetings and holding press conferences to push for specific pieces of legislation. Usually at these press conferences he is accompanied by the Democratic chairman of the committee responsible for the legislation.

A recent press conference provides a perfect illustration of this new brand of House leadership. The issue was the creation of an independent consumer protection agency. This proposal lost out at the end of the 91st Congress when it was hung up in a tie 7-7 vote in the House Rules Committee.

At the press conference, Albert shared the spotlight with Rep. Chet Holifield (D-Calif.) who is chairman of the House Government Operations Committee. The consumer measure is in his jurisdiction.

Albert said that the proposal would be brought to the floor of the House within 60 days, which would make it before May 1.

"I feel confident that we will get a rule this time when we bring up the bill," Holifield told the reporters. He said that some minor changes will be made in the legislation to overcome some objections raised in the Rules Committee last year but the bill would not be weakened.

Actually there are three bills calling for an independent consumer protection agency but all are similar. One was introduced by Holifield, another by Rep. Benjamin S. Rosenthal (D-N.Y.), author of the proposal stalled last year and a third by Rep. Florence Dwyer (R-N.J.).

All three would set up an agency to represent the interests of consumers in proceedings before federal agencies and the courts. The White House office—which now exists by Executive Order, not by law—would plan and coordinate consumer programs conducted by various departments.

There should be no problem on the Senate side. In the 91st Congress the Senate passed a measure similiar to the Rosenthal bill by 74 to 4.

ANOTHER MAJOR PIECE of consumer legislation scheduled for the 92nd Congress is class action. It would allow consumers to join forces to bring lawsuits against fraudulent manufacturers or merchants.

Under existing federal court procedures, consumers cannot bring lawsuits unless the claims total at least $10,000, and consumers are forbidden from joining together to reach the $10,000 minimum.

The Administration asked for new legislation which permitted consumers to sue unscrupulous businessmen for damages after the Justice Dept. had brought successful lawsuits against the merchants.

The Senate Commerce Committee accepted this but added a class action provision which did not require Justice Dept. action. It would have allowed any consumer who lost at least $10 to become a member of a class of consumers seeking redress for unfair consumer practice. A businessman could recover court costs, however, if the court found the suit frivolous. The bill passed the Senate Judiciary Committee but did not reach the Senate floor.

A House subcommittee passed similar legislation but the full House Interstate & Foreign Commerce Committee sent it back without marking it up. This year the bill may go to the Judiciary Committee where it would receive a warmer reception.

A third bill that died in the 91st Congress but is expected to receive serious attention this Congress is one which sets minimum standards for warranties and guarantees which manufacturers and merchants offer to purchasers for their goods and services.

The plan this year is to tie the measure to an amendment which would authorize the Federal Trade Commission to set out clearly all terms and conditions of warranties.

NEARLY ONE-THIRD of the states still fail to measure up to federal meat inspection standards, Arnold Mayer, center, declared on Labor News Conference. Mayer, legislative representative of the Meat Cutters, is interviewed by Robert Walters of the Washington Evening Star and Marjorie Hunter of the New York Times.

NEGOTIATORS for the Railway & Airline Clerks and railroad management meet at the bargaining table for the final step in a long collective bargaining process—signing the new agreement. The 42-month contract provides wage improvements totaling $1.60 an hour and other benefits valued at 22 cents more. The Maintenance of Way Employes and the Hotel & Restaurant Employes won similar terms. A fourth union, the United Transportation Union, still seeks a settlement.

UTU-Railroad Talks Snagged On Rules Issue

(Continued from Page 1)

service; protection against peremptory job transfers and assignments to distant away-from-home points; and working conditions won in past negotiations in exchange for other union-sought benefits.

Management calls the rules "featherbedding" and wants the union to scrap them. UTU negotiators have indicated they are willing to change some rules where change is justified, provided the carriers improve some of the working conditions that railroad men call unjust.

UTU Pres. Charles Luna told newsmen earlier that the railroads "want us to sacrifice our working rules to pay for our raises. . . . They figure to save enough on rules changes to bankroll the entire cost of the new contracts."

"We're not buying that kind of package," Luna said.

Three other unions settled with the carriers recently on 42-month agreements providing wage increases totaling some 46 percent in seven steps. They are the Railway & Airline Clerks, Maintenance of Way Employes and the Hotel & Restaurant Employes representing dining car crewmen. The only work rule change affected a group of BRAC members.

The UTU has been free to strike since Mar. 1, when a congressional embargo on strikes or lockouts expired. Congress forbade any concerted action by either side after a one-day strike Dec. 10.

The UTU represents railroad trainmen, firemen and enginemen, conductors, switchmen and others. It has been trying for 17 months to get contract improvements.

Other railroad unions also are pressing for action on their contract proposals. They include the Railroad Signalmen, who set a strike date, which was postponed when Pres. Nixon named a hearing board; six unions of shopcraft employes; the Locomotive Engineers and the Train Dispatchers.

Musicians' Grant Aids College Jazz Festival

New York—The Musicians Union has donated $2,500 to send five professional jazz artists to the American College Jazz Festival May 14-16 at the Krannert Center for the Performing Arts on the Champaign-Urbana campus of the University of Illinois.

Musicians Pres. Hal C. Davis said it is the second year the union has provided financial assistance to these events which bring college musicians together with such union musicians as Dizzy Gillespie, Clark Terry and Bill Watrous.

Impact of Tips Studied In Hotel-Restaurant Pay

Tipped employes in the nation's 25,000 restaurants and year-around hotels earned an average of $2.89 an hour—30 cents an hour below the straight-time hourly average of factory workers, the Labor Dept. reported to Congress.

On the basis of a 40-hour week, tipped workers averaged $115.60 a week before any deductions and factory workers $127.60 a week. The report summarized a survey made in March 1970 of the effect of the wage-hour law's amendments permitting employers to pay tipped employes up to 50 percent of the minimum wage required by the Fair Labor Standards Act.

Those who get tips from patrons include waiters, waitresses, bartenders and some chambermaids. Non-tipped employes in hotels and restaurants were paid an average of $1.86 an hour—$74.40 a week—the same survey disclosed.

Labor Sec. James D. Hodgson sent the findings to Congress as the first of a number of special studies on the workings of the wage-hour law.

The Labor Dept. summed up the study this way: "The higher the tips, the lower the wages."

Among its conclusions were these:

- Tips make a substantial contribution to the earnings of tipped employes in normally tipped occupations.
- The addition of tips to cash wages raised the earnings of tipped employes to $2.89 an hour, but the wages paid by the employer accounted for only 42 percent of this total.
- Straight-time hourly earnings of all tipped and non-tipped workers in the survey averaged $2.62—$104.80 a week.

The department noted that the combined earnings—cash wages plus tips—of the tipped employes show 78 percent getting compensation of $2 or more an hour, with 28 percent getting $3 and up per hour.

Nearly 39 percent of the non-tipped employes were paid less than $1.50 an hour—just five cents more than the applicable wage minimum at the time.

Overall earnings, including the value of tips, averaged $2.24 an hour—$89.60 a week—for all the employes surveyed, the report showed.

Only one-eighth of the hotel chambermaids qualified for inclusion as tipped employes. That means "they regularly and customarily received more than $20 a month in tips."

When the minimum wage for hotel and restaurant employes went to $1.60 an hour last Feb. 1, the survey estimated there was a 2 percent increase in the employer's wage bill for tipped employes in restaurants and 3 percent in hotels and motels.

465,000 Workers Suffer:

Wage Violations Set at $93 Million

(Continued from Page 1)

cil, at its recent winter meeting, urged Congress to raise the minimum wage to "at least $2 an hour immediately" as a major step in the effort to eliminate poverty.

The council said the $1.60 an hour adopted in 1966 "was barely tolerable at that time" and is "utterly inadequate in 1971."

Hodgson's report on the effects of raising the federal minimum wage refuted the oft-repeated claim of some employer groups that such raises destroy jobs in marginal businesses.

It is possible, the Secretary's report said, that the 15-cent increase from $1.30 to $1.45 "may have had some effect on the price level of some goods and services" but, because of the "small impact" of the increase on wages, the effect on the price level was "probably very insignificant."

Hodgson told Congress the Labor Dept.'s wage and hours division will submit a comprehensive report this spring on a 1969-1970 study of the economic effects of changes in wage floors.

Reports on two special studies were submitted with the report on wages and hours. One was an evaluation of tips received by workers in the culinary trades. The other was a study of the wages, hours and working conditions of state and local government employes not now covered by the FLSA. **(Stories this page.)**

In a companion report, Hodgson noted a rise in complaints of age discrimination. He said the 1,344 complaints received during Fiscal 1970 represented a 30 percent increase over 1969. The law prohibits discrimination in hiring, promotion or job retention for persons 40 to 65 years of age. It applies to employers of 25 or more persons, employment agencies serving employers, and unions with 25 or more members.

Of the total of $93 million in wage underpayments discovered, Hodgson listed these components:

- Failure to pay the required wage minimums deprived 207,000 workers of $29 million—up by more than 8 percent over 1969.
- Overtime pay violations deprived 231,000 employes of $54 million due them under the wage-hour law.
- Backpay totaling $6 million was found to be due 18,000 workers, mostly women, in violation of the law requiring equal pay for equal work regardless of sex.
- In state and local schools and hospitals, a voluntary program of compliance produced $4 million in wage increases and another $4 million in backpay due some of the 100,000 employes involved.

Hodgson's report said child labor law violations in nonfarm industries rose more than 15 percent in Fiscal 1970 with 11,570 minors found illegally employed—4,412 in hazardous occupations.

In agriculture, Labor Dept. agents reported 1,472 minors as illegally employed—up 18 percent over 1969.

The report stressed a new program under which company officials of large firms, trained by Labor Dept. personnel, conduct self-audits of their operations to assure they comply with wage and hour laws. The enforcement program has been "significantly aided" by a large-scale public education program on what the laws require, it said.

The Labor Dept. said that although the minimum wage has been increased substantially over the years, its ratio to earnings has been largely eroded by rises in average hourly earnings. Consequently, the report said, "the ratio of the minimum wage to average hourly earnings . . . is now lower than it was in 1950, when the 1949 amendments went into effect."

Hodgson's report did not reveal what percentage of pay illegally withheld from workers was recovered in 1970. In the 1969 fiscal year, the Labor Dept. reported that $31.7 million was collected out of the $89 million discovered in unlawful underpayments—about 35 cents per dollar of wages due.

Strike Time Lost Declines from 1970

Work stoppages—strikes and lockouts—resulted in less lost time in the civilian labor force in January than in the year-ago month, the Labor Dept. reported.

Man-days of idleness caused by work stoppages in January amounted to .19 percent of the estimated working time of the labor force. This was well below the .25 percent in January 1970, but slightly higher than the .15 percent in December—the lowest level since March 1970.

The work stoppages accounted for 2.7 million man-days in January involving 286,000 workers, the Labor Dept. said. This compares with 3.7 million man-days affecting 233,000 workers in January 1970.

Labor Dept. Reports Cities, States Able to Meet Wage-Hour Standard

Extension of the federal minimum wage law to protect all state and local government nonsupervisory workers will cause almost no additional financial burden on the governments for payroll needs, a Labor Dept. study shows.

Findings of the nationwide survey submitted to Congress by Labor Sec. James D. Hodgson, revealed that straight-time earnings of the nonsupervisory public employes still excluded from the protection of the law averaged $3.27 an hour.

Only 3.5 percent of the non-covered workers earned less than the $1.60 hourly minimum required under the Fair Labor Standards Act.

"Hence, if coverage under the FLSA is extended to these workers, comparable minimum wage and overtime standards would not have as great an impact as the earlier extension of FLSA coverage," the report concluded.

About 2.7 million nonsupervisory employes of state and local hospitals, schools and residential care homes are currently covered by the FLSA minimum wage requirements, the Labor Dept. noted, while about 2.6 million other state and local government workers are excluded.

The survey conducted last March by the department's Workplace Standards Administration "indicates that wage levels of state and local government employes not covered by the FLSA are, on the average, substantially higher than workers already covered."

The workers employed by local governments averaged $3.36 an hour, 31 cents above the average in state governments. However, 4 percent of local government workers were earning less than $1.60 an hour, compared with 2 percent of the state workers.

The greatest concentrations of low-wage workers were in parks and recreation and in libraries. But these workers accounted for only 6 percent of the entire state and local government workforce, the report to Congress points out.

A regional breakdown of the wage patterns showed that most of the state and local workers earning less than $1.60 an hour were in the South—but this accounted for only 5 percent of the regional workforce.

In the nation's other three major regions, from 1 to 4 percent of the public employes earned less than $1.60, the report said.

Based on the March 1970 survey, state and local governments would merely have to boost their payroll expenditures three-tenths of 1 percent to bring wages of all public employes to the $1.60 level.

The report stressed that "the imposition of a $1.60 minimum wage would have no effect whatsoever on four-fifths of the state and local government units."

Wholesale Prices Show Sharp Jump

The Wholesale Price Index, usually a foreshadowing of what's in store for consumers, rose eight-tenths of 1 percent in February, according to preliminary estimates by the Labor Dept.'s Bureau of Labor Statistics.

The unadjusted rate was the biggest monthly increase since May 1969, and February's seasonally adjusted rate of six-tenths of 1 percent was the biggest since November of the same year.

Most of the increase resulted from advances in the price of farm products and processed foods, which climbed sharply for the second straight month.

58% of Workers Covered:

Bargaining on Rise In Federal Service

(Continued from Page 1)

In 1969, only 42 percent of non-postal workers were represented by unions. And in 1966, the comparable figure was only 21 percent.

While the number of blue-collar workers paid under the prevailing rate wage board system dropped 10 percent between 1969 and 1970, the percentage represented by unions jumped from 72 to 81 percent. In 1966, unions represented only 40 percent of wage board employes.

Again, while no exact figures are available, the 1970 data indicate that close to 95 percent of all eligible wage board employes are in union bargaining units after excluding ineligible supervisors.

Although the white-collar sector, made up of salaried employes paid under the government's general schedule, remains the least organized, the union gains here have been the most dramatic.

In 1966, only 15 percent of white-collar employes were represented by unions—and that had been a big gain over the previous minuscule proportion.

By 1969, this had moved up to a respectable 29 percent.

In 1970, white-collar employes represented by unions jumped to 35 percent of all salaried employes—which would bring the ratio close to 50 percent if supervisors were excluded.

For the first time, the number of white-collar employes represented by unions exceeded the number of blue-collar workers in bargaining units—487,245 to 429,136.

Among individual unions, the American Federation of Government Employes represented by far the largest number of workers in exclusive bargaining units—530,550, a gain of 10 percent over the previous year. About 60 percent were white-collar employes, the balance blue-collar workers.

The two big postal unions, the Postal Clerks and the Letter Carriers, continued to bargain for 301,000 and 204,000 workers respectively under their national agreements.

Hit hard by blue-collar cutbacks, the AFL-CIO Metal Trades Councils bargained for 66,000 workers compared with 75,000 the previous year—despite an increase in the number of bargaining units where they held exclusive recognition. For the same reason, the Machinists dipped slightly to 32,350 employes represented under exclusive recognition, even though the number of IAM bargaining units increased from 74 to 83.

Among the unaffiliated unions, the predominantly white-collar National Federation of Federal Employes moved up to fourth spot with 77,000 workers represented. The National Association of Government Employes, representing 37,200 blue-collar workers and 31,400 white-collar workers, took over the Number 5 spot.

These two largest unaffiliated unions, however, had a considerably smaller percentage of the employes represented covered by a written union contract than did the AFL-CIO unions. Thus, in terms of employes working under contract, the Metal Trades Councils had 50,700 compared with 45,300 for NFFE and 34,300 for NAGE.

Overall, 87 percent of all federal employes working under a written union contract were represented by AFL-CIO unions.

The number of employes represented by unions is greater, of course, than the number of union members. As in private industry, exclusive representation is achieved when a majority of a bargaining unit chooses union representation—normally through a secret ballot election. There is no union shop agreement in the federal service, nor any obligation to join a union that a worker votes to have as his bargaining representative. On the other hand, there are thousands of union members in the federal service in establishments where there is no exclusive bargaining representative and a number holding cards in unions other than the one that bargains for their group.

AN END TO DUMPING of foreign-made heavy electrical equipment at the expense of U.S. jobs is asked in petitions circulated by members of the Electrical, Radio & Machine Workers and the Technical Engineers. Shown with the petitions, presented to Congress and federal agencies, are from the left: Pres. Paul Carmichael of IUE Local 601, East Pittsburgh, Pa., Business Agent Al Litano, IUE Local 201, Pittsfield, Mass., Chairman William Bywater, of IUE's Fair International Trade & Employment Campaign, Rep. Silvio Conte (R-Mass.), IUE Pres. Paul Jennings, AFTE Pres. William T. Cleary, and Pres. Francis Burke of IUE Local 255, Pittsfield, Mass.

Labor Council Formed Among VA Employes

(Continued from Page 1)

livan, will serve as secretary-treasurer of the council.

The other participating unions, all of which have exclusive bargaining rights for local groups of VA employes, are the Carpenters, International Brotherhood of Electrical Workers, Fire Fighters and Laborers.

The council constitution set forth this eight-point program:

- To obtain exclusive recognition as bargaining representative of all eligible employes in the Veterans Administration.
- To aid VA employes, through collective bargaining, in securing improved wages, hours and working conditions.
- To promote the organization of all unorganized VA employes.
- To negotiate a master collective bargaining agreement for all VA employes.
- To represent all employes regardless of race, creed, color, national origin, ancestry or union affiliation.
- To seek legislation safeguarding employe rights.
- To protect and secure full recognition of all rights and liberties to which VA employes are justly entitled.
- To encourage participation of all VA employes in the council's primary goal, the betterment of working conditions, pay and benefits.

Griner termed formation of the council and establishment of common goals "a great breakthrough for unionism in the federal service."

He said "the day is near when we will sit down around the bargaining table with VA management and negotiate the agency regulations. We are at the threshold of meaningful collective bargaining in the Veterans Administration."

Sullivan, whose union represents the next largest group of VA workers, said a national agreement would provide "more meaningful" representation for employes. "It will be an important step in the direction of true collective bargaining in the federal service, to which the labor movement is committed."

If the council wins its goal of national recognition, it will propose supplementing a national pact with local agreements at the various VA installations.

Council affiliates will also work together on selection of organizing targets.

Senate Unit Approves Appalachia Aid Renewal

The Senate's Public Works Committee voted "no confidence" in Pres. Nixon's revenue-sharing plan.

One of the programs the President is seeking to replace with "no-strings" grants to the states is the Appalachian Regional Development Act.

Since 1965, the program has channeled federal funds into a 13-state depressed mountainous area for highways and other economy-building projects.

The Administration had asked only a one-year extension of the program—until the revenue-sharing plan was to take effect.

But the Senate committee ignored the President's proposal and approved a bill extending the regional commission's life an additional four years and the highway project for five years.

A sharp debate over the effect of a 52-year-old limitation on the interest the government pays on its long-term debts led to the first "teller vote" in the House in which members were recorded by names as well as being counted for or against an amendment.

The recorded teller vote, authorized under a legislative reform law passed last year, proceeded smoothly. But from labor's viewpoint, the wrong side won.

The House voted 212-179 to allow the Treasury to sell $10 billion in long-term government bonds without regard to the law that limits the interest rate to 4.25 percent.

A higher rate is paid on shorter-term savings bonds and there is no ceiling on the short-term notes the government regularly sells to finance its activities. But it has not been able to sell long-term bonds since 1965 because the interest ceiling was too low to attract buyers.

Opponents of a higher legal rate argued that freezing the government into paying current interest rates over a long period of time would add unnecessarily to the cost of the national debt—particularly since interest rates currently are heading down.

But banks—the principal customers for government bonds and notes—were strongly in favor of lifting the ceiling. And their position carried the day.

In the Senate, supporters of rules reform failed to pick up strength on a third try to break a filibuster and the Senate leadership served notice that the fight would be dropped if a fourth cloture vote showed no significant improvement.

The southern-led filibuster is aimed at blocking a vote on a proposal to change the Senate's rules to allow three-fifths instead of two-thirds of the Senate to close debate and break a filibuster.

The latest vote was 48-36 for closing debate, eight short of the needed two-thirds. Absenteeism remained heavy despite appeals for full attendance, but in any event no senator voting or paired switched his position from the previous two votes.

An all-out effort was being planned for the fourth vote, with the AFL-CIO and other groups supporting rules reform stressing the importance of being present and voting for cloture.

NLRB Upheld On Delegation Of Unit Cases

The Supreme Court has ruled that the National Labor Relations Board is not bound to review a regional director's determination of a bargaining unit before the NLRB orders an employer to bargain with the unit.

The case stems from a refusal to bargain on the part of the Magnesium Casting Co. of Hyde Park, Mass., which claimed that three employes voting in a Steelworkers representation election were actually supervisors and should not have been included in the unit by a regional director.

The Steelworkers won the election 140-59 in June 1968 and the union was certified as bargaining agent in October.

The unanimous decision against the company by the Supreme Court affirms a ruling by the 1st U.S. Circuit Court of Appeals at Boston.

In 1959, Congress permitted the Labor Board to relegate to its regional directors the task of unit determination.

The court noted, in an opinion delivered by Justice William O. Douglas, that it was made clear then that regional directors were to follow the NLRB's rules, regulations, procedures and precedents and "to act in all respects as the Board itself would act."

The decision disposes of a recurring matter of disagreement among lower federal courts.

Iron Workers Mark 75 Years as Union

St. Louis—The Iron Workers began their 75th year as a trade union with an anniversary issue of the union's monthly magazine, The Ironworker, and a call by Pres. John H. Lyons for membership cooperation in writing the record of those years.

"There are many among us," Lyons said, "who remember clearly many aspects of the struggle that took place during those 75 years as iron workers fought to have their voices heard. The going was not easy." The record, he said, will show "75 years of dedicated effort to bettering the way of life" for members.

Nearly all the records of the union's early years have been "lost, destroyed or stolen," Lyons reported. "It is not certain, for example, whether or not we even had a convention in 1898. No one seemed to know in 1909, just 11 years later."

The Ironworker, in the first of a series of summaries to be printed every two months, tells how steel replaced wood and stone as the primary load-carrying material in the late 1880s.

"This abrupt change brought about a demand for a new type of skill required of the workingman," it said. "Practically overnight, bridge carpenters became bridgemen and blacksmiths became housesmiths and architectural ironworkers."

For about $2.10 a day for 10 hours work, the ironworker in 1890 "was expected to climb narrow steel beams" six or seven days a week in all kinds of weather conditions, the synopsis asserts.

Iron workers were slow to form local unions for their own protection but on Feb. 4, 1896, 13 delegates from formerly independent unions in major cities met in Pittsburgh and formed the International Association of Bridge & Structural Iron Workers of America.

The union was chartered by the American Federation of Labor in 1901, when membership "swelled to 6,000" and there was more than $2,000 in the international treasury. Today's membership is 185,000.

Since records of the early years were kept in the homes of officers who moved, resigned or died, the chronicle of those years is scanty. Lyons urged all members to search their offices and homes for records, programs, letters and pictures for compilation by an editorial committee headed by J. W. Hardesty.

Subject to Referendum:

Merger Pact Signed By 5 Postal Unions

(Continued from Page 1)

A possible stumbling block to merger was overcome by a compromise that ensured the participation of the NPU's largest affiliate, the 27,000-member Manhattan-Bronx local. The New York group strongly supports the concept of area bargaining on wages, as contrasted to the existing national pattern.

Under the new largely autonomous U.S. Postal Service, labor relations will follow the general pattern of private industry except for the right to strike and to negotiate a union shop.

The merger participants agreed that the Manhattan-Bronx local would be permitted to put its case for a separate bargaining unit to the National Labor Relations Board even if the parent organization did not endorse the move.

The statement by the union presidents predicted that the merger will benefit the postal service and the public as well as the workers.

"We seek a fair wage for our labor" and "fair play," the unions declared. "We pledge a fair day's work in return."

It termed the reuniting of the two postal clerk unions "especially welcome."

"We have lived apart since 1958 but the will to merge has never been far beneath the surface of both organizations," the union presidents said. "Separate rooms are a luxury we no longer can afford."

The ratification vote is expected "in a matter of months," the presidents said. Until then the unions "will continue to exist separately and, to the greatest possible extent, in cooperation with each other."

Signing the pact, in addition to Filbey and Silvergleid, were Presidents Monroe Crable of the Maintenance Employes, Chester W. Parrish of the Motor Vehicle Employes and Michael J. Cullen of the Special Delivery Messengers.

The five union presidents expressed the hope that the remaining postal unions, including the Letter Carriers, will eventually join to form the "one big union" for the postal service.

Unions with national craft bargaining rights not in the merger agreement are the Letter Carriers and the Mail Handlers Division of the Laborers, both AFL-CIO affiliates, and the Rural Letter Carriers. Also outside, although invited to join the merger, is the unaffiliated National Alliance of Postal & Federal Employes, a predominantly black organization.

All seven unions holding national exclusive bargaining rights, including the three outside the merger agreement, have been cooperating closely in current bargaining negotiations as part of the recently established Council of Postal Employes.

MERGER AGREEMENT is signed by presidents of five postal unions as other officers and local union leaders gather around for the formal announcement. Seated at the head of the table are Presidents Chester W. Parrish of the Motor Vehicle Employes, Monroe Crable of the Maintenance Employes, Francis S. Filbey of the Postal Clerks, David Silvergleid of the National Postal Union, and Michael J. Cullen of the Special Delivery Messengers. The merger is subject to referendum approval of the membership.

Bookbinders, LPIU Press Talks on Unity

Presidents of the Bookbinders and the Lithographers & Photoengravers have set a target date of Labor Day 1972 for actual merger of the two graphic arts unions.

IBB Pres. John Connolly and Lithographers Pres. Kenneth J. Brown said after the first meeting of the executive officers of the two unions that they are confident a completed merger agreement will be ready this fall for presentation to conventions of both unions.

Merger discussions began last June. In July, the Bookbinders' convention unanimously directed that a merger agreement be worked out. The LPIU has a 1969 convention mandate, reaffirmed last June and October by its council.

Union officers met in the AFL-CIO Executive Council board room in Washington at the invitation of Federation Pres. George Meany, who said he is "encouraged by the excellent progress" to date and is optimistic about an early merger.

The LPIU's regular convention will be held Nov. 1-6 in New Orleans. The Bookbinders plan a special convention, possibly in October, to act on the merger agreement.

Connolly and Brown expect to have a first draft of a full merger agreement in April after subcommittees meet to discuss questions like an operating budget and convention representation.

The merger would create a union of 130,000 members, the unions anticipate. The LPIU itself was formed by the 1964 merger of the Lithographers and the Photoengravers.

Supreme Court Decision Upholds Self-Governing Power of Unions

The U.S. Supreme Court reaffirmed labor unions as self-governing institutions in reversing a lower-court award of $152,150 to a Mobile, Ala., man who claimed he was expelled from the Boilermakers without a "full and fair hearing."

The decision told federal courts in effect that the Landrum-Griffin Act, under which the suit was filed, does not authorize them to interpret union bylaws or constitutions and fit them to an offense.

Justice William J. Brennan, Jr., in delivering the opinion of the 8-1 majority, affirmed the right of unions to discipline their members for offenses not necessarily set forth in union rules.

Landrum - Griffin's so - called "bill of rights," he said, was not intended "to authorize courts to determine the scope for which a union may discipline a member."

A U.S. District Court at Mobile and the 5th U.S. Circuit Court of Appeals at New Orleans agreed with Boilermaker George W. Hardeman that he did not get a full and fair hearing on the ground there was insufficient evidence to support one of the two charges against him.

But the Supreme Court said that Landrum-Griffin does not "empower courts to determine what conduct may warrant disciplinary action by a union against its members."

The AFL-CIO had filed a friend-of-the-court brief urging reversal of the lower court decision.

Hardeman was expelled by union vote from Boilermakers Lodge 112 at Mobile on charges of creating dissension and threatening a lodge officer after he struck the lodge's business manager, Herman Wise.

Hardeman admitted assaulting Wise on Oct. 3, 1960, in the union hall because, he said, Wise did not refer him to a job. He filed suit in 1966 and a jury awarded him $152,150 in damages he said he suffered in lost income and pension and insurance rights.

The Supreme Court, in throwing out the award, said: "The statutory 'full and fair hearing' requires that the charging party provide some evidence at the hearing to support the charges, and here there was sufficient evidence to support the finding that respondent (Hardeman) attacked the business manager as charged."

Hardeman had admitted striking the first blow in the confrontation, the court noted.

Justice Brennan did hold in the majority opinion, however, that a union member has a right to file suit under Landrum-Griffin on the question of denial of rights.

The court rejected a union claim that the case should have gone to the National Labor Relations Board.

Even though the high court's decision is expected to reduce the number of lawsuits by union members over union discipline, it has no effect on state laws under which such suits might also be filed.

In other actions the Supreme Court agreed to review:

- A lower-court ruling that held unconstitutional a section of the Social Security Act which provides for the reduction of disability benefits being paid to any person under 62 who is receiving state workmen's compensation benefits. The government contends the lower court's decision would result in a "significant strain" on social security disability funds.
- The constitutionality of state laws requiring a person to reside in a state for one year before becoming eligible to vote in state elections. Thirty-three states have such laws.

Enforcement Power, Exclusive Role Sought for Equal Employment Panel

The AFL-CIO called on Congress to give the federal Equal Employment Opportunity Commission strong and exclusive powers to act against job discrimination.

Thomas E. Harris, AFL-CIO associate general counsel, reiterated labor's support of legislation empowering the EEOC to issue "cease and desist" orders against employers, unions and employment agencies that violate the fair employment section of the Civil Rights Act.

The bill, endorsed also by leading civil rights organizations, would also transfer to the EEOC the power now held by the Secretary of Labor to cancel government contracts of firms that discriminate in employment practices. And it would likewise shift to the strengthened EEOC present Justice Dept. functions to act against a "pattern" of discrimination.

This concentration of powers, Harris told a House Labor subcommittee, would give the Equal Employment Opportunity Commission "the effective enforcement authority it has heretofore lacked. At the same time it will make sure that it is the commission to which parties must look, not a multiplicity of other agencies and jurisdictions, for enforcement or relief."

Harris, accompanied by AFL-CIO Legislative Rep. Kenneth Meiklejohn, noted that unions and employers can be charged with breach of fair employment laws and policies in as many as nine separate forums and that an acceptable solution worked out with one agency can be upset by another.

The AFL-CIO vigorously supports an effective equal employment opportunity law, Harris stressed. He noted that as far back as 1962, AFL-CIO Pres. George Meany testified for such legislation and labor has consistently urged strengthening of the 1964 law which set up the EEOC.

"But that does not mean that we can support duplicative and overlapping enforcement procedures which are unduly burdensome," he added.

Harris said the bill sponsored by Rep. Augustus F. Hawkins (D-Calif.) meets both the goal of strengthening the EEOC and the elimination of conflicting jurisdiction.

It also, he noted, would broaden coverage to include establishments with eight or more employes as compared with the present requirement of 25 or more.

He praised also the proposed extension of coverage to state and local governments, and stressed that there is "no reason" to exempt them from national standards of non-discrimination in employment.

Food Clerks Win Pay, Pension Gain

San Francisco—Seventeen thousand supermarket clerks in seven northern California locals of the Retail Clerks have approved a new three-year contract priced at $1.45 an hour.

It includes a first-year increase of 75 cents an hour, two subsequent increases of 25 cents each, and a big boost in pensions. The pension benefit for 30 years of service jumps from $250 to $425 a month.

The new contract will raise the pay of experienced food clerks to $210.60 a week in the third year of the agreement.

Clothing Union Hits Voluntary Quota Proposal

Bal Harbour, Fla.—The Clothing Workers' executive board denounced as a "farce" a proposal to establish voluntary import quotas on Japanese textiles and apparel and said such action would have a devastating effect on the American textile and apparel industries.

"We are trying to lay a foundation, through legislation or negotiation or both, to end the disruptive effects of mushrooming imports," said an executive board statement announced by ACWA Pres. Jacob S. Potofsky.

"The Japanese voluntary agreement, rather than ending disruption, would increase it.

"If the Japanese announcement results in Congress taking no action on the international trade problem, it will open the flood gates to imports of all products," the statement said.

Unanimous Senate Okays Vote at 18 in All Elections

Labor Offers Plan to Spur New Growth

Labor's program to overcome unemployment and meet the nation's most pressing needs was submitted to the Joint Economic Committee of Congress as the alternative to Administration policies that have mired the nation in recession and inflation.

AFL-CIO Pres. George Meany said America's workers have been hurt by the "tragic consequences" of the economic slowdown engineered by the Administration over the past two years and have no confidence in its optimistic predictions for the future.

Workers and their unions, Meany said, "are distressed at the Administration's solicitude for corporate America, expressed through tax concessions and prodigal depreciation allowances, and its disregard of the public welfare, expressed through cutbacks of government programs that benefit all of the people."

Meany told the committee, which has been holding hearings on the President's economic report, that the AFL-CIO Executive Council undertook "a searching analysis" of the nation's problems at its recent meeting.

"We did much more than criticize," Meany stressed. "We offered viable, achievable solutions to the problems the nation faces."

In a detailed 48-page document, Meany presented to the joint congressional committee labor's "positive program for building a better America."

Its key ingredients include:

- Full funding of federal public investment programs in such areas as education, health care, low-and-moderate-income housing and community facilities.
- An emergency program of public works construction and repair grants in areas of high unemployment.
- **Legislation to create at least 500,000 federally-funded public service jobs with state and local organizations and private non-profit organizations.**
- A rapid expansion of money and credit at lower interest rates to stimulate economic expansion.
- Congressional action to block the Administration's plan to give a multi-billion dollar tax windfall to business through a change in depreciation tax rules.

Meany told the congressional panel that there is an urgent need to raise the federal minimum wage to "at least $2 an hour" and to

(Continued on page 2)

Meany Hits Court Ban on Rail Strikes

By Eugene A. Kelly

The railroads of America have once again "artificially created a national crisis" designed to get Congress to "abolish basic human rights" of their workers, AFL-CIO Pres. George Meany charged.

Noting the ruling of one U.S. District Court judge that a strike by the United Transportation Union against two of some 60 railroads would be illegal, Meany said "we in the AFL-CIO consider this situation intolerable."

He called on Congress to "meet this threat" to collective bargaining by one of these steps:

- **Pass the Staggers-Williams bill to authorize selective partial strikes, or:**
- **Nationalize the railroads.**

"Anything less" Meany said, "would be manifest injustice."

Meany's comments came after the UTU called off a scheduled strike against two major railroads and prepared to appeal a Mar. 10 ruling by District Judge John H. Pratt that selective strikes cannot be permitted, since the union bargained with the railroads as a group, and not separately. Pratt issued a temporary restraining order, which the UTU prepared to appeal.

With the appeal will go a request for speedy handling, the union said. It represents some 180,000 employes of all major U.S. railroads who have been trying for nearly 18 months to negotiate contract improvements with the carriers.

(Continued on Page 3)

WELCOME TO THE RANKS of AFL-CIO regional directors is extended by Federation Pres. George Meany to Walter J. Waddy. A staff representative since 1961, Waddy will head the region that includes Maryland, Virginia and the District of Columbia. He succeeds John Lorden, who will direct the Pennsylvania-New Jersey-Delaware region on the retirement of George Craig. **(Story, Page 3.)**

Amendment Expected to Clear House

By David L. Perlman

A labor-supported constitutional amendment allowing 18-year-olds to vote in all elections won unanimous approval in the Senate, 94-0.

The House Judiciary Committee has already voted a 32-2 endorsement of an identical amendment, virtually assuring passage by the full House this month by a one-sided margin.

If the timetable holds up, the proposed amendment will go to the states for ratification while most legislatures are still in session. If ratified by three-fourths of the states—38 out of 50—the 18-year-old vote will be written into the Constitution as the 26th Amendment.

Ratification is unlikely to be completed this year. But the chances are considered good for final approval before the 1972 elections.

Eighteen-year-olds already have the right to vote in elections for federal office—under the portion of a law Congress passed last year that was upheld by the Supreme Court. But the court said state voting laws are binding when it comes to voting for non-federal offices—in the absence of a constitutional amendment.

Except for the handful of states with voting ages under 21, that means that election boards would have to develop a cumbersome system of separate voting lists and ballots for 18, 19 and 20-year-old voters.

Faced with this reality, and the difficulty of amending state constitutions, resistance to the 18-year-

Recession Takes Toll:

Drop in Workforce Key to Jobless Dip

By Tom Castor

A shrinking labor force caused the unemployment rate to take a slight dip in February as growing numbers of the jobless gave up the search for work.

The monthly report of the Bureau of Labor Statistics showed that the total labor force dropped 539,000 on a seasonally adjusted basis to 86,334,000. And those still seeking employment were confronted with a tightening job market as total employment dropped 325,000 from the January level.

The BLS includes the unemployed in the total labor force figures only as long as these jobless persons are actively looking for work.

On a seasonally adjusted basis, the national unemployment rate dropped from 6 percent in January to 5.8 percent in February. But there still were 5.4 million Americans on the unemployment rolls in February, the same as the previous month—and it was still the heaviest jobless toll in a decade.

The BLS report noted that the seasonally adjusted decline in unemployment it found was due mostly to a drop in joblessness among the secondary or marginal labor force—those seeking lower-paying, part-time jobs.

Of the 185,000 drop in adjusted unemployment, 115,000 of these persons had been seeking part-time jobs and finally found them, the BLS reported.

On the employment side, employment of adult men was at its lowest point in two years at 45.2 million, 435,000 below the record peak of March 1970. Employment of adult women also was down from January to 27.1 million.

Labor Sec. James D. Hodgson saw in the February employment report "an additional indication from the labor market that the economy is moving in a favorable direction."

"It was accompanied by a similar favorable shift in other indicators—the decline in the level of state unemployment compensation

(Continued on Page 8)

Tariff Panel Rules Against TV Imports

The U. S. Tariff Commission has ruled unanimously that imports of Japanese-produced television sets are injuring the domestic industry. The commission's action clears the way for the Treasury Dept. to impose penalty duties on some of the Japanese imports.

The Treasury Dept. had decided Dec. 4 that the entire Japanese TV industry was violating the U.S. Anti-Dumping Act by exporting sets to this country for sale at prices below Japan's domestic prices for similar items.

Meanwhile, officers and members of the Electrical, Radio & Machine Workers have filed suit against a group of Japanese TV makers seeking nearly $68 million in damages on behalf of 1,500 former employes of the Emerson Radio & Television Corp. of Jersey City, N.J.

The plant ceased production of its Emerson and Du Mont television sets last summer, because, it said, Japanese TV producers were undercutting its costs.

Imports of Japanese black-and-white asd color television sets in 1970 were valued at about $255 million and accounted for about 28 percent of TV sales in the United States.

The Tariff Commission's decision climaxed the biggest Anti-Dumping Act investigation in the law's 50-year history.

Although the ruling is subject to review by customs officials, the agency will not be able immediately to exclude any specific Japanese manufacturer from the Tariff Commission finding.

Spokesmen for Japanese TV makers said the decision would close the U.S. market to smaller-

(Continued on Page 7)

SST Development Held 'Vital' to U.S. Economy

Continued development of an American-built airliner that would fly faster than sound is "vitally important" to the nation's economy, AFL-CIO Pres. George Meany testified.

Meany was the leadoff witness as the full Senate Appropriations Committee opened hearings on whether Congress should vote additional "seed money" to finish work on two prototypes of the supersonic transport plane (SST).

"There can be no doubt that this is the plane of the future," Meany told the committee. "The question is not whether there is going to be an SST. That question has already been answered by the French, the British and the Russians."

Meany noted that the Soviet-built TU-144 is already being advertised for sale "in any part of the world" and the Concorde, financed jointly by the British and French governments, has been extensively flight-tested.

The "second-generation" American SST will be a bigger and better plane, Meany said, and will enable the United States to recapture its traditional leadership in the world aviation market—if it is built.

If not, he warned, one of the nation's basic industries and a leading exporter will go the way of the once dominant American shipbuilding and electronics industries.

The AFL-CIO president's testi-

(Continued on Page 2)

SEED MONEY to continue development of an American-built supersonic airliner will preserve an industry that provides hundreds of thousands of jobs, billions in tax revenues and earnings from exports abroad, AFL-CIO Pres. George Meany tells the Senate Appropriations Committee. With him is AFL-CIO Legislative Director Andrew J. Biemiller.

Meany Calls SST Development 'Vitally Important' to Economy

(Continued from Page 1)

mony responded directly to the critics of the SST, who include, he noted, "many individuals and groups with whom we are normally allied."

Meany stressed to the committee that "the AFL-CIO takes pride in its record of support for programs and policies that benefit all the people" and has applied the same test to the SST issue.

On the evidence amassed to date, he said, the labor movement shares the conclusion of government studies that "there is no concrete evidence that a fleet of supersonic airliners will damage or threaten the earth's atmosphere."

If those opposing the SST on environmental grounds are convinced that their objections are valid, Meany suggested, "it seems to me they should be pursuing a campaign for international agreement to abolish the SST everywhere. Unilateral action by the United States against an American SST would not protect the world's environment."

Meany pointed out that the AFL-CIO shares the desire of those who would have the government do "much more" to overcome "deficiencies in housing, education, health, recreation, pollution control, mass transit and the like."

But, "we are realistic enough to know that solution of social problems depends in large part on solution of economic problems," he stressed.

"We cannot base a healthy social environment on a sick economy. We need basic industries that provide jobs and create dollar earnings in markets both at home and abroad."

It is the "billions of dollars worth of taxable revenues" generated by aerospace and other basic industries that finance the government's health, education, welfare and environmental programs.

As far as he personally is concerned, Meany told the committee wryly, today's planes fly fast enough. But nevertheless the world's airlines, including American carriers, "will fly the best planes available." And, he warned, "if they cannot get them with a made-in-the-U.S.A. label, they will get them elsewhere."

He told the committee that labor is "not merely fighting for 42,000 jobs now and 150,000 in the future. We're fighting to conserve one of America's most important industries."

It's not a "handout," Meany stressed. The relatively small federal development investment will be more than repaid in the privately financed production stage.

"We're asking Congress to fund a program which will not only keep people off unemployment and welfare rolls but which will create billions of dollars worth of new revenues."

The federal government's partnership in developing the SST was inaugurated by Pres. Kennedy, who proposed it in June of 1963. To maintain the nation's lead in long-range aircraft, Kennedy urged, the government should join with private industry "to develop at the earliest practical date the prototype of a commercial supersonic transport superior to that being built in any other country of the world."

Meanwhile, the House Appropriations Committee prepared legislation continuing federal funds for SST development.

Last year, the House voted by a narrow margin to continue federal financing, the Senate initially rejected it, and a compromise temporarily continued the program—thus leaving the decision to the 92nd Congress.

(Continued from Page 1)

expand coverage to 17 million workers still unprotected.

He stressed the importance the labor movement attaches to the National Health Security bill as "the only comprehensive program of national health insurance that meets the challenges of care, financing, costs, development and reform."

Meany spelled out the labor movement's position on world trade and the importance of regulating the multi-national corporations and foreign subsidiaries of U.S. firms to halt "the export of American jobs and displacement of U.S. production."

And he reiterated labor's opposition to dismantling existing federal programs to meet national problems under the guise of "revenue-sharing" with the states.

The AFL-CIO president noted that the Administration is basing its projection of an economic expansion during the coming year on an increase in consumer spending.

"We say that the most realistic and effective way to meet that goal is by substantially increasing the real wages of workers," Meany told the committee.

The labor program presented to Congress stressed the prime importance of expanded public investment "to revitalize the nation's urban areas as centers of American civilization and to improve the quality of life of the American people."

It endorsed federal assumption of public welfare payments, called again for closing of tax loopholes, and warned against efforts to impose a national sales tax "under the name of a value-added tax."

Above all, Meany said, "the AFL-CIO is convinced that America cannot afford to stand still or move backward, as it has done for the last two years."

Labor has "absolute confidence in America" and in the nation's ability to overcome its problems. But, Meany stressed, "those problems must be grappled with," not evaded or ignored.

"It is time to move boldly," he urged Congress.

Machinists Confer:

Aerospace Workers Set Contract Goals

Los Angeles—A union shop will be the top bargaining goal in aerospace industry negotiations this year, delegates representing nearly 200,000 workers decided at the 18th annual Machinists' aerospace conference.

The conference expressed concern over the depressed state of the industry, plagued by rising joblessness and hampered by the lack of new projects to stimulate hiring. They agreed, however, that industry management cannot be permitted to "force its workers to subsidize it with inadequate wages" and other benefits.

The nearly 200 delegates voted to seek contract improvements including a 35-hour workweek, 12 paid holidays per year, holiday pay at three times the regular hourly rate for those required to work, across-the-board wage increases in line with other recent union settlements, and a catch-up increase of 27 cents per hour plus current cost-of-living increments, all frozen into base rates.

The reports of six conference committees on contract goals were adopted unanimously. Among them was one to remove the cap on cost-of-living escalator clauses. Another was to recommend that all IAM locals press for full company-paid health and welfare programs. Yet another called for strong contract language against contracting-out of IAM work.

The delegates reaffirmed their support for continuing development of a supersonic transport-plane as the kind of project needed to stimulate the national economy and aerospace employment.

At stake, they said, is "the prosperity of one of the nation's largest industries and also one of its most depressed."

Massive layoffs have occurred in many states and "if this deterioration continues, more jobs will be lost and more damage done to the American economy," the conference declared.

The delegates urged the federal government to intercede with the British government to insure continued production of Rolls Royce jet engines for the Lockheed air bus or jumbo jet.

The conference's collective bargaining committee told the delegates that despite the depressed state of the industry, the strike must still be the ultimate tool to pry a fair settlement from manufacturers.

The IAM Research Dept. gave the conference a "statistical portrait of a disaster" as it traced the 26 percent drop in aerospace production jobs since the 1968 contract negotiations.

Reports from the shops showed employment at Boeing down from 148,000 in 1968 to 66,000; Lockheed down from 23,000 to 15,000 at Marietta, Ga., with 5,000 Rolls Royce workers furloughed in California. At McDonnel Douglas, more than 18,000 workers are on layoff. The loss of 7,300 jobs at United Aircraft was compounded by the announcement that 4,000 more will be furloughed over the next nine months, the IAM said.

Leisure Time Grows, but Many Opt For Extra Work to Meet Expenses

American workers have more leisure time today than ever before—an average of 50 hours more a year since 1960—but many of them are using their extra time to add to their income and buy additional goods and services.

This was one of the findings of Geoffrey H. Moore, commissioner of Labor Statistics and Janice Hedges, an economist in the Division of Economic Studies of the Labor Dept. Bureau of Labor Statistics.

Writing in the February issue of the Labor Dept. publication Monthly Labor Review, they note that in the past 100 years the average working man has gained 18,000 hours of leisure from reductions in the workweek, additional vacation and holiday time and from additional nonworking years in youth and old age.

The gain of 50 hours a year in the past decade, Moore and Hedges report, breaks down to 30 hours from reduction of the workweek, 15 hours in increased vacations and 4 hours in additional holiday time.

The authors note that while the 40-hour workweek is considered the standard in many industries, it is by no means universal.

"Many full-time workers today work much longer than 40 hours, either because their job normally exceeds the standard, or because of overtime, or because they hold more than one job," the article reports.

Total hours worked by full-time workers in May 1970 averaged 45 hours a week, according to the household survey conducted by the Bureau of the Census for the BLS.

Moore and Hedges note that the survey found that 14 percent of male full-time workers worked 49-59 hours a week during May 1970 and that another 14 percent worked 60 hours or more.

In the 20-24 age group, only about one-fifth worked 49 hours or more, but in every older age group, including workers 65 or over, about 3 out of 10 men employed full-time worked 49 hours or more.

The authors note that marital status also affects hours at work. In the survey, about 30 percent of all married males compared with 19 percent of all single males worked 49 hours or more.

"Occupation is another factor associated with working hours. Among managers, officials and proprietors, more than two-fifths worked 49 hours a week last May. A smaller, but still substantial proportion of professional workers—about one-fourth—were at work 49 hours or more."

Moore and Hedges point out that moonlighting and overtime work are two of the principal factors cutting into leisure time.

In May 1969, about 4 million persons, more than 5 percent of all workers, held two or more jobs at the same time. About half of them worked 55 hours or more during the survey week.

"Most moonlighters work at two jobs or more because they value additional income over leisure. In 1969, two out of five moonlighters cited the need for additional income for regular household expenses."

They stressed, however, that the ranks of overtime workers are much greater than those of the moonlighters. The number of workers who put in overtime on their regular jobs in May 1970 was 14.5 million.

"Growing interest in the four-day week is reflected in a federal law that has shifted five mid-week holidays to Mondays.

"Although the four-day week may be distant for most workers," the authors observe, "slow advances in that direction continue. About 7,000 workers in a small number of firms distributed throughout the United States were on a four-day week in 1970. Many companies that have gone to a four-day week require their workers to put in nine or even 10 hours a day."

Contribution Backs Red Cross Drive

The AFL-CIO has responded to the American Red Cross appeal for funds with a $10,000 donation. In addition to its annual campaign every March, the Red Cross is seeking special emergency funds because of recent blizzards, floods, tornadoes and the California earthquake.

Federation Pres. George Meany said the AFL-CIO contribution will help to meet the emergency needs of disaster victims across the country.

Red Cross Pres. George M. Elsey noted that the ARC has spent more than $32 million in its current fiscal year, including $13 million for four major disaster relief operations.

To Screen Out Negroes:

High Court Bars Bias in Job Tests

The Supreme Court has ruled that employers cannot require job-promotion tests and qualifications that could screen out Negroes and other minorities from better jobs without realistically testing their ability to do the work.

The court ruled 8-0 that Title VII of the 1964 Civil Rights Act bars such practices even if they are not discriminatory in intention.

"Congress has not commanded that the less qualified be preferred over the better qualified simply because of minority origins," the court said in an opinion written by Chief Justice Warren Burger.

"Far from disparaging job qualifications as such, Congress has made such qualifications the controlling factor, so that race, religion, nationality and sex become irrelevant.

"What Congress has commanded is that any tests used must measure the person for the job and not the person in the abstract."

The case involved the application for promotion by 13 black laborers at the Duke Power Co., Eden, N.C. The company required a high school diploma and passage of an achievement test for promotion to the better-paying jobs.

The high court noted that the fact Duke's white employes were better able to meet the qualifications than blacks would appear to be "directly traceable to race" because Negroes long have rereived "inferior education in segregated schools" in North Carolina.

"If an employment practice which operates to exclude Negroes cannot be shown to be related to job performance, the practice is prohibited," Burger wrote.

The court also noted that Duke is paying two-thirds of the tuition cost for employes who lack a high-school education.

But Justice Burger added, "the act proscribes not only overt discrimination but also practices that are fair in form but discriminatory in operation."

In a similar case, the high court denied review of a lower court's finding of racial discrimination against Lee Way Motor Freight, Inc.

Four Negro city drivers for the company in Houston were denied transfer to better-paying over-the-road driving jobs and filed suit under the Equal Employment Opportunity section (Title VII) of the Civil Rights Act.

Lee Way said it had adopted the policy of not transferring city drivers to cross-country jobs for efficiency reasons. It said that city drivers soon tired of the long absences from home and usually wanted to transfer back to city jobs.

The finding against the company was based in large part on employment statistics. The 10th U.S. Circuit Court of Appeals at Denver found that in 1964, 1966 and 1968 Lee Way had as many over-the-road drivers as 542 and none of them was black.

Pennsylvania State Workers Choose SCME

Harrisburg, Pa.—The State, County & Municipal Employes won the votes of Pennsylvania state employes in a runoff election among two units of 17,000 state workers.

SCME won a plurality in a Jan. 14 vote and was forced into a runoff. Initial elections had been conducted in four units—highway maintenance workers, highway maintenance supervisors, hospital and correctional employes, and hospital supervisors. They were reduced to two units for the second vote.

After the runoff, the State Labor Relations Board reported SCME was the winner against a two-union coalition, 6,032 to 4,673, to represent highway employes. Hospital employes voted for SCME, 915 to 847, the board said.

It was the largest election yet under the state's new Public Employes Relations Act, which permits public employes to join unions and bargain collectively. Other state, county and municipal employes also are eligible.

SCME Area Director Gerald McEntee asked Gov. Milton Shapp for the earliest possible start of negotiations on first contracts.

Sec.-Treas. Joseph L. Ames welcomed the 17,000 state employes to union membership. He said SCME would try to achieve the program it proposed in campaigning for members—job security, "realistic" wages, state-paid hospital and medical coverage, noncontributory pensions and life insurance protection.

Credit Union Strikers Ratify 3-Year Contract

Madison, Wis.—Office employes who walked a picket line together for two months at national credit union headquarters returned to work together after ratifying a new three-year contract.

The new pact covers 88 employes of CUNA International, Inc., and CUNA Supply Cooperative. It provides wage increases of 6 percent each year for three years, a longevity increase of 2 percent more after 15 years of service, four weeks of vacation after 18 years of service and discontinuance of a merit raise program that allowed management to withdraw a raise at its own discretion.

Pres. Marion Sachtjen of Office & Professional Employes Local 39 praised the "tremendous spirit" of the strikers and said they are satisfied with the agreement.

The support of labor and its credit unions was a major factor in winning a settlement after mediation had failed, Mrs. Sachtjen said. Most credit unions are affiliated with CUNA. Labor alone has 1,171 such loan-and-savings bodies.

Still unsettled are a dispute over unit clarification and grievances awaiting arbitration.

The union's appeal for support from affiliated credit unions brought strong response. Shortly before the settlement, directors of the Wisconsin Credit Union League urged CUNA management to bargain more intensively. The league also criticized CUNA for hiring replacements for some of the strikers, and called for "proper recognition and respect for the goals of Wisconsin labor unions."

OATH OF OFFICE is administered to Pres. Newton W. Black, center, of the Glass Bottle Blowers and Sec.-Treas. Harry Tulley, left, by Pres. Emeritus Lee W. Minton. Black had been secretary of the GBBA since 1949 and served as secretary-treasurer for the past year before succeeding Minton to the presidency. Tulley is a former vice president of the union.

New Directors Named In 2 AFL-CIO Regions

Promotion of an AFL-CIO staff representative to regional director and assignment of an assistant director to succeed a retiring veteran were announced by AFL-CIO Pres. George Meany.

The changes, effective Apr. 1, involve the leadership of the Baltimore and Philadelphia-Camden regions.

Walter J. Waddy, staff representative in the Baltimore region since 1961, becomes regional director succeeding John Lorden. Lorden takes the post in Camden from which Director George Craig is retiring.

Waddy was born in Irvington, Va. He joined Papermakers Local 632 in Richmond, Va., served as its president and vice president, and was a delegate to both the Richmond and state central bodies. As a staff representative for the Papermakers & Paperworkers he was a member of the Virginia AFL-CIO state executive board.

Named to the regional AFL-CIO staff in 1961, he played a key role in several campaigns and recently took part in the Dept. of Organization's "intern" program.

Waddy lives in Glen Burnie, Md., with his wife and three children. His region takes in the District of Columbia, Maryland and Virginia.

Craig is a veteran labor organizer who joined the Mine Workers in 1926 and was appointed to the UMW staff in 1935. Since then he has served with the Steelworkers Organizing Committee, the Packinghouse Workers Organizing Committee, the Ford Motor Co. organizing drive conducted by the former CIO and the Auto Workers, and other campaigns.

Craig was CIO regional director in eastern Pennsylvania, assistant to Director Van A. Bittner in the Southern Organizing Drive, and director in the Philadelphia region again for the CIO and then at merger for the AFL-CIO.

From 1956 to 1966 Craig was assistant to AFL-CIO Organization Director John Livingston, assigned to the Eastern Seaboard and the South. He returned to the Philadelphia area in 1966 and has directed the regional staff for Pennsylvania, New Jersey and Delaware.

JOHN LORDEN

Lorden entered the labor movement in his native Philadelphia in 1932, and later became business agent of Federal Labor Union 18571. This was followed by membership in Operating Engineers Local 835 in Philadelphia.

Lorden was named to the field staff of the former AFL in 1937, and carried out many special field assignments in the East. He was elected secretary-treasurer of the Conference of East Pennsylvania Central Labor Unions, head of the Pennsylvania State Union Label & Service Trades Dept., and director of the AFL auditing department.

Black Succeeds Minton as Head Of Glass Union

Philadelphia—Newton W. Black has succeeded Lee W. Minton as president of the Glass Bottle Blowers. Minton, who headed the GBBA for the past 25 years, assumed the post of president emeritus.

Black had been secretary of the union since 1949 and became secretary-treasurer last year when the GBBA combined the two offices.

The union's executive board also named Harry Tulley, formerly a vice president of the central and midwest area, to fill the secretary-treasurer's post.

Minton, who was elected to the AFL-CIO Executive Council in 1956, will continue to serve as a vice president of the federation.

Black was born in Jefferson County, Illinois, in 1912. He was a charter member of GBBA Local 95 that was formed in 1933 at the Owens-Illinois Glass Co. in Alton. He later became president of the local and led a successful campaign to organize the production and maintenance workers at the plant.

Black became an international representative of the union in 1944 and was named to the GBBA executive board in 1946. He was first elected secretary in 1949 and reelected at subsequent GBBA conventions.

Black is a member of the AFL-CIO standing committee on community service activities and is a director of Boys Baseball, which the GBBA has supported for a number of years.

Tulley held several offices in GBBA Local 144 in Montgomery, Ala., before becoming a vice president of the union. He also was a district vice president of the Alabama AFL-CIO and president of the Montgomery Central Labor Council.

As president emeritus, Minton will be available for advice and counsel on GBBA matters.

Meany Hits Court Ban On Selective Rail Strike

(Continued from Page 1)

Members of the UTU, Meany pointed out, have "scrupulously abided by every detail in the Railway Labor Act, as well as the extraordinary act passed by the last Congress" Dec. 10. The act barred a strike by UTU and other rail unions before Mar. 1.

When bargaining was resumed, it reached an impasse Mar. 6, Meany noted. The union is legally free to strike but "the employers have once again resorted to the tactic of transforming a simple work stoppage on a few lines into a major national emergency," he charged.

When Judge Pratt enjoined a strike, Meany said he ignored a contrary decision by Judge Burrington Parker of the same court in another UTU case involving the jobs of railroad firemen. In so doing he approved the employer strategy, "even though the union agreed to move all material declared essential by the Dept. of Transportation."

He added: "In other words, Judge Pratt has given the union only the alternative of a nationwide complete rail shutdown, or no strike at all."

The employer strategy is "obvious," Meany charged. "They are convinced the Congress will intervene and prohibit a nationwide strike. They believe the Congress will force free men to work against their will for the private profit of other men."

Parker held that once negotiations have legally reached an impasse after good-faith bargaining, "selective strike action then becomes a legitimate economic tool so long as the union continues to seek a national agreement . . . without seeking to coerce individual carriers into deserting the multi-employer bargaining unit."

The issue will be fought out in the courts, the parties indicated. The carriers have not yet appealed Parker's ruling, their attorney said.

The UTU is the last of four railroad unions which struck for one day Dec. 10 and were ordered back to work by Congress in special emergency legislation. The other unions have since settled on contract terms, but UTU has been unable to reach agreement on changes in work rules sought by management negotiators.

Investment Banker Gets Post at Labor

The Labor Dept. announced that Frank G. Zarb, New York investment firm executive, has been named Assistant Secretary of Labor for Administration. Zarb, 36, leaves CBWL-Hayden, Stone Inc. Apr. 1. He succeeds Leo R. Werts, who retired Dec. 31.

Zarb will be responsible for directing a wide range of management and administrative programs, the Labor Dept. said.

The Economic Realities

THE NIXON ADMINISTRATION'S widely advertised expansionary economic policies, its slick full employment budget concept and its confessed conversion to Keynesian doctrine have all tended to mask some important facts about the real impact of its fiscal and monetary policies.

In the simplest terms, the Nixon budget for fiscal year 1972 is wide open to challenge on its basic assumption that it will provide the necessary stimulus for a recovery from the Nixon-triggered recession.

The President's willingness to accept an $18 billion deficit for fiscal year 1971 and an additional $11 billion deficit for the following fiscal year is being offered as evidence of the expansionary thrust of his policies.

But the Survey of Current Business, published by the U.S. Dept. of Commerce, notes that the size and scope of the budget deficits depend on the method of accounting used.

The unified budget concept does, indeed, set out the above figures. But the National Incomes Account method used by the government and economists to measure the real economic impact of spending and borrowing policies shows a markedly different picture.

THE PRESIDENT'S $18 billion deficit for fiscal 1971 shrinks to $15 billion measured by the accounts method. And the $11 billion plus for fiscal 1972 is sharply reduced to $4 billion.

It is these figures as well as other areas of the Administration's economic policies that led Dr. Maurice Mann, executive vice president of the Western Pennsylvania National Bank, who recently left the Administration as an assistant director of the Budget Bureau, to say:

"It is an open question as to whether the federal budget for fiscal year 1972 is as expansive as has been suggested . . . the budget is in effect essentially neutral in fiscal 1972."

Dr. Mann also told the Florida Bankers Association recently, ". . . we have now arrived at the millennium of a somewhat mechanistic full-employment budget concept marching in lock-step with a mechanistic monetarist approach, which, I must confess, gives me more than a little cause for concern. . . . We are now being treated to a double-barrelled 'black-box' approach—after fixing budget expenditures at full employment revenues, all we have to do is pour enough money supply in one end of the box and somehow—in some form—enough additional GNP comes out the other end."

ALL THIS dovetails with the analysis of the AFL-CIO that the Administration's approach is based in equal parts on wishful thinking, tricky arithmetic and, at best, a program for a mini-expansion that would fall far short of providing the jobs and the services and the programs that the nation needs.

The country requires a direct, candid and honest approach to its economic problems, an approach that will be concerned with the realities of unemployment and inflated prices and a deterioriating social fabric.

The AFL-CIO has offered such an approach, a detailed program for building a better America. We have spelled it out for the Administration and for Congress. Now we need some action.

A Word Edgewise:

Attacks on 'System' Reflect Growth of Freedom in U. S.

By John P. Roche

BECAUSE I REFUSE to consider the United States a repressive, fascist, imperialist, racist nation, a number of correspondents have accused me—often quite vividly—of "selling out to the conservatives," or some such crime. It is quite true that, with all its evident failings, I love this crazy country, but not just because I was born here, or because the Star-Spangled Banner hits me where I live. Indeed, professional patriots turn me off even faster than New Leftists.

No, my affection for the American people has been a function of experience, of watching for over 30 years the growth of American commitment to freedom, justice, and equality. The America of my childhood was constitutionally racist. The Supreme Court had defined "equal protection of the laws" to include mandatory segregation.

It was casually and customarily racist: I didn't know the polite words "Jew," "Negro" or, for that matter, "Italian," existed until I was about 14. I recall political posters in New York City in 1938 urging all and sundry to "Vote Dewey, Not Jewey." (In fairness to Thomas E. Dewey, these reflected the views of local leaders, not Dewey's, towards Herbert Lehman.)

When I entered grade school, there was no significant trade union movement in the United States. It was the era of the "open shop" when workers were simply treated like commodities. Every time union organizers attempted to remedy this condition of pure exploitation, some judge or other would issue an injunction.

Some injunctions. They even forbade organizers to make speeches that might incite workers to violate "yellow dog" contracts, that is, contracts which included a promise not to join a union. If that didn't work and the union got uppity, out would come the National Guard to enforce the injunction.

As far as justice was concerned, an individual had no rights protected by the Constitution against his state or local government. A radical whose views offended his listeners was customarily arrested for violence—the proof of which was that his audience had beaten him up.

Yale Pres. Kingman Brewster's statement that he didn't think a Panther could get a fair trial in the United States of 1970 was an accurate description of reality about 40 years ago—only it could then be extended to include all Negroes accused of crimes against white society. (Crimes against fellow blacks were generally ignored by the police; like gangland killings they were considered private rather than public business.)

Admittedly this is a view from the bottom, but most Americans lived on the bottom. In 1934, about 15 million Americans were unemployed, and millions more semi-employed; the South was a disaster area; most farmers were bankrupt; more than 4,000 banks, with uninsured deposits, had folded; and the gross national product had dropped to $58 billion. It was a great world to grow up into—and just over the horizon was World War II.

However, this is not an exercise in generational self-pity. My point is that throughout this incredible era (when many feared native fascism) freedom not only survived, but expanded. New Deal legislation, inadequate as it was, began to redress the inequities in our society.

IN THE POSTWAR period, the first real steps were taken to admit Negroes to the political community, and in general the federal courts began protecting minority rights in unprecedented fashion. Finally, under Pres. Johnson's leadership, even Congress got in the act. In short, freedom has flourished as never before in our history.

There are a number of things left on the agenda: A good "Soak the Rich" tax structure, a thoroughgoing reform of our whole system of criminal justice (including prisons), a nationally administered and funded program of income maintenance to eliminate the welfare monstrosity, a resuscitation of our cities (a precondition for racial equality)—to mention only a few.

Perhaps liberals will get the American people to support these measures. Maybe we won't. But we know one thing for certain: we have the freedom to assault "the System," the freedom to mobilize for our cause, the freedom to rebuild America when people are persuaded. If you think I am naive or an Establishment apologist, invite a 50-year-old Negro or unionist to lunch.

Before 92nd Congress:

Consumer Protection Needs Remain High Priority Issues

The following is excerpted from a statement on consumer protection adopted by the AFL-CIO Executive Council at its recent session at Bal Harbour, Fla.

DESPITE SOME forward steps by the 91st Congress, the advance of consumer protective legislation was disappointingly small in the past two years. The disappointment is especially keen, in view of the large number of proposals that were made and the several that came close to final passage, but narrowly missed.

Outstanding among the bills on which the Congress had nearly completed action were the consumer class action proposal and the bill to create an independent Consumer Protection Agency in the Executive Branch of the federal government. We urge the 92nd Congress to act promptly on these measures.

Other major consumer legislation which will be ready for consideration by the 92nd Congress will reflect the work of special studies, authorized in previous years. The National Commission on Product Safety, which completed its report in June 1970, recommended a comprehensive Consumer Product Safety Act which would for the first time provide significant consumer protection against hazardous household appliances and equipment. Certain features of the proposed legislation may need improvement or strengthening, but we are glad to endorse its major objectives and commend the commission on its work.

The principles of testing for safety before releasing unknown, potentially hazardous new products upon the public should be firmly imbedded in the proposed new legislation. This requirement should also be introduced in existing consumer safety statutes where it does not now exist, such as the Hazardous Substances Act, the Flammable Fabrics Act, and the parts of the Food & Drug Act dealing with cosmetics and medical equipment. Recent evidence of possible consumer injuries from widely sold new enzyme laundry detergents is a clear case in point.

The safety of food products is of mounting concern to the public, alarmed in recent months over mercury contamination of tuna packs. We call for greatly stepped up resources for the Food & Drug Administration and speedy enactment of the previously proposed Wholesome Fish & Fishery Products Act, including provision for continuous, full-time inspection of fish-processing plants.

The comprehensive Automobile Insurance and Compensation Study conducted by the Dept. of Transportation has been largely completed and Congress should be in a position to act concretely on the crisis in auto insurance. The outlines of constructive auto insurance reform have already been laid out in legislative proposals introduced by Sen. Philip Hart toward the close of the last Congress. We are glad to endorse this approach, including the introduction of the "no-fault" principle into the basic system of compensation to accident victims, the encouragement of group coverage and the provisions designed to reduce the costs of auto repair.

The National Commission on Consumer Finance, currently engaged in a study of consumer credit practices under the terms of the Consumer Credit Protection Act of 1968, will not report until July 1972. Pending completion of this work, Congress and the administrative agencies can and should take action on immediate, pressing issues. In particular, we commend the Federal Trade Commission for its proposed Trade Regulation Rules which would provide a "cooling off" period in door-to-door sales and, even more important, preserve a buyer's rights and defenses when a retailer transfers a consumer credit contract to a finance company or other party.

Legislative or administrative action should also be taken to remedy consumer complaints of faulty billing practices and computation of finance charges on revolving credit accounts. Excessive charges for credit life, accident and health insurance, sold by lenders in connection with consumer loans, should be eliminated by legislation directing the Federal Reserve Board to establish ceilings on such charges.

The proposed Uniform Consumer Credit Code, intended by its sponsors for adoption into the laws of every state, will again be under widespread consideration in 1971, when most state legislatures are scheduled to meet. We again caution state bodies as to inadequacies in the code, especially the excessive finance charges permitted to creditors and the failure to make significant improvements in wage garnishment provisions.

TO ENABLE the consumer to make easy price comparisons on packaged products, we favor amending the Truth in Packaging Act to require disclosure of prices in terms of price per unit of quantity.

Present government consumer information services should be expanded and consumer product-testing results, compiled by federal agencies, should be made fully available to the public in readily understandable form.

The public continues to be harassed and cheated by meaningless and ineffective guarantees and warranties issued by manufacturers on the reliability and performance of their products. We favor legislation that will induce manufacturers to stand—not hide—behind their products.

Finally, we support stronger and broader powers for the Federal Trade Commission to deal with consumer deception and fraud. Increased penalties expanded jurisdiction over commerce, power to issue temporary injunctions and binding regulation, plus authority to obtain redress for injured consumers are essential ingredients. If these reforms can be enacted, along with a strong consumer class action bill enabling consumers to sue as a group when they have been cheated in sales transactions, real progress can be made in reducing the victimization and gouges that today are too often the experience of the buying public.

Congress Still Concerned:

Administration Undermines Consumer Legislation Drive

CONSUMER LOBBYIST Evelyn Dubrow charged that while the Administration expresses concern about consumer problems, it is doing little to solve them.

"Every single message" on consumers from the White House "seems to be intent on weakening legislation that is projected on Capitol Hill," said Miss Dubrow, who is legislative representative of the Ladies' Garment Workers. In a network radio interview, she said Congress is "as concerned with what's happening to the consumer today" as it was during the Johnson years, when "the country was swept by a wave of consumer interest" and several major consumer protection bills became law.

The difference now, she said, is that Congress is more aware of "how the regulatory agencies function or don't function," and members have become "consumer statesmen rather than consumer agitators" in the drive for legislation.

Miss Dubrow, who is also chairman of the AFL-CIO subcommittee on consumer legislation, appeared on Labor News Conference, an AFL-CIO produced public affairs interview aired Tuesdays on the Mutual Broadcasting System.

ESTABLISHMENT of an independent consumer agency in the federal government, authorization for individual consumers to join together in legal actions against manufacturers and retailers, and protections in contracts "sold at the door by door-to-door salesmen," will be major consumer issues in the 92nd Congress, she predicted.

She said she also expects investigations and hearings on auto insurance by Sen. Philip Hart (D-Mich.) to "produce some pretty good legislation," and that "the mood of the Congress is to pass something on auto insurance." She said there is growing interest in "no-fault auto insurance," under which claims are paid without the long delays involved in settlement negotiations and lawsuits.

By Press Associates, Inc.

MANY OF PRES. NIXON'S proposed solutions to long-difficult problems turn out either to be over-simplified or, more likely, so vague that it is difficult to pin them down.

Gimmickry, game plan, rhetoric—these are among the words that have been used to describe the President's proposals in a number of instances where his vocabulary has sounded a great deal more like Madison Avenue than the White House ought to sound.

Take the President's Budget Message to Congress for fiscal year 1972.

"This budget expresses our fiscal program for the New American Revolution—a peaceful revolution in which power will be turned back to the people—in which government at all levels will be refreshed, renewed and made truly responsive. This can be a revolution as profound, as far-reaching, as exciting, as that first revolution almost 200 years ago."

Aside from the obviously over-blown language which would undoubtedly have raised the eyebrows of the Founding Fathers whose own "revolution" was more than a budgetary one, the statement did what so many other presidential statements have been doing—raised expectations far more than fulfillment.

Actually, the President's 1972 budget was filled with what labor economists have described as unrealistic "wishful" thinking as to the economic gains to be made during the current year and the size of the expected deficit. In addition, the idea that the budget would return power to the people is rhetoric at its most meaningless.

"Revenue sharing," once known under the prosaic name of "grants-in-aid" has become the "New Federalism" as though it were something new and exciting. In reality the federal government has been sharing its revenues with the states and local communities from the beginning of the Republic. Road building, the building of harbors and lighthouses, land grant colleges and the post office are examples of federal funds long used for local purposes.

REVENUE SHARING in the form of grants-in-aid has shot up from $7 billion in 1960 to $24 billion in 1970. Even the President's proposed $5 billion in "new money" conceals the fact that if current legislation were to be fully funded at least $6 billion in new funds would become available.

The only thing "new" about the Nixon proposal is that the $5 billion would be virtually without strings with the possibility that some of the states would actually cut their own taxes at the expense of the rest of the country.

A program for "the encouragement of exports" turns out to be a way of giving some of the largest corporations in the country a tax bonanza together with encouragement to ship more capital, equipment and know-how abroad at a time when cheap-labor competition is costing thousands of American jobs.

The Nixon "war on poverty" actually has meant the virtual liquidation of a great part of the program of two or even three years ago. It has transferred successful, innovative programs to old-line agencies and down-graded the status of what started out to be one of the major weapons in raising the living standards of the poor.

The Nixon version of how to settle labor-management disputes on the railroads is called the Emergency Public Interest Protection Act, despite the fact that the Labor Dept. itself has found that so called national "emergencies" caused by strikes are rarely as much of an emergency as the public is led to believe.

The President's proposed National Health Insurance Standards Act, which is clearly designed to head off the on-rushing National Health Security bill supported by organized labor, has been characterized as "piecemeal and inadequate." Less kindly comment has been to the effect that it is designed to "bail out" the medical insurance companies and the medical industry in general.

There is room, of course, for wide divergence of opinion on the solutions to be found for America's pressing problems, but the President's aides would be well advised to choose their vocabularies with less cleverness and less gimmickry than they have so far.

CONCERN FOR CONSUMERS is often expressed by the Administration, but it still seems intent on weakening legislation aimed at protecting them, Evelyn Dubrow declared on Labor News Conference. Reporters questioning Miss Dubrow, legislative representative of the Ladies' Garment Workers, are Frank Swoboda, left, of Business Week magazine and Tom Joyce of Newsweek magazine.

VIETNAMESE CHILDREN in the Mekong Delta load up on gifts at a party sponsored by a U.S. Army military advisory team. A donation of $500 from the AFL-CIO was used to purchase 12,000 toys that were distributed to the youngsters. The donation was sent through the Asian-American Free Labor Institute.

ILO Rebuffs Soviet Bid To Undercut Structure

Geneva—The Governing Body of the International Labor Organization overwhelmingly defeated an attempt by the Soviet Union to undermine the "tripartite" structure of the United Nations agency.

This structure insures that the 121 ILO member states are represented in the organization by trade union and management delegates as well as by government representatives.

With defeat looming ahead of him, Soviet government delegate V. S. Pozharsky tried every possible procedural maneuver to avoid a record vote on his proposal.

U.S. Worker Delegate Rudolph Faupl of the Machinists, official spokesman of the workers' group on the 48-member executive body, charged Pozharsky with "filibustering."

Edwin P. Neilan, American member of the employers' group, similarly accused the Russian of attempting to "confuse the situation" by his diversionary tactics.

Pozharsky angrily retorted that the insistence on a vote being held on the Soviet proposal was a "political demonstration" against Moscow.

When put to a vote, the proposal was defeated 37 to 3 with four abstentions and four delegates absent.

The Soviet plan marked a first effort toward curtailing the freedom of the ILO worker and employer delegates to elect their representatives on the Governing Body.

In rejecting the proposal to make the inclusion of Communist representatives mandatory, the Governing Body said such a move would be the beginning of an "erosion" of the autonomy of each of the three groups of delegates.

The Soviet government suffered a similar defeat when no action was taken by the Governing Body on a proposal to have the agency's director general elected by the conference, or general assembly, of member states.

Moscow has repeatedly sought to no avail to move the election from the Governing Body to the conference, where the Communists believe they could exert more influence.

Other Soviet proposals for changing the procedures for naming the members of industrial and other committees in the hope of exerting greater influence also fell by the wayside.

The workers' group on the Governing Body chose Faupl as their spokesman for the session in the absence for health reasons of Joseph Morris of the Canadian Labor Congress, the regular chairman.

Neilan was the choice of the employer delegates to serve as their spokesman in the discussions on the agency's budget for the two years 1972 and 1973.

Attempts by Communist delegates to launch political attacks against the U.S. over the question of contributions were stopped short with great firmness by S. O. Koku of Nigeria, the Governing Body's chairman.

"Talk finance, not politics," Koku bluntly ordered when warning that he would take the floor away from them.

Labor Joins In Tributes to Whitney Young

The American labor movement expressed its shock and sorrow at the sudden death of Whitney M. Young, Jr., 49-year-old executive director of the Urban League.

Young was stricken while attending a conference at Lagos, Nigeria, along with other prominent Americans and Africans.

AFL-CIO Pres. George Meany wired Mrs. Young that her husband's name and example "will continue to inspire those who must carry on his work."

Young had worked closely with the trade union movement in major legislative and civil rights crusades.

Meany described the Urban League director as "a tireless fighter for justice for all men. His devotion and energy have been among the strong assets of the civil rights movement."

Young was swimming in the Atlantic surf when he suddenly collopsed and died. He is survived by two daughters as well as his wife.

Labor Reporter Stan Levey Dies

Stanley Levey, veteran labor writer for the Scripps-Howard Newspaper Alliance, died at George Washington University Hospital in Washington, D.C. He was 52.

Levey was in poor health since he suffered a heart attack last June while touring Turkey with his wife, Nan Robertson, a reporter for the New York Times.

AFL-CIO Pres. George Meany, in a message to Levey's family, called him "a fine friend, a real gentleman and a topnotch reporter," who covered labor "diligently and with understanding."

Levey joined the New York Times in 1944 and covered the labor beat from 1947 to 1963 when he switched over to the Columbia Broadcasting System. He joined Scripps-Howard in 1966.

Besides his wife, survivors include two sons by a previous marriage.

MacDonald, Trudeau Clash:

High Joblessness in Canada Tied to Economic Policies

Ottawa—The Canadian Labor Congress strongly condemned federal economic policies in its annual memorandum to the Cabinet.

The 15,000-word submission of legislative proposals contained some of the toughest language ever used in the 15-year-history of the annual presentation between the federal Government and Canada's central labor organization.

And it sparked a spontaneous and unexpected debate between Prime Minister Pierre-Elliot Trudeau and CLC Pres. Donald MacDonald.

The memorandum charged that the federal Government is directly responsible for Canada's heaviest unemployment in 10 years. It used such words as "brutality," "callousness" and "studied indifference to human consequences" to describe federal policies.

It predicted that "full employment—measured by the Economic Council of Canada as 3 percent of the labor force—would not be reached before the end of the current decade."

The memorandum also blasted the Government for imposing the War Measures Act during the crisis in Quebec last October when the revolutionary Front de Liberation du Quebec was most active. Pierre LaPorte, the labor minister of the Province of Quebec, was kidnapped and killed during the crisis, and a British diplomat, James Cross, was kidnapped and later released in return for safe passage to Cuba for seven Canadians.

The CLC said it had not been necessary to impose the act because the police already had sufficient powers to arrest FLQ suspects. The act gave police power to search homes without warrants and arrest and hold suspects without charge.

In reply, Prime Minister Trudeau said the federal Government had imposed the arbitrary wartime powers because the Province of Quebec and the City of Montreal had asked for them.

But MacDonald said federal authorities should have investigated the real situation before meeting the request.

The Government failed to produce "a tittle of evidence" to justify actions which had thrown the country "into a state of panic," the CLC said.

Of 497 persons arrested during the emergency powers, only 62 had been charged. "We cannot conceive of an insurrection led by only 62 people," the memorandum said. It noted that 33 offensive weapons had been found in police searches.

The CLC proposed several measures to stimulate jobs: immediate reduction of personal income taxes in the lower-income brackets, immediate increases in unemployment benefits, major improvements in old-age benefits, and removal of an 11-percent federal tax on building materials.

The memorandum said the federal Government had overreacted against inflation by imposing tight fiscal and monetary policies which it knew would bring on heavy unemployment.

Last year, the Prime Minister had said the Government intended to fight inflation even if unemployment rose to 6 percent, which it subsequently did.

The CLC brief declared that the Government had "consciously and with a cool detachment" sentenced hundreds of thousands of Canadian workers and their families to the hardships of unemployment. "The brutality, the callousness, the studied indifference to the human consequences of this anti-inflationary approach were matched only by its ineptitude."

The presentation at first followed the pattern of previous years. MacDonald gave a 30-minute summary of the brief, then the Prime Minister replied orally, and several Cabinet ministers replied to specific parts of the submission.

It was when the CLC president gave his traditional rebuttal that the session departed from pattern. In past years the Prime Minister and his Cabinet sat through the rebuttal without comment.

But this year, Trudeau frequently interrupted MacDonald, asked him questions, and disputed his statistics.

Trudeau claimed his tight fiscal policies had been necessary and that they had resulted in a strong Canadian dollar and the highest trade surplus in history.

But MacDonald said high unemployment was too high a price to pay and that federal authorities should have eased restraints last year as the CLC asked it to do in its 1970 brief. The lid was kept on the economy much longer than was needed, he said.

"Our rate of inflation compares very well with the world's major industrial countries," MacDonald observed. "We are doing better than the United States with whom we have more than two-thirds of our export-import trade. We are also doing better than major industrial countries such as the United Kingdom, France, West Germany, Italy, Japan and others."

Many industrial countries had full employment and did not suffer rampant inflation, he added.

The presentation covered a wide range of other topics. It criticized federal policies on social security. It expressed the hope that proposed new federal labor legislation would provide "a framework within which organized labor and management should be free to work out their relations as much as possible on the basis of mutual agreement."

It praised federal action to relieve the housing shortage but said public land banks are needed to fight exorbitant land prices. It also sought lower interest rates for housing. The memorandum assured the federal Government of labor help in battling pollution. Finally, it called for an end to all trade with South Africa.

Warren Confirmed For ILO Committee

Geneva—The Governing Body of the International Labor Organization unanimously approved the nomination of former U.S. Chief Justice Earl Warren to a key ILO committee

The Committee of Experts on the Application of Conventions & Recommendations includes jurists and former premiers and other heads of government departments around the globe. It meets yearly to oversee reports of member governments on their implementation of the ILO's social and human rights standards.

U.S. Worker Delegate Rudolph Faupl told other delegates that Warren, as chief justice from 1953 to 1969, "had proved himself a great humanitarian."

Textile Unions Protest Japanese Export Plans

A unilateral announcement from the Japanese Textile Federation that it will impose voluntary restraints on its exports beginning July 1 brought the immediate condemnation of four AFL-CIO textile and apparel unions. In a joint statement, the presidents of the four unions termed the proposal "completely inadequate and totally unsatisfactory."

They declared that the Japanese proposal would cause utter chaos and disruption in the American textile industry because it does not call for a categorical limitation of exported goods, only a single, overall ceiling.

This would allow foreign suppliers to destroy domestic manufacturers by simply concentrating on one category or item at a time, the statement said.

It was issued by Pres. Jacob S. Potofsky of the Clothing Workers, Pres. Louis Stulberg of the Ladies' Garment Workers, Pres. William Pollock of the Textile Workers Union of America and Pres. George Baldanzi of the United Textile Workers.

"It is essential for an agreement with Japan or any other country to place ceilings upon each major category of goods by type of fabrics used," they said.

Without such comprehensive ceilings, more and more textile and apparel plants will be closed. Employment, which already has declined by over 100,000, will be further curtailed.

"Instead of slowing down the import penetration of American markets, it will be accelerated in those areas that can least bear it."

The four unions said they had been re-enforced in their convictions that legislative action is the only answer to imports produced in low-wage countries.

"Only with legislation . . . can we be assured of developing the orderly flow of textile and apparel imports that will preserve and not further destroy domestic employment and production opportunities," the statement said.

The Japanese proposal also brought the denunciation of American textile and apparel management groups who asked the President and Congress to "disavow and disregard the proposal and continue working for a real solution."

Pres. Nixon subsequently rejected the Japanese proposal as not acceptable and said he will "strongly support legislation imposing quotas."

Rep. Wilbur Mills (D-Ark.) chairman of the House Ways & Means Committee, earlier had welcomed the Japanese proposal and strongly implied that the United States should accept it.

The House last year passed quota legislation, but it never came to a vote in the Senate. The Administration had sought a voluntary agreement to avoid legislation.

Japanese Dumping Cited:

Tariff Panel Rules Against TV Imports

(Continued from Page 1)

screen sets made in Japan, "to the detriment of American consumers," but Treasury officials said that imports won't be prevented.

They explained that the Japanese firms could avoid further anti-dumping duties by raising export prices, lowering their home market prices, or both.

The IUE currently is in the midst of a nationwide drive to bring about stricter enforcement of anti-dumping legislation and laws forbidding export subsidies by foreign governments to their domestic manufacturers.

In announcing the suit for nearly $68 million against Japanese electronics companies and their American subsidiaries, union officials accused the firms of conspiring to eliminate competition in the American TV industry which led to the shutdown of the Emerson plant last June 30.

IUE District 3 Pres. William Bywater, one of the plaintiffs, said the suit will help spotlight the many unfair trade policies which foreign manufacturers engage in to take over U.S. markets.

The suit charges:

- Dumping of TV sets in the United States at prices lower than those in Japan for the purpose of driving out all competition, especially in the small-screen TV market, in violation of the Anti-Dumping Act.
- Combination and conspiracy in restraint of trade to destroy or lessen competition and give the Japanese firms a monopolistic share of the TV market, in violation of the Sherman Act, the Clayton Act and the Wilson Tariff Act.

In other IUE action in Washington, the union recently completed a two-day lobbying campaign to halt the dumping of foreign electrical equipment on the U.S. market. The IUE demanded that the Nixon Administration declare a moratorium on government purchases of all such equipment made in other countries.

IUE Pres. Paul Jennings told district and local union leaders attending the conference that the Interior Dept.'s purchasing policy has played a major role in the rise in imports.

He said the Tennessee Valley Authority, the Bonneville Dam and the Bureau of Reclamation have been buying from 50 to 90 percent of their heavy equipment from foreign manufacturers.

EXECUTIVE OFFICERS of the Lithographers & Photoengravers meet with leaders of the Bookbinders to discuss creation of a 130,000-member union via the merger route. LPIU Pres. Kenneth J. Brown and IBB Pres. John Connolly, center, headed the two groups, which met in the AFL-CIO Executive Council room in Washington at the invitation of Federation Pres. George Meany. The conferees said they expect a merger by Labor Day 1972.

Senate Abandons Filibuster Fight As Majority Falls 8 Votes Short

A minority of the Senate refused to give up even part of its power to block action on legislation, and the majority in favor of rules reform wasn't big enough to force the issue to a vote.

So, after more than a month of desultory debate in which all of the familiar arguments on both sides were rehashed, the Senate leadership abandoned rules reform and moved on to legislative business.

The issue, of course, was the filibuster—the means by which senators opposed to a bill use their right of unlimited debate and other delaying tactics to prevent a vote from being taken.

Under the Senate's long-standing rules, it takes a two-thirds vote to limit debate and thus cut off a filibuster.

Rules reform supporters this year sought only a mild modification of this rule. They proposed to reduce the requirement for cloture from two-thirds to three-fifths of senators present and voting.

As has been the case at the start of every recent Congress, their motion for a rules change never got to a vote. It was blocked by a filibuster.

Four attempts were made under the Senate's old rules to muster the two-thirds majority needed to halt the filibuster.

Each fell short, even though the final 55-39 vote for cloture was the largest number of votes ever mustered by the rules reform coalition. But it was eight short of a two-thirds majority.

A behind-the-scenes effort to further compromise the proposed rules reform created a flurry of interest, but little enthusiasm, and it was dropped when sponsors of the "compromise" were unable to switch enough votes to make the difference.

Sen. Jack Miller (R-Iowa) and several other opponents of a straight three-fifths cloture said they would go along with the proposal if it were amended to require that the three-fifths include a majority of each major party. Otherwise, the two-thirds rule would prevail. And, in addition, a two-thirds vote would be required to make any future changes in the Senate's rules.

But when only two or three senators in the filibuster bloc said they would support Miller's plan, the proposed "deal" fell through and no votes were changed.

A last-ditch effort was made by Sen. Jacob K. Javits (R-N.Y.) to get the Senate to assert the right of a majority to adopt new rules at the start of each Congress—and to bring them to a vote.

Two former Vice Presidents, who serve as presiding officers of the Senate, had upheld this theory—Hubert H. Humphrey, who issued a ruling to that effect, and Richard M. Nixon, who issued an advisory opinion when he was the presiding officer of the Senate.

A majority of the Senate, however, had rejected Humphrey's ruling two years ago on a 53-45 vote.

Vice Pres. Spiro T. Agnew had indicated earlier he would not take the Humphrey-Nixon position and he didn't even bother to show up for the Senate session. In his place, the presiding officer was Sen. Allen J. Ellender (D-La.), a member of the filibuster bloc.

His ruling that a two-thirds vote was required was sustained by a 55-37 vote.

On the basic issue of rules reform, Sen. Frank Church (D-Ida.) predicted eventual success in a future Congress.

The 55 votes for cloture—with three other senators paired or announced in favor of limiting debate—marked, he noted, the "high-water mark" of the campaign to date.

As it has in the past, the coalition of civil rights, labor, liberal and religious groups lobbied for rules reform—remembering vividly such episodes as the years of delay in enacting civil rights legislation and the inability to get a vote on repeal of Taft-Hartley's "right-to-work" Section 14(b) because of filibusters.

Before the final cloture vote, AFL-CIO Legislative Director Andrew J. Biemiller wrote all senators that labor considers the rules reform issue "one of the most important" facing the Senate.

Senate Rollcall Vote on Filibuster Rules Reform

The Senate again failed to muster a two-thirds vote to stop a filibuster that has prevented action on a motion to change the Senate rules so that it would only require a three-fifths vote to limit debate and break a filibuster.

The majority for invoking cloture and bringing the rules reform to a vote was 55-39 on Mar. 9. This was eight short of a two-thirds vote.

Labor supported the position of the 32 Democrats and 23 Republicans who voted for rules reform. Opposed were 19 Democrats and 20 Republicans.

Not paired, but announced against cloture: Jordan (D-N.C.), Mundt (R-S.D.).

Recorded Teller Vote Brings Record Turnout

A conservative coalition carried the issue, but the first recorded teller vote in the House brought congressmen to the floor in record numbers.

The key vote came on a labor-supported amendment by Rep. Wright Patman (D-Tex.) to a bill raising the ceiling on the national debt—something Congress periodically, if unhappily, does so that the government will be able to pay its bills.

Patman's amendment sought to strike an unrelated section that would permit the Treasury to sell $10 billion of long-term bonds without regard to the legal ceiling of 4.25 percent interest.

These are bonds bought by banks and big investors, not savings bonds. The argument against selling them at current high rates of interest is that it would slow the decline in interest rates and force the government to continue to pay the high rates years from now, even if interest rates have come down.

Under the legislative reform adopted last year, members who walk by tally clerks for important votes on amendments to bills can be recorded by name, with the roll-call published in the Congressional Record. Previously, they were just counted—and major issues have been decided with less than one-fourth of the House present.

This time, with the vote recorded, 392 of the 435 congressmen showed up. Patman's amendment lost 212-180. On a party breakdown, it was suported by 160 Democrats and 14 Republicans, opposed by 60 Democrats and 152 Republicans.

The issue is expected to be fought over again in the Senate, where a similar bill has been given an 8-4 endorsement by the generally conservative Senate Finance Committee.

The Administration supports the lifting of the interest ceiling, contending that it has been forced to finance the national debt through the more cumbersome procedure of selling short-term notes because there is no market for long-term bonds at the present interest ceiling.

AFL-CIO Field Staffer M. L. Kress to Retire

Knoxville, Tenn.—Melville L. Kress, an AFL-CIO staff representative in the Tennessee-North Carolina-South Carolina region, will retire Mar. 31, just a month short of the 25th anniversary of his appointment to the organizing staff.

Kress was an officer of Steelworkers Local 1416 in Pittsburgh, Pa., when he was first named to the staff of the former CIO. He and his wife, who live in Bristol, Va., were given a farewell party at a recent staff conference in Charlotte, N.C.

Many Give Up Search for Work:

Dip in Jobless Rate Laid To Shrinking Labor Force

(Continued from Page 1)

benefits, for instance," Hodgson said.

But Assistant BLS Commissioner Harold Goldstein said the February figures were "sort of mixed." He noted for example, that long-term unemployment—the classification for those out of work 27 weeks or more—was at its highest level since September 1964.

Asked how his interpretation squared with Hodgson's remarks, Goldstein told reporters:

"It is not my job to support the Secretary's statement, or not. My job is to help you understand the figures."

A new study by a Georgetown University professor, indicates that the impact of the shrinking labor force and the decline in jobs is even sharper than the BLS figures indicate.

Prof. Alfred J. Tella, head of the university's Income Maintenance Project, attempts to measure "hidden" unemployment that includes the jobless who have given up hope of finding work in a recession. By his count, these "cyclically discouraged" unemployed increased from 100,000 in January to 678,000, sending his adjusted unemployment rate from 6 percent to 6.6 percent.

The average duration of unemployment during February remained at 10.4 weeks, unchanged from the previous month.

And although most occupational groups showed little change in joblessness, the unemployment rate for professional and technical employes hit 3.3 percent, its highest point since 1968.

For manufacturing workers, the jobless rate moved down to 6.8 percent in February from 7.2 percent in January, with most of the decline in the durable goods industries.

The jobless rate for workers in transportation and public utilities dropped to 4.0 percent in February after rising steadily since last October.

The number of persons on nonfarm private payrolls was at 69.5 million, showing a decrease of 120,000 over the month, even though it normally shows little change between January and February.

After seasonal adjustment, payroll employment declined by about 95,000, but would have dropped more, the BLS noted, if it had not been for the net return to work of 30,000 strikers.

Compared to February 1970, the number of payroll jobs was down 570,000.

February declines in manufacturing and contract construction jobs — totalling 145,000 — were only partly offset by gains in other major industries.

At a seasonally adjusted figure of 18.7 million, factory employment dropped by 105,000 since its December recovery from the automobile strike.

The decline in manufacturing jobs occurred among both the durable and nondurable goods industries, totalling 75,000 seasonally adjusted.

Durable goods employment in 8 of 11 industries, and in nondurable goods with the exception of rubber goods, all showed decreases in employment with the largest drops taking place in apparel and chemicals.

The BLS said unusually bad weather may have accounted for the decline of 270,000 jobs in construction, down 8.7 percent from January.

Service jobs hit a record of 48 million in February with the increase resulting primarily from a rise in state and local government employment.

Average hourly earnings of rank-and-file workers on private, nonfarm payrolls were up 1 cent to $3.34 in February, but this was more than offset by a decline in the average workweek of two-tenths of an hour to 36.9 hours.

The decline in the workweek was dominated by sharp decreases in manufacturing and contract construction and marked a return to the low levels recorded during the period of the automobile strike. Compared with February 1970, the workweek was down four-tenths of an hour.

At 39.4 hours seasonally adjusted, the manufacturing workweek was four-tenths of an hour below the January level.

In the durable goods sector, the workweek cutbacks were particularly evident in electrical equipment, fabricated metals and miscellaneous manufacturing.

In nondurable goods, declines were sharpest in tobacco, apparel and leather.

Average factory overtime was up to 2.8 hours seasonally adjusted, but still four-tenths of an hour below February 1970.

Average weekly earnings were essentially unchanged over the month at $122.24.

Over the year ended in January 1971, average weekly earnings rose by 5.2 percent.

But, the BLS noted, during the same period, consumer prices advanced by an identical amount, so that real earnings were unchanged from January 1970.

Meany Warns Against One-Sided Wage Curbs

AFL-CIO Pres. George Meany renewed labor's long-standing pledge to cooperate with wage-price controls, if the President judges them necessary, provided they are applied fairly and even-handedly throughout the economy.

Meany made it clear, however, that labor will not accept one-sided curbs on workers' wages while corporate profits and other earnings go unrestrained.

He spelled out labor's position in a letter to Chairman Wright Patman (D-Tex.), of the House Banking Committee which had approved legislation extending for another two years the President's standby authority to impose wage, price and rent controls.

The House later passed the bill, 381-19. The Administration previously opposed standby controls, but this year endorsed their extension although declaring that the President didn't intend to invoke them without first receiving congressional approval.

Meany said that AFL-CIO policy has remained unchanged since February 1966, when the Executive Council adopted the following statement:

"If the President determines that the situation warrants extraordinary overall stabilization measures, the AFL-CIO will cooperate so long as such restraints are equitably placed on all costs and incomes—including all prices, profits, dividends, rents and executive compensation, as well as on employes' wages and salaries. We are prepared to sacrifice as much as anyone else, as long as anyone else, so long as there is equality of sacrifice."

"Mandatory government controls are never desirable, but at times they may be necessary," Meany wrote Patman. "If such controls are deemed necessary by the President, and are even-handed across the board . . . they would be both equitable and workable.

"It is our view that one-sided curbs on workers' wages, with no effective restraints on prices or the incomes of other groups in the economy, are neither a balanced and equitable stabilization program nor a workable policy in a free society.

"It is also our view that government measures to restrain wages or both wages and prices in one industry or sector of the economy are likewise inequitable and unworkable. In the complex, interdependent and continental-sized American economy, it is not possible to effectively and equitably place government restraints on incomes in an industry or economic sector, in the hope of curbing price increases, when all other parts of the economy are free of similar restraints."

Meany told Patman that a "basic prerequisite for AFL-CIO cooperation" was the "across-the-board, overall and even-handed nature of stabilization measures."

All-Election Youth Vote Passed by Senate, 94-0

(Continued from Page 1)

old vote has been drastically reduced.

The AFL-CIO was among the early advocates of lowering the voting age to 18 and Federation Pres. George Meany had testified for it at congressional hearings.

The AFL-CIO Executive Council last month strongly supported the constitutional amendment that has now passed the Senate.

"We believe that 18-year-olds should have the vote," the council said, "and also that it is impractical to have one age standard for voting for federal office and another for state office."

The constitutional amendment moving through Congress declares that "the right of citizens of the United States, who are 18 years of age or older, to vote shall not be denied or abridged by the United States or by any state on account of age."

And it gives Congress the authority to enforce the amendment by "appropriate legislation."

One effect of the amendment would be to strengthen the rights of 18-year-olds to vote in federal elections. While unlikely, the present law is subject to repeal by a simple majority vote in Congress. Or the Supreme Court, which upheld the law by a narrow 5-4 margin, could conceivably reverse itself on the issue.

The proposed amendment, however, would transform the congressional grant of voting rights into a constitutional right.

'It's MY Revenue-Sharing Plan'

PHS Hospital Closings Tied to 'Hostile' Group

"A hostile bureaucracy" within the Dept. of Health, Education & Welfare apparently is determined to subvert the intentions of Congress to maintain Public Health Service Hospitals for the nation's seafaring men, an AFL-CIO Maritime Trades Dept. official told the Senate Health subcommittee.

"It is not a partisan political matter," MTD Administrator O. William Moody Jr. told the subcommittee, "since this program of closing the hospitals down piecemeal has been going on under the administrations of both political parties."

The PHS hospitals were established in 1798 to provide adequate medical services for merchant seamen. They also serve the U.S. Coast Guard and sometimes act as emergency facilities for the areas in which they are located.

Moody also testified before the House Commerce Committee in favor of a resolution to modernize and expand the eight remaining PHS hospitals.

"In 1946 there were PHS hospitals in virtually every port city in the United States," he told the House panel.

"Today there are only eight hospitals and 26 clinics. Four hospitals have been closed in the past five years alone," he said, even though "Congress has consistently appropriated funds for the upkeep and modernization of the hospitals, surely indicating that Congress wanted them maintained."

The Nixon Administration promised Congress Mar. 8—the same day Moody testified before the Senate subcommittee—that it will not close any of the eight remaining PHS hospitals this year, but did not give similar assurances for 1972.

Assistant HEW Sec. Roger O. Egeberg, told the same subcommittee that it is not the intention of the Administration to close the hospitals at any time.

But Moody reminded subcommittee members that he had heard similar assurances in 1969 during hearings on PHS hospitals at Detroit and Savannah, Ga., which have been shut down.

By adopting the Merchant Marine Act of 1970, he noted, Congress has committed the nation to maritime expansion through the construction of as many as 30 federally subsidized cargo vessels a year.

He warned too that if seamen were forced to turn to private medical care—which can cost four or five times as much as PHS services—they would have to seek higher health insurance contributions from shipowners through their unions.

"In an industry where the competitive balance is so close, this might make the difference between success and failure for the merchant marine program," he asserted.

The PHS hospitals still in operation are located in the port cities of Boston, New York, Norfolk, Va., New Orleans, Baltimore, San Francisco, Seattle and Galveston, Tex.

8-18-71

Federal Wage Study Group Meets on Rules

The five-member Federal Employes Pay Council has held the first of a series of meetings with Administration officials to discuss the ground rules for a survey of private industry salaries by the Bureau of Labor Statistics.

Under the Pay Comparability Act that took effect this year, salaries of federal white-collar employes are adjusted annually by the President to achieve pay omparability with private industry.

Three of the five members of the employes council—the maximum permitted from a single union or labor federation—represent the AFL-CIO. They are John F. Griner and Clyde Webber, president and executive vice president of the American Federation of Government Employes, and Rudolph Oswald, economist in the AFL-CIO Dept. of Research. Two other spots are assigned to unaffiliated unions.

$2 Billion in Public Works Urged as 'Lift' to Economy

HIGH UNEMPLOYMENT points up need for a federally-financed public works program. Examining the chart in the hearing room of the House Public Works Committee are, from left, AFL-CIO Legislative Director Andrew J. Biemiller, Pres. George Meany, Committee Chairman John A. Blatnik (D-Minn.) and Rep. John J. McFall (D-Calif.). The labor-supported legislation would create jobs and provide needed public facilities.

Meany Endorses Job-Creating Plan

By David L. Perlman

America needs a stepped-up public works construction program to give "a needed lift" to an economy bogged down by unemployment and lack of consumer purchasing power, AFL-CIO Pres. George Meany testified at House hearings.

Meany strongly endorsed the approach of a bill by House Public Works Committee Chairman John A. Blatnik (D-Minn.), earmarking $2 billion in federal funds to build and improve needed public facilities in areas of high unemployment.

"This is revenue-sharing from a very practical viewpoint," Meany said.

"It would create jobs," and then "additional jobs as the newly-hired workers spend their earnings."

The workers hired would "build and repair public facilities that are needed by the American people, such as waste treatment plants, water supply and sewer systems, health care and recreational facilities and public buildings."

Meany stressed that "there is not a single 'leaf-raking' project in this proposal. Every project helped by this program would add to the nation's wealth."

Blatnik, who presided at the hearings, noted that Meany had testified in 1961 for a similar program during the last recession and that labor's strong support helped bring about its enactment in 1962.

The 1962 program, Blatnik said, proved "most successful."

The legislation would provide federal funds to finance 80 percent of the cost of public works projects in areas of high unemployment, and Blatnik indicated his support for

'Substantial' Gains Won In Can Pacts

New York—The Steelworkers wrapped up key negotiations in the container industry as the union won "substantial" wage and benefit gains in new contracts with three big can manufacturers after a 28-day strike by 35,000 members.

The firms are the Continental Can Co., the American Can Co. and the Crown Cork & Seal Co.

For a while during the strike they had refused even to return to the bargaining table until the Federal Mediation & Conciliation Service got them to resume negotiations.

The final agreements, ratified by the union's Container Industry Conference, parallel the economic package accepted Feb. 15 by the National Can Co., the union said. The strikers began returning to work Mar. 15 under three-year agreements.

The contracts provide wage increases ranging from 50 to 60.5

58,000 Join Public Unions In AFL-CIO

Members of three unions totaling 58,000 have voted by a substantial majority to affiliate with two AFL-CIO unions representing workers in the public employe field.

The 30,000-member Los Angeles County Employes Association—for many years one of the nation's largest unaffiliated organizations of county employes—voted by a wide margin in a mail referendum to join the Service Employes.

A similar ratification vote approved merger of the Hawaii Government Employes Association with 19,200 members, and the 8,400-member United Public Workers of Hawaii with the State, County & Municipal Employes.

Officers of the two AFL-CIO

10 Percent Increase:

Social Security Hike Termed Initial Step

Twenty-six million persons on the social security benefit rolls will receive a retroactive 10 percent increase under legislation the AFL-CIO termed "only a down payment on what America's senior citizens need and deserve."

The benefit hike, retroactive to Jan. 1, exceeded the 6 percent recommended by the Nixon Administration. But Congress attached it to a debt limit measure the government needed to continue paying its bills, and Nixon promptly signed it into law.

To avoid further delay for the millions of retired workers, widows and dependent children receiving social security benefits, Congress adopted a short-cut procedure that speeded the legislation to near-unanimous passage in less than a week.

The initial decision was to separate the retroactive increase from other proposed major changes in the Social Security Act which are still being considered in committee.

Then the 10 percent benefit hike was tacked by the Senate onto the House-passed bill raising the national debt limit. A House-Senate conference committee trimmed back some additional Senate amendments. And the final version breezed through the Senate, 76-0, and the House by a 358-3 vote.

AFL-CIO Pres. George Meany said labor is "delighted" but "far from satisfied." He added:

"The increases are long overdue and it was right and proper to enact this immediate increase.

"But much more remains to be done to modernize the Social Security Act and make it more equitable. We will continue to fight for these improvements for we consider this only a down payment."

Because it will take several months to change over the vast social security accounting and check-writing procedure, the higher payments are not expected to show up until the June checks, with a separate retroactive check being mailed out later that month.

The higher payments will pump

California Rally Spurs Health Security Drive

San Francisco—The fight for National Health Security starts here and now.

That's the word delivered to more than 600 California unionists, a cross-section of the state's 1.6 million union members, at a two-day California AFL-CIO conference on National Health Insurance.

The word came from AFL-CIO Legislative Director Andrew J. Biemiller. It was seconded by Sen. Edward M. Kennedy of Massachusetts and Rep. James C. Corman from California's 22nd District, both principal sponsors of National Health Security bills now before Congress.

Concurring opinions by several experts made it equally plain that the time is, if anything, overdue.

Biemiller was blunt: "We won't get the National Health Security program we're talking about without a fight . . . and we better make up our minds that that fight is starting right here and now."

And it will be a tough one, he warned.

"We are going to be taking the Nixon Administration on—and

(Continued on Page 6)

Attacks on Labor Seen Effort to Hide Failures

New York—Attacks on organized labor by the Nixon forces are designed "to turn people's minds away from the failures of this Administration," AFL-CIO Pres. George Meany charged as he addressed more than 2,000 labor and industry leaders here.

"We're going to be the target—and this is not new," Meany added. "We've been shot at before. But I'm sure we'll survive and we'll continue to do our job long after our critics are gone and forgotten.

"We will continue to serve the great mass of the people and continue to play our part in enhancing the social and economic welfare of the American people." (Excerpts, Page 4.)

Meany was the principal speaker at a dinner honoring Edward F. Carlough, president-emeritus of the Sheet Metal Workers, who stepped down as head of the union last Sept. 30 at its convention in Atlantic City.

Meany recalled his long-standing friendship with Carlough, citing him as "an outstanding leader of the American trade union movement at the local level and the international level." Carlough, Meany said, "represents the finest type of trade union leader who recognizes that the business of a trade union is to advance the interest of the members in the industry in which they work and in

(Continued on Page 7)

IUD Publishes First Issue of New Magazine

The first issue of Viewpoint, a new quarterly magazine published by the AFL-CIO Industrial Union Dept., focuses on the economic problems of workers and their need for catch-up wages in a period of inflation.

Initially, the publication will have a circulation of nearly 30,000. It is directed at key persons in the labor movement, IUD affiliates and other union officials—and for those who watch labor affairs: educators, students, the news media, libraries and government agencies.

IUD Pres. I. W. Abel, in the introduction of the magazine, said: "We present Viewpoint as a new forum for ideas and discussion of labor's valid interests."

Each issue will be devoted to a particular area of concern, offering a self-contained package of reference material, Abel said.

"Since labor's interests are wide-ranging," he noted, "our subject matter will be designed to cover many facets of American society as they affect our lives at work, in our communities and nation and at home."

The first issue includes articles by Murray Seeger of the Los Angeles Times, IUD Research Director Richard Prosten, former AFL-CIO Research Director Stanley H. Ruttenberg, Abel, Communications Workers Pres. Joseph A. Beirne and Al Goodfader. The articles by Abel and CWA Pres. Beirne present the case for substantial wage increases this year for workers in the steel and communications industries.

CASKET of Whitney M. Young, Jr., is carried from the Riverside Church in New York by civil rights leader Bayard Rustin and other pallbearers. Rustin was with Young at a conference in Lagos, Nigeria, where the executive director of the National Urban League died. Scores of trade unionists attended the funeral services. Members of the AFL-CIO delegation appointed by Pres. George Meany were Vice Presidents Paul Jennings, David Sullivan and Frederick O'Neal, all of whom are on the Urban League's national board, Education Director Walter Davis and Civil Rights Director Donald Slaiman.

Import Quotas Pressed Over Voluntary Limits

The Japanese textile industry's unilateral proposal for voluntary quotas on its own exports was termed "altogether unsatisfactory" by AFL-CIO Pres. George Meany. The Nixon Administration also rejected the plan.

"We shall renew our efforts to achieve legislation that will establish a trigger mechanism for quotas," said Meany, "not only on textile and apparel products, but on any products in which there is a loss of American jobs due to market disruption or the activities of American multi-national corporations."

The executive council of the Textile Workers Union of America, meeting in Atlanta, welcomed Pres. Nixon's rejection of the Japanese proposal.

TWUA Pres. William Pollock said the union would resume its campaign for the enactment of legislation calling for quotas along the lines of those proposed in the Mills bill during the last session of Congress.

The TWUA was one of four AFL-CIO textile and apparel unions urging rejection of the Japanese Textile Federation's plan. They declared in a joint statement that the Japanese proposal would cause utter chaos in the American industry because there would be no categorical limitation on imported goods.

The absence of categorical limitation, they said, would allow foreign suppliers to destroy domestic manufacturers by simply concentrating on one category, or item, at a time, thus wrecking the American textile industry which is highly specialized. The statement was issued by the Ladies' Garment Workers, the Clothing Workers and the United Textile Workers along with the TWUA.

In his rejection of the plan, Nixon said he would "strongly support" legislation to impose quotas on textile imports.

The President listed two basic principles which he considers essential to any agreement.

- Specific import ceilings for a limited number of products particularly sensitive to import competition. These products involve about half the imports from Japan.
- Specific limitation by the United States if Japanese imports should exceed the 1970 level plus a "more liberal" growth factor—unless a mutually satisfactory solution was reached.

CONVENTIONS

The Utah State AFL-CIO will hold its 1971 convention in Salt Lake City Aug. 11-13.

The Colorado AFL-CIO will hold its 1971 convention Sept. 15-18 at the Antlers Plaza Hotel in Colorado Springs.

Railroads Admit Plan For Strike Insurance

American railroads have established a strike insurance program to protect them against losses from selective strikes, management lawyers told federal Court of Appeals judges at a hearing as to the legality of strikes that are less than nationwide.

Existence of the program, a well-kept secret until the United Transportation Union decided to strike two railroads, was admitted by management attorneys under questioning by Judges Harold Leventhal, J. Skelly Wright and Malcolm R. Wilkey in the U.S. Court of Appeals for the District of Columbia.

The insurance issue may figure in the decision on the UTU's appeal of a lower court ruling that the union may call a strike against all 170 of the nation's Class I railroads but not against a few at a time.

Under questioning by Leventhal and the other judges, counsel for the railroads admitted the existence of a program to protect the carriers against strike interruptions.

The point being fought out in the courts is whether the UTU, or any rail union, may use the strike weapon against selected carriers when an impasse is reached in negotiations. On Mar. 10, Judge John H. Pratt in the U.S. District Court for the District of Columbia ruled they could not. He said selective strikes would have a "whipsaw" effect which individual railroads would be helpless to resist.

AFL-CIO Pres. George Meany charged after Pratt's ruling that U.S. railroads have once again "artificially created a national crisis" designed to get Congress to "abolish the basic human rights" of their employes. He called on Congress to "meet this threat" to collective bargaining either by passing the Staggers-Williams bill to authorize selective partial strikes, or by nationalizing the railroads.

Two days before the Pratt ruling, another U.S. District Court judge, Barrington Parker, refused the railroads' request for a court order forbidding a UTU strike against a few railroads in another long dispute over the use of firemen on freight diesel engines.

He ruled that selective strike action is a legitimate union tool so long as the strike is not used to compel management to settle on an individual basis. The UTU has no such intention in either case, Pres. Charles Luna has testified.

On the subject of strike insurance, Parker cited the action of the Long Island Rail Road in setting up a self-help program during a work stoppage a few years ago. Under the program, a railroad can collect its average daily "fixed expenses" for up to 365 days a year.

In another contract dispute, the Railroad Signalmen testified before a presidential emegency board that the wages of their skilled members are among the lowest in the railroad industry. Signalmen must maintain complicated signal equipment under all kinds of dangerous conditions but draw pay of only $3.78 to $3.81 an hour.

The Signalmen set a Mar. 5 strike date when their negotiations bogged down. Pres. Nixon delayed a strike for at least 60 days by appointing a board to make recommendations.

Wages Top List:

CWA Drafts Goals In Bell Bargaining

By Tom Castor

Communications Workers Pres. Joseph A. Beirne said the CWA has placed "substantial wage increases" at the top of its negotiating priorities for 490,000 Bell System workers whose contracts begin expiring April 30.

"Our members are hurting," Beirne said. "In this year's negotiations, we must recoup the buying power lost through inflation since 1968 and secure some additional improvement beyond, in recognition of our members' work and increased productivity during the same period."

Beirne said that an immediate 25 percent increase could be justified after taking into account the financial condition of the utility industry, the "unprecedented increase in the cost of living" and wages paid electricians performing work similar to that of Bell craftsmen.

He said the union would not commit itself to more than a one-year contract unless cost-of-living protections are included in a longer agreement—which Beirne said he preferred.

Bell's parent company, American Telephone & Telegraph, which is a protected utility, had a return of 7.68 percent in 1970, the union noted. And workers have increased their productivity by 5.6 percent over the past decade.

Yet, the average wage for non-supervisory workers in the Bell System is $3.25 an hour, or $127.73 weekly for 39.2 hours of work.

Bell craftsmen—installers, cable splicers and exchange workers—are paid from $156 to $190 a week.

Telephone operators earn from $96.50 to only $115 a week.

Beirne announced the bargaining goals Mar. 16 after a two-day Washington conference of the union's 61-member, rank-and-file Bell System Bargaining Council.

He characterized the mood of the council as "very sober and very determined" and told newsmen that the outlook for negotiations is the "worst since 1946-47" when CWA members struck for six weeks across the nation.

The reasons for the tough outlook, Bierne said, are changes in the managerial structure of AT&T, the economic mood of the country and the Nixon economic game plan, specifically its suspension of the Davis-Bacon Act.

Talks already are in progress in some locations and they directly affect telephone workers in 21 Bell System operating companies, the AT&T Long Lines Division, two Western Electric divisions (installation and sales), various Western Electric Manufacturing plants, and the Bell Telephone Laboratories.

Although no pattern-setting target has been picked, Beirne said Northwest, Michigan and Western Electric installation talks will be the crucial ones in the first round of negotiations.

Other contract proposals call for an increase in the pension formula from 1 percent to 1.5 percent and a cost-of-living adjustment in pension plans applying to both present and future retirees. All minimum pensions would be increased to $125 a month, according to the union proposal.

Under job reclassification, the union is seeking an upgrading of at least $10 weekly for central office technicians, field communications technicians and computer technicians as well as a $5 weekly upgrading for computer attendants and accounting or tape librarians and $20 weekly for business-service representatives.

The CWA proposes shortening all six-year progression schedules to four years and is introducing a "dual choice" concept under the present health plan to permit employes to elect group practice.

Can Strike Settlement Produces Major Gains

(Continued from Page 1)

cents per hour immediately depending on job classification, additional wage hikes of 12.5 to 20.9 cents an hour in each of the next two years, an unlimited cost-of-living escalator, and "significant" pension improvements.

USWA Pres. I. W. Abel, here for the final negotiating meeting, said he was pleased with "an excellent agreement" that is "responsive to the needs of our members in the can industry."

The cost-of-living clause, a major union goal, calls for a 1 cent pay increase for each four-tenths of a point rise in the federal Consumer Price Index during the second and third contract years.

The clause guarantees that, if living-cost increases during 1972 total less than 12.5 cents, a special supplement will make up the difference. This provision also applies to the third year so that, by the end of the third year, every employe will be receiving no less than 25 cents an hour more.

The companies agreed to increase the benefit factor in the pension plan from $6.50 to $8.50 per month times years of service, effective during the second contract year. In addition, all present retirees will receive a $15 monthly increase in benefits, effective immediately.

It was agreed also to raise Part B Medicare payments for retired employes to a maximum of $7 a month. The medical program for early retirees up to age 65 was changed from a $200 surgical schedule to the same fee schedule that applies to employes who are still active.

Other major pension improvements include an increase in the special supplement for early retirees from $100 a month to $130. Workers affected by a long layoff, plant shutdown or disability will receive it until they become eligible for full social security benefits.

Employes aged 50 or above may under the new contract apply for early retirement benefits in case of job loss if their age and years of service total 70. They may retire at any age under the same formula if the "magic number index" totals 75.

Another pension change provides vesting of pension rights after 15 years of service regardless of age.

Other improvements were made in the major medical program, effective Feb. 15, 1973, and in the job classification manual. An additional paid holiday raises the total to 10.

The companies agreed to add 4 cents an hour to their payments into the Job and Income Security Fund to finance higher supplemental unemployment benefits and sickness-accident payments.

Prevailing Wages Stay:

States Buck Nixon On Davis-Bacon Act

A growing number of state administrations—both Republican and Democratic—are opposing the Nixon Administration's attempt to have them suspend their prevailing wage laws, or "little Davis-Bacon acts."

On Feb. 23, Pres. Nixon suspended the federal Davis-Bacon law, which requires that prevailing local wages be paid on all federal construction projects. He simultaneously asked the states to take similar action.

And Labor Dept. Solicitor Peter Nash wrote to state governments, telling them the Nixon suspension pre-empts all state prevailing wage laws as they apply to federally assisted state construction.

But last week, as spokesman for New York state's Republican Administration reiterated that state's position that "on publicly funded construction project, financially assisted by the federal government, state law requiring prevailing wages remains in effect as mandated by the state legislature."

Pennsylvania has made a similar ruling, prompting the AFL-CIO's Building & Construction Trades Dept. to advise its affiliates to "get similar rulings if you have a state or municipal prevailing wage law."

Massachusetts and Ohio, states with heavy concentrations of both population and industry, have declared that they would not, or could not, end supports for construction industry wages.

"I could not suspend it by executive order, and even if I could, I would not," said Ohio's Democratic Gov. John J. Gilligan.

"If wage and price controls for everyone in the box were involved —if we go to full wartime controls —this is something else," said Gilligan.

"But to single out one group is not a solution."

Gilligan told a National Press Club audience in Washington that Nixon's suspension of the law was "more of a stunt" than a real effort to deal with inflation. It was a "misdirected and ineffective move," he said.

He said there have been a dozen or more state construction contracts awarded in Ohio since Nixon's action and that every one of them went to firms on the basis of their compliance with the state's prevailing wage law.

"We are not going to suspend our law," said Gilligan, "because to do so would throw us into chaos."

In Pennsylvania, Gov. Milton Shapp, through a statement issued by the Dept. of Labor & Industry, said the state's Prevailing Wage Act applies to "all public works" where the estimated cost is in excess of $25,000.

Nixon's action will have no effect on the law's operation, he said.

Governors Gilligan and Shapp both are Democrats, but Gov. Russell W. Peterson of Delaware is a Republican as is New York's Gov. Nelson A. Rockefeller.

In Delaware, an effort to repeal the prevailing wage law was opposed by Gov. Peterson, and killed when more than 2,000 construction workers descended on the state capital in buses, appealing for continuation of the law.

Of the few states announcing they would go along with the President, several have let it be known they are doing so only under the threat of losing funds for federally assisted construction projects.

Idaho was one such state, and Wyoming said it would comply with the White House's wishes only on federally assisted projects and would continue to require prevailing wage rates on purely state-supported projects.

The administrator of the Labor Dept.'s Workplace Standards Administration, Robert D. Moran, urged federal contracting agencies recently to take the "appropriate steps" insuring compliance with the Nixon Administration's request.

He also said "it should be understood" that no federal assistance would go to construction projects where wages were supported in resistance to the President's action.

But when Moran was pressed by newsmen as to whether this was a hard-and-fast rule, he replied, "I'm not in a position to answer at this point. We will react to cases as they come up."

GE Ordered to Reveal Data from Wage Survey

An employer must furnish correlated wage survey information to a union when the company relies on such surveys in collective bargaining, the National Labor Relations Board ruled.

This was the substance of a ruling involving such a request by the Electrical, Radio & Machine Workers, which had asked the management of three General Electric plants for "correlated" wage information—that is, specific rates in specific plants supplying data for the General Electric survey.

Management refused on the grounds that the information was obtained from other employers under pledge that it would be kept confidential.

But the labor board rejected the assertion that disclosure of the information would "inhibit future collection of such data and deprive employers generally of access to accurate information concerning local wage standards."

The NLRB said its order applied only to such information as the company might have. In other words, if management does not have in its possession a correlated wage survey, it would not be obligated to furnish it to a union.

Observers saw an unstated suggestion here that a firm might hire some organization outside the company to make the survey, leaving the sources protected.

Board members also make it clear that their order does not apply to "all factual situations," basing the limitation on the fact that a company, General Electric, had conducted the survey, and "demonstrated without question its own reliance on the data."

"Well-established" precedents under Taft-Hartley, the board said, require an employer to supply a union with information necessary for the union to fulfill its function of representing employes.

The three cases ruled upon by the NLRB involve GE plants at Rome, Ga.; Dover, O., and Seattle, Wash.

LEADERSHIP CHANGES in the Service Employes will make Pres. David Sullivan, right, president-emeritus on May 26. First Vice Pres. George Hardy, center, will become president, with Executive Sec. Thomas R. Donahue taking Hardy's post. Sullivan is an AFL-CIO vice president.

58,000 Join Public Unions In AFL-CIO

(Continued from Page 1)

unions welcomed the affiliating employes and said their active membership would "immensely strengthen" the organizations involved.

The Los Angeles vote followed a recommendation to affiliate by the LACEA directors. LACEA General Manager Vic Hochee called the board recommendation and resulting approval a "landmark" for public workers in California.

SEIU Pres. David Sullivan said the new group has been chartered as LACEA Local 660 of the SEIU. George Hardy, SEIU vice president and president-designate, worked closely with the association over a two-year period leading up to the affiliation.

The merger, Hardy said, is a "major step toward providing frustrated public employes in California with real hope that their legitimate needs will soon be met."

The other vote to merge brought together two formerly unaffiliated groups that had for many years been considered the strongest public employe organizations in Hawaii.

After merger terms had been worked out, SCME Pres. Jerry Wurf told a Honolulu press conference that he was inviting all of Hawaii's 40,000 public employes to membership in SCME.

Under the affiliation pact, each formerly independent organization will retain its autonomy within SCME as a local union. All new employes of state and local governments in blue-collar classifications will be required to join the UPW local and, generally speaking, all white-collar workers in public employment will join the HGEA, under existing contracts.

Both HGEA and UPW studied the question of affiliation since passage by the Hawaiian legislature last year of a collective bargaining law for public workers.

Moratorium Called In Lettuce Boycott

A 30-day moratorium on the lettuce boycott was announced March 17 by the AFL-CIO United Farm Workers Organizing Committee in Salinas, Calif.

UFWOC said the moratorium was part of a program to work out a permanent settlement in the West Coast dispute.

David Sullivan Retiring, Hardy Will Head SEIU

David Sullivan, president of the 435,000-member Service Employes since 1960, announced his resignation effective May 26. Sullivan said he wants to devote more time to a number of personal projects involving "the continuing struggle for social justice."

George Hardy, who took office as first vice president the same year that Sullivan assumed the union's top job, will succeed Sullivan as president. Hardy's post will be taken by Thomas R. Donahue, executive secretary of the union since January 1969 and assistant Secretary of Labor for the two years before that.

Sullivan was born in Cork, Ireland, in 1904. He attended school there and came to the United States in 1925.

He took a job as an elevator operator and joined SEIU Local 32-B in New York City. Sullivan played an active role in helping the union organize and rose in the ranks from shop steward to local union business agent.

He was elected secretary-treasurer of 32-B in 1938 and president in 1941. The local union meanwhile became one of the largest in the nation with more than 42,000 members, and Sullivan became president of the international union.

During Sullivan's incumbency, SEIU experienced a 70 percent increase in membership in the U.S. and Canada. It represents public employes, hospital and nursing home employes, and private building maintenance and custodial workers.

The union named Sullivan president emeritus in recognition of his leadership role. He serves also as a vice president of the AFL-CIO, chairman of the labor advisory committee of the Office of Economic Opportunity, member of the National Advisory Council on Economic Opportunity, and vice chairman of the Senior Citizens Golden Ring Council.

While Sullivan was serving as president of Local 32-B, the union's largest, Hardy headed its second largest, Los Angeles Local 399.

Hardy was born in 1911 in North Vancouver, B.C. His father, Charles, was first organizer of an SEIU local in California and a vice president of the international union until he died in 1948.

Hardy went to school in San Francisco, worked as a laborer in a coal yard and as a radio operator on deep sea ships until the depression of 1929-32.

He joined Theater Janitors Local 9, the oldest SEIU local union in the state, in 1932. From that time on he witnessed and participated in the growth of the Service Employes from a total membership of 386 in the state to some 120,000.

Hardy helped organize Local 87 in San Francisco, Local 399 in Los Angeles, and virtually every other local of his union in California. He helped form the first state council of SEIU unions in 1936, and has been its secretary-treasurer since 1937.

Hardy earned three battle stars for service with the U.S. Army in the Battle of the Bulge and other engagements. After the war he was named to head SEIU's organizing program in southern California.

A long-time Democrat, he was a delegate to the 1960 and 1968 national conventions and still serves on the California State Democratic Central Committee.

An international union representative from 1946 to 1948, Hardy was elected an international vice president in 1948 and first vice president in 1960.

Donahue joined the staff of Local 32-B in 1949 and served as head of the publicity and contract departments for seven years. Following three years in Paris with the Free Europe Committee, he returned as executive assistant to Sullivan in 1960, and later became SEIU executive secretary. In 1956 he received a bachelor of laws degree from Fordham University.

ILO Survey Cites Rising Joblessness

Unemployment increased in nearly half of the world's industrialized nations during 1970 but the jobless rate was generally below 3 percent of the total labor force, the International Labor Organization reports.

The jobless rate exceeded 5 percent only in the United States, Canada, Yugoslavia and Ireland, according to data in the ILO's 1970 Year Book of Labor Statistics.

Consumer prices also rose through most of the year, with the rate exceeding 5 percent in almost half of the countries for which data were available. Real wages, however, rose for workers in 24 of the 27 countries surveyed by the ILO. The United States was one of the three countries where consumer price increases eroded wage increases to result in a decline in purchasing power for workers from 1969 levels.

Looking to 1972

THE CONSTRUCTION TRADES unions have been a major factor in the development of the American trade union movement and they have been a major factor in protecting the interests of all American workers in war and in peace.

So it is somewhat odd to see today that the construction workers are the target of a vicious campaign of misrepresentation on the part of some people who, in an effort to distract attention from their own failures, are holding construction workers responsible for all of the nation's troubles.

January 1969, when Pres. Nixon was inaugurated, was the 95th month, according to official records, of continuing economic expansion in this country. This long period of economic growth got under way in March of 1961 and was still continuing eight years later.

By January 1969, the number of unemployed in this country was down to 2.7 million or 3.4 percent of the labor force. This was still not a perfect record but it was the lowest unemployment rate in 16 years.

Then came a new Administration with new ideas—the so-called Nixon "game plan," the brain child of Dr. Arthur Burns, an extraordinary economist, an egghead of unusual brilliance, who for eight years had been the most severe critic of the economic policies of the Kennedy-Johnson Administrations. With the election of Nixon, his big moment had come.

Well, the plan, as put forth by Dr. Burns and Pres. Nixon, was to slow down the economy, to restrict the money supply, to tighten up on credit, to curb inflation, to bring down prices. And this was going to be done without increasing unemployment. And let me repeat that again—without increasing unemployment.

The Nixon-Burns "game plan" for the country's economy, after two years, was a miserable and complete failure.

NOW WE HAVE a "new game plan." We are going to psych the economy toward prosperity by the middle of 1972. Well, of course, 1972 is important. That is when we elect a new President.

And we are presented now with what can be called mini-expansion measures, pie-in-the-sky revenue sharing plus a barrage of optimistic rhetoric.

And what about the architect of this prolonged recession with its increasing unemployment, combined with the steady rise in living costs? What does Dr. Burns have to say now from his new ivory tower as chairman of the Federal Reserve Board?

He has new ideas for the future. He knows how he can solve our problems and he has found a very convenient whipping boy in the process. And who would the whipping boy be? Surely you can guess. Organized labor, the favorite whipping boy for kept eggheads of big business from time to time over the years.

So, we are going to be the target and this is not new. Organized labor has been the whipping boy before. We have been around quite a few years. We have been shot at before. And I am sure we will survive and continue to do our job long after our critics have been gone and forgotten.

And we, too, look forward to 1972. And we realize that it is an election year. And we realize it is an opportunity presented to us to make the political arm of the AFL-CIO, COPE, much more effective than it ever was before.

And in November of 1972, we will answer Dr. Burns and those who feel that the nation's future lies in a crackdown on labor.

—From an address by AFL-CIO Pres. George Meany at a dinner in New York City Mar. 12, 1971, honoring Pres.-Emeritus Edward F. Carlough of the Sheet Metal Workers.

A Word Edgewise:

Plight of Jews Underscores Reality of Vast Soviet Prison

By John P. Roche

ALL OVER the United States the Communists and other extremists of the left are busy trying to "Free Angela Davis!" Indeed, Eldridge Cleaver, the Panther who is currently in Algiers, is upset about the campaign: he thinks it is a clever diversion designed to distract attention from the "Free Bobby Seale!" operation.

The presumption of innocence in American criminal law reaches all the way from Angela Davis to Tony Boyle of the United Mine Workers. In every case we have to see what a jury thinks about the evidence when the trial is over. Given Miss Davis's predilection for travel, it seems eminently sensible to hold her without bail to make sure there will be a trial.

My concern is not Angela Davis, but a young woman 27 years of age who was recently sentenced to forced labor by a Soviet tribunal in Leningrad. The evidence indicates that she was in fact guilty of participating in an ineffectual conspiracy to hijack a plane to escape from Russia, a conspiracy that literally never got off the ground.

However, her basic offense, like that of her 10 co-conspirators, was that she is a Jew who wants to emigrate to Israel. Her final statement to the court, which appeared in the February issue of Midstream, was one of the most moving indictments of totalitarianism that I have ever read.

"I think," she said, "that Soviet law should not regard a person's intention to live in another country as treason, and I am convinced that, according to law, those who illegally trample on our rights to live where we please should be brought to trial." Then, particularly when you realize that she was speaking before the court (no jury) had retired to consider its verdict, came an incredibly courageous credo.

"We will never abandon the dream of being united with our ancient homeland. Some of us didn't believe this venture would succeed . . . we had already noticed that we were being trailed. But obviously we couldn't go back. . . . Go back to the past, to regret, and provisional living from suitcases.

"Our dream to live in Israel was incomparable (sic) to the fear of the suffering that could be caused us. Our departure would have harmed no one. I wanted to live with my family there and to work. I wouldn't have become involved in politics. All my interest in politics consisted of the simple wish to leave (the Soviet Union)."

Then, like a trumpet, echoing down the centuries, came her final affirmation: "Even now I don't doubt for a minute that some time I will leave anyway and will live in Israel. I will never abandon this dream sanctified by two thousand years of hope. Next year in Jerusalem! And now I repeat: If I forget Thee, oh Jerusalem, may my right arm wither."

SHE WILL NOT BE in Jerusalem next year; she was sentenced to a long term at forced labor. But her statement highlights the appalling reality of the Soviet regime as a vast prison. Not just for Jews, of course; other minority groups have been savagely repressed, but have no Zion, no dream of Jerusalem.

In fact, one could argue that Soviet anti-Semitism today arises in large part from the symbolic role of the Jews as the spearhead of resistance to the brutal nationalities policy, to what is known as "Great Russian chauvinism."

As readers of this column know, I have consistently opposed conspiracy trials in the United States from the first application of the Smith Act to a group of Minneapolis Trotskyites to the most recent litigation against anti-war militants in Boston and Chicago.

Perhaps Dr. Benjamin Spock, Abbie Hoffman, Rennie Davis, Jerry Rubin and the others whose rights I have defended will sign on as charter members of my committee to "Free Silva Zalmanson!" I await their response.

Fear of Medical Costs Mars Nation's Health Care Record

The following is excerpted from an address by Andrew J. Biemiller, director of the AFL-CIO Dept. of Legislation, to a conference on National Health Insurance held by the California AFL-CIO in San Francisco.

WE PRIDE OURSELVES with being able to put a man on the moon. We pride ourselves with being the nation with the highest per capita income in the world. We pride ourselves on a great many visible accomplishments. We like to show the world that "here's something we can do that none of the rest of you can."

Well, if a lot of people aren't laughing at us, they ought to be. When it comes to the matter of the health care of our citizens, a matter of the most basic of human concerns, we're a second-rate nation.

We have a population in which many of us don't know what real health security is.

Some of us think we've got it—because we're protected by hospitalization—because there is a health and welfare plan in our contract.

Then, when we go to the doctor, to the hospital, to a nursing home, we find out the rude truth.

Hospitalization, on the average, covers only three-fourths of the bill, and that's on the average. The rest of the money comes out of the family budget. All too often, an individual can find himself faced with financial ruin because of a lengthy illness over which he has no control.

This is not a problem that's peculiar merely to the lower income ranges. Estimates are that between 60 and 90 percent of all personal bankruptcy cases are due to the high cost of medical care.

We live with the fear of the cost of medical care—not with the assurance that what we are paying will protect us. We live with the fear of:

"What will it cost me? Can I afford it? What's it going to do to the money I've been setting aside for the education of my children? What's it going to do to my savings?"

We use the word crisis so often that it tends to lose meaning. But the fear of going to a doctor, the fear of going to a hospital, the fear of any kind of medical treatment—because of what it might cost—that's the real crisis.

And no one in this country should have to live with that fear.

We are well aware that the costs of groceries are a sharply rising element in the family budget. But you have to eat, so you buy.

But the tragic fact is that the American public does not "buy" the kind of medical care it ought to have—the prevention of sickness as well as the treatment of sickness—that it ought to have.

What's at fault is not the doctors, or the hospitals, or the other medical institutions in this country.

What's at fault is our present "nonsystem" of health care we now have in America.

Doctors and health facilities are at the wrong places for the most efficient and effective care of the whole population. There are 150 counties in this nation who do not have a single doctor—and another 150 who have only one. There are only about one-ninth as many specialists and hospital-based doctors per 100 beds in rural regions as compared with metropolitan areas.

Health care spending in the fiscal year ending June 30, 1970 increased by 12.2 percent to a total of $67.2 billion—an increase of $7 billion over the previous year. To give this some meaning, the federal government spent $27 billion in the fiscal year ending June 30, 1960 for health care.

Spending for health care now represents 7 percent of the entire gross national product. In 1960 it was 5.4 percent.

In the fiscal year ended June 30, 1970, spending on hospital care increased at a greater rate than any other element of health care; it rose by 15 percent to a total of $25.6 billion.

Physicians' services in the same period rose by 9.5 percent to a total of $12.9 billion.

THE AVERAGE PER-PERSON health expenditure during those 12 months rose by $33 to a total of $324 a year. If you've got a wife and three children, multiply that one and see what it does to the family budget.

Those are just the figures for the latest year. Take a look at what's happened over the last 10 years.

In that period, the cost of living rose about 25 percent. But, hospital daily service charges rocketed 150 percent. Physicians' fees increased nearly 50 percent.

The figures of the American Hospital Association show that the daily expense of community hospitals went up by 59 percent from 1963 to 1968, while the average annual salaries of employes in these hospitals rose by 35 percent.

Someone is making good money out of health care—but it sure isn't the hospital workers.

Something has to be done about all of this. Something has to be done to put the lid on soaring costs of going to a doctor, or a hospital, or a nursing home—or, for that matter, receiving any kind of medical care.

We just can't go on living with this crisis.

The answer is simple—so simple we haven't been able to see it.

We can do it by spreading the cost of medical care over the federal government, employers, and individuals; by establishing an annual budget for our health care costs on a national basis, by providing financial incentives through that budget system for doctors, hospitals and institutions to do that which they can do best—take care of the health of people.

This is what National Health Security is all about. It insures health, and it insures security. It seeks to make out of our present poor distribution of health services a logical system to reach all Americans, to give them the effective and efficient health care of which we are capable as a nation.

Incentives and Controls Missing:

Nixon's Health Insurance Plan Scored as Unworkable Puzzle

THE HEALTH CARE plan proposed by the Administration is like a "jigsaw puzzle" that can't be put together "because so many pieces have been swept under the rug," AFL-CIO Social Security Director Bert Seidman declared.

Seidman stressed that Pres. Nixon's plan provides neither the incentives nor controls needed to encourage a better organized and more efficient medical care delivery system and to hold down costs. The result, he said, would be a "big bite" out of the "ordinary family's income," while the system would fall short of providing the kind of comprehensive, quality care that Americans need.

Seidman called for passage of the National Health Security bill now pending before both the Senate and the House, which "would cover a larger percentage of the costs of medical care than any other proposal that has been made" and protect all Americans, regardless of the nature of their employment.

Seidman appeared on Labor News Conference, an AFL-CIO produced public affairs interview broadcast Tuesdays on the Mutual Broadcasting System.

Pointing out that the Administration's plan would deny coverage to part-time employes, domestic workers and agricultural workers, Seidman warned that there would be a very real danger that a great many "low-income people . . . who have a desperate need for medical care" would be left unprotected.

Seidman said that the National Health Security bill, which has bipartisan sponsorship in Congress and is the "number-one legislative objective of the AFL-CIO," stands a good chance of enactment in the current Congress. He predicted, "if the Congress does not respond to the needs of the American people for across-the-board, quality medical care," it will be "the most important issue" in the 1972 election campaign.

By Press Associates, Inc.

LAST OCTOBER Pres. Nixon vetoed a bill that would have both lowered and equalized television and radio campaign expenditures. In his veto message, the President declared that he was rejecting the measure because it "plugs only one hole in the sieve." He contended that the bill did not cover other media such as published advertising and direct mail.

Since both television and radio are the real reasons that campaign costs have zoomed in recent years, many found it impossible to accept the President's explanation for his veto.

Democratic National Chairman Lawrence F. O'Brien, for example, charged that "Mr. Nixon and his political advisers turned thumbs down for only one reason. This law would have stopped the Republican Party's campaign to saturate the public airwaves with paid spot commercials."

There are some convincing statistics involved. The GOP is currently comfortably in the black while the Democratic Party is between $8 million and $9 million in debt.

According to figures compiled by the Federal Communications Commission, in the 1968 campaign Richard M. Nixon and Spiro T. Agnew spent $12,697,953 in contrast to the $6,143,953 spent by Hubert H. Humphrey and Edmund S. Muskie. Other comparisons have been offered which show an even wider gap.

The move to override the veto—requiring a two-thirds margin—lost by four votes with 58 in favor and 34 opposed.

However, before the vote Senate Minority Leader Hugh Scott of Pennsylvania promised that he would come up with a "comprehensive election reform bill" early in 1971 that would meet the President's objections.

Scott did fulfill his pledge; he introduced a measure, the Federal Election Reform Act of 1971, on Feb. 25. It has four parts: financial reporting and disclosure; tax incentives for small political contributions; political broadcasting and advertising, and reduced rates for political mail.

Any meaningful reform must do two things: 1) reduce the costs of political campaigning, and 2) provide effective and full public disclosure of the sources of the contributions, since knowing who gave the money and who got it is vital.

The Scott bill goes a long way toward meeting the latter goal but serious questions are being raised over whether the bill would reduce the cost of campaigning, particularly radio and TV spending.

As Scott himself admitted, "it is important to note, at the outset, that this reform approach does not include any spending limitations on the candidate."

IN THE HOUSE, a bipartisan bill with 63 co-sponsors has been introduced by GOP Conference Chairman John Anderson (R-Ill.) and Rep. Morris Udall (D-Ariz.). It provides for spending limitations of 30 cents, 25 cents and 20 cents per registered voter in campaigns for the House, Senate and the presidency, respectively.

The limits apply to total spending for broadcast and print media, billboards, postage and telephones. It also includes provisions pertaining to contributions and expense reporting, government-paid television time for candidates and tax credits.

Sen. Edward M. Kennedy (D-Mass.) is proposing another reform plan which, while meeting some of Nixon's objections to the 1970 bill, would set a 7 cents per voter limitation on broadcasting.

The Senate Commerce subcommittee on communications has been holding hearings on three bills that would revise federal election laws, lower the costs of political campaigns and afford reduced rates for broadcast time to candidates for public office.

Sen. John O. Pastore (D-R.I.) is chairman of the subcommittee and he was also the principal author of last year's vetoed broadcast spending bill.

"The legislation before the subcommittee is in no sense of the word partisan or the concern of a special group," Pastore said in opening the hearings. "It is in response, in the purest democratic sense, to the will of the people, who want something done to correct a situation that threatens the integrity of their electoral process."

HEALTH CARE legislation coming from the White House was described by AFL-CIO Social Security Director Bert Seidman, center, as an unworkable jigsaw puzzle because "so many pieces have been swept under the rug." Seidman was questioned on Labor News Conference by Jerome Brazda of the Washington Report on Medicine & Health and Judith Randal of the Washington Evening Star.

KEYNOTE to a three-day conference of Boilermakers legislative, education, action program (LEAP) is given by AFL-CIO COPE Director Alexander Barkan. Seated at right are Boilermakers Pres. Harold J. Buoy and Sec.-Treas. H. E. Patton; at left is the union's research director, William Kuhl.

Senate Unit Okays Plan For Public Service Jobs

The Senate Labor Committee voted a bipartisan 15-2 endorsement of a public service jobs program that has been strongly supported by the AFL-CIO and actively opposed by the Nixon Administration.

It sent to the Senate floor a bill authorizing up to $1.75 billion over a two-year period to provide useful jobs for the unemployed.

Unless the unemployment rate dropped below 4.5 percent—it has been hovering close to the 6 percent level for some months—the federal government would pay 90 percent of the payroll costs for hiring additional workers in the public service sector of the economy.

The federal grants would go to city, county and state governments and to non-profit public service organizations. It would cover employment in such fields as environmental quality, health care, public safety, education, transportation, recreation, park and street maintenance, pollution control, housing, conservation and community improvement.

Workers hired would be paid the prevailing rate for similar public jobs or the minimum wage, whichever is higher.

Under the bill, sponsored by Sen. Gaylord Nelson (D-Wis.) and co-sponsored by Sen. Jacob K. Javits (R-N.Y.) and 32 other senators, up to $750 million would be available during the first year and up to $1 billion the second year, depending on the level of unemployment.

The program would be keyed to upward mobility of the newly hired workers, either to permanent career jobs in the public service field or to private employment.

Pres. Nixon vetoed a public service manpower bill last year, scoffing at it as creating "WPA-type jobs."

As the Senate committee was voting its approval of the bill, Labor Sec. James D. Hodgson was testifying before a House Labor subcommittee in an effort to head off approval of similar legislation.

Hodgson spoke up for the Administration's new Manpower Revenue Sharing bill—which was introduced just a day before his testimony.

In essence, it would turn over manpower training funds to the states and cities which would be able, if they wished, to discontinue existing programs and shift part of the money into short-term "transitional" public employment with no minimum wage requirement.

The Administration, he said, would have to oppose the pending public service job bills.

Subcommittee Chairman Dominick V. Daniels (D-N.J.) retorted sharply, "It seems every time this committee takes up a bill, there is a threat of a veto. I resent such threats."

Daniels indicated that his panel will act shortly on a public service jobs bill—before considering the Administration's manpower proposals.

Chemical Union Settles Sterling Strike, Boycott

Akron, O.—The Chemical Workers reached agreement with Sterling Drug Co. on new contracts for 2,000 members who went on strike June 8 at company plants in Cincinnati, O., and Rensselaer, N.Y.

The agreements were ratified and the strike ended, ICWU Pres. Thomas E. Boyle announced. At the same time the union called off its widespread boycott against Sterling products.

Expressing gratitude for the assistance of the AFL-CIO in the boycott, Boyle asked Federation Pres. George Meany to notify all affiliates of the boycott termination.

Rensselaer Local 61 reached agreement in February on a 3-year pact providing wage increases totaling 94 cents an hour. When Local 342, Cincinnati, won a similar settlement the strike and boycott were called off.

The pacts also contain inequity adjustments of 10 cents an hour, Good Friday as an additional paid holiday, a modified union security clause, and improvements in vacations, shift bonuses, seniority and overtime clauses.

Pilots Name Fergus As Education Director

The Air Line Pilots named James V. Fergus as director of education. Fergus joined ALPA in 1967 as supervisor of membership services, then became director and later assistant to the general manager.

Fergus is a Chicago native. He holds a bachelor of arts degree from St. Mary's Seminary, Perryville, Mo., and a master of liberal arts degree from De Paul University, Chicago.

IAM-UAW Pact Revived After 2-Year Lapse

Detroit—The Machinists and the Auto Workers announced that they have reactivated their old mutual assistance pact in an effort to build labor solidarity and insure maximum strength at the bargaining table. Mutual aid was the keystone of the two unions' bargaining strategy in the aerospace industry for 15 years.

The new pact was signed here by IAM Pres. Floyd Smith and UAW Pres. Leonard Woodcock.

The agreement had been ratified by the IAM executive council and the UAW executive board. It provides for mutual assistance in organizing and in negotiating. Its terms require regular meetings between committees of the two unions; the two union presidents are required to attend at least one of these meetings each year.

Unlike the earlier agreement which was abrogated by the UAW after it left the AFL-CIO in 1968, the new pact provides for arbitration of any differences between the two unions. The arbitrator is empowered to assess damages against either organization if it violates the accord.

MUTUAL ASSISTANCE agreement is reactivated by the Machinists and the Auto Workers to insure bargaining strength of both unions in the aerospace industry. The new pact was signed by IAM Pres. Floyd E. Smith, left, and UAW Pres. Leonard Woodcock in Detroit. An earlier agreement between the two unions was suspended in 1968 when the UAW left the AFL-CIO.

Biemiller Warns:

Major Fight Shaping On Health Care Bill

(Continued from Page 1)

head on. We are going to be taking on some of our oldest sparring partners—the American Medical Association, the insurance companies. . . ." He included the U.S. Chamber of Commerce and the National Association of Manufacturers on the list. **(Excerpts, Page 5.)**

Kennedy called on the unionists to join him in his goal of enacting comprehensive national health insurance "before the Congress adjourns for the 1972 elections." Biemiller predicted passage, if not at this session, then the next.

Dr. Edward Rosinski, executive chancellor of the University of California Medical Center, San Francisco, called national health insurance not only necessary, but "inevitable."

The Nixon Administration had contributed an unwitting assist in these goals, Biemiller noted. Pres. Nixon's recognition of the nation's "massive health crisis" led the AMA and the insurance companies to give up opposition to the use of federal money to solve the crisis, he observed.

Disorganization of the health care system is widely and increasingly recognized, he said, and allies are springing up in unexpected places. He pointed to the interest of the American Nurses Association and the recent endorsement of National Health Security by the American Osteopathic Association. Biemiller added:

"There is a new and rising breed of doctors. The AMA just isn't their voice. Even many of those who have gone along with AMA policies in the past are now questioning and rejecting them."

Biemiller called on unionists to reach out to community groups of every kind, professional as well as non-professional. Where speaking invitations aren't forthcoming, generate them, he urged.

"We've got to be prepared to go anywhere and talk to anyone who'll listen."

Kennedy underscored the urgency. Health care, he said, "is the fastest growing failing business in the nation—a $70 billion industry that fails to meet the urgent needs of our people."

He cited these major factors in the nation's health crisis:

- "There is not a person in the nation who has not felt the burden of rising (health care) costs."
- Acute and worsening shortage of all kinds of health personnel.
- "The archaic and inadequate methods by which we provide health care for our people. Too often, the system is an obstacle course for the consumer, not a path to better health."
- "For millions of our citizens, the quality of care is so poor that they may easily find themselves worse off because of their contact with the system."
- "The system has operated in the interests of the providers—the doctors, hospitals, and their agents. The health consumer has been ignored."

The National Health Security program embodied in his bill, he said, is designed to overcome the crisis. "The goal of the bill is to bring health security to all Americans."

Corman summed up the Nixon Administration efforts to meet the crisis: "I don't know how Nixon's proposal would meet the need for more doctors, but it will surely produce a generous supply of happy, healthy insurance companies."

He declared that the National Health Security program "will work," but "Nixon's proposal won't."

He pointed out that Nixon's plan would funnel millions of health care dollars through insurance companies, requiring every employer to do business with them. Costs would skyrocket, he predicted, and the beneficiary would be faced with endless "deductibles" and "co-insurance."

Donald Vial, chairman of the University of California Center for Labor Research, Berkeley, summed up the major "frustrations" resulting from the present health and welfare structure—frustrations, he said, the health security program is intended to meet:

- Coordinating health and welfare purchasing power to achieve control over cost and quality of health care and to reform the delivery system hasn't worked. Experience rating—"the worst health plague of our time"—has divided labor into good and bad risks according to bargaining units and destroyed incentives for better health care.
- Lopsided benefits, geared to hospitalization, have hooked the health and welfare plans into a cost escalator. They have limited or barred outpatient care, promoted over-use of expensive and unnecessary hospitalization.
- Plans have generally failed to cover total health care bills, perpetuated expensive forms of service, wasted scarce resources, discouraged preventive medicine.

Richard Liebas, research director for the Bay Area District Council of Service Employes, saw a National Health Security program as largely replacing present functions of the health and welfare plans. He also saw in such a program a challenge to union officials to extend the horizons of collective bargaining still farther.

The challenge, Liebas said, lies in eliminating the necessity to be concerned with costs of bargaining continually for the pennies to meet the soaring cost of health care at the expense of other benefits or higher earnings. As NHI supplants health and welfare coverage, he suggested, trustees and unions can move beyond into other areas of benefit to workers.

Nixon-Burns 'Game Plan' Scored:

Meany Hits Labor Critics, Sees Move to Hide Failures

(Continued from Page 1)
the community of which they are a part."

Meany cited the many years during which the building trades had been "a major factor in developing American trade unions and in protecting the interest of American workers in war and peace."

"So it seems somewhat odd today to see construction workers as the target of a vicious campaign of misrepresentation by some people," he said, "people who hold the construction workers responsible for all the nation's troubles—some Administration politicians, some eggheads and some spokesmen of the new left."

He said there is "no question this country is in trouble" and cited high unemployment, the steady deterioration of major cities into "great American slums" and added that "there is no question where the blame rests"—the economic "game-plan" of the Nixon Administration, the "brainchild of Dr. Arthur Burns," former chief Administration economist and now head of the Federal Reserve Board.

When the new Administration took office, Meany recalled, the nation was in the 95th month of continuous economic expansion that had begun in March 1961, and unemployment was down to 2.7 million or 3.4 percent, the lowest rate in 16 years.

"Then came the new Administration with new ideas . . . the plan put forth by Dr. Burns and Pres. Nixon was to slow down the economy, restrict the money supply, curb inflation, bring down prices, and this was all to be done without increasing unemployment. Pres. Nixon in a letter to me in February 1969 said the plan would be put into effect without causing more unemployment."

Instead, Meany noted, workers out of jobs rose by leaps and bounds, housing starts declined sharply, interest rates soared to their highest point in 100 years, industrial production began falling off as early as August 1969.

"It took the Nixon Administration policy only a few months to turn the economy around to where we were in a general recession," he said, adding that the "Nixon-Burns game plan for the country's economy after two years was a miserable and complete failure."

Meany commented that if Burns had "turned in this kind of record for private industry, he would have been fired. If it had happened in Russia, he'd have been sent to Siberia. But since he did it in the Nixon Administration, he is kicked upstairs."

He said the Administration now had "a new game plan, including pie-in-the-sky revenue sharing plus a barrage of optimistic oratory."

And Burns, he said, also has new ideas for the future that include "a new whipping boy—and you can guess who it is—organized labor."

Meany cited a Burns speech in California in January in which he called for repeal of the Davis-Bacon law, compulsory arbitration in major industry disputes, a cut in the federal minimum wage for some workers and a tax incentive—speedy write-offs of the cost of new equipment—for industry.

Referring to a recent appearance of Burns before a congressional committee, Meany said the economist had said the time had come to take away some of organized labor's powers and to stop aiding strikers, some of whom get food stamps and in some states unemployment insurance benefits.

"He wants to take us back to the last century, back to the 'starve-'em-out' method of labor relations," Meany declared.

He also singled out Burn's assertion that "our apprentice system is medieval, archaic, and should be done away with."

He said he could tell Burns that the building trades are not going to give up their standards for qualifying apprentices as journeymen in the various trades.

TESTIMONIAL DINNER for Edward F. Carlough, retired president of the Sheet Metal Workers, brings together Carlough, AFL-CIO Pres. George Meany and Edward J. Carlough, right, who succeeded his father last October. The senior Carlough refused renomination at the union's convention in September after serving from 1951 to 1959 as secretary-treasurer and from the latter year to his retirement as president.

NLRB Reaffirms Stand On Retiree Bargaining

The National Labor Relations Board ruled for the third time in recent months that retirement benefits for already-retired employes are mandatory subjects of bargaining.

The board ordered the Westinghouse Electric Corp. to stop refusing to negotiate on such benefits with the Electrical, Radio & Machine Workers at the corporation's Pittsburgh, Pa., plant. If an agreement is reached, the terms must be put into writing and signed, the board ruled.

A three-member NLRB panel disagreed with a trial examiner that Westinghouse also violated the law when it put an increase in benefits for retirees into effect after advance notice but against IUE objections.

A section of the agreement gives management that right, members Gerald A. Brown and Howard Jenkins, Jr., said. Chairman Edward B. Miller concurred, but dissented from the other finding. Miller said he agrees with an appeals court finding in the Pittsburgh Plate Glass Co. case that retirees are not employes within the meaning of the law.

Westinghouse claimed it had no obligation to bargain over increased pension benefits for retirees, citing the 6th U.S. Circuit Court of Appeals ruling in the Pittsburgh Plate Glass case. The Supreme Court has agreed to hear arguments on the ruling and the AFL-CIO has filed a brief urging reversal of the decision.

Examiner Ivar Peterson, who took testimony in the case, reported that the IUE has for some years represented about 1,000 employes in 23 of the corporation's maintenance and repair plants.

Bargaining on a new contract began Sept. 17, 1969. Union proposals to increase benefits for retirees were discussed at three meetings, Peterson said. During these sessions company representatives "refused to engage in meaningful bargaining about retirees, claiming that (it) viewed them as no longer its employes."

In a third case, the NLRB ordered the Union Carbide Corp. to furnish IUE Local 749 with information on retirees at a plant in Fostoria, O. That ruling, too, is being appealed.

Laborers Urge Probe Of Service Contracting

The Laborers charged the federal government with undermining the economic security of nearly 2 million federal employes by encouraging service contractors on government work to ignore the collective bargaining agreements of their predecessors.

LIU Pres. Peter Fosco challenged the right of government officials to ignore union-negotiated wage increases in setting "prevailing rates" upon which contractors base their bids for work on federal installations.

The union has taken two steps designed to combat what Fosco called the perversion of the intent of the McNamara-O'Hara Public Service Contracts Act. It has urged Rep. James O'Hara (D-Mich.) and Sen. Harrison Williams (D-N.J.) to hold hearings on the "misadministration" of the act by the Dept. of Labor and the General Accounting Office. O'Hara is one of the original authors of the law.

Fosco said the union is also preparing to appeal a recent National Labor Relations Board decision allowing a successor contractor—Emerald Maintenance, Inc.—to disregard an existing agreement setting wages of civilian employes at an Air Force base in Laredo, Tex.

Fosco charged that government policy has been changed "in defiance of the intent and spirit of the law, which is to protect employes . . . subject to unstable conditions because of the frequent changes" in contractors underbidding other contractors and refusing to observe existing agreements negotiated by their predecessors.

The purpose of the act, Fosco pointed out, is to guarantee that employes of contractors at federal workplaces will have wages and benefits on a par with those of workers performing similar jobs in private business.

In service contracts, the "prevailing rate" of pay usually is determined on the basis of the rates in contracts previously negotiated at the installation. But some government agencies now are encouraging contractors to ignore the existing rates when they take over a service contract before the collective bargaining agreement has run its full course, Fosco said.

Current policies are "tantamount to a permanent freeze on Wages," Fosco charged. If employers bidding on a one-year service contract "are free to disregard the second and third-year provisions" of the collective bargaining agreement, employe wages are "forever frozen at the first-year level."

Such employes would "never receive an increase," even if they went on strike, Fosco observed. He said forcing them into such a position is to "encourage labor turmoil, which benefits none of the parties involved."

In the Emerald Maintenance case, the firm underbid a previous contract holder and then refused to deal with the union representing Laredo AFB employes. An NLRB trial examiner ruled its conduct violated the law and NLRB doctrine, laid down a year earlier in the Burns Detective Agency case.

The board reversed in part the ruling of Examiner Thomas Ricci that the contractor was bound to observe the contract negotiated by the former employer. It ordered Emerald, however to recognize Laborers Local 1057 and to negotiate new contract terms with it.

The employer asked the 5th U.S. Court of Appeals in New Orleans to set aside that part of the order requiring it to bargain with the union. The Laborers will cross-petition the court to set aside the board's finding that Emerald need not observe the existing contract.

The case arose when Emerald, of Sandpoint, Ida., was low bidder on contracts for maintenance work at Laredo. The agreements negotiated by the preceding contract holders called for increases in wages and fringe benefits as of Apr. 1, 1970. But the Comptroller General ruled in 1969 that the prospective wage increase need not be included in the "prevailing wage" determination under the Service Contract Act.

The union notified all bidders of the coming change in wages, but Emerald bid on the basis of the rates then in existence. Emerald took over the work on Apr. 1, 1970, and using the same employes as the other contractors, "refused to have anything to do with the union," rejected the agreements then in effect and fixed employe benefits below the level provided for in the contract "as though there had never been a union or a contract," the examiner reported.

Study by Census Bureau Confirms Advantages of Union Membership

Union members in private industry earn, on the average, substantially more than workers who don't hold a union card.

The paycheck advantage of union membership, according to a Census Bureau report, is even greater among black workers. And, the report notes, the percentage of Negroes in unions is slightly larger than the union membership ratio for the entire workforce.

The figures are old—based on a survey of 1966 earnings in private industry. But they're the latest the Census Bureau has compiled and the report has just been published.

Some statistical highlights:

- Among all workers in private employment, 23.9 percent were union members in 1966—31.4 percent of the men and 12.9 percent of women.
- Among workers who had full-time jobs for at least 50 weeks during the year, the union ratio was 28.9 percent—33.5 percent of men and 17 percent of women workers.
- Among Negro workers, 25.4 percent of the total black workforce had union cards—35.3 percent of the men and 13.9 percent of the women.
- Among Negro full-time, year-'round workers, 33.9 percent belonged to unions—41.2 percent of the men and 19.6 percent of women.
- Among all workers, the median earnings of union members were 88 percent higher than the median earnings of workers who didn't belong to unions.
- Among black workers, the typical union member earned 270 percent more than did the non-union worker.
- Among workers employed 50 or more weeks fulltime, the union member typically earned 20 percent more than the non-union worker. For the Negro segment of this group, the black union member earned 68 percent more than his non-union counterpart.

Other data the Census Bureau reported included findings that 78 percent of union members in private employment in 1966 were men, predominantly in blue-collar jobs.

Relatively more union members worked fulltime at least 50 weeks a year—66 percent compared to 51 percent for the non-union group.

The 1966 survey estimated 15.4 million union members in the private sector—excluding members of public employe unions and Canadian members of U.S. unions.

All of the survey data were based on a census sampling of some 29,000 households throughout the nation. The Census Bureau said the chances are 68 out of 100 that any error woud not be more than seven-tenths of 1 percent and 95 out of 100 that its data would not be more than 1.7 percent off the mark.

Robert S. Fuchs Heads NLRB Northeast Region

Appointment of Robert S. Fuchs as director of the Boston region of the National Labor Relations Board was announced by the board. Fuchs, a career attorney, is 52. He succeeds Albert J. Hoban, resigned, in a region serving Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and all of Connecticut except Fairfield County.

$2-Billion Program:

Public Works Plan Endorsed by Meany

(Continued from Page 1)

two amendments suggested by Meany.

One would make federal agencies clearly eligible for public works construction funds. The other would earmark a portion of the $2 billion for loans to municipalities that are too financially strapped to put up their 20 percent of the cost of the projects.

The AFL-CIO statement recommended that all areas certified by the Labor Dept. as having "substantial" unemployment—generally 6 percent or higher—and those designated as redevelopment areas by the Commerce Dept. be eligible for the federal grants.

Meany strongly urged that the Davis-Bacon Act and other prevailing wage laws apply to the public works program "to assure that work for the federal government is not based on exploitation of workers."

In testimony and during the question period, Meany sharply criticized Pres. Nixon's suspension of the Davis-Bacon Act. Before the last election, Meany noted, the President was entertaining leaders of the construction unions at the White House and "now he turns around and spanks the workers."

But the President, Meany commented, was silent about the construction costs that have gone up much faster than wages, including land costs and interest rates.

"We hope that this committee will again endorse the principle of prevailing wages and thus inform the President that it disapproves of his action," he said.

There is on hand, Meany noted, a backlog of thousands of needed public construction projects and improvements that have been stalled for lack of funds.

"Let us not permit these planned projects to be delayed for additional months and years," he urged. "Let us quickly take these plans off the shelves and put them into operation."

Such a program, he said, "would be a powerful weapon against the stagnation of the national economy. It would be an investment in America that would pay for itself in improved public facilities, additional jobs, increased family incomes and reduced unemployment insurance payments."

Meany was asked what assurance there would be that the Nixon Administration would allow the public works funds to be spent in view of its refusal to release funds Congress has already voted for model cities programs, pollution control and other programs.

He replied that he didn't see how Administration officials could continue to go around making speeches about revenue sharing if they withheld funds from this "very practical" form of aid to cities and states.

And when a Republican congressman suggested that it might be more useful to get existing appropriations released to cities and states, Meany replied emphatically "let's do both."

The need is urgent, Meany stressed. He told the committee he could find no sign that the national economy is turning "from recession and stagnation to a rapid upturn of sales, production and employment."

The basis for a prosperous economy, Meany said, is mass purchasing power. And until there is work at decent wages for people willing to work, he told the committee, the problems of the inner cities will never be solved.

With Meany at the witness table were AFL-CIO Legislative Director Andrew J. Biemiller and Research Director Nat Goldfinger. Earlier, the committee heard a strong endorsement of the Blatnik bill from the U.S. Conference of Mayors and the National League of Cities.

Detroit Mayor Roman Gribbs, speaking for both groups, said America's municipalities have a critical shortage of funds for needed construction and at the same time face the problems resulting from high unemployment.

'Let's Get Them Off the Shelves!'

Extension of Aid Urged For Appalachia Region

The Appalachian Regional Development Act should be continued and expanded, a trade union leader testified from first-hand experience with its operation.

Miles Stanley, chairman of the AFL-CIO Appalachian Council and president of the West Virginia AFL-CIO, told a House Public Works subcommittee that the program has clearly proved its value.

The Nixon Administration is trying to phase out the regional development program, but the Senate voted 77-3 to extend it an additional four years. The next move is up to the House.

Stanley told the subcommittee members that in the poverty-riddled Appalachian Mountain region "we have seen significant and measurable progress occur."

He stressed that "little or none of this progress would have been possible without the concentration of resources" authorized by Congress. And the "most important" of these, Stanley said, has been the Appalachian Regional Development Act.

Stanley recited the detailed involvement of the region's labor movement in programs ranging from job training to education, housing and health.

"We know about the effect of these measures," he said, "not by casual observation, but by active involvement."

Labor has sponsored non-profit housing projects, placed some 9,000 workers in on-the-job training, recruited more than 13,000 into Job Corps programs, worked with hundreds in Neighborhood Youth Corps programs and screened more than 600 youths from West Virginia alone for entry into the privately-funded Seafarers' training program.

Thanks to the Appalachian regional program, Stanley noted, more than 230 vocational education schools have been established so that today's youth can meet tomorrow's manpower needs.

The fact that secondary school education so long was geared to pre-college students, Stanley suggested, was a major contributing factor to a high dropout rate and a correspondingly high unemployment rate.

He noted that the development program has made an important start in ending the isolation of mountain communities and making possible the flow of commerce necessary to create jobs.

The regional development concept has proved its worth, Stanley told the subcommittee. "We believe it should be continued as an effective method of solving the economic and social problems of regions similar to Appalachia."

Canada Hikes Wage Base to $1.75 an Hour

Ottawa, Ont. — The Canadian government has announced a boost in the federal minimum wage to $1.75 an hour effective July 1. It applies to about 530,000 workers in the transportation, communications, broadcasting and banking industries.

The federal minimum now is $1.65 an hour. Provincial minimums which apply to all other industries range from 95 cents an hour in Prince Edward Island to $1.55 in Alberta. Ontario's is now $1.50 increasing to $1.65 Apr. 1.

The government also has introduced legislation under which unemployment insurance changes would have nationwide effect. Maximum benefits would go up from $57 to $100 a week and well over a million Canadians who are now excluded would be added to the unemployment insurance rolls. These are wage and salary earners earning more than $7,800 a year who have not contributed to nor received benefits from the unemployment insurance fund so far.

The new benefits will be introduced in stages from June 27, 1971, to Jan. 2, 1972.

The new legislation is applied to all members of the work force who are not self-employed.

It also provides sickness and pregnancy benefits in what amount to the most important changes since the Unemployment Insurance Act was introduced in the early 1940s.

While increasing benefits, the new plan will make benefits received taxable and contributions tax-deductible.

3-20-71

House Refuses Funds For SST Development

The House voted by a narrow 215-204 margin to cut off further federal funds for development of an American-built supersonic airliner.

Supporters of the SST—including labor, industry groups and the Administration—had urged that the program be continued to maintain the nation's leadership in commercial aircraft manufacture and sales, a major source of employment and export earnings. Britain, France and the Soviet Union have already fliight-tested commercial airliners that surpass the speed of sound.

Opponents had charged that supersonic planes are at best a risky financial investment and had stressed the possibility of hazard to the environment.

Existing funds for the project run out on Mar. 30, leaving the future of the two partially-completed prototype planes in doubt.

The federal government had financed most of the development cost to date, under an arrangement for repayment from future sales if the aircraft was put into commercial production.

A first vote on the issue came after a day and a half of debate, on a recorded teller vote when the Dept. of Transportation appropriations bill was being considered in the Committee of the Whole. The initial vote to delete the SST funds was 218-204. The final rollcall followed.

The Senate could still add funds for the program, but that appeared uncertain in light of the past history of the controversy, which deadlocked the 91st Congress.

Last year the House voted the full $290 million SST appropriations the Administration had requested as part of a Dept. of Transportation funding bill. The Senate voted to delete the funds, but a House-Senate conference committee then brought back a compromise appropriation of $210 million. A filibuster by Senate opponents kept it from coming to a vote and a final compromise provided temporary funding through this March, leaving further action up to the 92nd Congress.

AFL-CIO Pres. George Meany, in a letter to House members before the vote, urged approval of the appropriations.

"A sick economy, crippled by high unemployment," can't finance the social progress America needs, Meany stressed.

Meany is co-chairman of the National Committee for an American SST, which includes AFL-CIO Sec.-Treas. Lane Kirkland and 31 federation vice presidents.

10 Percent Social Security Boost Called 'Down Payment' for Aged

(Continued from Page 1)

an estimated $3.6 billion into the consumer purchasing stream this year alone.

To pay for the increases and ensure the continued solvency of the fund, the ceiling on earnings subject to the social security tax will be raised Jan. 1, 1972, to $9,000—up from the present $7,800 limit.

There will be no change in the tax rate, so persons making under $7,800 will not have any more money taken out of their paychecks.

The maximum additional payment—for persons making $9,000 a year or more—will be $62.40, or $1.20 a week.

However, those workers whose payments are increased will also be entitled to higher retirement benefits based on the higher earnings base, and to more insurance protection for their families if they die before retirement.

The AFL-CIO Executive Council at its recent meeting renewed labor's support for a two-step 35 percent benefit increase, a wide assortment of other improvements, expansion of the Medicare program, and use of general Treasury funds to help finance the cost of social security benefits.

In other congressional developments:

- The Senate ignored the Administration's proposal to scrap most federal grant programs in favor of "revenue sharing" and voted 77-3 approval of a bill extending the Appalachia regional development program an additional four years.

Pres. Nixon had wanted to phase out the program, but Republican senators and governors from the region joined with Democrats in pressing for its continuation. The House is expected to follow suit.

- Congress approved emergency legislation to finance unemployment benefits for returning servicemen and federal employes who are laid off. The Administration last year greatly underestimated the unemployment rate and although Congress appropriated the full amount requested, the money has all been used up.

- The Senate approved legislation to create a new joint congressional committee on the environment, subject to House concurrence.

- The House Armed Services Committee gave tentative approval—by a 32-4 vote—to legislation extending the draft an additional two years, until June 30, 1972. It rejected by a one-sided margin a substitute proposal to end the draft immediately and rely on an all-volunteer force.

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, March 27, 1971 | No. 12

'Rosy' Claim on Economy Draws Meany Challenge

Price Rise Saps Real Earnings

By Tom Castor

A continued rise in prices reduced the "real earnings" of the average worker in February. His paycheck stayed the same, but it bought less than the previous month as the Consumer Price Index edged up another two-tenths of 1 percent.

The increase—which was idenical on a seasonally adjusted basis—brought the CPI to 119.4, an increase or 4.8 percent over the past year.

This meant that the same goods and services that cost $10 in 1967, cost $11.94 last month.

Gross weekly income remained unchanged from January and the average take-home-pay for rank-and-file workers with three dependents was little changed at $107.57.

But in terms of 1967 dollars, on which the CPI is based, this take-home pay represented only $90.09 worth of buying power—13 cents less than in January.

Since February 1970, the average worker has gained only 16 cents a week in buying power, the BLS reported, while the cost of living has skyrocketed.

The February CPI figures were the first since the Korean War to be released by the BLS without an accompanying press briefing. The Labor Dept. also announced cancellation of monthly briefings on unemployment figures.

The action was taken, a Labor Dept. news release said, to "avoid the awkwardness of subjecting the professional staff of the Bureau of Labor Statistics to questions with policy implications" and to "achieve a consistency with the method of release of all other statistical data by the Executive Branch."

House Speaker Carl Albert was harshly critical of the Labor Dept. action:

"I was appalled to learn of the cancellation of the Labor Dept.'s traditional monthly briefings on economic indicators," he said.

"The muzzling of those officials who for 20 years—under Democratic and Republican Administrations alike—have provided impartial interpretations of these statistics for newsmen is a most blatant attempt to impede the flow of government information to the public, and clearly demonstrates the Nixon Administration's lack of faith in its own rosy predictions on the future of the economy."

Cancellation of the briefings came just two weeks after the BLS report on employment for Febru-

House Panel Okays Public Works Plan

A $2 billion program to provide jobs and build needed public facilities in areas with high unemployment has been approved by the House Public Works Committee and may reach the House floor before Easter.

The legislation, sponsored by Committee Chairman John A. Blatnik (D-Minn.), would revive the 1962 accelerated public works program that helped break the back of the last recession.

The federal government would finance 80 percent of the cost of constructing public works for which there is an "urgent and vital" need in communities "burdened by substantial unemployment and underemployment resulting from the economic decline of 1970."

And if the communities are so hard-pressed that they can't even borrow money to put up their 20 percent of the cost, the federal government would pay the full amount.

AFL-CIO Pres. George Meany was the principal public witness for the bill when it was being considered by the House committee. He termed the concept "revenue sharing from a very practical viewpoint."

It would "create jobs," Meany said, give a "needed lift" to a bogged-down economy, and meet the nation's needs for such projects as waste treatment plants, water supply and sewer systems, health care and recreational facilities.

Under the committee bill, federal grants would go to areas that have had substantial unemployment—generally 6 percent or higher—for at least six of the preceding 12 months, and to places designated

(Continued on Page 7)

ENFORCEMENT of the new Occupational Safety & Health Act that goes into effect Apr. 28 will be administered by George C. Guenther, left, who was named Assistant Secretary of Labor by Pres. Nixon. Nominated to the Occupational Safety & Health Review Commission was Alan Burch, right, safety director of the Operating Engineers. Other members named to the commission are Robert D. Moran, chairman, and James F. Van Namee. **(Story, Page 8.)**

Data Show Job Picture Worsening

AFL-CIO Pres. George Meany sharply challenged the "rosy-glow" claims of the Nixon Administration and told a congressional committee that the nation's unemployment crisis has gone from bad to worse in recent months.

At the request of the House Public Works Committee, Meany submitted a detailed analysis of the "hidden unemployment" that union economists cite as evidence of "a continuing weakness in the nation's job markets."

The analysis, prepared by the federation's Dept. of Research,

The Labor Dept. announced that the number of major job areas with substantial unemployment jumped to 50 in March, the highest level since June 1962. There were only eight such areas a year ago.

This means that one of every three of the nation's 150 largest manpower centers recorded jobless rates of 6 percent or more The five new areas so classified are New Haven, Conn., Rockford, Ill., Terre Haute, Ind., Worcester, Mass., and Binghamton, N.Y.

In addition, 27 smaller areas were newly listed as having 6 percent or more joblessness, bringing the total for this group to 662.

punctures the "officially optimistic views of the Administration" that the decline in the seasonally adjusted unemployment rate from 6.2 percent in December to 5.8 percent

Amendment Clear Congress:

States Rush to Ratify 18-Year Voting Age

By David L. Perlman

A labor-supported campaign for ratification of a constitutional amendment giving 18-year-olds the right to vote in all elections has gotten off to a running start. Within hours after the amendment received final congressional approval, ratification resolutions had been approved by five state legislatures and two more acted the next day.

The goal is to complete the ratification process before the 1972 elections—with at least a hope of ratification by this summer.

When 38 of the 50 states—the required three-fourths—ratify the 18-year-old vote proposal, it will become Amendment XXVI to the U.S. Constitution.

Under a law passed by Congress last year, 18-year-olds have the right to vote in elections for all federal offices. But the Supreme Court, in a 5-4 decision, said Congress didn't have the power to establish the voting age for state and local elections.

Thus, except in a handful of states with lower voting ages, election officials would be required to set up a cumbersome and costly system of dual voting procedures—one for persons over 21 who could vote for all offices on the ballot and the other for 18, 19 and 20-year-olds who could vote only for president, senator and congressman.

Faced with this reality, a bipartisan groundswell of support brought swift congressional approval of a constitutional amendment.

It takes a two-thirds vote by both the House and Senate to initiate a constitutional change, but the issue was never in doubt. First the Senate approved the amendment, 94-0. Then the House passed it, 400-19. The handful of diehard opponents argued that Congress should repeal the 18-year-old vote for federal elections instead of seeking to extend it to all elections.

Early ratifications came from the legislatures of Minnesota, Dela-

More Funds, Stronger Law Sought To Press Fight on Water Pollution

New legislation—backed up by full funding—is needed to "move the nation off dead center in cleaning up its increasingly polluted waters," the AFL-CIO testified at Senate hearings.

Lack of funds as well as inadequate enforcement has hampered federal programs to curb water pollution, AFL-CIO Economist George H. R. Taylor said.

Taylor told the Senate Public Works Committee that both the executive branch and Congress share the responsibility for the too-slow pace of water clean-up campaigns.

Not only have funding authorizations been inadequate, but the budget requests have been substantially below the spending ceilings set by Congress.

This "gap between authorization and actual funding," Taylor said, will total about $1.3 billion by the end of the current fiscal year.

He urged the committee to build on the bill introduced by Sen. Edmund Muskie (D-Me.) with bipartisan co-sponsors, and add some strengthening provisions including several sections of the Administration's pollution control bill.

The Muskie bill would authorize a five-year, $12.5 billion program of federal grants to help communities finance water waste treatment plants.

It would also increase the federal share of the cost from 55 percent to two-thirds, and the AFL-CIO suggested that the federal portion be raised further to 80 percent.

Taylor supported stronger and broader federal powers "to protect and improve water quality in all navigable waters, underground waters, lakes, coastal areas, contiguous oceanic waters, soil wash from agricultural and non-agricultural sources including metropolitan areas, feed lots and sanitary landfills."

Federal standards, he stressed, should "aim at improving water quality, not merely holding the line to prevent an already dirty water resource from getting dirtier."

Taylor praised the Muskie bill's

Black Builders Hit Suspension Of Davis-Bacon

The Washington, D.C., Area Contractors Association, a group of 163 black general and subcontractors has denounced the Nixon Administration's suspension of the Davis-Bacon Act, declaring that it could result "in the destruction of the growing black firms in the industry."

The Davis-Bacon Act, which requires that prevailing wage rates be paid on all federally financed construction work, was suspended Feb. 23 by Pres. Nixon on the grounds that it had contributed to "severe inflationary pressures" by spreading "excessive" wage increases.

Con Ed Accord Benefits 18,000 In New York

New York—The Utility Workers reported ratification by a 25-1 margin of a new two-year contract providing sizable gains for 18,000 employes of the Consolidated Edison Co.

Ballots cast in a mail election showed 12,611 in favor of accepting the new terms, 503 opposed, the American Arbitration Association reported to Local 1-2 of the union. It represents Con Ed employes in Manhattan, Queens, Brooklyn, the Bronx and Westchester County.

The new contract calls for pay increases of 10 percent in the first year and 8 percent in the second year, an accelerated progression schedule toward the top rates, and reduction of the voluntary retirement age to 62 without any change in benefits.

James Joy, Jr., the union's chief negotiator, said two major improvements were agreed to—the first dental service plan in the utility industry to be fully paid for by the employer and a provision that Con Ed can no longer deny a progression raise for any disciplinary purpose.

Also provided are three weeks of vacation after five years of service instead of the former seven, improved medical care coverage, increases in night shift premium pay from 5 percent to 6 percent and pension benefit boosts for 6,100 retirees or their widows.

Similar terms were accepted earlier by Local 3 of the International Brotherhood of Electrical Workers, representing 800 Con Ed employes on Staten Island.

Metal Trades Win Vote At Charleston Shipyard

Charleston, S.C.—The Federal Employes Metal Trades Council, AFL-CIO, turned back an attempted raid by the National Association of Government Employes at the Navy Yard here. In so doing it retained the rights it has held since the early 1960s to bargain for 4,700 wage board employes at the Charleston Naval Shipyard

The vote, in the second of two elections after what Metal Trades unions charged was a "vicious propaganda campaign" by the raiding group, was 2,126 for FEMTC, 1,777 for NAGE.

The victory was a "very important" one, said Pres. Maywood Boggs of the AFL-CIO Metal Trades Dept. in a congratulatory message to council officers and J. R. Graham of the AFL-CIO Dept. of Organization, campaign coordinator.

Council Pres. J. A. Grayson and Sec. Lewis E. Walters said a vigorous drive by union members to retain the right to represent blue-collar employes here was the decisive element in the victory. They asked shipyard management for a preliminary meeting to set ground rules for negotiations on terms of a new contract.

NAGE promoters began campaigning last year for bargaining rights, circulating charges which the Metal Trades rebutted. When the shipyard commander issued an order that restricted the right of union members to distribute printed matter, solicit union membership or leave work to perform the duties of a union steward, the Metal Trades challenged the order.

A hearing examiner ruled that the shipyard's directives to stop "electioneering" by either side were unfair labor practices. Assistant Labor Sec. W. J. Usery, Jr., upheld the Metal Trades' position in the first ruling of its kind since the President gave Usery the power to settle disputes under the Executive Order governing federal labor-management relations.

Neither party received a majority of the votes cast in the first election, Feb. 18. A new vote was ordered by the Labor Dept., and the campaign was resumed.

The raiding union intensified its charges, and the Metal Trades took to the radio, television and printing press to "straighten the record." The final vote was close, but decisive.

The Navy Yard here is used for the repair and overhaul of nuclear-powered and conventional Navy vessels, surface and submarine. The Metal Trades Council has been chartered in this area for more than 50 years.

White House Criticized On Youth Parley Shift

The Nixon Administration was charged with attempting to undermine the effectiveness of the coming White House Conference on Youth by shifting the site of the sessions from the nation's capital and for its heavy-handed controls in selecting delegates.

The Council of National Organizations for Children & Youth said that moving the conference to Estes Park, Colo.—a resort community of about 1,600 persons—"is certain to limit the participation and curtail public attention to youth problems."

The council which is made up of about 400 national organizations representing several million persons, also accused the Administration-picked conference staff of creating constant confusion over changes in the date and duration of the sessions.

The conference staff has refused to schedule a plenary session and has failed to involve or consult with the national organizations concerned with the interests of youth, the council charged.

White House conferences on children and youth have been held every 10 years since 1909. The Administration separated the conference for the first time with the children's sessions held last year in Washington and the youth conference now scheduled for Estes Park, Apr. 18-22.

The council said that rigid controls by the White House staff on the children's conference "severely limited representative and responsive citizen participation in the policy and decision-making processes."

Eli E. Cohen, chairman of the council, warned that the same thing will happen in Colorado. He said Estes Park was chosen to deliberately "keep the lid on the conference."

Leo Perlis, AFL-CIO director of community services, who represents the council on the White House technical committee for the youth conference, said the Administration's staff has continually ignored the suggestions of the committee on the planning of the sessions.

The committee has been able to meet twice with the White House conference staff and "we didn't even have time to rubber stamp the proposals," Perlis said.

He noted that last year's children's conference ended in confusion because of the White House staff controls. More than half the delegates gave up in disgust and returned home before the conference was completed, Perlis recalled.

Isabella J. Jones, executive director of the bipartisan council, said that the youth conference will have the lowest number of delegates in more than 30 years—1,500. She noted that 6,700 delegates attended the youth conference in 1960, 5,000 in 1950 and 4,700 in 1940.

The council urged the White House to expand the number of delegates to 2,500 to increase the participation of youth and representatives of national youth organizations.

It also called for returning the conference to Washington "where public attention can focus more strongly on the problems and the needs of youth and on recommendations for solutions."

The council also urged that increased participation of youth be encouraged by rescheduling the conference for June when students will be through with classes.

Air Line Pilots Staffer Thomas G. McHale Dies

Thomas G. McHale, director of government affairs for the Air Line Pilots since last January, died of a heart attack at his home in Rockville, Md. He was 41.

McHale had been working "energetically" on the union's program in support of the supersonic transport plane, ALPA said. Before joining the union staff he had been legislative assistant to Sen. Howard W. Cannon (D-Nev.) and had worked for several federal agencies.

As Buying Power Sags:

Unions Bargaining For Catch-Up Pay

Decreased buying power brought about by record increases in the cost of living is one of the key issues as organized labor prepares to renegotiate 1,200 major contracts covering 4.5 million workers this year.

In "1971 Bargaining Preview," an article in the March edition of the Federationist, the AFL-CIO magazine, Federation Economist Rudolph Oswald and Research Assistant John Volpe note the overwhelming rapidity of inflation in 1970.

Auto Workers, they point out, lapsed 26 cents behind the cost of living as a result of a 16-cent ceiling on their escalator clause for 1970.

"Such experiences were widespread as virtually all economists miscalculated the extent of the inflationary rise in living costs during the last three years," the authors note.

"Consequently, unions are going into negotiations trying to catch up from the losses in earning power that resulted from the unanticipated rapid rate of price changes."

The cost of living rose 6 percent during 1970 on the heels of a 5.4-percent hike in 1969, 4.2 percent in 1968 and 2.8 percent in 1967.

And the authors point to 1970 settlements as a preview of what's going to happen at the bargaining table in 1971.

"Wage increases in major contracts negotiated in 1970—by definition those covering 1,000 or more workers—averaged 10 to 12 percent during the first contract year. Nearly all these contracts were front-loaded to catch up to the accelerated rise in living costs. But when averaged out over the full life of the contracts, the typical wage increase was 8 or 9 percent a year."

Workers not protected by cost-of-living escalator clauses were hard pressed and the wage gains they won in the pay envelope were quickly diminished by higher prices for housing, clothing, medical services and public transportation.

"Cost-of-living escalator clauses gained new importance as a means of protecting the wage earner's buying power," the article observes. It notes that contract settlements in 1970 gave cost-of-living protection to an additional 300,000 workers and "brought the total number of workers covered by some sort of escalator clause to the highest level since 1960"—3.5 million.

Those hit hardest by rising living costs—pensioners—were also one of the principal subjects of bargaining in 1970.

Increases in the cost of Medicare and doctors' payments prompted many unions to renegotiate payments to cover the cost of these items for present and future retirees.

And 1970 contract language also reflected the rising unemployment rate due to automation or exporting of American jobs.

"Severance pay clauses were expanded; new attention was given to training programs, including a review of the apprenticeship programs; tuition refund programs were established."

The authors note, for example, that the Bakery Workers, in contracts with General Baking and Continental Baking, negotiated 30 hours severance pay per year of service after three years up to a maximum of 900 hours pay.

The Rubber Workers negotiated a severance pay plan calling for $250 for each year of service in their contract with Mattel, Inc.

A new feature of the Electrical, Radio & Machine Workers' contract with Sperry Gyroscope was a "Phase-Out Fund." The program requires an employer contribution of 5 cents hourly to the fund, which provides benefits if any operations are shut down.

Under the IUE contract with Reliance Electric, the maximum severance benefit was increased from $100 to $120.

CWA Delegates Act On Structural Shifts

Denver—A special convention of the Communications Workers reviewed the union's objectives in contract negotiations with the Bell System and acted on changes in the constitutional structure of the CWA.

The 1,500 delegates to the one-day convention voted to extend the terms of national and local officers from two years to three, to stimulate meetings of local representatives at state and area levels and to set up clubs for retired members.

Pres. Joseph A. Beirne reaffirmed the current CWA contract goals that were adopted by the union's Bell System Bargaining Council a week earlier in Washington.

"There is not the slightest shadow of doubt" that a 25 percent increase in the wages of Bell System employes is a "reasonable, justifiable demand," he stressed.

Because of their own economic situation, Beirne said that telephone workers cannot be satisfied with the wage increases negotiated in the recent contracts in the auto and container industries.

Beirne reiterated his earlier charges that the workers' problems were linked to failures of the Nixon Administration economic policies. Efforts in Administration circles to establish wage ceilings show "how desperately devoid of ideas that Administration is," he added.

Administration policies are designed, Beirne said, to develop public opinion resistance to union collective bargaining programs so that labor organizations may be induced "not to seek, much less achieve, the legitimate and reasonable demands of our members."

He said that industrial management "has already begun to take advantage of this doctrine of the Administration."

The CWA's negotiations with a number of Bell System operating affiliates are to get under way shortly. Current three-year agreements start expiring Apr. 30.

In other action, the delegates rejected the union dues concept based on a percentage of wages and turned down a proposal to increase the number of CWA geographic districts from nine to 13.

A series of workshops were conducted for several days following the convention.

On Year-Round Basis:

'High' Construction Wages Revealed as Mostly Myth

By Eugene A. Kelly

Building trades wage rates, despite the spotlight beamed on them by Pres. Nixon and his advisers, produce incomes not much higher per year than those of factory workers, the government's own statistics prove.

The nation's construction craftsmen insist that their negotiated wage increases—far from being a cause of inflation—are the only means open to them to keep up with the ever-climbing cost of living.

They work in an industry where they are idle for an average of four months every year, even when times seem good.

They cite these facts, reported by the National Association of Home Builders, an employer organization, and the Bureau of Labor Statistics, an agency of the Dept. of Labor:

Construction wages now take about 18 percent of the cost of a single-family home. Financing takes 10 percent, builder's expenses and profit 13 percent, land 21 percent, materials 38 percent. All have risen sharply in the last 20 years except wages and profits, which slipped—wages from 33 percent to 18, profits from 15 percent to 13.

That means construction wages are the least of the inflationary building factors. But the Nixon Administration, zeroing in on wages alone, took away the construction worker's legal right to be paid the prevailing area wage on federal construction projects.

"Sure, we make a good buck when we work," said one worker to a reporter at the site of the only big building now going up in Cleveland. "But the weather kills us."

On that building, Iron Workers lettered their reaction to Pres. Nixon's suspension of Davis-Bacon Act prevailing wage rates: "Would Nixon do our work for less money?"

The hard hat who said "the weather kills us" was calling attention to a major fact of life in the construction industry, especially in northern cities.

Seasonality has always plagued employment in the industry. In spite of efforts to shelter workers from the wind and wet, weather still shuts down building projects and builders still lay off the workforce, as many a worker finds after traveling miles to the jobsite.

In 1970, construction workers, union and nonunion, earned an average of $5.22 an hour, according to the BLS. The average for union craftsmen was $6.18 an hour. Applying the latter figure to 1,400 hours a year, the average time worked, would produce an average yearly wage of $8,652 for union men in cities of 100,000 population or more.

The 1,400 hours breaks down to 35 weeks of work, leaving the equivalent of 17 weeks of unemployment. Averaging the union man's wage over the year, his pay was $166 a week—higher than that of the typical factory worker, but lower than the pay of a dozen other groups of workers.

When he works, the union hard hat gets an average wage ranging from $3.65 an hour for roofers' helpers to $7.01 for plumbers, plus pension, health and other fringe benefits valued at 34 cents to $1.23 an hour extra.

Wage rates vary from city to city and region to region. In areas of high demand and short supply, workers get more than the average—and these are the rates that draw public attention.

But the construction worker thinks not of his high hourly rate, but of his total income over a month or a year, as do all Americans.

The typical construction worker travels increasingly longer distances to reach the building site. When he climbs out of the car, he may find the job shut down. So he goes home, unpaid for the day.

When he works, he faces the hazards that go with working on 40-story-high beams or in deep trenches subject to cave-ins.

The construction job is nearly twice as dangerous as the factory job, BLS statistics show. In 1968, the latest year for which the bureau has reported, the injury-frequency rate in contract construction was 26.9 per million hours worked against 14 per million hours in manufacturing. And the injury-severity rate—the number of days of disability per million hours worked—was 1,992 in construction, nearly three times as high as that for manufacturing.

Should these factors be reflected in wage rates? The building tradesman says yes.

But today his resentment is directed toward the Administration for ignoring all these factors and focusing on the hourly wage rate as an inflationary villain.

In New York, a worker on a 50-story office building told a newsman "if the President wants to do something about prices, tell him to check that delicatessen across the street. I just paid a buck eighty-five for a sandwich and a cup of coffee."

The Administration's swat-labor approach drew other criticism, too, from AFL-CIO Pres. George Meany to company executives, home builders and economists.

Meany charged the worker is the victim, not the cause, of high prices. It was unfair of Nixon to single out construction wages and shut his eyes to all other factors, he said.

The AFL-CIO Building & Construction Trades Dept., which represents more than 3.5 million union construction workers, also denounced the action. BCTD Pres. C. J. Haggerty said: "This move by Pres. Nixon, I am sure, was motivated by his advisers, or misadvisers. Suspending the Davis-Bacon Act will not halt inflation.

"It won't help unemployment, which is about 14 percent in our industry. It won't help, either, in our effort to bring minority group workers into the construction industry."

John Stastny, president of the 40,000-member National Association of Home Builders, and a member of the President's Committee on Collective Bargaining in the Construction Industry, told a reporter for the newspaper, Newsday, of Long Island, N.Y.:

"In our industry, labor is not the principal trouble right now. High land and materials costs probably have more to do with pushing up the cost of new homes."

Vice Pres. Herbert D. Conant of Turner Construction Co., one of the world's major builders, declared of the freeze on prevailing wages: "I don't think the President is getting very good advice. The people advising him don't know much about the construction industry."

The President's action, "other than irritating a lot of people, isn't going to do anything for anybody," commented Pres. William J. Hunkin of Hunkin-Conkey Construction Co., another major firm.

Michael Sumicrast, chief economist for the home builders association summed up the prevailing opinion: "Actually, labor's share of the homebuilding dollar has been declining for the last 25 years."

Negro Contractors Hit Davis-Bacon Suspension

(Continued from Page 1)

But Peter R. Taylor, president of the Washington contractors group, said at a news conference that the action hasn't done anything to stabilize the construction industry in the Washington metropolitan area. And he said, it is beginning to have an adverse effect on the firms in his association which employ about 5,000 workers, most of them black.

"The Davis-Bacon Act took wages out of competition, thereby causing all workers to get a fair pay for equal labor," said Taylor.

"Many black contractors geared their firms on the strength of the act. This enabled them to compete for labor costs and tended to stabilize the bidding on inner-city construction. All participants in the industry were aware of the labor and material costs on a given job.

"Thus, the only other consideration would be the overhead and profits. With the suspension of the Davis-Bacon Act, this is no longer true," he said.

Members of the association charged that the larger contractors can now reduce wages and then submit much lower bids, forcing the smaller, minority contractor into a bid lower than he can afford.

"This is a tactic often used to drive minority contractors out of business," Taylor said. If this were to happen, he added, "those who are semi-skilled or unskilled will have to barter for whatever they get."

"I think it is a fallacy, a falsehood to say that suspension of the act is in any way aiding the small black and white contractor," he declared.

On the same day of Taylor's news conference, Mar. 24, Project Build, an organization engaged in the training of young black craftsmen in Washington, issued a statement saying it is experiencing difficulty in placing apprentices who were being accepted at $2.89 an hour.

Now, with the suspension of Davis-Bacon, they are being offered $1.60 hourly.

"Prior to the suspension of the Davis-Bacon Act, contractors were well aware that 'slave labor' was not available and they would make no attempt to acquire manpower at such poverty levels of pay," the statement said.

SCHOOL CONSTRUCTION PROJECT undertaken by Local 1969 of the International Brotherhood of Electrical Workers, Redwood City, Calif., is discussed by Local Pres. John Knezevich, right, and Peace Corpsman Chuck Stout. The local is raising $1,200 to build a village school in a developing nation.

IBEW Local Sponsors Village School Overseas

Redwood City, Calif.—Union electrical workers here are raising funds to build a village school in one of the 50 developing nations assisted by the Peace Corps.

Local 1969 of the International Brotherhood of Electrical Workers hopes to raise $1,200 through various community projects to participate in the School Partnership Program of the Peace Corps.

While more than 1,400 such schools have been built since the program was launched in 1964, Local 1969 is the first union to take on the project. A number of unions and labor organizations are involved in other Peace Corps programs.

Local Pres. John Knezevich said the money will be raised through sales, raffles and other means, without tapping the local's official treasury. It hopes to complete the campaign by September.

Construction materials will be purchased with the funds. The people of the village will provide the land and build the school themselves, Knezevich explained. A Peace Corps volunteer in the village will administer the funds and provide on-site assistance. The country and village in which the Local 1969 school will be built are still to be decided. Schools built under the program generally consist of one to four classrooms.

The Peace Corps volunteer will make periodic reports on the project to the local and will coordinate the exchange of letters, pictures and artifacts to promote a better understanding between the villagers and local members.

Local 1969 was chartered by the IBEW in 1957 and has 2,600 members—almost 70 percent of them are women. The local has contracts with 27 manufacturing plants in San Francisco, San Mateo and Santa Clara counties.

Additional information on the School Partnership Program is available at the Peace Corps headquarters in Washington, D.C.

Funding Gap Slows Drive to Curb Pollution

(Continued from Page 1)

inclusion of the Davis-Bacon Act prevailing wage requirement.

"This may not be in the direction of the wind presently blowing from the White House," he told the committee, "but the need for prevailing wage protection to workers on federally financed construction programs was recognized many administrations ago. It has not diminished one hair's breadth despite Pres. Nixon's recent punitive action against construction workers."

Taylor urged the committee also to explore steps that can be taken to prevent companies from falsely claiming that adherence to pollution control standards will result in layoffs or plant closings. And he said in cases where a job loss actually takes place, special Labor Dept. programs should be established to assist the workers in obtaining new jobs and training.

Masters, Mates Affiliate With Longshoremen

Miami Beach, Fla.—The executive boards of the Longshoremen and the Masters, Mates & Pilots have approved a merger of the two organizations and set up committees to complete details "on other facets of the affiliation."

The announcement was made by ILA Pres. Thomas W. Gleason and MM&P Pres. Thomas F. O'Callaghan. The Masters, Mates & Pilots will become the Marine Division of the ILA under the terms of the agreement.

The union presidents said that "both unions recognize" that there is a "revolution in technology and modernization" in the maritime industry and that the "security and future" of both licensed deck officers and longshoremen "are on the block."

The two organizations have a membership of 128,500, the joint statement said. The ILA's 116,000 members load and unload cargoes from ships in East Coast, Gulf of Mexico and Great Lakes ports. The 12,500 members of the MM&P provide the captains, licensed deck officers and pilots for deep sea, inland and Great Lakes merchant marine as well as skilled personnel in a large number of ports.

Gleason, a member of the AFL-CIO Executive Council, said at a press conference at which the merger was announced that "the basic reasons for this affiliation are that it will bring total stability to our organizations and will break the ice in bringing together maritime unions that have been split too long."

Politics and Prices

THE NIXON ADMINISTRATION'S public relations approach to the tremendously important area of economic statistics on unemployment and living costs poses some new doubts and questions.

The cancellation of press briefings by the Bureau of Labor Statistics on the release of monthly statistical reports on job figures and the Consumer Price Index is not a mortal blow to press freedom.

But the decision announced by Labor Sec. James D. Hodgson to issue the information without briefings raises anew the questions of analysis, interpretation and political comment, and perhaps as happened in the Eisenhower Administration, leads to a questioning of the accuracy and the integrity of the statistics themselves.

On one point there is widespread agreement—that the BLS has demonstrated over years of statistical reporting under varying political conditions the bureau's overriding integrity.

This has not been a simple matter. Tremendously important decisions by government, business, unions and other segments of society rest on the accuracy and integrity of BLS statistics. And over the years there have been efforts to exploit the monthly figures for political gain.

IN THE EARLY DAYS of the Kennedy Administration this problem came into sharp focus because of the political uses of BLS figures made in the final years of the Eisenhower Administration, according to Eileen Shanahan of the New York Times, who commented:

"General Eisenhower's Secretary of Labor, James P. Mitchell, would sometimes announce the figures before the Bureau of Labor Statistics could. And he—and President Eisenhower himself—were strikingly inconsistent about their use of seasonally adjusted or not seasonally adjusted figures (usually emphasizing those that looked most favorable).

"Some similar things are occurring now as policy-making officials increasingly comment on the various economic statistics."

The consequences of the public relations treatment of economic statistics in the late 1950s, she notes, were that "many informed individuals across the nation began to doubt the accuracy and integrity of the statistics themselves. . . ."

Pres. Kennedy established the Gordon Committee to examine the problem and it came in with a series of recommendations and stressed that publishing unemployment statistics "in a non-political context cannot be overemphasized."

This is the issue in the cancellation of the BLS briefings—not that reporters will have to dig into the statistical information without formal guidance from the trained technicians of the bureau.

Without the interpretation and analysis that only trained economists working as career civil servants can offer, the political interpretation offered by the White House or its representatives will gain a new currency and raise new questions about basic economic data that will impair intelligent policy-making.

A Word Edgewise:

U.S. and Israel Short-Changed On Peace Talks Ground Rules

By John P. Roche

THE OTHER NIGHT one of our local radio stations, which specializes in good music, was off doing its duty to the public interest by sponsoring "controversy." Assuming it would return to Bach in a few minutes, I left the station on but mentally tuned out.

The problem, however, was that the speaker's voice was somehow familiar. He was in a rage about our refusal to engage in genuine negotiations, about our refusal to bargain in good faith, about our absurd faith in a military solution. I had just observed, slightly profanely, that the peace crowd ought to get a new tape, when I discovered it has. The familiar voice was not talking about the United States and the Vietnamese Communists; he was referring to Israel and the Arabs.

For those who have never watched the Communists employ negotiations as a weapons-system, the current Israeli and American predicaments are instructive. The basic gambit is the non-negotiable precondition for negotiations.

We have been told for at least six years, for example, that productive negotiations with the Hanoi regime could start in half an hour once we have a) agreed to pull out all our troops, and b) busted the Saigon government. Of course, this would leave nothing for the "genuine negotiators" to negotiate about except, as one sardonic North Vietnamese put it, what music the Americans would like played for their departure.

The U.S. government has to stonewall in the face of this bogus generosity, though in the process it gets a reputation for inflexibility, stubbornness, if not sheer international malevolence. The ubiquitous U Thant, along with various spokesmen for the "Third World," the worldwide Communist agitprop apparatus, and a number of innocent men and women of good will all agree that we are willfully refusing to compromise and thus continuing the war.

Now the Israelis are in the same boat. They have been handed a bogus proposition, and roughly the same cast of characters is out jumping up and down, accusing Jerusalem of aggressive, militaristic, imperialistic greed. In essence, Gunnar Jarring (with apparent United States support) has told Israel that as an indication of its sincere desire to negotiate a permanent peace it must withdraw from the territory occupied after the 1967 war.

This bears repeating: Jarring has not moved to bring the Israelis and Arabs together to negotiate an Israeli withdrawal, to work out a map. He has handed Israel this requirement as a precondition for genuine negotiations. This is just one more variation on a classic gambit.

If Israel were not a democratic state sincerely interested in peace, the Israelis could treat the whole affair as an exercise in political warfare. The appropriate response, for instance, would be to gather together a group of disaffected Egyptians and set them up as the "legitimate government of Egypt."

This "Gaza government" would call upon the Egyptian people to rise against the Soviets and their puppet Anwar Sadat, would demand admission to the United Nations, ask for recognition by other nations, and—most important—negotiate a peace treaty with the Israelis. (This is a rerun of the Polish ploy that Joseph Stalin devised to destroy the non-Communist Polish government-in-exile during World War II.)

THE TROUBLE IS that democratic societies are incapable of playing games of this sort. Madame Binh claims to represent a Viet Cong government at the Paris negotiations, a "government" that has all the clout in South Viet Nam that the "Gaza government" I just set up has in Egypt. But there she is, making speeches.

In contrast, it would take the press about an hour to demolish the "Gaza government" as an Israeli invention. Totalitarian states really have the jump on us when it comes to political warfare.

Our Israeli friends should relax. It's very depressing to be on the receiving end of one of these negotiating campaigns, but the alternative is to give away the ball game before it even starts.

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Over Recount on Deaths:

Black Panther Episode Indicts Knee-Jerk Reaction of Press

The following is excerpted from an an article in the Wall Street Journal of Mar. 17, 1971 entitled "Those 28 Panthers—and the Press," by Robert L. Bartley of the paper's Washington Bureau.

A RECENT ARTICLE in the New Yorker punctured the myth about 28 Black Panthers being killed by police in 1968 and 1969, but it seems to have spawned a few myths of its own. The first is that the substance of the information in the story is startlingly new. And that gives rise to the second, that the lesson of widespread acceptance of the 28-death figure in the press is merely that journalists ought not to be careless.

The 28-death figure originally came from Charles R. Garry, a lawyer who represents the Panthers in court. He made the complaint shortly after two Panthers were killed in an orgy of police gunfire in Chicago. His complaint gave rise to talk of "genocide" and a national police conspiracy to eradicate the Panthers.

Edward Jay Epstein, author of the New Yorker article. reports that both the New York Times and the Washington Post, after giving Mr. Garry as the source in their initial articles, subsequently used the figure as a fact, without attribution. It was also treated with utmost seriousness by Time, Newsweek and other publications that did not happen to commit careless slips in their attributions. As Mr. Epstein traces so well, the charge fed on itself: the newspapers printed the figure, civil rights leaders read the newspapers and repeated it, newspapers quoted the civil rights leaders citing the figure, etc., etc.

The New Yorker article has created quite a stir among the press. The Washington Post published a long editorial finding itself "guilty" of "reinforcing a misconception." Time said it "served to remind newsmen they can never be too careful." The Washington Star found a major sin of omission: "No major newspaper, it seems, did what Epstein did. None of us asked Garry just who those 28 victims were."

If the Star had checked its facts a little more carefully, it would have discovered that the New York Times is far too great a newspaper to have left itself open to so simple-minded a charge. The Chicago raid that triggered the Garry charges and the "genocide" talk took place on Dec. 4, 1969. On Dec. 21, 1969, the Times published the story that resulted when Earl Caldwell, who covers the Panthers for the Times in San Francisco, asked Mr. Garry who the 28 victims were.

Mr. Caldwell reported that Mr. Garry responded with a list of not 28 but 19 names of Panthers who had "died violently since March of 1968." Of these, Mr. Garry attributed only 12 deaths to the police; the others had been killed by rival black nationalists, by a merchant or in unexplained violence. The 12 included Alex Rackley, a victim whom several Panthers were already under indictment for killing. One victim, by Mr. Garry's own account, was threatening a policeman with a rifle when he was shot. One case with no details was listed as "killed by police agent."

The remaining nine died in shootouts with police. Mr. Caldwell's story balanced Mr. Garry's list with details attributed to "sources" but clearly relating the police or official side of events. The details made clear that it was at least a matter of dispute who fired first in these cases, and that police officers had also been killed and wounded in some of the exchanges of gunfire.

All this has been a matter of public information for nearly 15 months now. In case you missed it in the Times, which was easy enough to do considering that the story was on page 47 of the Sunday edition, it was all repeated in an editorial in this newspaper on Dec. 29, 1969.

So the interesting question is why the figure achieved and maintained such cachet even after this information had been published by two major newspapers? Or to take it a step further, why was that information so completely ignored in December 1969, when today essentially the same information is greeted with fantastic word-of-mouth and a consensus of mea culpa?

The answers, almost surely, are to be found in the temper of the nation. In the last months of 1969 a decade of social turmoil was boiling to a climax. . . . Such an over-excited atmosphere can bear heavily on what seems credible and what incredible, what seems startling and what seems proforma.

NOT EVERYONE reacts the same way, but obviously a substantial and influential segment of the American people was willing to take charges of "genocide" seriously. Especially in the immediate wake of the Chicago raid, details from police were published and read merely as a matter of record. The most morally concerned segment of the nation was willing to credit any indictment of the police, society and the national Administration.

Mr. Epstein's article is a measure of how the national temper has changed. People on both sides drew back from excesses of excitement after Cambodia and Kent State, and particularly after the 1970 congressional elections. The magnificent common sense of the common man again prevailed, managing in one election to rebuff both the political strategy epotomized by Spiro Agnew and the one epitomized by John Kenneth Galbraith.

There is a lesson here for the press, all right, and not merely a general one about the need for double-checking. The lesson for the press, and for its readers, is a far more specific one about the susceptibility of judgments to broad cultural trends. Especially, the lesson is that the national press has a particular set of reactions to cultural stimuli like the intense ones of the late '60s. These are the reactions not of the common man but of the morally concerned elite. And no one circle—even for all its good intentions, the morally concerned one—is always right.

'Cop-Out' on Standards:

Flaws in Revenue-Sharing Plan Threaten National Priorities

SEPARATION of the "responsibility for raising money from the responsibility for spending" it, as Pres. Nixon's revenue-sharing plan would do, fails to assure that nationally collected revenues will be used to meet national priorities, AFL-CIO Economist Arnold Cantor warned.

Using the federal government "as a conduit—as a collection agency"—to funnel money back to state and local governments with no standards of performance or priority is "a cop-out," declared Cantor.

"Nobody's arguing the need for federal aid to state and local governments," Cantor asserted, stressing that "the argument really is on the delivery system." Cantor, of the federation's Dept. of Research, appeared on the AFL-CIO produced network radio interview, Labor News Conference, broadcast Tuesdays on Mutual radio.

Cantor said it is "unfortunate" that the Administration's revenue-sharing plan is viewed by many people as "a power struggle between local officials and federal officials." As a result, he said, "the real needs are getting lost in the shuffle."

Noting that the President would lump the hundreds of current federal grant-in-aid programs into "five or six big categories," Cantor said that consolidation is "desirable." He noted that such a multitude of "categorical grants-in-aid" can result in programs so narrowly drawn that help can't be channeled where it is most needed.

WHILE THE AFL-CIO does favor consolidating categorical programs, Cantor stressed that state and local governments should be required to designate how the money will be used, and Congress should set standards that will assure its use to meet national priorities.

"It is appropriate" that federal tax dollars collected in comparatively affluent areas be used to ease the "tremendous imbalances" in poorer areas, he declared. But, he added, it must be "controlled at the federal level," with "a congressman I have something to do with electing" having a voice in how those funds are used.

By Press Associates, Inc.

FORTY YEARS AGO three Republicans—Pres. Herbert Hoover, Sen. James J. Davis and Rep. Robert Bacon—contrived to have enacted into law the Davis-Bacon Act.

It was enacted in the middle of the worst depression this country has ever had. It was designed to help the unemployed and to keep up the standard of living of America's construction workers.

It has now taken another Republican—almost half a century later—to knock it off the books, at least for the present.

Pres. Nixon suspended the Davis-Bacon Act under which government contractors must pay prevailing wages, in the name of his war on inflation. Other members of his Administration, however, have not been so restrained. Assistant Sec. of Labor Arthur Fletcher, for example, has used the suspension as part of an open "union-busting" crusade.

Davis-Bacon has more than an economic meaning to American union workers, notably construction workers whom it directly affects. It has a symbolic meaning, first developed at a time when millions of Americans were out of work, when American standards of living were on the downgrade and when labor unions were all but helpless to alleviate conditions.

Pres. Hoover threw the full force of his Administration into enactment of the Davis-Bacon legislation that was strongly supported by the American Federation of Labor and all of the liberal forces in Congress.

Supporters of the bill also included Fiorello La Guardia, of New York mayoralty fame; Rep. John McCormack, later Speaker of the House; Sen. James Mead, New York liberal, and many others who played vital roles in the New Deal days.

It was Hoover himself who complained that his make-work half-billion-dollar federal building program was being ruined by unscrupulous contractors who employed alien labor and transported workers great distances to areas where heavy unemployment already existed.

There were other similar complaints. La Guardia told of visiting construction sites in the North where he saw workers from other parts of the country "huddled in shacks, living under most wretched conditions and being paid wages far below the standard."

BACON SPOKE OF "irresponsible contractors, with itinerant, cheap, bootleg labor," who had made it necessary for the government not only to protect workers but to protect itself.

The picture they painted was startlingly similar to the picture of migratory farm labor today—workers imported from great distances, paid low wages, housed miserably, exploited viciously.

How far unscrupulous contractors will go in taking advantage of suspension of the act remains to be seen. But already there are strong signs that the suspension touches the problem of inflation only peripherally, that its real impact is on the use to which the suspension is made to undermine and perhaps even "bust" the unions concerned.

Sec. of Housing & Urban Development George Romney had scarcely taken office in 1969 when he began an open campaign against the construction unions, accusing them of excessive wage gains and of practices that held up the housing industry.

Assistant Sec. of Labor Fletcher has been conducting a similar drive in the name of placing minority workers in the ranks of apprentices and journeymen. He has now turned to gloating at what he believes is the breakdown of union strength in the construction industry. Only recently he told a contractors' meeting that now was their chance to weaken the construction unions.

Yet, today minority workers are beginning to make their way into the ranks of organized labor, to become part of the progress that has been painfully made by organized workers over the long years. It would scarcely seem a time to undermine the very structure of which they are so rapidly becoming a part. And, on the largest scene, it would scarcely be the time to turn the clock back to the conditions of 40 years ago.

A MAJOR FLAW in Pres. Nixon's revenue-sharing plan is failure to tie the "responsibility for raising money" to the "responsibility for spending" it to guarantee that nationally collected tax dollars go to meet national priorities, AFL-CIO Economist Arnold Cantor, center, declared on Labor News Conference. He was questioned by Murray Seeger, left, of the Los Angeles Times, and Spencer Rich of the Washington Post.

House Rollcall Vote on Funds for SST

The House on Mar. 18 voted 215-204 against appropriating funds to continue development of an American-built supersonic airliner. The AFL-CIO supported the SST as important to preservation of the nation's leadership in aircraft manufacturing—one of the nation's basic industries.

On labor's scorecard, the 114 Democrats and 90 Republicans who voted for SST financing cast Right votes (R); the 131 Democrats and 84 Republicans who voted against funds were Wrong (W).

Numerals show congressional districts; PR—paired right; PW—paired wrong; A—absent and not paired.

Congress Cuts Off Funds:

SST Action Shakes Aerospace Industry

Refusal by Congress to vote the money needed to continue development of an American-built supersonic airliner has put a big question mark over the future of the nation's depressed aerospace industry and its dwindling work force.

The Senate, by a 51-46 vote, confirmed the decision of the House a week earlier to drop SST funds from a Dept. of Transportation appropriations bill covering the balance of this fiscal year—until June 30, 1971.

Existing spending authority expires at the end of this month, and Boeing Aircraft Co. announced in Seattle that it will have to lay off as many as 7,000 workers as a result of the congressional decision. Seattle's unemployment rate is currently 12.7 percent, one of the highest in the natiion.

The SST votes in both the House and Senate led to unusual alliances on both sides of the issue, splitting both party and ideological ranks.

Most—but not by any means all—of the liberals of both parties ended up voting against the SST on the ground that there are higher and more deserving priorities for the nation's tax dollars.

Other liberals argued—as did the AFL-CIO—that supersonic airliners are already being built by Britain, France and the Soviet Union and the only effect of abandoning the U.S. effort would be to cripple the future of the nation's aircraft industry whose employment and export sales are vital to the American economy.

Most conservatives went along with the Administration in support of the SST program, which was launched by Pres. Kennedy back in 1962.

But some of the most conservative members of Congress—such as Rep. H. R. Gross (R-Iowa) and Sen. Harry F. Byrd (D-Va.)—opposed further funding just as they have opposed most federal spending.

Their votes, in fact, more than tipped the balance since even a small shift in either the House or Senate would have reversed the outcome.

The bruising congressional battle could be renewed in a few months, when the appropriations bills for the fiscal year starting July 1 begin to move through Congress. Or, alternatively, efforts might be made to provide some form of government backing for private financing of the balance of the prototype development.

Under the existing financial agreement, the federal government would recover its investment and possibly a profit from royalties on the SST if it proved successful commercially and moved into large-scale production.

Senate Rollcall Vote On Funds for SST

The Senate on Mar. 24 voted 51-46 to cut off further federal funds for development of a supersonic airliner.

Labor supported the position of the 19 Democrats and 27 Republicans who voted for SST funds. Opposed were 34 Democrats and 17 Republicans.

MANPOWER PROGRAMS of the AFL-CIO Human Resources Development Institute are discussed at a three-day conference in Philadelphia. From left are West Virginia State AFL-CIO Pres. Miles C. Stanley, HRDI Regional Director Ben Stahl, HRDI Executive Director Robert M. McGlotten and Virginia State AFL-CIO Pres. Julian F. Carper.

HRDI Parleys Explore Wider Job Programs

Regional conferences conducted in Atlanta and Philadelphia by the AFL-CIO Human Resources Development Institute explored organized labor's efforts to broaden its manpower programs for unemployed and under-employed workers.

Particular emphasis was put on the role of unions in finding jobs or training opportunities for disadvantaged workers despite rising unemployment.

HRDI Pres. Julius F. Rothman outlined labor's historic function of assisting the disadvantaged and cooperating with federal programs with similar goals.

Executive Director Robert M. McGlotten described the new HRDI Job Development & Placement program now operating in 11 cities and the Veterans' Assistance Program for returning veterans.

At the three-day Philadelphia conference, AFL-CIO Civil Rights Director Donald Slaiman reported on increasing minority representation in the building trades through Appenticeship Outreach and journeymen's training and upgrading efforts.

Attending the Atlanta conference were key officials of city and state central labor bodies from Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina and Tennessee.

The Philadelphia sessions drew participants from Delaware, Maryland, Pennsylvania, Virginia, West Virginia and the District of Columbia.

Shop Stewards Manual Updated

A newly revised edition of the AFL-CIO Manual for Shop Stewards is now off the press.

The 66-page booklet deals extensively with the steward's key role in resolving grievances and dealing with management. But it also discusses the broader role of the steward as the "first-line leadership" of his union. A foreword by AFL-CIO Pres. George Meany stresses that point.

Single copies of the manual are 20 cents; the bulk rate is $15 for 100. It is AFL-CIO Publication No. 75 and may be ordered from the AFL-CIO Pamphlet Division, 815 16th Street, N.W., Washington, D.C. 20006.

House Panel Approves Public Works Program

(Continued from Page 1)

as "redevelopment areas" where unemployment has been persistent.

The proposed $2 billion authorization would cover a two-year period. The actual amount, up to that ceiling, would depend on the appropriations voted by Congress—and on the willingness of the President to spend the money Congress votes.

While refraining thus far from an actual veto threat, the Administration has opposed the concept of the program and argued instead for its token "revenue-sharing" grants to states and cities with "no strings" on how the money is used.

The Public Works Committee joined to the bill a four-year extension of the popular Appalachian Regional Development program, that has already passed the Senate.

That, too, is opposed by the Nixon Administration which wants to phase it out within a year as part of the revenue-sharing cutback of existing programs. But Senate Republicans joined with Democrats in approving a four-year extension by a one-sided 77-3 vote.

Campaign Spending

In another development, the White House appeared to have second thoughts on whether there should be a limit on spending in political campaigns and sought to reopen hearings before the Senate Commerce Committee.

The political fact of life is that more well-heeled businessmen support Republicans than Democrats, and the GOP has consistently outspent Democrats in presidential campaigns and in most campaigns for lesser offices.

Pres. Nixon last year vetoed a bill that would have imposed spending ceilings on political broadcasts over television and radio, claiming it would be "discriminatory" and also ineffective because the excess money could be spent for other campaign expenses.

The Senate Commerce Committee, its hearings concluded, was preparing to act on a bill setting overall limits on campaign spending when the White House intervened.

Deputy Attorney Gen. Richard G. Kleindienst asked that hearings be reopened so that the Justice Dept. could present its position which, he said, could not be adequately covered in a letter. Five Republican members of the committee asked also that other witnesses be called, who could testify on constitutional issues involved. And Republican objections blocked a meeting of the committee on the seldom-used ground that the Senate was in session.

Just before the GOP began its efforts to delay the legislation, Pres. Nixon said in a White House interview, "We do favor a limitation on expenses. There's no question about that."

Democrat Wins D.C. Election To House Seat

The District of Columbia elected its first representative to Congress in nearly 100 years—Democrat Walter E. Fauntroy, a Baptist minister who was an associate of the late Rev. Martin Luther King, Jr.

He will have a vote in the House District of Columbia Committee and will be able to speak—but not vote—on the floor of the House.

Fauntroy won the Democratic nomination in a field of seven candidates in January. In the general election, he easily outdistanced Republican John A. Nevius, 65,905 to 28,349. The only one of four petition-nominated candidates to poll a significant vote was Julius W. Hobson, with 15,114.

Fauntroy's election theme, in the predominantly Negro capital city, was "black and white together."

State-County, NEA Join in Coalition

The State, County & Municipal Employes union and the National Education Association have announced the formation of a new Coalition of Public Employe Organizations, subject to ratification by the executive boards of both groups.

The goals of the coalition, as announced by SCME Pres. Jerry Wurf and NEA Pres. Helen Bain, are to secure enactment of meaningful collective bargaining laws for all public workers and establish a "separate, cabinet-level post for education."

The statement said that other public employe organizations "with similar aims" will be encouraged to join and that the coalition is designed to allow public employe organizations to maintain their own identities while working cooperatively for common goals.

Nixon Fills Key Posts:

Alan Burch of OEIU On Job Safety Panel

Pres. Nixon has nominated Alan F. Burch, safety director of the Operating Engineers, as one of three members of the new commission which will review violations of workplace standards under the Occupational Safety & Health Act. The law goes into effect Apr. 28.

Nixon also named George C. Guenther as Assistant Secretary of Labor to oversee the enforcement of the act. Guenther has been director of the Bureau of Labor Standards since September, 1969.

The Occupational Safety & Health Review Commission will include representatives of government and industry as well as labor. It will be headed by Robert D. Moran, who was named for a six-year term as chairman.

James F. Van Namee, accident prevention administrator for Westinghouse Electric Corp., was appointed to a four-year term on the commission.

Burch, who has headed the Operating Engineers' safety department for the past six years, was appointed to a two-year term on the commission. He is the past chairman of the National Safety Council's Labor Conference.

Labor Sec. James D. Hodgson also announced that Nixon has nominated Horace E. Menasco, deputy assistant secretary for workplace standards, to succeed Moran as administrator of both the Wage & Hour Division and the Workplace Standards Administration of the Labor Dept.

All of the nominations require Senate confirmation.

Hodgson noted that the provisions of the act will cover about 57 million workers in some 4.1 million places of employment.

He said the Occupational Safety & Health Administration will operate through 10 regional offices with 35 to 40 area offices in the regions.

The administration's staff is expected to number 2,000 when fully operative. Two-thirds of staff, including the compliance officers, will be in field operations.

Hodgson said he anticipates a force of 625 persons in the administration by mid-summer. He reported that the compliance officers are being selected "very carefully" from nearly 4,000 applicants, mainly from the ranks of safety engineers, safety officers and industrial hygienists.

The Labor Dept. will depend on states to enforce their own safety standards until the federal law is fully implemented, he said.

The review commission will consider appeals from employers who are found in noncompliance with the federal standards and from workers over the length of time allowed for correcting unsafe working conditions. The commission's decisions may be appealed to the U.S. Courts of Appeal.

The three commission members will serve fulltime. Moran will be paid $40,000 annually and Burch and Van Namee $38,000.

A new training school was set up to prepare the compliance officers for their responsibilities in inspecting workplaces covered by the act.

Guenther referred to the first class of 28 as "trail blazers." He told the trainees that "the success of this program rests on the way it is carried out in the field," and that it is their responsibility.

A new class of 25 or more trainees will be entering the school each week. The curriculum includes both technical and administrative subjects.

Initial on-the-job safety and health standards will be adopted "on or soon after Apr. 28," Hodgson reported.

"The standards we promulgate will be essentially those that have been issued by nationally recognized standards-producing organizations," he said.

Still in the Hole

Railpax Network Seen Eliminating 6,000 Jobs

The National Railroad Passenger Corp., established by Congress to operate most of the nation's passenger trains after May 1, announced its selection of routes over which 184 daily or thrice-weekly runs will link 114 cities of 100,000 population or more.

Six states and several cities will have no passenger service whatever when the Railpax system begins functioning about May 11. The cities include Cleveland, headquarters of two rail systems and two major railroad unions. The states are Maine, New Hampshire and Vermont in the East, and Arkansas, South Dakota and Wyoming in the South and Northwest.

Eight Railpax incorporators met the press in Washington, D.C., Mar. 22 to explain their plans and the reasons for their choice of routes between key points picked by the Dept. of Transportation.

"What we are announcing today represents our best judgment," said Chairman David W. Kendall, former corporation lawyer and Eisenhower Administration official. "We realize that others may take issue with us."

Pres. Charles Luna of the United Transportation Union, a member of the board of incorporators, told newsmen the new system will cost the jobs of more than 6,000 of the 16,000 workers now employed in rail passenger service.

His union and others are meeting with management now to negotiate protective agreements to cushion the loss of jobs and wages expected when senior employes "bump" those with less service, Luna said.

The board of incorporators will choose a president and other corporation officers to run the system. Kendall said Railpax is "taking the best equipment—some 1,500 out of 3,300 existing passenger cars, operated by 22 different railroads" under schedules mostly not coordinated with one another, and in the face of a loss estimated at more than $235 million a year.

Incorporator Arthur D. Lewis said Railpax expects revenues of about $150 million the first year—$100 million shy of anticipated costs.

The routes chosen by Railpax were among alternate choices offered by the Transportation Dept. between 21 pairs of cities the department said Railpax must serve. The corporation decided to provide no passenger service west of Buffalo on the former New York-to-Chicago route of the Twentieth Century Limited, the Pacemaker and other once-popular trains. Instead it chose to use the route of the Broadway Limited, through Pittsburgh, Canton, O., and South Bend instead of through Cleveland, Toledo and South Bend.

Kendall said in a letter to 50 state governors that "limited finances and prudent management" limit service, at least in the beginning, to a "small basic system."

The Rail Passenger Service Act of 1970, however, provides that additional service may be negotiated with state, regional or local agencies that agree to reimburse Railpax for at least two thirds of the extra cost.

Passenger trains will be run by cooperating railroads under contracts now being negotiated with Railpax. The corporation has $40 million in cash from the federal treasury, $100 million in federal loan guarantees, and another $200 million in cash, loans or equipment that railroads will give in exchange for dropping their own passenger service.

Nearly two dozen railroads have agreed to date to turn their passenger service over to Railpax. Those who do not contract with the semi-public corporation must continue to provide existing service, under the Passenger Service Act. They have been given until May 1 to decide.

New CPI Rise Saps Workers' Real Earnings

(Continued from Page 1)

ary drew divergent reactions from Labor Sec. James D. Hodgson and Assistant BLS Commissioner Harold Goldstein.

Hodgson saw in the unemployment statistics "an additional indication from the labor market that the economy is moving in a favorable direction," but Goldstein told reporters at the monthly briefing the job picture "was sort of mixed."

Hodgson's comments were contained in a news release made available during the press conference on the BLS figures, and newsmen asked Goldstein how the Secretary's interpretation squared with his. Goldstein replied that it was not his job to support or refute the Secretary's statements.

Hodgson expressed further optimism over the February CPI report, describing the small rise in the index as "good news."

But one of the most basic costs — food — posted its biggest increase since last May.

Food prices rose four-tenths of 1 percent during February on a seasonally adjusted basis.

The overall price increase in consumer services showed only a slight increase, but the cost of medical care continued to soar, rising seven-tenths of 1 percent over January.

About 551.000 workers will receive cost-of-living wage increases based on the February index.

Approximately 530,000 workers, including 527,000 employes in the trucking industry, will receive annual hourly increases ranging from 3 cents to 8 cents based on the national index.

3-27-71

'Rosy' Economic View Challenged by Meany

(Continued from Page 1)

in February is a sign of economic recovery.

"Hidden behind the White House rhetoric," Meany said, "is the fact that the civilian labor force has actually declined in the past few months, that there has been a substantial increase in hidden unemployment and that employment in the private sector is off considerably."

The AFL-CIO backed up its position with these facts:

- The small increase in employment over the two-month period—74,000 out of a labor force of more than 83 million—is not only statistically insignificant but is substantially less than could be expected by the normal growth of the labor force.
- The big factor that made it appear that unemployment had gone down was the decline of 225,000 in the civilian labor force over the two month period.

That is "the opposite" of progress, since it means that these are people who dropped out of the active search for work—and therefore were no longer counted as unemployed—because there were no jobs available in their areas.

- By normal standards, the labor force should have increased by about 320,000 between December and February. The decline in the labor force thus points to a "hidden unemployment" of about 500,000.

The conclusion, the AFL-CIO analysis found, is that the seeming decline in the unemployment rate "was mainly the result of the economy's failure to produce the needed expansion of job opportunities, rather than a substantial rise of employment."

And considering the continuing drop in employment during most of 1970, the lack of a "significant" rise in jobs in recent months, "is a sure sign of general economic stagnation and weakness in the job markets."

Taking a look at the economy as a whole, the AFL-CIO economists found only two areas of job improvement during the past year—in trade and services, where many of the jobs are part-time, and in employment with local and state governments.

By contrast, employment in manufacturing is 1.6 million under what it was less than a year-and-a-half ago, and construction is down 300,000.

States Rush to Ratify Voting Age Amendment

(Continued from Page 1)

ware, Tennessee, Connecticut, Washington, Massachusetts and Hawaii.

The AFL-CIO has had a long-standing policy in support of the right to vote at 18, and Federation Pres. George Meany had testified for it at congressional hearings.

After the Supreme Court ruling, the AFL-CIO Executive Council strongly endorsed the constitutional amendment that is now awaiting ratification.

"It is impractical to have one age standard for voting for federal office and another for state office," the council said. And in any event, it stressed, "we believe that 18-year-olds should have the vote."

Under the pending constitutional amendment, there would be no difference in registration or voting procedures for those 18-21 and older voters.

"The right of citizens of the United States, who are 18 years of age or older, to vote shall not be denied or abridged by the United States or by any state on account of age," the amendment reads. It concludes: "The Congress shall have the power to enforce this article by appropriate legislation."

San Antonio Trades Get Outreach Grant

San Antonio, Tex.—The San Antonio Building & Construction Trades Council received its third federal contract to prepare an additional 40 minority youths for apprenticeships in the trades.

The new one-year contract for $47,272 from the Labor Dept. will run through next January, Manpower Administrator Paul J. Fasser, Jr., said.

In two previous contracts, the council placed 68 minority youths in building trades apprenticeships.

Senate Okays $1.75 Billion For Jobs in Public Service

Appeals Court Backs UTU:

Rail Union Upheld On Selective Strike

By Eugene A. Kelly

The U.S. Court of Appeals for the District of Columbia ruled that the United Transportation Union has the legal right to conduct a selective strike against railroads in pursuit of a national contract agreement, provided it acts in good faith.

Reversing a District Court decision of Mar. 10, a three-judge panel sent the case back "for such further proceedings as may become appropriate" in the light of future developments.

The only proviso the appeals judges attached to their ruling was that the union must give reasonable notice of a strike, and railroad management must give like notice of a lockout. The judges said two weeks "is a bench mark for reasonable notice."

UTU Pres. Charles Luna called the decision a "step forward" toward settlement of the long contract dispute with 170 major railroads. Union Counsel Lester Schoene said the court adopted "completely" the UTU's legal position in urging the judges to set aside the ruling by District Judge John H. Pratt that a union must strike all railroads or none under the Railway Labor Act.

"The union is giving careful consideration to the court's opinion, and will steer its course along those lines," Schoene said.

Appeals Judge Harold Leventhal wrote the opinion reversing the lower court for himself and Judges J. Skelly Wright and Malcolm R. Wilkey.

The dispute grew out of a strike called last Dec. 10 by the UTU and three other unions. Terms have since been reached with the carriers

Senate Vote Falls Shy on Jobless Aid

The Senate narrowly turned down a move to liberalize the extended unemployment benefits program, but left the door open for future action.

Sen. Birch Bayh (D-Ind.) had the support of a bipartisan liberal-moderate coalition in an effort to tack an unemployment compensation amendment onto an unrelated House-passed tax bill—a not uncommon form of legislative shortcut.

His amendment would have eased the present stiff requirement for triggering an additional 13 weeks of benefits for workers who have exhausted their state unemployment insurance.

It also would have provided full federal financing instead of the 50-50 matching fomula written into a law Congress passed last year.

Bayh's amendment was killed when a motion to table it was

THE STEELWORKERS will seek a "very substantial" wage increase for 450,000 members in negotiations with the basic steel industry this year, USWA Pres. I. W. Abel tells newsmen in Washington. Shown with Abel at the close of a conference for 600 local union presidents is USWA Vice Pres. Joseph P. Molony. **(Story, Page 3.)**

On Executive Order:

Crafts Pledge Fight For Members Equity

By Tom Castor

The AFL-CIO Building & Construction Trades Dept. said it has "no choice" but to comply with Pres. Nixon's Executive Order imposing controls on construction industry wages, but will press a legal battle to gain "equity for our members."

The order, issued March 29, was accompanied by the President's reinstatement of the Davis-Bacon Act, which requires that the prevailing wage be paid on all federal or federally assisted construction projects.

The presidents of the 17 building trades unions issued a statement the next day declaring that the Nixon order "is fundamentally unfair in applying strict controls to wages and a vague procedure with respect to prices and profits."

They hailed the Davis-Bacon reinstatement, noting again that its suspension on Feb. 23 "did not address itself to the inflationary problem at hand and served no purpose other than to completely confuse the bid and award procedure in almost every locality of the nation."

Nixon's new order, in effect, ties wage increases for the 3.5 million workers represented by the building trades to the 6-percent annual increases prevalent in the 1961-68 period—when the average rise in the cost of living was 2.5 percent a year.

The order does contain a clause permitting additional "equity adjustments . . . where carefully identified," but how the section will be interpreted remained to be seen.

The BCTD presidents said they have directed their legal departments to make extensive analyses of the order "so that an appropriate basis can be secured for making future policy determinations."

(Continued on Page 7)

Bipartisan Vote Passes 2-Year Plan

By David L. Perlman

The Senate voted to set up a public service employment program that the AFL-CIO said is "desperately needed" both by unemployed workers and by local and state governments with jobs to be filled but no money to meet the payroll.

The bipartisan legislation authorizes up to $1.75 billion over a two-year period, with the rate of funding keyed to the level of unemployment. The federal government would pick up 90 percent of the cost of the program.

A smaller-scaled bill was vetoed by Pres. Nixon last year with a sardonic reference to "WPA-type jobs."

Before passing the bill, 62-10, the Senate defeated an attempt to send the legislation back to committee so that it could be pared down and linked to the President's revenue-sharing plan. The recommittal motion by Republicans Peter H. Dominick (Colo.) and Winston L. Prouty (Vt.) was beaten, 44-29.

By an even larger margin, the Senate rejected an amendment by Sen. Robert Taft, Jr. (R-Ohio) to lower the minimum wage for persons hired under the program to $1.30 an hour, and to set a ceiling of $500 a month on their wages.

Despite the Administration's opposition, a number of Republicans joined in voting for the measure which was introduced by Sen. Gaylord Nelson (D-Wis.) and co-sponsored by Sen. Jacob K. Javits (R-N.Y.) and 32 other senators.

Similar bills are being considered

(Continued on Page 7)

House Democrats Press Minimum Wage Boost

The House Democratic leadership has given the green light to legislation that would increase the federal minimum wage to $2 an hour by Jan. 1, 1973, and extend coverage to as many as 7 million workers not now protected by the Fair Labor Standards Act.

House Speaker Carl Albert (D-Okla.) said he expected "broad support" for the bill introduced by Rep. John H. Dent (D-Pa.) and 18 other Democrats.

The AFL-CIO Executive Council, at its winter meeting, called for an immediate increase in the minimum wage to at least $2 and extension of coverage to all workers.

Rep. Carl D. Perkins (D-Ky.), chairman of the House Labor Committee, pledged his "wholehearted cooperation" in securing passage of a higher minimum wage. Hearings have been set for April 20 and 22.

Dent predicted the bill would be ready for a House vote within four to five weeks.

Dent's bill would increase the minimum wage for all workers now covered by the $1.60 minimum to $1.80 on Jan. 1, 1972. A year later, the figure would reach the $2 level.

Agricultural workers, whose minimum wage is currently frozen at $1.30, would go to $1.50 on Aug. 1. Further steps would bring them to the $2 level on Jan. 1, 1974.

(Continued on Page 2)

AMA Puts $1.5 Million Into Health Care Battle

Organized doctors, opposed to enactment of the National Health Security program endorsed by the AFL-CIO, will begin a $1.5 million advertising campaign in May "to tell medicine's story to the public."

Announcement of the expensive promotional campaign came as the American Medical Association launched its political drive to defeat National Health Security.

The AMA's board of trustees has contracted with the firm of McCann-Erickson to prepare the advertising that will appear in newspapers, magazines and on television. The contract calls for spending $750,000 in each of fiscal 1971 and 1972.

The advertising is in addition to the activities of the organization's political arm, AMPAC, according to the weekly AMA publication American Medical News.

AMPAC enlisted the aid of Sen. Robert Dole (R-Kan.), the chairman of the Republican National Committee, at a Washington workshop promoting the AMA's health care proposal, "Medicredit."

AMPAC Chairman Hoyt D.

(Continued on Page 6)

Musicians Win Rate Boost for Commercials

New York—Members of the Musicians who make commercial spot announcements for television and radio broadcasts have approved a new two-year contract providing a 10 percent increase in scale and other benefits.

AFM Pres. Hal Davis said the members involved voted 640 to 231 to accept a new agreement with the Association of National Advertisers, Inc., and the American Association of Advertising Agencies, Inc.

Davis said the contract contains new provisions for payment to musicians for the use of commercial spots in other countries and for "explicit recognition of the federation's position that employers cannot, without the consent of the AFM, use the spots produced under the agreement for anything other than free TV and radio broadcasting."

The contract is retroactive to Mar. 1 and expires Apr. 1, 1973. The basic scale will be $44 an hour for instrumental musicians, five men or more, up $4. For sidemen, the rate will be $50.80 a day—up $3.62. Employer pension contributions of 6.5 percent continue for both groups.

Re-use payments for the 13-week cycle after the first cycle will continue to be based on 50 percent of the minimum session fee, plus the 6.5 percent pension contribution.

Other changes include a mandatory rest period of 5 minutes the first hour, 10 minutes in each subsequent hour; another paid holiday—Washington's Birthday—and a 10-percent wage increase for music arrangers, orchestrators, copyists and librarians.

THE NEED TO SAFEGUARD interests of workers in both the United States and Japan is stressed in a statement signed by AFL-CIO Pres. George Meany and Vice Pres. Ichiro Shioji of the Japanese Confederation of Labor (DOMEI). The agreement was drafted at a meeting at the AFL-CIO headquarters. Standing are DOMEI General Sec. Takumi Shigeeda and AFL-CIO Vice Pres. S. Frank Raftery.

U.S., Japan Labor Cite Mutual Goals, Problems

The AFL-CIO and the Japanese Confederation of Labor (DOMEI) agreed to work for domestic wage policies and international trade practices that are not harmful to workers of either country.

Representatives of the two international labor federations stressed that their prime task is to safeguard the interests of workers, members and affiliates in their respective lands.

They explored the impact of multinational corporations on employment and wage levels at the third regular meeting in Washington aimed at increasing the understanding between the AFL-CIO and DOMEI.

Representing the AFL-CIO were Pres. George Meany, and Vice Presidents James A. Suffridge, Joseph D. Keenan, Hunter P. Wharton and S. Frank Raftery.

The Japanese delegation was made up of DOMEI Vice Pres. Ichiro Shioji, General Sec. Takumi Shigeeda and Osamu Arakaki of the Dept. of International Affairs.

In a joint statement signed by Meany and Shioji, the two federations warned of "the harm done to employment and wage levels in their respective countries by companies which establish plants in other lands in order to swell their profits by taking advantage of the intolerable low wages in these countries."

"The economic problems caused by multinational enterprises," the statement continued, "are not only theirs, but the common problems for the entire working population of the world."

They agreed to continue to study the problems caused by multinational firms in an effort to achieve an equitable solution.

The federation also agreed to cooperate with DOMEI to meet any difficulties that may occur for workers over the scheduled return of Okinawa to Japan in 1972.

The two parties reaffirmed their objectives to help expand the free and democratic trade union movement throughout the world, particularly in Asia in an effort to bring peace and prosperity to the Asian workers.

The need for closer ties and more frequent meetings designed to solve mutual problems was expressed at the Washington sessions.

"Both organizations consider it worthwhile that their affiliated unions . . . should also be invited to participate in such meetings," the statement said.

The next meeting between the two organizations was set for Tokyo next year.

Seniors Hit 'Stacking' Of White House Panels

Political bias shown by the Nixon Administration has all but destroyed the real significance of the White House Conference on Aging scheduled next Nov. 28 to Dec. 3, Nelson Cruikshank charged at a Senate hearing.

Cruikshank, president of the National Council of Senior Citizens, testified before a joint hearing of the Senate Special Committee on Aging and the Subcommittee on Aging of the Senate Labor & Public Welfare Committee.

The NCSC spokesman questioned "how a conference used by the White House for partisan political purposes can produce a national policy acceptable to a bi-partisan Congress or, for that matter, acceptable to a bi-partisan nation."

The technical committees assigned to analyze problems of the elderly have ratios of up to five Republicans to every Democrat on them, according to Cruikshank. He charged that members were chosen on the basis of their politics rather than their knowledge.

Few of those named to the committees are known to leaders in the field of aging and gerontology, Cruikshank observed. He also criticized the decision to give each of the more than 350 national organizations participating in the conference an equal voice in pre-conference planning.

"With this kind of planning," he said, "the voice of the 3-million-member NCSC will be no louder than that of the Boy Scouts of America, the Diplomatic & Consular Officers, Inc., or the Sex Information & Education Council, all national organizations invited to participate in the Conference."

Even more noteworthy, Cruikshank said, is the fact that "the planners seem to see no difference between an organization set up simply to make money off the needs of the elderly—like managers of proprietary nursing homes—and a non-profit organization whose members are dedicated solely to advancing the welfare of the elderly."

William R. Hutton, NCSC executive director, who also testified at the Senate hearing, charged that the Nixon Administration is phasing out the U.S. Administration on Aging.

He called the 10-percent cutback in funds "the latest dismemberment of this agency which will probably amount to a death blow unless Congress does something about it."

Both witnesses urged the Special Committee on Aging to name a task force or advisory committee to recommend the type of federal agency best designed to promote programs to meet their special needs.

They called for renewed efforts by Congress to assure the low income elderly more governmental programs to provide training and employment for the elderly.

Also, they asked for congressional action to provide an "ombudsman" representative of the elderly, who would be charged with responsibility for making federal programs available where the need is greatest.

Nayder Named to Head Chicago Building Trades

Chicago—Thomas J. Nayder was elected president of the Chicago Building Trades Council to fill the unexpired term of the late Thomas J. Murray.

Nayder, a member of Glaziers Local 27 of the Painters, has been secretary-treasurer of the council since 1958. He also is a vice president of the Illinois State AFL-CIO.

Disputes Plan Set:

Pact Brings End Of Lettuce Boycott

AFL-CIO Pres. George Meany announced resolution of a dispute between the United Farm Workers Organizing Committee, AFL-CIO, and the Western Conference of Teamsters.

The agreement, Meany and UFWOC Director Cesar Chavez said in simultaneous statements, ends the Farm Workers' current lettuce boycott. It provides a method for mutual resolution of problems between the two organizations, establishes an arbitration procedure to resolve disputes.

Under the plan, representatives of the Teamsters and UFWOC will have five days to resolve a disputed matter to their mutual satisfaction. If they fail, the issue will be referred to the Bishops Committee on Farm Labor of the United States Catholic Conference for attempted resolution.

Inability of the bishops' committee to arrive at a mutually satisfactory solution within 15 days will result in referral of the issue to Meany and Frank Fitzsimmons, general vice president of the Teamsters, or to an arbitrator or arbiters appointed by them for final and binding arbitration.

The agreement will remain in effect until Mar. 31, 1974.

UFWOC had announced a moratorium on the lettuce boycott Mar. 17 while discussions with the Teamsters were being held. Both groups had agreed earlier to respect each other's jurisdiction but some growers have refused to abide by the agreement.

Meany said in a statement that he believes "a bright new day is dawning for America's farm workers."

Under the "able and dedicated leadership of Cesar Chavez and his associates," Meany said, "America's farm workers have moved far in recent years. But much more remains to be done before any of us can be satisfied."

The AFL-CIO, Meany declared, is "determined to continue its unstinting efforts to help UFWOC in its quest for basic human dignity for farm workers. We and they are confident we will achieve that goal."

Chavez told a news conference in Salinas, Calif., that growers are being asked to begin contract negotiations with the Farm Workers for agricultural employes represented by his organization.

A boycott against non-union growers of lettuce was launched last Sept. 16 after some growers refused to recognize UFWOC or negotiate with it on the ground that they had contracts with the Teamsters.

"We're not in the business of fighting unions," Chavez said. "We're in the business of fighting employers for contracts."

During the lettuce dispute Chavez was jailed for refusing to end the boycott. He was released after 20 days by order of a higher court, and an appeal is pending.

House Leaders Press Boost In Wage Floor

(Continued from Page 1)

All public employes would be covered for the first time by the Dent bill, with their wage floor set at $1.80 an hour strating Jan. 1, 1972, increasing to $2 the following year.

The bill also would repeal certain overtime exemptions for transit employes, seasonal industry workers (principally agricultural processors) and for workers in the fish and sugar industries. Overtime coverage of nursing home employes would be modified to conform with that for hospital workers.

The bill also would change the method for determining minimum wage for Puerto Rico. Beginning with hotel and motel workers, all Puerto Rican workers would eventually receive dollar parity with the mainland minimum wage.

At a news conference announcing introduction of the bill, Dent admitted that the $2 minimum wage is "50 cents an hour lower than what it should be." He said the delay by Pres. Nixon in revealing the Family Maintenance Assistance Program prevented him from seeking $2.50.

Dent also said he expected the Administration would oppose increasing the minimum wage.

Albert told reporters, "The people who will benefit from this legislation are those hardest hit by inflation, not its cause.

"Minimum wage legislation fits into a developing pattern of congressional initiatives to get people back to work, to put a decent wage in their pockets so that they can start buying again, and thereby enable industry to gear up to meet the renewed demand," he concluded.

ORGANIZED LABOR in the Stockton, Calif., area as well as religious and civic leaders have pledged their support to a current United Farm Workers' organizing drive among 6,000 asparagus workers there. Some of the labor leaders attending a rally kicking off the campaign were: from left, Sec.-Treas. Harley L. Harris of the San Joaquin and Calaveras County AFL-CIO; William L. Kircher, director, AFL-CIO Dept. of Organization; UFWOC Director Cesar Chavez, and Sec.-Treas. Bill Dorcey of the San Joaquin County Building & Construction Trades Council.

In Coming Negotiations:

Big Pay Raise Tops Steel Contract Goals

The Steelworkers will be asking "very substantial" wage increases tied to a cost-of-living escalator clause when negotiations open May 18 with nine basic steel companies, USWA Pres. I. W. Abel told a Washington press conference.

Abel declined to speculate on the amount of the increase the union will seek for 450,000 members who work in steel plants. But he told reporters, "I have an idea our members will not accept anything less" than the union's recent settlements with four big can manufacturers. The can contracts provide wage boosts of $1.10 an hour over three years plus an unlimited cost-of-living escalator and "significant" pension improvements.

Asked if the union would accept a 6 percent limit on increases suggested by the Nixon Administration, Abel replied "certainly not."

Abel and Vice Pres. Joseph P. Molony met newsmen after a two-day conference at which presidents of 600 U.S. and Canadian locals gave the union's chief negotiators a verbal picture of what their members want and need.

The local presidents made suggestions for supplementing the 1971 policy statement adopted by the union's International Wage Policy Committee last November, and gave their unanimous vote of confidence to Abel and other USWA negotiators.

The recommendations of the conferees will be reduced to writing and included in proposals to be drafted by a USWA committee. Abel gave this time table for basic steel talks:

"Sound-off" meetings will start May 18 at the Hotel Shoreham in Washington for an exchange of proposals. Follow-up meetings are to be held the week of May 23 in home cities of the nine big steel firms. The entire month of June will be devoted to local plant-level issues in each plant city. Negotiations will resume in Washington July 6, with Aug. 1 the date of contract expiration.

Abel said he is sure that union and company negotiators will "engage in good, honest collective bargaining across the table." Union members need a sizable wage increase, he said, but he declined to suggest a specific figure.

"With runaway inflation," he asked, "who knows now how much will be needed?"

Acknowledging that the steel industry has problems, Abel said "we have joint problems—we've been victimized, too, in some respects."

Abel noted there has been no steel strike since 1959. And when Aug. 1 arrives, he said, "I hope those who have stockpiled steel" as a hedge against a walkout will "find themselves with a supply to be worked off" after a settlement.

Abel told his questioners that the union will insist on a cost-of-living clause, along with wage, pension and vacation improvements. A previous escalator clause was removed in the 1959 strike settlement.

The wage-policy statement adopted last November lists all the areas in which the union will be seeking improvements—wages, pensions, insurance, job evaluation and incentive pay, income security, shorter workweek, contracting-out of members' work, and others.

CURRENT ISSUES facing Congress are discussed at a periodic legislative conference for members of the Rubber Workers in Washington. Addressing the session is Rep. John F. Seiberling, Jr. (D-Ohio), a freshman congressman who was elected last fall with the support of organized labor.

2 Unions Set Bargaining Target As Aluminum Industry Talks Near

Unions representing 75,000 workers in the aluminum industry set 1971 collective bargaining goals at conferences held well in advance of the May 31 expiration of contracts with major producers.

The Steelworkers, meeting in Pittsburgh, drafted a program that will be presented to the Aluminum Company of America and Reynolds Metals Co., Apr. 17, in New York City, and to Kaiser Aluminum & Chemical Corp., May 4, in the same city.

The Aluminum Workers held pre-contract talks in St. Louis for delegates representing 30,000 industry employes. Tentative approval was given to proposals to be submitted Apr. 30 in New York to union bargaining teams for Alcoa and Reynolds employes and May 4 to company representatives.

The Steelworkers' proposals call for a wage increase keyed to the industry's "high productivity and high profitability," and protection against job layoffs and constantly rising living costs. The USWA represents 45,000 employes of five major firms and numerous independent companies.

Delegates from 105 USWA local unions, representing employes of 43 aluminum companies, adopted a statement pointing out that the aluminum industry "set new production records in 1970" at a time when employes were suffering "severe hardship."

"Prices are skyrocketing. Our purchasing power is decreasing," the policy statement declared.

"Layoffs and unemployment continue to rise, even in this highly profitable industry. Moreover, plants . . . are being phased out, throwing our people out of work by the scores."

The conference agreed that "aluminum workers are entitled to a very substantial wage increase to reflect the prosperity of the industry, its enormous productivity, settlements in other industries and the urgent economic needs" of Steelworker members.

The delegates called for these improvements:

- Wage increases that "reflect the inflation which has eroded our living standards" and past gains, including a general increase and amounts necessary to maintain an "appropriate relationship" among various jobs and skills.
- A cost-of-living escalator provision for "adequate protection against future increases in consumer prices."
- Correction of wage and salary inequities between plants and companies, better pensions, insurance, jobless pay benefits, vacations and holidays.

"Income security should be assured by instituting earnings protection," the statement emphasized. "Now is the time to move ahead to a shorter workweek without reduction in pay. Whatever the workweek, it should be guaranteed so that working employes can receive a full week's pay."

The conference, after adopting numerous other goals, said "we shall proceed with unity and militancy to negotiate satisfactory settlements" in line with USWA policy.

The Aluminum Workers, bargaining with many of the same employers, represents 19,000 workers whose contracts are due to expire in two months. Contracts covering 11,000 others will be extended until the talks with industry leaders are concluded, Pres. Henry S. Olsen said.

Nixon Plan Would Split Labor Dept.'s Functions

Pres. Nixon proposed to slice the Labor Dept. down the middle and parcel out its functions to two sprawling new superdepartments in a message to Congress spelling out his plan for reorganization of the executive branch of the government.

The proposal to abolish seven present Cabinet departments and create four new ones was outlined in his State of the Union message earlier this year and the final version reflects only minor changes.

If enacted—something congressional sources consider highly doubtful—about 7,000 of the Labor Dept.'s 11,000 employes would be shifted into the new Dept. of Economic Affairs.

The 161,000 employes in the proposed department would include large segments of the present Dept. of Agriculture, Dept. of Transportation, Dept. of Commerce and various independent agencies ranging from the Small Business Administration to the Federal Mediation & Conciliation Service. The Coast Guard would also be a part of the department.

Some 4,000 employes of the Labor Dept.'s Manpower Administration—which includes the Bureau of Apprenticeship & Training and the U.S. Employment Service—would be assigned to the proposed Dept. of Human Resources.

This department, with 121,000 employes, would include the largest part of the present Dept. of Health, Education & Welfare.

A new Dept. of Natural Resources, with 110,000 employes, would embrace many of the programs of the Interior Dept. Large portions of the Dept. of Housing & Urban Development would be found in the proposed Dept. of Community Development, with 30,000 employes.

One effect of the reorganization would be to disperse the natural "constituency" of the present departments.

The Labor Dept., for example, was established in 1913 under a congressional mandate "to foster, promote and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment."

The AFL-CIO Executive Council, at its February meeting, was sharply critical of any move to eliminate a single Cabinet department "where workers and their unions can take problems and get understanding response."

And it suggested that "consolidation of many diverse existing programs into four sprawling catch-all departments is far more likely to produce administrative monstrosities than efficiency."

Pilots Appoint Davis Public Relations Chief

The Air Line Pilots named Lou Davis as director of public relations. He had been editing its magazine and other publications for 13 months after years of experience as an aviation news and feature editor as well as an aircraft industry executive. Davis also is a licensed pilot.

Jobs Conference Set for July 12-13

The AFL-CIO Conference on Jobs, which will explore all aspects of the job-loss problem in the United States—from foreign trade to reconversion—has been scheduled for July 12-13 at the Statler-Hilton Hotel in Washington.

"We consider it one of the most important conferences ever held by the AFL-CIO," said Federation Pres. George Meany in a letter to union presidents asking that they reserve these dates.

Meany said a limitation on the number of delegates would be necessary to insure fair, across-the-board representation from all affiliates.

The Conference on Jobs was authorized by the AFL-CIO Executive Council during its last session.

Appeals Court Upholds Selective Rail Strikes

(Continued from Page 1)

by the other three—the Railway Clerks, Maintenance of Way Employes, and the dining car division of the Hotel & Restaurant Employes.

The UTU, resisting management demands to emasculate several protective rules, served notice Mar. 8 of its intent to call a "peaceful withdrawal from service" of its members on the Burlington Northern and Seaboard Coast Line railroads.

Railroad management promptly sought an injunction, Judge Pratt issued it after a hearing, and the union appealed.

The appeals court ruling, barring a reversal by the Supreme Court, could affect the future course of union-management negotiations under the Railway Labor Act.

In it, the judges reached the legal conclusion that "when collective bargaining on a national handling basis has come to an impasse and all procedures of the act have been exhausted, it is not unlawful for the union to call a strike against some or a few of the carriers in order to put pressure on the railroads to reach a national multi-employer agreement."

The judges said their views of the law are "congruent" with those of U.S. District Judge Barrington Parker, who ruled Mar. 8 in another case that the UTU has the right to call selective strikes against railroads in a separate dispute over the use of firemen on diesel freight locomotives. That dispute has been in process for several years.

The appeals judges concluded that the Railway Labor Act "defers and delays, but . . . does not deny a union's right to call a strike. That right of self-help has been reached in the case before us."

The courts are not free, they said, to "terminate or qualify that right, except in pursuance of authority granted by Congress. No such authority appears in the wording of the act."

Over-65 Population Continues to Grow

The number of persons 65 and over grew to slightly more than 20 million—or about 10 percent of the total U.S. population in 1970, the Bureau of the Census reported. There were 16.6 million counted in that age group in the 1960 census.

The South accounted for the largest number of senior citizens among the four major regions in 1970. It had 6 million persons 65 or older against 5.7 million for the Northeast, 5.2 million for the North Central region and 3.1 million for the West.

Among the states, New York had the largest number of elderly persons with 2 million, but Florida had the largest proportion of the 65-and-over age group—14.5 percent of its population.

Wage Guidelines

THE PRESIDENT'S Executive Order providing for "stabilization of wages and prices in the construction industry" is primarily a wage guideline approach that contains potential implications for the entire economy.

The order says that "acceptable economic adjustments in labor contracts negotiated on or after the date of this order will be those normally considered supportable by productivity improvement and cost of living trends, but not in excess of the average of the median increases in wages and benefits over the life of the contract negotiated in major construction settlements in the period 1961 to 1968."

Labor Sec. Hodgson said this means about 6 percent.

The AFL-CIO has maintained that a wage guidepost policy—even where it is coupled with price restraints, a factor left for future committee consideration in the President's order—is unworkable, one-sided and inequitable.

The pressure of a guideposts policy is to hold down wage increases, with the emphasis always on wages as a cost rather than wages as income for workers and the major source of consumer buying power.

If the Administration's 6 percent guideline for the construction industry were to be applied across the board, the effect would be to cut workers' buying power in terms of the inflationary and tax realities of 1971.

In the 1961-68 period living costs were up an average of 2.5 percent a year. They accelerated after 1968 while many workers were locked into two- and three-year agreements. Last year the CPI climbed 5.9 percent. Increases in federal, state and local taxes have made further inroads on workers' buying power since the 1961-68 period.

BECAUSE OF these factors the AFL-CIO Executive Council in February adopted a statement on the national economy which included this recommendation:

"Increases in the buying power of workers' wages and salaries are a basic prerequisite for economic growth in 1971—to provide workers with a share in the benefits of economic progress and to establish the foundation for the needed expansion of consumer markets. Rapid economic growth in 1971 will not be possible without a substantial boost of consumer sales, which account for almost two-thirds of the national economy. And the needed rise of consumer expenditures cannot possibly be achieved unless increases in the real incomes of workers are attained."

Simple economic justice demands substantial improvements in collective bargaining agreements to be negotiated in 1971, the council said, given the decline in buying power in 1970 for the second consecutive year.

A 6 percent wage guideline based on 1961-68 averages applied to all wage settlements in 1971 would thwart the goal of equity and justice for American workers who for too long now have borne the burden of the Administration's economic policies and "game plans."

A Word Edgewise:

True 'Progressive Education' Neither Anarchy Nor Tyranny

By John P. Roche

ONE OF THE MOST difficult historical accomplishments is to modify an arbitrary, capricious, irrational authority structure without simultaneously destroying the authority principle itself. Nowhere is this problem more evident than in American educational circles. Under the banner of "progressive education," many schools and classrooms have been turned into unstructured, free-floating rap sessions.

First, this is not "progressive education" in the sense that John Dewey and his associates conceived it. Their objective was to eliminate the appalling system of rote learning, to inject relevance (in its real sense) into a curriculum, and, above all, to make students and teachers into allies in a quest for knowledge.

Never in his long, long life did John Dewey confuse a school with libertyville: he sought to replace an archaic and irrational authority system with a rational one. The thought of a teacher going into a classroom and asking his students, "What shall we discuss today?" would set Dewey spinning in his grave.

To Dewey, Lucy Sprague Mitchell, and the other pioneers of progressive education, the teacher and students were allies, not peers. But the teacher had authority growing from knowledge and dedication, not from official status as a warden in a quasi-penitentiary.

Indeed, a teacher who genuinely accepts the principles of progressive education probably works twice as hard as either the old style martinets or the new wave of permissive educators. I have investigated some "dynamic, relevant, student-oriented, free-flowing, etc." courses offered both in colleges and high schools and, frankly, I think the teachers should be arrested for grand larceny.

What a racket. You wouldn't believe what goes on under the protection of "innovation." I verified a situation in an unidentified college where a volley ball game determined final sociology grades: the winners got an A; the losers A−.

Or take "discussion courses." There is no harder task in this world than conducting a good seminar, or small discussion class. I could, with half an hour's lead time, deliver a respectable lecture on, say, Locke or Rousseau, but it takes hours of preparation to prime a seminar on the same topics. You have to sit down and prepare the key questions, then ready yourself to play devil's advocate, set up challenges to the conventional wisdom, and above all avoid the lazy man's way out: turning on your Locke or Rousseau tapes.

COMPARE THIS with the innovative fantasy of "student taught" courses. Only an egomaniac would argue that the only things learned in college derive from the faculty. I recall bull sessions with my fellow students as a vital part of the learning process, but we never expected academic credit for it. I have known students who were helped immensely by psychiatic support, but again did not expect brownie points for their time on the couch.

A good teacher will be an intellectual catalyst: his students will go off to argue and debate amongst themselves, and then return to argue with the teacher himself. That is the name of the game: for students to teach students in a formal sense is basically an anti-intellectual exercise, one which in practice results in the facile leading the docile.

To come back to the initial point, this academic nonsense is not in any proper sense progressive education; it is a shameful caricature of the fundamentally sound and genuinely innovative views of John Dewey. A believer in progressive education—and I am one—must repudiate academic anarchy with the same vigor that he condemns the academic tyranny of the fundamentalists. As usual, a true liberal finds himself fighting a two-front war.

Impact of Economic Stagnation:

Grim Employment Statistics Refute White House Optimism

The following is taken from a memorandum to the House Public Works Committee from AFL-CIO Pres. George Meany on the present employment situation to supplement Meany's testimony before the committee supporting a public works construction program.

DESPITE the officially optimistic views of the Administration, the Labor Dept.'s reports on the employment situation, in recent months, reveal a continuing weakness in the nation's job markets.

Hidden beneath the White House rhetoric is the fact that the civilian labor force has actually declined in the past few months, that there has been a substantial increase in hidden unemployment and that employment in the private sector is off considerably.

These are the facts and the "rosy-glow" statements of the Administration should not be allowed to camouflage the picture.

The details of the reported decline in the seasonally adjusted unemployment rate from 6.2 percent of the civilian labor force in December to 5.8 percent in February clearly indicate job-market weakness rather than a show of strength.

Total employment between December and February increased only 74,000 after accounting for seasonal changes—not enough to reduce the unemployment rate by even a full one-tenth of 1 percent, with a civilian labor force of over 83 million. So the decline in the reported unemployment rate in those two months was hardly due to increased employment.

Examination of the Labor Dept.'s figures reveals that the reported decline in the seasonally adjusted unemployment rate between December and February was mainly the result of a sharp decline in the civilian labor force—a decline of 225,000. In other words, 225,000 people disappeared from the government's tabulation of the labor force and that cannot, by any reasonable standard, be considered progress. In fact, it is the opposite.

Aside from the possibility of month-to-month statistical difficulties, the essential reason for the decline in the reported unemployment rate was that 225,000 people, who had been in the civilian labor force in December, stopped actively seeking jobs by February, after failing to find work. Since the Labor Dept.'s definition of the civilian labor force requires the active seeking of work, those who stop such active search are considered to be no longer part of the labor force.

The reported decline in the unemployment rate between December and February, therefore, was mainly the result of the economy's failure to produce the needed expansion of job opportunities, rather than to a substantial rise of employment.

Moreover, the detailed figures reported by the Labor Dept. reveal the probability of a substantial increase of hidden unemployment between December and February. The civilian labor force should increase by about 160,000 a month, after accounting for seasonal variations. So the civilian labor force should have expanded by about 320,000 in December-February, instead of the reported decline of 225,000. These figures reveal that hidden unemployment increased by as much as 500,000 in those months.

In addition, the failure of employment to increase to any significant degree in recent months—following a decline during most of 1970—is a sure sign of general economic stagnation and weakness in the job markets.

Moreover, a clearer picture of weakness in the job markets is revealed in the Labor Dept.'s detailed reports on the number of wage and salary workers on payrolls of non-farm establishments, based on employers' payroll records.

THESE REPORTS indicate that the number of workers on private and public payrolls in February was down 700,000 from the peak in March 1970. They indicate substantial job losses in manufacturing industries and construction in the past 15 to 17 months—down 1.6 million in manufacturing and 300,000 in construction. Moreover, contract construction and most manufacturing industries reported continuing job-declines in February.

The only parts of the private economy that reported significant job-increases were wholesale and retail trade and the services, with a combined employment-increase of about 400,000 in the past year; but many of these jobs are part-time.

In addition, production cutbacks have resulted in reduced working hours for large numbers of employed workers. The average number of weekly working hours of non-supervisory workers in private employment in January-February 1971 was down 2.7 percent from the same period of 1969.

The only part of the total national economy that has reported substantial job-increases is government employment. Jobs in state and local governments in February were up almost 490,000 from the previous year, while federal employment was down nearly 50,000.

The overall employment picture remains one of continuing weakness in most job markets—revealing the stagnation that persists in most parts of the national economy, following the general economic decline of 1969-1970.

$2 Base Needed:

Inflation Erodes Buying Power Of $1.60 Minimum Pay to $1.24

AMERICA'S LOWEST-PAID workers are even worse off now than they were when the minimum wage was last improved in 1966, AFL-CIO economist Rudolph Oswald declared as he called for an immediate boost to "at least $2 an hour."

"The inflationary impact of the last five years" has cut the 1966 value of the $1.60 minimum wage to "only $1.24 today, which is less than it was before" Congress made the last improvement, said Oswald, of the federation's Dept. of Research. That "deterioration of buying power . . . makes it mandatory" that there be a new and higher federal floor under wages, he stressed, on Labor News Conference.

Oswald said that low-paid workers also continue to suffer from employer violations of the federal Wage & Hour law, noting that "inspections of only about 5 percent of the establishments covered by the law" revealed that half a million workers "were short-changed some $93 million last year."

Noting that the minimum wage law has been on the books since 1938, he said, "it is hard to believe that after (more than) 30 years," employers would not be aware of the law and what it requires. He said that mounting employer violations could be curbed by the addition of more inspectors "to assure that workers . . . are actually paid" the minimum wage required by law.

The union economist turned aside the contention that the rise of unemployment for the past two years makes this the "wrong time to raise the minimum wage." He said that "if we listen to that argument, it would always be 'the wrong time' to raise the minimum wage," yet past improvements have been followed by a decline in unemployment.

WHEN THE MINIMUM WAGE was first established in 1938, Oswald pointed out that "unemployment was double the current rate," and it decreased in the following years. He said that unemployment has also eased after other minimum wage improvements, "largely because we've always been so modest in the increases."

Oswald said the AFL-CIO will also push hard in this Congress to extend minimum wage coverage to all wage and salary employes. "If a job is worth doing, it's worth a wage that is at least enough to support the worker and his family," he declared.

Questioning Oswald on the AFL-CIO produced public affairs interview were James F. Welsh of the Washington Evening Star and Donald Finley of United Press International. The program is broadcast Tuesdays on Mutual radio.

By Press Associates, Inc.

THE GROWING OUTCRY against the failures of our health delivery system is being matched by a deep resentment against practices of the auto insurance industry.

The complaints on auto insurance have been repeated over and over again: high unilateral increases in rates, cancellation without notice, non-renewal of policies, refusal to sell insurance in certain areas and to certain groups of workers, etc.

Since 1965, Sen. Philip A. Hart (D-Mich.), chairman of the Senate Antitrust & Monopoly subcommittee, has conducted hearings and studies on many facets of the auto industry and the auto insurance industry.

The Dept. of Transportation conducted a two-year study in the same area and its report has been made public.

Time and again in these hearings and studies the outrageous cost of litigation in resolving accident disputes emerged. Both the Hart hearings and the DOT study show that on claims for 1969 auto accidents, the parties engaged in litigation will pay legal fees totalling some $1.1 billion, conservatively estimated to be one-fourth the total income of the legal profession for that accident year.

Such litigation ties up our courts, too. A study by the Federal Judicial Center points out that motor accidents litigation requires 11.4 percent of judges' time in federal district courts and approximately 17 percent in state courts of general jurisdiction.

This is taking place at a time when the backlog of cases in our courts has reached frightening levels. In Los Angeles, for example, there are 42,000 civil and criminal cases awaiting trial. Philadelphia has 427 untried homicide cases.

A study done by the insurance industry for DOT showed that claimants with a permanent total disability had an average economic loss of $78,000. Yet, they received only an average insurance payment of $12,556—only 16 percent of their total loss.

To move litigation out of the auto insurance picture, Hart and Sen. Warren G. Magnuson (D-Wash.) have offered a proposal for "no fault" insurance.

Under this bill a federal program will be established requiring uniform insurance laws in the states which would guarantee that auto insurance will be available to every qualified driver with sufficient, fair and prompt payment of losses due to death or injury—regardless of who is at fault.

THE WHOLE CONCEPT of "no fault" insurance has reached such a point that Transportation Sec. John A. Volpe told Magnuson's Senate Commerce Committee that the Administration also favors the no-fault approach but seeks its adoption on a state-by-state basis. He acknowledged that it would take about five years even if the states cooperated.

The Volpe plan got some sharp reactions from both Hart and Magnuson.

Hart termed it "an insurance industry proposal." Volpe replied that it was based on the Massachusetts "no fault" plan and it was supported by both lawyers and insurance men in the legislature.

Hart then pointed out that under the Massachusetts legislation the no-fault provision is limited to claims under $2,000.

"What the lawyers care about," Hart said, "are the big claims, the ones still going to court. Just as the Massachusetts bill is the lawyers' bill—assuring them of the juicy business—the Administration plan is an insurance industry proposal."

Also, the Administration plan does not deal with two other critical problems, cancellation and non-renewal of policies. The Hart-Magnuson Bill protects the motorists on both counts.

The idea of "no fault" insurance is not new. It was proposed more than 50 years ago when it was suggested that the no-fault insurance plan in workmen's compensation be applied to auto insurance.

A MINIMUM WAGE of "at least $2 an hour" is "mandatory" for America's lowest-paid workers, who are worse off now than they were when the floor under wages was last raised in 1966, AFL-CIO Economist Rudolph Oswald, center, declared on Labor News Conference. He was questioned by James F. Welsh, left, of the Washington Evening Star and Donald Finley of United Press International. The interview program is broadcast Tuesdays on Mutual radio.

HEALTH SECURITY COVERAGE is the basic right of all Americans, AFL-CIO Social Security Director Bert Seidman, center, declares on a television forum in Columbus, Ohio. Appearing with Seidman on the "Town Meeting" program were Dr. Roger O. Egeberg, left, assistant secretary of the Dept. of Health, Education & Welfare, and Dr. Walter C. Bornemeier, president of the American Medical Association.

Nixon, AMA Plans Hit:

Health Security Seen Meeting Basic Right

Columbus, O.—"Every American citizen, whether he's rich or poor, black or white, blue-collar or white-collar worker, has a basic right to a decent standard of health care. It is the purpose of our proposal—the National Health Security Act—to provide this goal."

So declared AFL-CIO Social Security Director Bert Seidman here as he participated in a television "Town Meeting" debate on America's health crisis with Dr. Roger O. Egeberg, assistant secretary of the Dept. of Health, Education & Welfare, and Dr. Walter C. Bornemeier, president of the American Medical Association.

Seidman told the panel and Columbus television viewers that "America faces a health care crisis of unprecedented proportions." He noted that health care costs have zoomed 170 percent over the past 10 years, 11 percent in the past year alone.

He pointed out that the United States is the only industrial nation in the world without a national health program.

"This means that in 35 other countries of the world, a 10-year-old-boy can expect to live longer than a similar 10-year-old American boy. And yet," Seidman declared, "we spend more money on health care in this nation than any other nation in the world."

He described the main features of the National Health Security Act, emphasizing that it would not interfere with existing doctor-patient relationships as some critics have charged. What it will do, Seidman said, is:

- "Finance across-the-board quality medical services so that your doctor's judgment of medical needs and not the size of your income will determine your medical treatment.
- "Increase the number of doctors, nurses and other medical personnel and encourage development of up-to-date efficient health care facilities.
- "Increase the availability, control the costs and assure the quality of comprehensive medical services.
- "Make quality health care the right of every American."

Dr. Egeberg defended the Nixon Administration's proposal to require compulsory health insurance through private insurance plans. It would, he said, build on the "many strengths" of the present system and "fill in the gaps."

Dr. Bornemeier said the AMA plan, called "Medicredit," is an "insurance policy" which will provide a health care card in the pocket of every American. He said a sliding scale formula would be applied to health care bills with the poor having their entire bill paid, and tax credits granted to middle-class and rich Americans.

Seidman, in response, described the Nixon Administration proposal as a "fragmented approach to the health care crisis in America today." He said the Nixon plan is really four different proposals: one for the poor, one for workers, one for the elderly, and one for people not covered by anything. "The AMA proposal does not appear to be much different," Seidman declared.

During a half-hour of questioning from viewers at home, Dr. Bornemeier admitted surveys have shown that in every community of 1,000 persons, 250 will need the services of a doctor at least once in a given month. But he argued that the AMA plan would continue to allow those needing health care services to have a choice of the type of services they wished to have. He was critical of the labor-backed bill because "it would lock everyone into one group."

Dr. Egeberg said he didn't have confidence in the federal government's ability to find solutions to the health care crisis. He contended one plan of health care would work in one section of the nation, while another might be best for a different region. He said it might be "eight or 10 years before we really know what America needs" to solve the health crisis.

First Bargaining Order Upheld In Long Battle with J. P. Stevens

New Orleans—The 5th U.S. Circuit Court of Appeals has upheld a Labor Board order that J. P. Stevens & Co., Inc., must bargain with the Textile Workers Union of America because of the company's "outrageous" and "pervasive" anti-union conduct interfering with an election.

The order to bargain without another election being held was the first by any court against Stevens in the corporation's long history of labor law violations, the union pointed out.

Three appeals judges voted to enforce the National Labor Relations Board order against Stevens, the nation's second largest textile chain and a major supplier of government cloth. The judges upheld an NLRB finding in October 1969 that Stevens must negotiate contract terms even though the union lost an election. The cause of the loss, the NLRB found was "numerous unfair labor practices" by company supervisors at Stevens's Gulistan plant in Statesboro, Ga.

TWUA Pres. William Pollock said the judges agreed that the order to bargain, which went beyond the usual remedies in such cases, "was warranted . . . even if the union never possessed a valid card majority, in view of Stevens's extensive campaign . . . of unlawful practices to defeat the union."

The order also requires Stevens to stop its illegal practices and reinstate four discharged workers with back-pay. In addition, the corporation must post appropriate notices in the Gulistan plant, read the NLRB order to its employes on company-paid time, and give TWUA reasonable access to company bulletin boards for a period of one year.

The 5th Circuit decision was written by Appeals Judge Irving L. Goldberg for himself and Judge Homer Thornberry, with Judge Robert A. Ainsworth, Jr., concurring. It listed the case as Stevens No. 6 and expressed the hope there would be no Stevens No. 7.

Stevens claimed the record in the case contained no substantial evidence of law violations.

"We disagree," the appeals court said. "The record reveals, and the NLRB found, that Stevens engaged in an extensive campaign of 'classic, albeit crude, unlawful labor practices' to defeat the union" in a 1968 organizational campaign.

There were, the judges said, numerous instances of company misconduct violating the law. They spelled it out:

- Supervisors threatened that a union victory would result in a reduction of work, extensive discharges, and even the closing of the plant.
- Four union supporters were fired to make good the threats.
- Company officials engaged in "blatant surveillance" of union activities.
- Supervisors interrogated employes about union activities under circumstances that tended to be "coercive and intimidating," and promised benefits "calculated to undermine union strength."
- During a critical juncture in the union campaign, the company granted certain benefits which the board found were "designed to destroy union support."

These and other samples of company misconduct ate away the union's support and finally resulted in its defeat at the polls.

The court, while ordering Stevens to bargain with the TWUA, nevertheless denied a union request that it compel the NLRB to devise "more meaningful and far-reaching remedies."

Other courts, including the Supreme Court, have upheld Labor Board orders against Stevens to remedy unfair labor practices. But until now no order to bargain has been enforced by a federal court.

That record "shows how successful Stevens has been" in avoiding bargaining with the union, a government attorney said. Last year the board directed Stevens to bargain with the TWUA at its Black Hawk warehouse after a 1969 election victory, but the order was dissolved with a ruling that the union had lost its majority.

TWUA had previously won 11 board rulings against Stevens over nearly a decade of legal battling. One ruling, upheld by the courts, required the textile chain to give more than $1 million in backpay to employes it fired illegally.

AMA Presses Drive Against Health Security

(Continued from Page 1)

Gardner, M.D., told the record gathering at the workshop that AMPAC was born out of the AMA's opposition to Medicare.

He said the AMA's arguments did not prevail during Medicare because Congress and the Administration were not listening.

"We fought hard and the battle cost us dearly in dollars and in image," he recalled.

"AMPAC was born to provide weight to our argument. We have set out to improve the legislators' attention span so they will listen while we make our points."

Dole told the workshop that National Health Security, the Griffiths-Kennedy bill, is a "multi-billion-dollar blueprint for the end of American medicine as we know it."

His statement came about the same time two AMA spokesmen were telling Sen. Edward M. Kennedy's health subcommittee of the Senate Labor & Public Welfare Committee that "Medicredit," the AMA's proposal of giving federal tax credits to persons who buy private insurance, would cost $14.5 billion.

One of those spokesmen, Dr. Max H. Parrott, also told the AMPAC workshop that "medical leaders must be aware of and know the value of political action."

Labor, Civil Rights, Liberal Alliance Essential to Progress, O'Neal Says

Philadelphia—The common objectives of the labor, civil rights and liberal alliance demand that the coalition continue as an effective political force in the nation.

Relations among the three groups have at times become strained in recent years, AFL-CIO Vice Pres. Frederick O'Neal noted, but the differences have not been great enough to destroy the movement.

He said the strength and effectiveness of the coalition were reflected in the results of the 1970 elections.

"We have lived through a decade in which race was a central domestic issue," O'Neal said, ". . . and we are entering a decade in which the central issue will be economic justice. This is our issue. With it we can win."

This was O'Neal's assessment to the question "Is a Black-Labor-Liberal Alliance Viable?" at a joint luncheon meeting of the Jewish Labor Committee and the Negro Trade Union Leadership Council here.

O'Neal emphasized the need for continued cooperation between Negroes and organized labor. He said the strengthening of the bonds between the civil rights movement and labor was "one of the brightest developments of the 1960s."

"At a time when one could not open a newspaper without reading about the division between the civil rights and labor movements, they combined to block the appointment of Haynsworth and Carswell to the Supreme Court," he told the 90 leaders of labor, civil rights, religious and community organizations.

O'Neal, who also is president of Actors' Equity and chairman of the AFL-CIO Civil Rights Committee, said that to achieve common goals, "we must remain together—black and white, trade unionist and liberal."

"Common interest is the force that binds the Negro-labor alliance," he pointed out, "and it is common interest that will cause this alliance to grow stronger over the years."

O'Neal refuted the charge that the trade unions are blocking the Negro's struggle for equality.

"This is very dangerous nonsense," he warned, "put forth very often by the same people who charge that the workingman is responsible for inflation, backlash and war."

"The people who talk this way are not workers. . . . They are not struggling to make ends meet on $7,000 or $8,000 a year. They live sheltered lives in sheltered communities, far from the cutting edge of social change."

O'Neal said the liberals who sat out the 1968 elections because of the Viet Nam war issue were in error. "But we must not now permit the question of foreign policy to become the overriding issue in our coalition for it will obscure our unity on domestic policy."

"We should emphasize that which unites us," he observed, noting that the trade union movement supported candidates in the 1970 elections not on their position on Viet Nam, but because of their support for progressive domestic policies.

"If the 1970 elections are to be a model for future action, we will be able to rebuild the coalition and reverse the political trend of the nation," he suggested.

On Executive Order:

Crafts Vow Fight To Assure Equity

(Continued from Page 1)

The Nixon order came the same day the Joint Economic Committee of Congress suggested that perhaps construction wages were being unfairly blamed—on the basis of insufficient information—for inflation in the industry.

"The Committee was surprised and dismayed to learn how little factual data is available regarding construction wages," said the statement, which was quoted by the BCTD presidents during their news conference.

And although Labor Sec. James D. Hodgson labeled the mechanisms in the order "constraints" as opposed to "controls," BCTD Pres. C. J. Haggerty disagreed.

"It is a full control—one that is clothed in very clever language," Haggerty said.

He said that while the building trades will comply, they also "will fight this plan with all the legal power at our command to gain equity for our members."

Sheet Metal Workers Pres. Edward J. Carlough stated his union's position firmly: "I say in all candor that we will not buy 6 percent," adding that "we intend to discover the full and complete meaning of the word 'equity' as it applies in this order, at the earliest possible opportunity."

Administration spokesmen have implied that contractors and unions alike nodded at the proposal of an Executive Order covering the construction industry so long as the Davis-Bacon suspension was lifted.

But the building trades presidents emphasized in their statement that they "had rejected a proposal of the Labor Dept. for a voluntary wage stabilization arrangement, and any implication to the contrary is not consistent with the facts."

Although Nixon reinstituted Davis-Bacon, his Executive Order provides for selective suspension of the law in any case in which a wage settlement violates the criteria set forth:

"Acceptable economic adjustments in labor contracts negotiated on or after the date of this order will be those normally considered supportable by productivity improvement and cost-of-living trends, but not in excess of the average of the median increases in wages and benefits . . . negotiated in major construction settlements in the period 1961-68."

Or, in Hodgson's words, 6 percent.

The Executive Order establishes labor-management craft dispute boards to review wage settlements to make sure they are in line with the wage guidelines.

Wage agreements negotiated earlier but which have not yet gone into effect also will come under review by these boards.

If they find violations of the criteria, they are to notify a "watchdog" committee—the Construction Industry Stabilization Committee—also established by the Nixon order.

This will be a tripartite board, including four members each from labor, management and the public. This committee has 15 days to decide whether a specific settlement violates the order.

If it does, the Sec. of Labor could then take action, in one of several ways. He could merely identify or publicize the violation, he could have government contracts with the offending parties suspended, or he could selectively suspend the Davis-Bacon Act.

The order also establishes a committee to determine criteria for prices in the construction industry.

But, it states, "until criteria have been developed and applied and prices and compensation are determined to be unacceptable, prices and compensation shall not be deemed in violation of this order."

'I Can See Without Them!'

Fire Fighters Cite Need for Aid to Cities

The Fire Fighters, worried by cutbacks in municipal fire fighting facilities, launched a program to help cities and states get the federal financial aid that now has become "an urgent matter of life or death for millions of people."

The program was announced by Fire Fighters' Pres. W. Howard McClennan at a pres conference-luncheon. At the same time, IAFF affiliates throughout the country made similar announcements of the union's efforts to help mayors and governors.

The program will be coordinated and directed by a newly-established Emergency City Fiscal Affairs Committee, operating from IAFF's headquarters in Washington.

Although the aim of the union is to help achieve "responsible" revenue-sharing between federal and local governments, McClennan said the IAFF is not supporting any specific proposal at this time. In fact, he emphasized that the union, like the AFL-CIO, opposes any revenue-sharing where there are no strings attached to how the federal funds are used.

The desperate need for federal aid to cities, McClennan observed, is evidenced by a recent wave of cutbacks of police and fire services for lack of funds. Although these restrictions are "short-sighted," he noted, they illustrate the "desperation" of city governments.

He released data on fire station closings in Washington, cuts in "already inadequate" fire services in New York, and dangereous reductions or threatened reductions in Minneapolis, Detroit, St. Louis, New Orleans, Los Angeles, Seattle and more than a score of other cities.

"Reports from our members all over the country are couched in the language of desperation," McClennan said. "Our cities are literally becoming death-traps while fire services are being stretched thinner and thinner."

Senate Passes Program For Public Service Jobs

(Continued from Page 1)

by the House Labor Committee. House Democratic leaders have strongly endorsed the public service jobs concept and have promised a high priority to the legislation.

The Senate bill would start the flow of federal funds whenever the national unemployment rate is at least 4.5 percent; it has been close to 6 percent for some months. The higher the rate, the more funds would be released to city, county and state governments and to private, non-profit organizations.

Jobs to be filled would be in such areas as health care, environmental quality, public safety, education, transportation, recreation, park and street maintenance, conservation and community improvement.

Workers hired would be paid the prevailing wage for similar public jobs or the minimum wage, whichever was higher.

In a letter sent to all senators before the vote, AFL-CIO Legislative Director Andrew J. Biemiller stressed that "the legislation makes it clear that the public service jobs are not to be of the dead-end variety."

The legislation is of "critical importance," he said, and the labor movement considers a vote for the bill as "a vote toward restoration of a full employment economy."

The maximum amount available under the Senate bill would be $750 million in federal grants the first year and $1 billion the second year of the program.

Although the legislation accomplishes one of the key objectives of revenue-sharing — shifting federal funds to city, county and state governments—the Administration remained adamant in opposition.

Its own proposal, which met with a cool reception in Congress, calls for discontinuing existing federally financed manpower training programs and turning the money over to the states and localities.

Then, if they wished, they could divert part of the funds to public service employment. But the Administration said any such program should be short-term "transitional" employment—actually closer to the WPA-type concept that the President derided than to the Nelson bill.

In terms of creating jobs and meeting public needs, the Senate measure is one-half of a two-pronged program that labor has strongly urged.

The other half of the job-creating package is the accelerated public works construction program, aimed at building and improving waste treatment plants, water supply and sewer systems and other needed facilities.

The House Public Works Committee has already cleared a $2 billion measure that is expected to reach the House floor during April.

In both programs—public service jobs and public works construction—the basic premise is the same. The unemployed need jobs and the communities need services and facilities.

The twin legislation is aimed at bringing them together.

Jobless Aid Extension Sidetracked in Senate

(Continued from Page 1)

adopted 45-40. But its supporters noted that some senators opposed it primarily because it had not gone through the committee hearing stage and that a number of liberals who were likely to back the proposal were among the Senate's 15 absentees that day.

Under the present law, a nationwide program of extended benefits takes effect only when the seasonally adjusted jobless rate among workers covered by unemployment insurance is at least 4.5 percent for three consecutive months.

Since insured unemployment always is lower than the actual unemployment rate, that would require a jobless rate well above 6 percent and would be reached only during the most severe recession periods.

An alternate, presently optional, system allows a state to trigger extended benefits when its insured unemployment rate is at least 4 percent and also is at least 20 percent above the average for the same period the previous two years. States have until next January to pass enabling legislation.

Under this program 17 states are already paying extended benefits, with 50 percent federal financing. But many eligible states have not yet passed enabling legislation and others have not reached the trigger point.

In some cases, their unemployment rate is well above the 4 percent mark, but not 20 percent above the previous level; in other states unemployment has nearly doubled in the past year but the insured rate has not come up to the 4 percent level.

The AFL-CIO Executive Council, at its mid-winter meeting, declared that "soaring national unemployment rates require much earlier implementation of this extended benefit program."

The council urged Congress to reduce the national trigger to 4 percent, provide 100 percent federal financing of extended benefits, and put the nationwide program in effect this year.

Perkins Named to Key COPE Post

John Perkins has been named assistant director of the AFL-CIO Committee on Political Education, COPE Director Alexander Barkan announced. Perkins has been COPE area director in Illinois and Indiana since April 1968. Prior to that, he was business representative of Carpenters Local 565, Elkhart, Ind. Perkins's responsibilities will include conduct of the annual AFL-CIO voter registration effort and coordination of the COPE data processing program.

Succeeding Perkins as Illinois-Indiana COPE area director is Peter Pesole, assistant business manager of Local 713 of the International Brotherhood of Electrical Workers, Chicago.

Nixon's Policies Seen Holding Back Recovery

The Joint Economic Committee of Congress gave poor marks to the Nixon Administration's latest "game plan" and called for new and expanded federal programs to restore full employment.

The committee majority warned that the Administration's present policies and proposed federal budget would result in unemployment continuing "at a very high and wholly unacceptable level" through the balance of this year.

It criticized as "a serious failure of national policy" the lack of advance planning to provide jobs for returned servicemen and for defense workers thrown out of work because of cutbacks.

The committee, made up equally of representatives and senators, urged immediate enactment of a public service employment program "both to reduce the present high level of unemployment and to fill some of the many unmet needs in the public sector."

It urged improvment of the unemployment insurance program, both in terms of basic benefits and coverage and in the federally-aided program of extended unemployment benefits. And it called for a federally-financed income support and welfare reform program for all needy persons "adequate to provide a decent standard of living."

At the same time, the committee largely glossed over the problem of job losses caused by imports, declaring that the solution is to provide more generous adjustment benefits and retrain workers for jobs elsewhere.

And while criticizing the Administration for its "ineffective . . . inflation alerts," the committee recommended a national "incomes-price board" that would "issue guidelines specifying acceptable increases in wages and prices." It also suggested the possibility of a "temporary" wage-price freeze, but said it should not be imposed only on a single industry.

Teachers Protest New Coalition

The American Federation of Teachers has protested the action of the State, County & Municipal Employes union in forming a coalition with the National Education Association as aiding the "non-union chief rival of the AFT."

Teachers Pres. David Selden said in a statement that protests from unionized teachers across the nation on the formation of the coalition of Public Employe Organizations led to the action.

He said the coalition was formed without exploratory meetings with other AFL-CIO unions, including the AFT.

In Equal Rights Drive:

Legal Protections Held Vital to Women

Carefully-drawn legislation to outlaw sex discrimination was urged by the AFL-CIO in testimony opposing a constitutional amendment that labor contends would backfire against working women.

"We are not opposed to equal rights for women," AFL-CIO Legislative Director Andrew J. Biemiller stressed at a House Judiciary subcommittee hearing.

He said the AFL-CIO's opposition to the so-called "equal rights amendment" is based on the belief that it could "destroy more rights than it creates" and that its principal effect would be to nullify state labor standards designed to protect women against employer exploitation.

Only a minority of working women have trade union protection on the job, Biemiller noted. The protective laws, he said, are especially important to women without a union to turn to.

The equal rights amendment has been pushed primarily by women's professional and business groups and last year a discharge petition brought it to the House floor where it was approved by a one-sided vote. But it died in the Senate, after various amendments to modify its impact were adopted over the protests of the most vocal women's groups.

Biemiller told the House panel that the thrust of the proposed amendment is "essentially negative," that the basic principle of equality is already embodied in the U.S. Constitution and that the goal of Congress should be to remedy discrimination, not destroy hard-won protections.

In the legislative area, Biemiller urged a women's equality law including these key provisions:

- Authorization for the Attorney General to join in court challenges to all forms of sex discrimination that violate the 14th Amendment's guarantee of "equal protection of the law."

This would be done by amending the 1964 Civil Rights Act to extend the Attorney General's powers to act against racial and religious discrimination to include discrimination based on sex.

- Amendment of the federal Fair Labor Standards Act to remove the present exemption of executive, administrative and professional employes from the coverage of the Equal Pay Act, which prohibits wage discrimination between men and women doing the same work. The present law is basically limited to jobs covered by the wage-hour law.

While stressing the importance of safeguards against job and pay discrimination, Biemiller cautioned against needless and irrelevant blanket addition of sex to all sections of the Civil Rights Act.

There is no reason, he said, to legislate against a separate women's hotel by applying the same public accommodations standards used to bar discrimination against Negroes, nor to require every school to be coeducational so long as there is no overall discrimination in availability of education.

"Equality and identity are not the same," Biemiller said, and thus well-meaning but poorly thought-out constitutional and legislative changes threaten to create more problems than would be solved.

Court Upholds Ban on Use of Convict Labor

San Francisco—The California AFL-CIO has won a three-year court battle to outlaw the use of state convicts as a source of cheap labor for the state's agricultural industry.

The victory came recently when the California Supreme Court refused to hear arguments on a 1967 injunction won by the state central body against the use of nearly 300 convicts for harvesting figs and grapes in Merced and San Bernardino Counties.

Republican Gov. Ronald Reagan, who authorized use of convict labor by the growers, tried to defend his action by citing sections of the penal code which extended a work furlough program to inmates of state institutions.

But Thomas Pitts, then executive secretary-treasurer of the state federation, challenged the governor on the grounds that temporary use of convicts as farm laborers had no rehabilitative aspects as the law requires and that there was no labor shortage.

Administration Hit For Blocking Funds

House Democratic leaders sharply denounced the Administration for holding back billions of dollars voted by Congress for state and local programs at the same time it is trying to drum up political support for revenue sharing.

Majority Leader Hale Boggs charged the White House with "hypocrisy" on the issue.

Joined by House Speaker Carl Albert and chairmen of a number of Appropriations subcommittees, he estimated that impounded and withheld funds total $20 billion. This includes money earmarked for urban renewal, mass transit, pollution control, highways and air safety.

Albert said the President's withholding of funds has been on an unprecedented scale and "seriously compromised" the role of Congress as a co-equal part of government.

Administration officials have argued that the withholding of funds voted by Congress is both legal and necessary to combat inflation. But a number of Republicans have joined in the protest and there have been some signs that the Administration policy is being eased.

The issue flared up in the Senate, too, when Agriculture Sec. Clifford M. Hardin appeared before a Senate Appropriations subcommittee handling funds for his department.

Subcommittee Chairman Gale W. McGee (D-Wyo.) told Hardin the Administration does a lot of talking about environmental problems and the need for safer pest controls but has refused to spend funds Congress appropriated for research on that very problem.

Even Republican Sen. Roman L. Hruska (Neb.) joined in the criticism, telling Hardin, "I am puzzled."

Hardin said the question of releasing the funds is under study and told the critical senators, "I think I got the message."

LARGEST HEARING ROOM in the new Senate Office Building was filled to capacity and additional hundreds of members of the American Federation of Government Employes lined the hallway as hearings opened on a labor-supported bill to provide additional pay steps and a better prevailing wage system for federal blue-collar workers. At the witness table are AFGE Pres. John F. Griner, other union officials, and William H. Ryan of the Machinists, representing the AFL-CIO Metal Trades Dept.

Federal Unions Win 74 of 77 Elections

Federal employes voted for union representation in 74 of the 77 collective bargaining elections held in the Washington, D.C., area between Jan. 1, 1970 and Feb. 28, 1971.

The tally was compiled by the Washington area office of the Labor-Management Services Administration, which supervised the elections, and was announced by Assistant Sec. of Labor W. J. Usery, Jr.

The elections covered units with 23,500 employes, and the Labor Dept. said 80 percent of those who cast ballots voted for union representation.

Ohio Law on Garnishment Ruled Invalid

Cleveland—The death knell of Ohio's harsh garnishment law was sounded here by U.S. District Judge William Thomas who ordered the Cleveland Municipal Court to stop applying the law to workers' wages.

The Ohio AFL-CIO hailed the ruling as a victory not only for labor, which has campaigned against the law for years, but for all consumers in the state.

Judge Thomas, in handing down the order, told the Ohio Council of Retail Merchants to inform its members to likewise refrain from using the law in the future.

The garnishment law struck down by the federal court allowed the municipal court system to take up to 70 percent of a worker's weekly earnings once a month.

The Labor Dept. joined with the Ohio AFL-CIO in a suit challenging the law, passed last year by a Republican-controlled 108th General Assembly.

Labor Dept. Counsel Aaron Caghan argued that the Ohio statute was in conflict with the federal Truth-in-Lending Act, which stipulates that up to 25 percent of a worker's weekly earnings are subject to garnishment.

Judge Thomas responded with a restraining order against the Cleveland Municipal Court.

Meanwhile, the state attorney general of Gov. James A. Rhodes' previous administration went to Washington, asking that Ohio be exempted from the federal law. The exemption was denied after the State AFL-CIO argued against it.

Prior to 1967, all of an Ohio worker's paycheck could be taken by creditors through garnishment.

Federal Employes Push Blue-Collar Pay Bill

The federal employe blue-collar pay bill that Pres. Nixon vetoed two hours before the 91st Congress adjourned is very much alive and well in the 92nd Congress, Senate hearings clearly demonstrated.

In fact, if union enthusiasm and congressional response is a fair indicator, the bill that emerges is likely to be an improvement over the legislation the President vetoed last January. That bill had been trimmed back in a futile effort to avoid a veto.

Testimony by Pres. John F. Griner of the American Federation of Government Employes and by William H. Ryan of the Machinists, who represented the AFL-CIO Metal Trades Dept., was strongly endorsed in a letter to the Post Office & Civil Service Committee by AFL-CIO Legislative Director Andrew J. Biemiller.

Legislation to add additional steps to the blue-collar pay schedule, to improve the system for determining prevailing wages, and to include thousands of employes of military post exchanges and other self-financing activities is needed in the interests of "justice and equity," Biemiller said.

Reinforcing the union testimony was the impressive demonstration of support by some 1,800 blue-collar members of the AFGE who came from eight states to back up their union's position.

Well before the hearing got under way, they had filled every available seat and standing room space in the Senate's largest hearing room. Hundreds who couldn't crowd into the room lined the corridors outside.

Arriving senators and union leaders were greeted with loud applause by the members, many of whom had gotten up before dawn to make the trip or had come by chartered buses the night before. Nearly all had given up at least a day's pay to bear witness to the importance of the legislation.

Griner told the committee that the present compressed three-step wage system for hourly-paid government workers keeps them consistently below private industry standards. As a result, a substantial number haven't even been able to keep up with the rise in the cost of living.

And as for the workers employed by self-financing enterprises, Griner said, they have all the burdens of regular civil service employes—including a prohibition against striking—but virtually none of the rights and fringe benefits. They "work in the world of the double standard."

Griner, Ryan and Biemiller endorsed a bill introduced by Sen. Frank E. Moss (D-Utah) and similar legislation by other senators which would:

- Establish a 10-step pay system, with progression to the top step after 17.5 years—as is the case for salaried white-collar federal employes.
- Set up a Federal Prevailing Rate Advisory Committee of equal union and management representation with an impartial chairman who does not hold any other government post.
- Grant full pay equity to the employes of self-financing activities, the "non-appropriated fund employes."
- Establish uniform, government-wide shift differentials for night work.

The unions also urged inclusion in the legislation of a guarantee that the wage board increases will at least meet the rise in living costs since the last pay adjustment.

Ryan told the committee that depressed local conditions often result in pay adjustments far short of both the national average and the cost-of-living rise. The increase in living costs, he urged, should be the floor under all wage adjustments.

Speaking for the 22 affiliated Metal Trades unions, Ryan said experience with the present National Wage Policy Committee, whose chairman is designated by the Civil Service Commission, is that union recommendations often "fall on deaf ears" and are rejected by 6-5 votes.

Meany Hits Move to Brand Workers as 'Scapegoats'

DOUBLE STANDARD used by Nixon Administration to reward business and banks while cracking down on workers' wages is attacked by AFL-CIO Pres. George Meany at Senate hearing on economic stabilization legislation.

Cites Double Standard For Labor, Business

By David L. Perlman

AFL-CIO Pres. George Meany accused the Nixon Administration of trying to cover up the failure of its economic policies by making a "scapegoat" of America's workers.

He lashed out, in Senate testimony, at the "double standard" used to reward big business and banks while demanding restraints on wages.

Instead of concrete programs to create jobs for 5 million unemployed and restore purchasing power, Meany said, the Administration continues to feed the American people "a diet of rosy predictions."

Meany testified before a Senate Banking subcommittee that is considering legislation extending the President's emergency powers "to stabilize prices, rents, wages and salaries" and to impose selective credit controls. A similar bill has already passed the House.

The AFL-CIO supported such stand-by powers in the past and still supports them, Meany testified.

But, he urged, "Congress must make it abundantly clear that this authority is for overall, across-the-board and even-handed measures, rather than for singling out one industry or one group of workers."

And if such broad controls are invoked, he said, Congress should use its taxing powers to impose similar curbs on profits, dividends and capital gains.

Meany made it clear that the AFL-CIO does not consider the current effort to restrain construction wages either even-handed or workable.

"It is absolutely, completely unfair to make the construction worker the whipping boy," he said in response to a question.

In principle, Meany said, it

Jobless Rate Climbs Back To 6% Level

By Tom Castor

The nation's unemployment rate climbed back to 6 percent in March after dipping to 5.8 percent the previous month.

The Bureau of Labor Statistics said the increase was largely among those in the 16-24 age group who were seeking their first jobs or re-entering the labor market.

On a seasonally adjusted basis, the total civilian labor force—those working or seeking employment—gained 91,000 persons after losing 514,000 in February.

Those who have given up the search for work are not included in the March unemployment figure of 5.2 million.

And Assistant BLS Commissioner Harold Goldstein told the Joint Economic Committee of Congress that this "hidden unemployment" numbered about 800,000 workers in the first quarter of 1971 as against 600,000 in the same period a year ago.

BLS Commissioner Geoffrey H. Moore told the committee that he sees unemployment as peaking at about the 6-percent rate. But he conceded that the stability of the rate may reflect a buildup in steel inventories in anticipation of a possible strike this year.

Both Moore and Goldstein had been summoned before the committee by its chairman, Sen. William Proxmire (D-Wis.) after members of Congress protested the cancellation of press briefings on the monthly figures.

"You're leaving this to the politicians—the politicians in the White House and the politicians on Capitol Hill," Proxmire told Moore.

Proxmire also vowed to summon the commissioner and his assistant each month, if needed, to give public information about the employment situation.

Moore defended cancellation of the briefings with the same arguments used earlier by Labor Sec. James D. Hodgson, who made the decision in conjunction with Pres. Nixon.

The BLS commissioner said cancellation of the monthly job briefings, as well as those on the Consumer Price Index, will speed dissemination of information and "avoid the awkardness of subjecting the professional staff of BLS to questions with policy implications."

At the conclusion of his appearance before the committee, Moore said that questions from Proxmire had been substantially "more penetrating" than those which would have been asked by reporters. This produced a loud groan from the press table, and Proxmire told the commissioner that "eight or 10" of

(Continued on Page 7)

Bid to Boost School Aid Falls Short

The House bowed to a presidential veto threat and by a hair-thin margin rejected a move to increase federal funds for education programs by about 15 percent.

Labor and school groups strongly supported an amendment by Rep. William D. Hathaway (D-Me.) to add $728 million to a $4.8 billion education appropriations bill. But with only 13 Republicans willing to defy the Administration on the issue, the amendment was voted down, 191-187. Forty-three Democrats joined 148 Republicans in defeating it.

Even if it had been adopted, the level of funding for key programs would have been only about half the amount authorized by Congress in the legislation setting up the programs.

The bill sent to the Senate exceeds the Administration's budget request for the programs covered by the legislation by about $131 million, including increases in federal "impact" payments to schools attended by children of servicemen

(Continued on Page 8)

To Protect Members:

Unions Accept Role On Craft Pay Panel

The new Construction Industry Stabilization Committee met for the first time after AFL-CIO building trades presidents said they could find no sound legal basis for challenging the Executive Order which created it.

Presidents of the 17 craft unions in the AFL-CIO's Building & Construction Trades Dept. decided that the department should cooperate "to protect the interests of their membership," and top officers of six of the unions accepted appointment as delegates and alternates to the tripartite committee.

The four labor delegates named by Labor Sec. James D. Hodgson are Pres. Hunter P. Wharton of the Operating Engineers, Pres. S. Frank Raftery of the Painters, Pres. John H. Lyons of the Iron Workers and Pres. Charles H. Pillard of the International Brotherhood of Electrical Workers.

Named as alternates for labor were First Vice Pres. William Sidell of the Carpenters and Assistant Pres. Martin J. Ward of the Plumbers & Pipefitters.

All attended the first session of the body which was established by Pres. Nixon's Mar. 29 Executive Order aimed at keeping wage increases on construction in the 6 percent range.

The President simultaneously reinstated the Davis-Bacon Act which requires that the area prevailing wage be paid on federal construction projects.

Although the building trades presidents decided not to fight the order, they instructed their legal counsels to keep a record of "the actual cases decided . . . to determine whether litigation should be maintained in the future."

The function of the tripartite committee is to review wage settlements referred to it by craft boards to make sure that increases are in accord with the

Social Security Panel Asks Major Increases

An immediate increase of 15 percent in benefits and a minimum payment of $100 a month for retirees are among major improvements in the social security program proposed by four members of a blue-ribbon advisory panel.

The full 13-member Advisory Council on Social Security issued 25 specific recommendations that included a more realistic plan for financing the programs for the elderly and automatic increases in retirement benefits to keep pace with rising prices.

Three members of the advisory council representing labor and the late Whitney M. Young, Jr., joined in endorsing the recommendations, but they urged additional improvements in social security benefits.

The supplementary recommendations came in a statement drafted by advisory council members Bert Seidman, AFL-CIO social security director; Pres. Joseph P. Tonelli of the Pulp, Sulphite & Paper Mill Workers, and Sec.-Treas. Walter J.

(Continued on Page 8)

Wage Freeze Charged On Service Contracts

The Nixon Administration has distorted the Public Service Contracts Act to impose a perpetual wage freeze on low-paid workers, unions charged at a House Labor subcommittee hearing.

A co-author of the 1965 law—which is commonly referred to as the O'Hara-McNamara Act—agreed.

Rep. James G. O'Hara (D-Mich.) accused the Labor Dept. of "maladministration" of the law, which is intended to guarantee that workers employed by service contractors will be paid the prevailing area wage rate for their jobs.

Spokesmen for the Laborers, Service Employes, Government Employes and Maritime Union testified that the Labor Dept.'s acceptance of a dubious interpretation by the General Accounting Office has made it almost impossible for workers ever to get a pay raise.

The unions testifying and the AFL-CIO had strongly supported passage of the law to rectify the sharp cut in pay rates—particularly at military installations—that took place when government agencies decided to save money by contracting out various service functions, including cleaning, laundry, guard and cafeteria work which had been done by federal employes.

David L. Jacobs, business manager of a Laborers local at Laredo, Tex., noted that a 1961 contract-

TOOLS OF THE TRADE that graduates of Project Build in Washington, D.C., will use on their jobs are explained to Walter E. Fauntroy, the man who will represent the District of Columbia in Congress as a non-voting delegate. O. C. Willie Dixon, center, and Alvin Gilchrist, right, were among the 154 apprentices and 31 journeyman trainees who were graduated in the Outreach program sponsored by the Greater Washington Central Labor Council. Delegate-elect Fauntroy was the key speaker at the graduation.

Kirkland Cites Quality As Hallmark of Unions

New York—The long struggle to maintain standards of quality for the worker continues as a prime objective of trade unionism, AFL-CIO Sec.-Treas. Lane Kirkland told symphony musicians at a two-day seminar here.

"The problem of sub-standard, amateur or dilettante competition has afflicted every calling" since the beginning of history, Kirkland noted, "holding the perennial threat that genuine talent, training, skill and quality may be driven from the field."

The worker—whether he lives by his talent, skill or muscle—abides today under the constant shadow of an accelerating technology "in a society at the stage of transition from old patterns of judgment to God knows what," he observed.

Kirkland noted that in the past a major struggle of the Musicians was for fair compensation for "canned music"—the recording of members' performances.

"Today, the machines are making the music—or something some people call music—in an environment where standards of performance or quality are non-existent, accidental or regarded as irrelevant," he declared.

"The route from the Victrola to switched-on Bach and the Moog synthesizer—translating computer programs, heartbeats, brainwaves and light patterns into something defined and accepted by a rising generation as music—parallels the route of many another old and proud calling, skill or profession."

All trade unions are affected by these problems and they must work more closely together to search for answers, he stressed.

"The AFL-CIO is trying to respond to the challenge and the changing role of work and leisure," Kirkland observed.

Addressing AFM representatives of 30 major symphony orchestras from across the country and Canada, Kirkland reaffirmed the federation's support for full funding by Congress of the National Foundation of Arts & Humanities. He called for an increase in funds in the years ahead.

The two-day seminar, called by AFM Pres. Hal C. Davis, was attended by 72 symphony musicians and officials of the AFM. Wide-ranging discussions covered the issues and problems of the orchestras and their members.

Other speakers included Amyas Ames, board chairman of the New York Philharmonic Orchestra; Dr. Walter F. Anderson, program director for music of the National Endowment for the Arts; AFM Sec.-Treas. Stanley Ballard and executive board members of the union.

A panel discussion on contracts, negotiations and bargaining techniques was led by Henry Kaiser, general counsel of the union. Kaiser also reported on the AFM's activities in the area of copyright and anti-piracy legislation.

Cites Double Standard:

Meany Hits Move to Brand Workers as 'Scapegoats'

(Continued from Page 1)

doesn't make sense to single out a single industry or a single group of workers "when all other parts of the economy are free of similar restraints."

And in practice, he pointed out, construction wages have been among the least of factors in the rising cost of homes and buildings—far outdistanced by the huge increase in land costs and financing costs. Yet there is no Administration effort to control land profits, bank charges or broker profits.

He told a questioner that the wage stabilization mechanism ordered by the President for the construction industry was not the result of a voluntary agrement or of negotiation, but in fact was imposed "because negotiations did not succeed."

As examples of "lopsided double standards" of the Nixon Administration, Meany cited:

- The plan to step-up business depreciation allowances so as to cut corporate taxes by $3 billion to $4 billion a year—while workers' wage increases are denounced as "inflationary."
- The Administration's proposals to allow business to defer taxes on profits from exports at a cost to the Treasury of hundreds of millions of dollars. "But when organized labor seeks economic justice for workers, it is attacked as exercising excessive market power."
- "Not even a hint of government guidelines for the banks" when bank profits shoot up and bankers are "rewarded with higher salaries." But "workers are told that their wage increases are supposed to be held down."

To the glee of the crowded Senate hearing room—with standees lining the walls—and to the consternation of Sen. John G. Tower (R-Tex), Meany verbally roasted Arthur F. Burns, original architect of the Administration's slowdown of the economy and currently chairman of the Federal Reserve Board.

Instead of apologizing for the fact that his economic theories didn't work and his predictions were way off base, Meany noted, Burns has been taking out after labor and demanding compulsory arbitration.

Tower complained that the "Administration does not deserve this abuse." It has been "very conciliatory toward organized labor," Tower said, adding that some Republicans think it is "too conciliatory."

As to singling out construction wages and ignoring other construction costs, Tower argued that "while land and money responds to the law of supply and demand, the price of labor has not."

Subcommittee Chairman William Proxmire (D-Wis.) wondered whether speeding up scheduled income tax cuts would give a needed boost to the economy.

Meany replied that the AFL-CIO considers the two most important measures to revive the economy to be the public service jobs bill and accelerated public works in areas of high unemployment.

And he urged that Congress follow up the "short-term" programs to create employment with a "long-range plan to rehabilitate the nation's cities and reclaim natural resources lost to pollution."

The problem of America's cities, Meany stressed, is "a national concern," not just a problem for people in a particular area.

As military spending goes down, he said, increased federal funds should be made available to meet the needs of the nation.

Meany, who was accompanied at the witness table by AFL-CIO Legislative Director Andrew J. Biemiller and Research Director Nat Goldfinger, gave this summation of labor's position:

"We want inflation ended. We want full employment restored. We are prepared to sacrifice to meet these goals—as much as anyone else, for as long as anyone else.

"But we will not be the scapegoat for the economic mess created by this Administration's ill conceived game plan."

West Virginia Labor Hails Legislative Gains

Charleston, W.Va.—AFL-CIO-supported legislation enacted by the recently adjourned West Virginia state legislature raised the state's minimum wage and increased unemployment and workmen's compensation.

The session was termed "the most successful and progressive in the history of the AFL-CIO in this state," by Federation Pres. Miles C. Stanley.

The new state minimum wage law increases the floor on wages in jobs not protected by the federal wage-hour law to $1.20 an hour effective next July 1, $1.40 by July 1, 1972, and $1.60 a year later. The amount which an employer can deduct from "tipped" employes for gratuities was reduced from 40 cents to 25 cents an hour.

Maximum weekly benefits for workmen's compensation were increased to $74.80, or 55 percent of the average weekly wage in the state. Other benefits include an increase in funeral allowances from $750 to $1,200 and an increase in the minimum weekly benefits from $26 to $35.

In unemployment compensation, labor won an increase of $10 a week in the benefit ceiling to $68 effective July 1 and extension of benefits for an additional 13 weeks to a total of 39 weeks during periods of high unemployment. The extension provision applies immediately.

Other legislative victories reported by the State AFL-CIO include:

- A Little Wagner Act, a goal of labor here for more than 30 years, which spells out organization and collective bargaining rights for intrastate workers.
- A bill clearing away legal obstacles to prepaid group health care plans.
- A mine safety law, giving the State Dept. of Mines additional authority and responsibility for enforcing mine health and safety regulations, plus more money to operate.
- A measure granting 18-year-olds the right to vote in state and local elections.

Chicago Insurance Firm Signs with Office Union

Chicago—The Office & Professional Employes signed a first contract with the Amalgamated Labor Life Insurance Co. The firm is the first in the Chicago insurance industry to be organized by the OPEIU.

The three-year pact gives company employes a 32.5-hour work week, 11 paid holidays, and paid vacations up to four weeks after 10 years of service. Improved insurance and medical care benefits also are included in the contract, which is retroactive to Jan. 1, 1971.

Senate Rollcall Vote on Jobs in Public Service

Before passing the public service jobs bill on Apr. 1, the Senate rejected by a 50-27 vote an amendment by Sen. Robert Taft, Jr. (R-Ohio), which would have permitted wages as low as $1.30 an hour to be paid to persons hired under the program and would have barred any person from being paid more than $500 a month.

Labor supported the position of the 39 Democrats and 11 Republicans who voted against this wage-cutting amendment. On the other side were 24 Republicans and three Democrats.

Michigan Ban Lifted:

High Court Upholds Legal Aid by Union

The Supreme Court struck down as an invasion of rights guaranteed by the First Amendment a Michigan injunction limiting a union's right to provide legal aid services for its members.

Five justices, in an opinion by Justice Hugo Black, said "collective activity undertaken to provide meaningful access to the courts is a fundamental right within the protection of the First Amendment."

That right would be a "hollow promise," the majority opinion said, "if courts could deny associations of workers the means of enabling their members to meet the costs of legal representation."

The ruling reverses the Michigan Supreme Court and lower state courts in a suit brought in 1959 by the State Bar of Michigan against the Railroad Trainmen, now part of the United Transportation Union.

The attorneys' organization charged that the union recommended selected lawyers to prosecute injury claims under the Federal Employers' Liability Act, secured a commitment that the legal fees would be no more than 25 percent of the amount recovered, and recommended Chicago attorneys to represent Michigan claimants.

Black's opinion observed that the state bar's complaint appears to be a plea for court protection of unlimited legal fees.

It is hard to believe, the opinion said, "that a court of justice would deny a cooperative union of workers the right to protect its injured members, and their widows and children, from the injustice of excessive fees at the hands of inadequate counsel."

Justice John M. Harlan, concurring and dissenting in part, said he would uphold the right of the union to seek a limit on attorneys' fees but agreed with the Michigan court otherwise. Justices Byron R. White and Harry A. Blackmun said they would limit the giving of advice to lawyers. Justice Potter Stewart did not take part in the decision.

The majority opinion noted that "the only evidence introduced in this case was the testimony of one employe of the Association of American Railroads in 1961 that from 1953 through 1960 a large number of Michigan claimants were represented by the union's designated Chicago legal counsel."

The state trial court in 1962 issued an order enjoining the union's legal referral service on the ground that it violated a state law against "soliciting" damage suits against railroads. The union appealed, and the state Supreme Court upheld the lower court in 1969.

The five concurring Supreme Court justices ruled that the Michigan Supreme Court "failed to follow our decisions" in three cases involving the BRT, the Mine Workers and the NAACP. The injunction in the present case "cannot stand in the face of these prior decisions," they said.

In another case the high court declined to review a decision by the 8th U.S. Circuit Court of Appeals in St. Louis that the Kellwood Co., Ottenheimer Division, must bargain on contract terms with the Ladies' Garment Workers and reinstate many employes with back pay. The company, which makes clothing for department stores and other firms at Little Rock, Ark., lost its claim that it had bargained in good faith.

LABOR APPOINTEES and alternates to the Construction Industry Stabilization Committee participated in the committee's first session which was devoted to "setting up business." From left are Iron Workers Pres. John H. Lyons, Painters Pres. S. Frank Raftery, IBEW Pres. Charles H. Pillard, and (third from right) Operating Engineers Pres. Hunter P. Wharton. To the right of Wharton is First Vice Pres. William Sidell of the Carpenters, an alternate. Labor's other alternate, Plumbers & Pipefitters Assistant Pres. Martin J. Ward, attended the session but is not shown.

AFT Rallies Support For Striking Teachers

The American Federation of Teachers rallied its members to stand solidly behind striking teachers in Newark, N.J., San Francisco, Scottsdale, Ariz. and other school districts.

Negotiations over classroom conditions sparked spring walkouts in school systems with about 10,000 teachers and more than 200,000 pupils.

In Newark, the teachers' union was ready to end a nine-week strike but a divided school board voted 5-4 not to accept a fact-finder's recommendations on terms. The board voted at a second public hearing after the first one broke up in disorder blamed on militants.

The strikers will not return until the board withdraws charges of "unprofessional conduct" against 347 strikers it wants to fire, AFT Pres. David Selden said in a message to all local unions.

The board's attitude toward the strikers "looks like a purge," said Selden.

The strike started Feb. 1 when school officials insisted on cutting back conditions won in previous contracts. Police and sheriff's deputies arrested union pickets, and three union officers were jailed on charges of violating a court order to return.

Local Pres. Carole Graves, in jail since early March, began a hunger strike three weeks ago in the Essex County Penitentiary, where she is living on water and vitamin pills in protest against board policies. Also in the Caldwell, N.J., lockup are union Vice Presidents Frank Fiorito and Donald Nicholas.

Union members in San Francisco called a "stay out" shortly before Easter vacation. Their ranks were swelled by members of the rival teachers' association who ignored a call by the National Education Association to cross picket lines.

The dispute stems from a decision by new Supt. Thomas Shaheen to keep classes at their current size despite an agreement with AFT Local 61. Also, the union said, 340 teachers face dismissal under Shaheen's austerity budget. Teachers who remain have been offered a 1 percent pay raise.

Executive Sec.-Treas. John F. Henning of the California AFL-CIO said the dispute points up the need for a state law guaranteeing orderly collective bargaining for contract terms and grievance procedures. A state AFL-CIO bill to that effect is pending in the Senate.

Mediation efforts to date have failed in San Francisco and in Scottsdale, where members of an NEA affiliate walked out and were supported by union teachers. The Board started hiring volunteer strike-breakers for the 1,000 teachers and threatened to fire those who do not return promptly.

Craft Wage Panel Holds First Session

(Continued from Page 1)

6 percent provision of the presidential order.

Prof. John T. Dunlop of Harvard, named as chairman of the wage stabilization committee, said after its first meeting that various sectors of the construction industry would be formally notified "very soon" to set up the labor-management craft boards.

If they fail to do so, negotiated wage settlements will come directly to the 12-man stabilization committee.

Dunlop said D. Quinn Mills, an M.I.T. construction industry expert, had been appointed secretary of the committee.

Millard Cass, previously Deputy Undersecretary of Labor, will serve as administrative director.

Public members of the board besides Dunlop are Clarence D. Barker and Stuart Rothman, members of the Dept. of Labor Wage Appeals Board, and Prof. Albert Rees of Princeton University.

Management members are John E. Healy II, president of the Associated General Contractors of America; Robert L. Higgins, executive vice president, National Electrical Contractors Association; George A. Miller, executive vice president, Mason Contractors Association of America, and John E. Quinn, executive vice president, National Constructors Association.

Romney Acknowledges Housing Law Scandals

Real estate speculators pocketed big profits by palming off substandard housing under a government-financed program that enables low-income families to become home owners, Housing & Urban Development Sec. George Romney conceded.

But Romney, testifying before the House Banking & Currency Committee, had a unique explanation.

The fault, he suggested, lay with Congress and not his department.

It is true, Romney acknowledged, that some government-hired appraisers appear to have connived with speculators in approving sales of homes with serious defects at excessive prices.

And he did not challenge the fact that the House committee's investigation last summer had exposed the scandal and that HUD had first scoffed at the charges.

But, Romney said, it was the fault of Congress for establishing in the first place programs that were "too complicated for any organization to administer successfully."

With the General Accounting Office—an arm of Congress—looking over its shoulder, HUD finally got around to investigating abuses in the program—carried out under Section 235 of the Housing Act.

Under the "235 program," low-income families pay 20 percent of their income for long-term house purchases and the federal government pays the balance. In the past two years, nearly 160,000 homes have been sold under this program by private developers or realtors.

In many cases, the House committee's initial investigation found, speculators would buy up older homes at low prices, put in some "cosmetic" remodeling that would make the homes look more attractive but paper over structural defects, and promptly sell them under the government-backed plan at big profits.

Romney conceded that many FHA appraisers, who certified to the soundness and value of the houses, are more closely linked to builders and bankers than to a "consumer orientation."

A witness from the General Accounting Office team that monitored the subsequent HUD investigation, reported that 44 percent of the used homes and 25 percent of the new homes passed by the FHA under the program had serious defects. More than 200 cases have been referred to the Justice Dept. for possible violations of law, Romney said.

Anyway, Romney suggested, it would be better if Congress agreed to Administration proposals for consolidating various HUD programs so that it all wouldn't be "too complicated" for his department to administer.

'Bacon' Bill Too Late For Washington's Davis

Olympia—After a three-year battle, the Washington state legislature has finally passed what has become known as "Davis's Bacon Bill."

But for Joe Davis, president of the Washington State Labor Council, victory came too late.

The State AFL-CIO's newsletter recounts the one-man crusade Davis launched in 1969 when he found that the lean-looking bacon that showed through the small plastic window of the package usually turned out to be mostly fat when the full wrapping was peeled away.

Clever, those packagers. But Davis likes his bacon lean.

The legislative wheels were set in motion. Hearings were held in 1969 and 1970. Consumers were heard from. They wanted packaging that would show them what they were buying. Support mounted.

This year the fat was in the fire, legislatively speaking. The Davis "bacon bill" sizzled through the House, 86-12, and the Senate, 38-8.

Victory was sweet—for thousands of shoppers and bacon-lovers. But for Joe Davis, well, it seems that he's been put on a strict diet. No bacon.

Engineers Sign New Contract To Train 810

The Operating Engineers will train 810 more jobless and underemployed workers through a new $1.7 million federal contract. In two previous contracts with the Manpower Development & Training Administration, 2,230 persons completed training in the IUOE's program.

Under the new 18-month contract that runs through June 1, 1972, IUOE locals and joint apprenticeship committees will train 215 entry-level operating engineers and upgrade the skills of 555 journeymen and 40 heavy duty mechanics who have some trade experience.

The project will be operated in 15 areas across the country as subcontracts for the program are negotiated. Ten cities already selected and the number of trainees in each city are Albuquerque, 75; Atlanta, 75; Cleveland, 50; Denver, 50; Detroit, 150; Harrisburg, Ill., 50; Kansas City, 50; Milwaukee, 40; Mobile, 38, and Washington, D.C., 20. The five states with cities still to be selected are Arkansas, 50; Louisiana, 50; Mississippi, 50; Northwest Florida, 12, and Northwest Texas, 25.

Double Standard

CHAIRMAN ARTHUR BURNS of the Federal Reserve and much of the Administration's leadership have been engaged in the shocking and blatant use of a double standard. To cover their record of failure in economic policy, with its tragic consequences for millions of American families, they try to pin the blame on workers, while providing subsidies and aid for the banks and big business.

Let me cite a few examples of these double standards:

● Since the cash-flow to corporations moved down after mid-1969, as a result of the Administration's engineered recession—following a 91 percent rise from 1960—the Administration has proposed a step-up depreciation, which would cut corporate taxes by $3 billion to over $4 billion a year in the next few years. But workers' wage increases to offset the accelerated rise of living costs and to gain some improvement in buying power are denounced as inflationary.

● **When exports lag, while imports continue to rise, the Administration proposes, as it did last year, to provide business with a mechanism to defer taxes on profits from exports, at a cost to the Treasury of hundreds of millions of dollars. But when organized labor seeks economic justice for workers, it is attacked as exercising "excessive market power."**

● When bank profits shoot up—like 21.9 percent for J. P. Morgan & Co. and 16.1 percent for Chase-Manhattan in 1970—there is not even a hint of government guidelines for the banks. And the New York Times reports that "the heads of the nation's largest banks—which enjoyed sharp increases in profits during the recession year of 1970—generally were rewarded with higher salaries last year." No Administration spokesmen admonished the bankers but workers are told that their wage increases are supposed to be held down.

● Soaring land costs and financing charges have resulted in sharply rising housing costs. The cost of financing on FHA homes has risen 356 percent in the past 20 years and land costs have gone up 296 percent, while structure costs (which include on-site labor) have risen 65 percent. However, the Administration tries to pin the blame solely on construction wages and attempts to institute specific and immediate wage restraints. It offers only a vague promise of some future restraints on construction prices and profits and no mention at all of the major inflationary pressures of soaring land and financing costs.

How can the government, in good conscience, apply wage restraints on workers in one industry—to single out one group of workers—when the prices of the food, clothing and other goods and services they buy are free to move up? Such a measure smacks of punitive action, rather than a stabilization policy.

Moreover, how can the government hope to stabilize prices in one industry, alone—such as construction—when that industry depends on materials and services it buys from other industries, whose prices are free to rise? It just can't be done.

We want inflation ended. We want full employment restored. We are prepared to sacrifice to meet these goals—as much as anyone else, for as long as anyone else. But we will not be the scapegoat for the economic mess created by this Administration's ill-conceived "game plan."

—AFL-CIO Pres. George Meany on economic stabilization before a Senate Banking Subcommittee, Apr. 7, 1971.

'You've Got Too Much Clout!'

A Word Edgewise:

Mao Tse Tung Falls Victim To His Own 'Great Revolution'

By John P. Roche

DESPITE the American obsession with events in Indochina, it is probable that a historian writing in, say, 1990 will look back at the 1960s with a very different Asian perspective.

Three events will likely dominate his canvas: (1) the destruction of the myth that India was a great power, a job the Chinese Communists brilliantly accomplished in 1962. (2) the transformation of Indonesia from an aggressive proto-Communist regime into an anti-Communist, neutral state. (3) the demolition of the centralized Communist state on mainland China known as Mao's Great Proletarian Cultural Revolution.

It began with an article by a theater critic in a Shanghai newspaper on Nov. 10, 1965. For the next three years, as the Red Guards mobilized, marched, screamed, fought and agitated, the Chinese People's Republic seemed to outside observers more and more to resemble a lunatic asylum seized by the inmates.

One million (that is, 1,000,000) Red Guards demonstrated day and night around the Soviet Embassy. The Russians had taken precautions, replacing their diplomats with hard-eyed KGB types, but even secret policemen have their noise thresholds, and it must have been sheer hell.

Those who were trying to make sense out of events had a hard time. Every morning the White House specialists went over all the latest intelligence material, but it was extremely difficult to sort out the signals from the static.

The only reporters in Peking were Japanese, who spent their time rushing around reading the "Big Character" posters that seemed to be the main communications devices. Chinese radio stations were mostly unhelpful—indeed, in crucial areas, some of them were off the air for months.

The best sources were the "China Watchers," perched precariously in Hong Kong, who spent their time talking to refugees, reading papers that came over the border, and, seemingly at times, visiting astrologers.

The United States consulate had a particularly skilled staff, though the burden was overwhelming. Mao was up! Mao was down! Mao was dead! Mao was alive! The Red Guards had taken control in Tibet. . . . The Army in Tibet had suppressed the Red Guards. So it went, month in, month out.

Throughout this turmoil three men seemed able to make sensible patterns out of the chaotic pieces: Ed Rice, our consul general in Hong Kong; Paul Kreisberg, a brilliant China expert in the State Dept., and Robert S. Elegant, Hong Kong bureau chief of the Los Angeles Times.

Neither Rice nor Kreisberg is in a position to go public, but now fortunately Elegant has brought out a masterful analysis of Red China's travail. "Mao's Great Revolution" (World) may be replaced by more detailed, inch by inch, scholarly studies as more facts leak out. But I doubt if it will ever be matched as a synoptic tour de force.

ELEGANT BEGINS with Mao's disillusionment in the late '50s and with his paranoidal conviction that only the existence of sinister, traitorous forces within the regime could account for the appalling economic conditions that existed. A classic megalomaniac, the aged chairman set his course towards "instant" communism, a course that required the elimination of the reactionary forces blocking progress, notably the Communist Party hierarchy. The youth became the chosen instruments of his revenge and for three years they tore the country apart.

This anarchy obviously could not last forever, but there remained only one agency in the country that could try to put the pieces back together: the Army.

Now it is clear that Mao is a museum piece and the People's Liberation Army is running the country. To anyone who had read Elegant's superb book, this would come as no surprise. He clearly indicates that today we are dealing with military communism in China, and he suggests this is a far more hopeful development than one might initially surmise.

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Labor Spells Out Stand:

Threat to On-Job Safeguards Mars Women's 'Rights' Drive

The following is excerpted from testimony by AFL-CIO Legislative Director Andrew J. Biemiller before a House Judiciary subcommittee on the Equal Rights Amendment.

WE ARE NOT OPPOSED to equal rights for women. We are, however, opposed to the Equal Rights Amendment. This is because we believe that:

1. The amendment could destroy more rights than it creates by attempting to create equality through "sameness."

2. Many state labor standards laws on wages, hours and other conditions of employment apply only to women. The practical effect of the amendment could be to destroy these laws for women rather than to accomplish their extension to men.

All too many working women do not have the protection afforded by trade union membership and must therefore rely on safeguards provided by law. The existence of special labor standards legislation for women is a positive offset to discriminatory disadvantages they suffer in the market place.

The Equal Rights Amendment is essentially negative in its impact. It creates no positive law in itself to combat discrimination against women where private employment or other discriminatory practices are concerned. There is a myriad of legal relationships in every area of life which adoption of the Equal Rights Amendment could affect, with uncertain and possibly inequitable results. Identity of treatment does not necessarily yield true equality of treatment between the sexes.

In place of proposals like the Equal Rights Amendment we have argued that the best way to remedy legal discrimination against women is through specific legislative remedies to particular legal inequities plus specific positive anti-discrimination legislation, such as the Equal Pay Act, enacted into law in June 1963 with our full support.

Pres. Kennedy's Commission on the Status of Women in its Report dated October 1963 categorically rejected the Equal Rights Amendment, saying: "Since the commission is convinced that the U.S. Constitution now embodies equality of rights for men and women, we conclude that a constitutional amendment need not now be sought in order to establish this principle."

We believe that the commission's conclusion was and is essentially sound and that it represented a fair conclusion based on consideration of many divergent viewpoints, both within the commission itself and among the groups testifying before it.

In 1964, the year following the commission's report, Congress enacted the Civil Rights Act of 1964. Title VII of that act contains provisions prohibiting discrimination in employment based on sex, as well as on race, creed, color or national origin. We supported this legislation in 1964 and today we are trying to strengthen it by giving the Equal Employment Opportunity Commission cease and desist power similar to those vested in the National Labor Relations Board and other regulatory commissions.

It should be noted, however, that Title VII, and similar state laws, have raised serious questions concerning the continued validity of state labor laws applying specifically to women. On Aug. 19, 1969, the Equal Employment Opportunity Commission issued an administrative guideline holding that state laws which "prohibit or limit" the employment of women are in conflict with Title VII and would be disregarded by the commission.

Over the past five years, states have in fact been modifying their women's labor laws in a number of different ways. But total repeal has been the exception, not the rule. The principal adaptation has been to exempt women whose employers are in compliance with the minimum wage and overtime premium pay provisions of the federal Fair Labor Standards Act. In other cases, permitted hours of work have been lengthened, or provision made that overtime work be on a voluntary basis.

We believe, as was said in our 1969 convention resolution, that the commission's ruling was and is much too sweeping and makes no allowance for women who need the protective laws the most, namely low paid factory and service workers not covered by union contract or by alternative forms of labor standards legislation providing substitutes for the safeguards the commission seeks to abolish.

WE RECOGNIZE that it has been suggested that developments under Title VII of the 1964 Civil Rights Act which have been essentially hostile to labor standards legislation applying particularly to women, have eliminated the basis for objection on the part of the labor movement to the Equal Rights Amendment. This is a purely semantic argument with which we must respectfully disagree. While a severe blow to many such laws has been dealt by the Equal Employment Opportunity Commission, the commission has not completely destroyed them, nor has it attacked every form of women's labor legislation.

While some of these laws may seem anachronistic at the present time, most of them are, we believe, necessary and appropriate to assure safe and healthful conditions on the job for working women.

Where changed circumstances or conditions no longer require particular protection for women or where such protection operates in a discriminatory fashion to deprive women workers unreasonably or unfairly of benefits guaranteed to men, specific legislative remedies may well be appropriate. A blunderbuss approach such as Equal Rights Amendments can only result in throwing all protective labor standards applicable to women out the window.

Nixon's Plan Scored:

No-Strings Grants Held Threat To Quality Education Programs

FEDERAL PROGRAMS aimed at quality education at all levels could be seriously weakened or destroyed by Pres. Nixon's plan of no-strings, block-grant aid to education, the AFL-CIO's education director warned.

Congress designed and enacted those programs in the Sixties for educational purposes that "were not being fulfilled at the local level," particularly quality schools for low-income and disadvantaged citizens, declared Walter G. Davis, on the network radio interview Labor News Conference.

Stressing that "you don't scrap everything that's been done, simply because it doesn't have the Administration's stamp on it," Davis said that block grants for education would produce results "just the opposite" from the intent of Congress in adopting the programs.

Davis pointed out that the Administration wants to give local politicians a free hand in using 70 percent of the federal aid-to-education money intended for such programs as vocational training, aid to federally impacted school districts, aid for handicapped children and school lunches. "That would be a big turn-around, in terms of what we have fought and struggled for over the last ten years," he declared.

"THIS COULD BE a very political situation," he said, with strong pressures at the local level working to the further disadvantage of "people in low income brackets" who "don't have the necessary political muscle" to assure that their special needs are met. They have no strong "lobby at the local level," he declared, and the federal purpose could be thwarted if local officials are given a free hand to "respond to what makes political sense to them."

Davis was also critical of the Administration's reluctance to "come to grips" with the need to fully fund federal educational programs and research. Citing Nixon's vetoes of two education appropriations during the last Congress, he asserted "Any attempt to rationalize vetoing research money just doesn't stand up."

By Press Associates, Inc.

AT THE VERY MOMENT that innumerable American labor unions are protesting bitterly at the loss of jobs in their industries due to unfair competition from abroad, the U.S. Dept. of Commerce is bragging about how it is helping to send those jobs abroad.

The department, of course, doesn't make the comparison, but it's there for any one of America's 5 million unemployed to read.

Latest figures from the Commerce Dept. show that overseas affiliates of U.S. corporations boosted their plant and equipment spending a huge 22 percent in 1970 during the very time that American unemployment was going from 2,628,000 to 4,636,000.

Moreover, during 1970 the flow of U.S. capital for direct investment abroad increased $900 million, or almost 25 percent, to $4 billion with most of the increase going into European investments.

On top of that, the Commerce Dept. reports that this year foreign affiliates plan to increase their spending abroad another 16 percent to $15.3 billion. Here again the biggest increase in capital spending is in Europe where spending of affiliates is estimated to increase 37 percent to $5.1 billion.

Far from putting a check on this flight of American capital for bigger profits abroad, the Commerce Dept. has an elaborate program for assisting it. In "Commerce Today" of Mar. 22, 1971, published by the department, is a glowing article on the services to business offered by the Foreign Investment Services Division, Office of International Investment, in making the path to corporation profits abroad as easy as possible.

The article starts out with the bland statement that "in the development of their international business, many American companies have found that certain markets can be more effectively penetrated through manufacture overseas."

It then describes the various ways of how manufacturing overseas can be achieved—joint ventures, licensing, technology agreements or the establishment of wholly owned subsidiaries. Any American company—at the taxpayer's expense—can get information and advice from the Commerce Dept. on how to go about it all—foreign government regulations, financing, labor and management, physical facilities and similar information to make investments abroad as painless as possible.

"THE COMMERCE DEPT.'S Bureau of International Commerce (BIC)," the article continues, "has a keen interest in encouraging all of this activity."

Whether the department is responsible for all of the success of these shifts of American capital may be open to debate—some corporations doubt it—but the fact remains that total American investment abroad has gone from $11.8 billion in 1950 to $32.8 billion in 1960 and to $64.8 billion in 1968. More specifically and where it has most damaged American workers—manufacturing—it has gone from $3.8 billion in 1950 to $11.2 billion in 1960 to $26.4 billion in 1968.

"Although the Foreign Investment Services Division carries out a number of related activities, its prime purpose is to assist U.S. firms in making profitable investments abroad," the article concludes.

"In the final analysis, the decision to manufacture abroad must be made by the firm itself, after it has taken the steps necessary in making an intelligent and subjective decision. The specialists in Commerce are ready, willing and able to assist any U.S. company, large or small, with any aspect of its international investment program."

It is no longer a matter of trade in the old national sense; it has become a matter of powerful national corporations which have become international and no longer are serving purely domestic interests. Today's great economic problem is not the free interchange of goods, but the movement of capital—and American capital in particular—to other parts of the world without regard for the interests of the workers of the country of origin.

CONVERTING aid to education to Pres. Nixon's no-strings revenue-sharing plan could seriously weaken or destroy federal programs aimed at quality education at all levels, AFL-CIO Education Director Walter G. Davis. center, warned. Appearing on Labor News Conference, broadcast Tuesdays on Mutual radio, he was questioned by Harry Conn, left, of Press Associates, Inc., and Tom Joyce of Newsweek magazine.

125-YEAR-OLD TOOLS used by gold beaters in preparing gold leaf for decorating ceilings and art objects are presented by AFL-CIO Pres. George Meany to the Smithsonian Institution as a gift from the federation. Left to right, John H. White of the National Museum of History & Technology; Silvio Bedini, assistant director of the Smithsonian; Pres. S. Frank Raftery of the Painters; Meany and John Hoffman, assistant curator of mining at the Smithsonian. Meany obtained the tools, and a rare book on professions and trades, from a New Jersey woman.

AFL-CIO Gives Rare Tools to Smithsonian

A collection of goldbeater craftsman tools more than 125 years old has been acquired by AFL-CIO Pres. George Meany and turned over to the Smithsonian Institution as a gift from the federation.

Smithsonian officials called the collection "unusual in its completeness." Also presented by Meany in a ceremony in his office was a rare book, a copy of Edward Hazen's "Panorama of Professions & Trades," published in 1845 by Uriah Hunt & Son, Philadelphia.

Meany obtained the tools and book from Miss Mildred E. Laune of Belvidere, N.J., who sent him a letter explaining that her grandfather, a goldbeater, had migrated to the United States from England in the 1880s. His eldest daughter, a gold cutter, followed the trade and used the tools until the 1930s. The book was a family heirloom.

Goldbeaters prepare gold and gold leaf for use by artisans under the jurisdiction of the Painters & Allied Trades in decorating ceilings, domes and ornamental chambers as well as in book illustrating and printing.

Meany asked Painters Pres. S. Frank Raftery to inspect the collection and determine whether some prestigious museum would be interested. Director Daniel J. Boorstin of the Smithsonian said the museum was "extremely interested in preserving the historical aspects of the American laborer."

Accepting the gift for the Smithsonian were John N. Hoffman, associate curator of mining; Silvio Bedini, assistant director, and John H. White, Jr., chairman of the industries section.

Job Market Weak In Manufacturing

Weakness in the job market prevailed in February as the demand for factory labor remained sluggish, Labor Dept. statistics showed.

Although layoffs in manufacturing declined from 19 to 15 per 1,000 workers, the number of job vacancies totaled 74,000, compared with 81,000 in January. There were 170,000 job vacancies in February 1970 when the layoff rate was about at the same level.

New hires also declined over the year from 25 to 18 per 1,000 workers, a drop of 28 percent, while job vacancies fell from 8 to 4 per 1,000 jobs, down 50 percent, the Labor Dept. reported.

Lockout Ruled Illegal As Offensive Weapon

Chicago—The U.S. Court of Appeals for the 8th Circuit ruled that an employer may not use the lockout as an offensive weapon by laying off his employes and hiring replacements before a strike has been voted or called.

A three-judge panel enforced a National Labor Relations Board order against three building supply firms which locked out members of Teamsters Local 126 in Oshkosh, Wis., when their contracts expired in 1968 and negotiations broke down. The union protested that it had not taken any strike action and would give a week's notice before any strike was called.

The employers continued to operate with replacements. They appealed the NLRB finding against them, and the order to compensate 41 laid-off employes whom they later rehired.

The three supply firms urged the appeals court to rule that the lockout weapon could be used by employers either defensively, as in the American Shipbuilding case decided by the Supreme Court in 1965, or offensively, by locking out employes after a bargaining stalemate.

Appeals Judges Win Knoch, Roger J. Kiley and Thomas E. Fairchild ruled that a lockout under the conditions that existed in Oshkosh, where the employers continued to operate with replacement labor, was "an interference with protected employe rights and, accordingly . . . an unfair labor practice . . . ."

The judges cited this general rule for judging the merits of lockouts:

"First, if it can reasonably be concluded that the employer's discriminatory conduct was 'inherently destructive' of important employe rights, no proof of an antiunion motive is needed and the NLRB can find an unfair labor practice even if the employer introduces evidence that the conduct was motivated by business considerations.

"Second, if the adverse effect of the discriminatory conduct on employe rights is comparatively slight, an antiunion motivation must be proved to sustain the charge if the employer has come forward with evidence of legitimate and substantial business justifications for the conduct. . . ."

The judges said they consider the employers' lockouts, plus the use of replacements to continue operations, "inherently destructive of protected rights." In addition, the employers offered no legitimate business justification for their "insistence on continued operation during their offensive lockouts."

The Supreme Court ruling in the American Shipbulding case was that an employer may legitimately lock out his employes to avoid a "whipsaw" strike whereby one employer is used against another in a multiemployer situation. No such situation existed in the Oshkosh case, the appeals judges found.

For Working Women:

Amendment Called Threat to Standards

Working women aren't willing to give up hard-won labor standards as the price of a constitutional amendment purporting to end sex discrimination, union witnesses told the House Judiciary Committee.

Backing the AFL-CIO position that carefully drawn legislation should be enacted in preference to a dubious constitutional change were Ruth Miller, national representative of the Clothing Workers, and Myra Wolfgang, vice president of the Hotel & Restaurant Employes. Women make up 75 percent of the ACWA members and a substantial portion of the Hotel & Restaurant union.

Miss Miller, former chairman of the California Advisory Commission on the Status of Women and currently chairman of the Los Angeles AFL-CIO Women in the Workforce Committee, said there is no disagreement over the premise that "women suffer discrimination in all walks of life."

But, she stressed, the so-called Equal Rights Amendment would "in one fell swoop" wipe out protective labor standards that took decades to win and "which were designed to shield women workers from excessive exploitation."

She cited California as one state where minimum wage laws for women are higher than the federal minimum wage—and in the case of 100,000 women farm workers, $1.65 an hour, as compared with the federal wage floor of $1.30 an hour for agriculture.

Six other states likewise have minimum pay for women only, she noted, in most cases helping low-paid workers who are least likely to have union protection.

Other protective standards specify rest periods, ventilation, lighting and other working conditions.

Instead of seeking to wipe out all such protections, she suggested, the organizations of business and professional women most actively pushing for the constitutional amendment should be supporting efforts to extend similar protections to men workers.

"We would then be moving toward positive good for everyone rather than destruction of hard-won labor standards for women," she said. Joining the testimony was Jane O'Grady, the ACWA's legislative representative.

Mrs. Wolfgang, who is a longtime member of the Michigan Women's Commission, said women in her state found out the hard way what such an amendment would do when Michigan's 54-hour maximum workweek for women was temporarily suspended.

Some women workers were required to put in 70 hours a week, she recalled. A baking company with an all-women labor force changed from a three-shift to a two-shift operation by lengthening the hours of work. And, she noted, hotel and restaurant workers who are covered by the federal minimum wage are exempt from the overtime provisions of the Fair Labor Standards Act and do not have to be paid premium pay.

And, she reminded the committee, no constitutional amendment can overcome the fact of life that most working women bear primary responsibility for their home and children—and abolition of protective laws does them no favors.

True Equality for Women Keyed To Protective Laws, Social Rights

Los Angeles—Protective legislation and social rights for women were key issues explored at an all-day conference sponsored by the Los Angeles AFL-CIO.

Some 350 persons, mostly women, heard from a round of speakers and panelists who focused on the conference theme, "Women at Work."

Sigmund Arywitz, the Los Angeles federation's executive secretary, told the delegates that "myth has played as big a role as any other factor in fostering discrimination against women at work."

"The traditional division of labor put the man in the factory and her at home—so, if she had a job, it was only to help out and just for a short time.

"She would work until she got married. Then just until the first baby. Then just until the car was paid for. Only there are always new cars to be paid for.

"And the woman spends most of her adult life at work.

"We must explode the myth that the female is an urban transient worker—on the job for just a brief interlude in her grand design as a homemaker.

"As she is recognized as a permanent fixture in the work force, she must be given the rights, the benefits and the equality she always should have had—but which she, among others, never saw fit to fight for."

The conference, planned by the federation's Women in the Workforce Committee, headed by Ruth Miller, West Coast education director of the Clothing Workers, featured Myra K. Wolfgang, Hotel & Restaurant Employes vice president, and Dr. Margaret Mead, famed anthropologist, author and lecturer.

Mrs. Wolfgang pointed out the working woman's needs, saying that "in order to have true equality, we must have protective legislation and social rights to meet woman's dual role as mother and breadwinner."

She urged a program of meaningful child-care centers and school lunch programs, improved hours limitation laws and rigid enforcement of equal pay and equal employment opportunity laws.

"By working for the enactment of such legislation, women would, as they should, become part of a social movement dedicated to reforming our social structure to permit true equality between the sexes."

True equality, she said, would "maintain the right to stay home as a housewife and mother, if circumstances permit, and that be the preference of the individual woman." And it would require "an economy that's free from hunger and privation, that affords freedom from want and need, in a society that promises every man and woman equal pay for equal work. That's the kind of liberation I'm interested in."

Dr. Mead, in voicing her opposition to the Equal Rights Amendment, said such legislation could be "used extensively to pull the chairs out from under the women in the assembly line."

She also called on the trade union movement to put its house in order, declaring: "Women have been cooking in your strike kitchens for 50 years, doing all the dirty work and low-level work and not being recognized through the trade union movement."

In a morning panel discussion on "Patterns & Effects of Discrimination," California AFL-CIO Economist Mike Peevey noted the "sorry fact" that women's median earnings, compared to men's, have dwindled in the past 15 years. Female unemployment, relatively, has increased since 1960, he said.

Discrimination against women, declared Dr. Barbara Solomon, associate professor of social work at the University of Southern California, "is just as endemic and destructive as racial discrimination."

She added that the "myths become self-fulfilling prophesy. What is expected of us, we become."

Other panelists included Mrs. Susan Clifton, former chief of the California Division of Industrial Welfare, and Mrs. Colleen M. Logan, head of the Los Angeles office of the California Division of Labor Law Enforcement.

5.2 Million Unemployed:

Jobless Rate Back At 6 Percent Level

(Continued from Page 1)

the questions asked had been submitted by newsmen who were given that opportunity by the committee staff.

The total civilian labor force stood at 83,475,000, seasonally adjusted, and employment was 78,475,000, a drop of 62,000 from February.

But over the past 12 months, there has been a net loss of a half million jobs, as compared with an annual average gain of 1.5 million jobs in the late 1960s.

Manufacturing employment fell by 63,000 in March to a seasonally adjusted 18.7 million, making a total loss of 630,000 jobs since September, the BLS reported.

"With the exception of November (the second month of the auto strike)," the BLS report said, "manufacturing employment was at its lowest point in five years."

Manufacturing jobs have declined by 1.3 million since March 1970.

The actual figure of 5.2 million workers unemployed in March represented a slight decrease from the 5.4 million in February, but on a seasonally adjusted basis, nothing really was gained.

Actual nonfarm private payroll employment stood at 69.8 million, up 270,000 from February, but about 680,000 below March 1970.

Service producing industries, including state and local governments, have taken up some of this slack, showing an increase of 840,000 in employment over the year.

The average duration of joblessness edged up to 10.8 weeks, seasonally adjusted, from 10.4 weeks in February.

On an unadjusted basis, however, the average duration of unemployment jumped from 9.5 to 12.2 weeks, and the ranks of the long-term unemployed — those jobless 27 weeks or more—were swollen by 314,000 newcomers for a total of 524,000.

Professional and technical employes are feeling the effects of the recession with unemployment in this category rising to 3.4 percent, its highest point since 1958 and 1.4 percent above the level of a year ago.

Unemployment for white-collar employes in general rose from 3.5 to 3.7 percent.

And with summer school vacations not far off, teen-age joblessness jumped from 16.7 to 17.8 percent, equal to the seven-year high reached last December.

The jobless rate for adult men was at 4.2 percent, relatively unchanged. Unemployment for adult women was about the same as the past four months at 5.8 percent. But the rate for women in the 20-24 age group jumped from 9.1 to 10.1 percent, for another seven-year high.

The jobless rate for blacks remained near its highest level since 1964, at 9.4 percent, while white unemployment increased slightly to 5.6 percent.

The unemployment rate in service and finance industries increased to its highest point in eight years —5.3 percent.

The jobless rates in construction, 10.9 percent, and manufacturing, 6.9 per cent, remained unchanged.

The average workweek rose two-tenths of 1 hour on a seasonally adjusted basis to 37.1 hours, the same level as January.

But factory overtime dropped two-tenths of an hour, seasonally adjusted, to 2.7 hours.

Average hourly earnings increased by 1 cent an hour and average weekly earnings were up $1.37 to $123.98.

During the year ended in March 1971, average weekly earnings increased $6.06, or 5.1 percent, the BLS said, while the Consumer Price Index rose 4.8 percent.

'Next!'

Ban on Federal Strikes Upheld By Court Panel

Government employes have no constitutional right to strike, according to a special panel of three federal judges who rejected a Postal Clerks' appeal challenging the constitutionality of anti-strike provisions covering postal workers.

"Given the fact that there is no constitutional right to strike, it is not irrational or arbitrary for the government to condition employment on a promise not to withhold labor collectively," the court panel said in an unsigned majority opinion.

The union said it would take its appeal to the Supreme Court, declaring that the right to strike is fundamental and protected by the Constitution as a basic right.

In its suit against Postmaster General Winton M. Blount, the union argued that public employes who are barred from striking are denied equal protection under the law.

Postal Clerks Pres. Francis S. Filbey said the case would have to be taken to the high court in light of a separate opinion by Judge J. Skelly Wright, who disagreed with the other two members of the panel on whether the constitution does cover the right to strike.

"It is by no means clear to me that the right to strike is not fundamental," Judge Wright said. "The right to strike seems intimately related to the right to form labor organizations, a right which the majority recognizes as fundamental and which, more importantly, is generally thought to be constitutionally protected under the First Amendment—even for public employes.

"A union which never strikes, or which can make no credible threat to strike, may wither away in ineffectiveness. That fact is not irrelevant to the constitutional calculations."

But Wright said he must concur with the majority inasmuch as the "asserted right of public employes to strike has . . . never been recognized as a matter of law."

That right never has been spelled out for public employes such as was done for workers in the private sector by the National Labor Relations Act of 1935.

Judge Wright said that in his opinion the essential question is whether public employes should be denied a right that is granted workers in the public sector. But, he added, it is a question for the Supreme Court to decide.

"If the right of public employes to strike—with all its political and social ramifications—is to be recognized and protected by the judiciary, it should be done by the Supreme Court which has the power to reject established jurisprudence and the authority to enforce such a sweeping rule."

About a dozen states now have public employe laws on their books, some of them containing harsh anti-strike provisions like those in New York and Ohio.

Pennsylvania and Hawaii give public employes a limited right to strike.

Unemployment Rise Drains Benefit Funds

Rep. Charles A. Vanik (D-Ohio) warned that if joblessness continues at the present rate, state unemployment insurance reserves could be completely depleted within two years.

Vanik, a member of the House Ways & Means Committee, said he would seek legislation to put the funds on a sounder basis nationwide.

A 6 percent rate of joblessness costs more than $6 billion a year in unemployment insurance benefits, according to Vanik. The national reserves are now less than $11.9 billion.

"Present reserves will not carry us through anything more than a mild recession," Vanik declared.

He also pointed out that as unemployment increases there are fewer employes for whom taxes are paid, placing a further drain on the fund.

The Ohio congressman is worried because the nation's unemployment compensation funds are on a state-by-state basis. The reserves of 16 states, including Ohio, have slid below the danger point.

This is the point where reserves are only one and one-half times what the state paid out in its worst 12-month period of unemployment since 1958. This safety ratio of 1.5 is what the U.S. Labor Dept. regards as the minimum safe reserve.

In addition to Ohio, the states in trouble are Alaska, Arkansas, California, Connecticut, Delaware, Illinois, Maine, Michigan, Minnesota, Montana, Nevada, New Jersey, Oklahoma, Oregon and Pennsylvania.

Although Washington state's reserves are still above the danger point, it faces a bleak future with unemployment currently at 16 percent and more to come with the defeat of the Boeing SST program.

IUE's Irving Abramson To Retire as Counsel

Irving Abramson, 66, veteran union lawyer and one-time CIO organizer, will retire in July after six years as general counsel of the Electrical, Radio & Machine Workers. His place will be taken by Winn Newman, former associate general counsel of the union, IUE Pres. Paul Jennings announced.

Newman will join the IUE June 16, leaving his current post as general counsel for the State, County & Municipal Employes. SCME Pres. Jerry Wurf said A. L. Zwerdling, Detroit labor attorney, will succeed Newman as general counsel.

Jennings called Abramson's contributions to labor and workers "immeasurable" as an "organizer, a fighter for democratic unionism and builder of a movement with broad community concern."

Abramson's long union career includes service as New Jersey state president and eastern director of the former CIO. He headed IUE's legal forces successfully fighting the General Electric Co. for the right to conduct coordinated bargaining.

Newman, who is 47, has been assistant executive director and chief of labor relations for the Equal Employment Opportunity Commission, an international representative for the Ladies' Garment Workers, assistant general counsel for the Brewery Workers, associate general counsel for the Steelworkers and on the legal staff of the National Labor Relations Board.

Zwerdling, who will maintain offices in Washington and Detroit, once served as an officer of SCME Local 191 in Detroit and later was administrative assistant to the late UAW Pres. Walter P. Reuther and associate UAW general counsel.

Activities Schedule For Studies Center

The AFL-CIO Labor Studies Center has six institutes scheduled for April and May. They are:

Staff Development Program, Apr. 18-May 14.

National Health Security speakers' training seminar, Apr. 21-23.

Effective Union Action in Civil Rights, Apr. 26-30.

Labor Seminar for HUD interns, May 17.

Man and His Environment, May 17-21.

Arbitration Institute, May 24-28.

Public Employe Rights Upheld by ILO Group

Geneva—The right of workers on government payrolls to "protection against any act which might impair trade union freedom" was proclaimed at the first session of the International Labor Organization's committee on public service.

Sec.-Treas. Owen H. Schoon of the Postal Clerks, representing U.S. workers, described as "more than satisfactory" the two-week meeting at the United Nations agency's headquarters here.

Because of the special nature of public service, the committee consists of 16 worker delegates and 16 government representatives. This is a departure from the traditional ILO "tripartite" structure of workers and employers with governments sitting in the middle. Louis S. Wallerstein of the Labor Dept.'s Office of Labor-Management Relations represented the U.S. government at the meeting.

ILO Director General C. Wilfred Jenks, welcoming the delegates, noted that far-reaching changes were taking place in the public services of many countries.

"The restriction of the right to organize, the limitation of consultation and collective bargaining procedures, and unsatisfactory methods of settling disputes concerning terms and condition of employment are tending to disappear," he said.

Schoon hailed as "very excellent" a resolution adopted by the committee affirming the right of public employes to enjoy the basic trade union freedoms defended by the ILO.

The committee stressed that the ILO pact guaranteeing workers the right to band together in organizations of their own choice and to defend their interests "applies integrally to public servants."

It also called for establishment of joint bargaining and conciliation machinery in an effort to make unnecessary the recourse by public employe organizations "to such other steps as are normally open" to other unions.

This, Schoon underscored, was a recognition that public service workers also have the right to strike when disputes cannot be settled through collective bargaining and conciliation procedures.

The report itself reinforced the resolution on the rights of public employes. It recorded the "wide agreement" in the committee that "work stoppages in the public sector should not be looked upon as mere public disturbances to be punished with criminal and administrative measures."

Among the points made in the report were:

- A 40-hour, five-day week should be reached as "quickly as possible in all countries."
- Overtime should not be a substitute for failure to hire enough workers or to pay them adequately.
- The right to "appropriately remunerated" annual vacations of "adequate duration."

Unions Tell Congress:

Contract Pay Law Twisted into Freeze

(Continued from Page 1)

ing-out decision at the Laredo Air Force Base resulted in a pay cut from $2.12 an hour to $1.15 for a truck driver who continued doing the same work and wages as low as 55 cents an hour for kitchen helpers, 60 cents for janitors.

And the next year, that contractor was underbid by a firm that imposed even lower rates and required a daily shape-up for mechanics in which those not needed that day were sent home without pay.

The 1965 law, he testified, halted the sub-minimum pay structure and workers were able through collective bargaining to improve their conditions.

But in 1969, the Secretary of Labor accepted an opinion by the Comptroller General that determinations of prevailing wages could not take into account future increases in pay negotiated with the current contractor.

Since virtually the only expense of a service contractor is the labor costs, that means that in localities where there are no large organized contractors in the non-government service field, workers find it virtually impossible to negotiate a higher rate of pay since each year's contract is based on the prevailing wage they received the previous year.

Thomas R. Donahue, executive secretary of the Service Employes, told the subcommittee that even in cities like New York, where there is a substantial amount of organized non-government service work, the refusal of the Labor Dept. to consider already-negotiated future increases means that many workers are a year behind on prevailing wages.

Or alternatively, when the union is strong enough to insist that the employer pay the going rate, he makes up the difference by cutting back on services.

Clyde M. Webber, executive vice president of the Government Employes, urged that the law be changed to make the prevailing rate determination identical with that applied to the federal government's own employes doing comparable work.

The general counsel for the Maritime Union, Stanley Gruber, also testified that the manner in which the law is currently being interpreted means "there can never be a wage increase or fringe benefit increase for employes."

Union witnesses also urged that contractors be required to observe collective bargaining agreements negotiated with predecessor contractors and that the period of service contracts be lengthened with provision for periodic adjustments of the prevailing wage.

At present, contracts are for one year and the turnover rate at the end of the year is close to 95 percent. And while most of the same employes are continued by the new contractor, the yearly change of employer denies workers any retirement benefits.

The hearings into the enforcement and interpretation of the Service Contracts Act are being held by the House Special Subcommittee on Labor, headed by Rep. Frank Thompson (D-N.J.).

WAGE FREEZE for low-paid employes of government service contractors has resulted from Labor Dept. administration of the prevailing wage law, union witnesses testified at House hearings. Three representatives of the Laborers, David Jacobs of Laredo, Tex., Legislative Director Jack Curran and General Counsel Robert J. Connerton discuss the problem with Rep. Frank Thompson (D-N.J.), chairman of a House Labor subcommittee.

Meany Receives Honorary Degree

Gonzaga College High School conferred the honorary degree of doctor of laws on AFL-CIO Pres. George Meany for his "untiring energy and his concern for the economic and moral welfare" of the nation.

At a convocation marking the Jesuit school's 75th year in Washington, D.C., Meany was given a citation noting that in modern society, "the labor leader occupies a pivotal position. . . . Gifted with those qualities of character which make leadership possible. . . . Meany exemplifies the finest ideals of citizenship and human concern."

Among others who received honorary degrees were Patrick Cardinal O'Boyle; Washington Mayor Walter Washington, District of Columbia commissioner; David Lloyd Kreeger, lawyer and art connoisseur. A special citation went to the Eugene and Agnes Meyer Foundation for community contributions since 1944.

Labor Protests Proposed Cuts In Medicare

Proposed cuts in Medicare benefits are the wrong way to deal with the problem of rising health care costs, the AFL-CIO said in a letter to members of the House Ways & Means Committee.

AFL-CIO Legislative Director Andrew J. Biemiller termed the committee's tentative decision to cut back hospital benefits and increase deductibles "drastic action" that should be reconsidered.

Even under present law, he noted, Medicare covers only about 50 percent of the health care costs of the elderly. The reported committee action would require elderly patients to pay one-eighth of hospital costs from the 16th through the 60th day of hospitalization and would require a larger initial payment before Medicare benefits take effect.

While acknowledging the committee's concern with the "rapidly increasing costs of health care," Biemiller urged that "the problem be attacked at its source."

He urged the committee, instead, "to fix effective cost controls such as prospective hospital budgeting and fee schedules for doctors."

Social Security Panel Asks Major Increases

(Continued from Page 1)

Burke of the Steelworkers and Young.

They called for:

- An immediate 15-percent increase in social security benefits to supplement the 10-percent boost recently enacted.
- A minimum monthly payment of $100, with further increases later.
- Improving the "dropout years" provision on which the amount of benefits is computed.
- A more liberal definition of disability for older workers.
- A reduction in waiting time for disability benefits to three months, rather than five months as the full advisory council recommended.

These improvements, the group said, could be financed without an additional increase in the payroll tax rate through a federal government contribution from general revenues of up to one-third the cost of the cash benefits program. For fiscal reasons, the group recommended that this contribution be held to one-fifth at the start.

Among its key recommendations, the full advisory council urged that widows of recipients receive 100 percent of the benefits rather than the current 82.5 percent, that men be allowed to retire at age 62 and receive benefits just as women are now permitted to do, and that the taxable wage base for social security be raised to $12,000 in 1974.

Social security taxes are now applied to the first $7,800 of income, but this base will increase to $9,000 next year, raising the maximum tax for an individual from $405.60 to $468 a year. The total tax for workers earning $7,800 a year or less would not go up.

The advisory council, headed by Arthur S. Flemming, who was Secretary of Health, Education & Welfare in the Eisenhower Administration, also recommended a number of improvements in the Medicare program:

- Coverage for persons on social security disability.
- Partial payment of the cost of drugs for elderly persons not in hospitals so that they could get new prescriptions filled for a flat $2 and refills for $1.
- An increase from 60 to 120 in the number of "lifetime reserve" days for which inpatient hospital benefits may be paid, with the patient paying one-fourth of the daily costs for these "reserve" days rather than the current one-half.
- A three-way system of financing with one-third coming from the federal government's general revenues, one-third from employers and one-third from employes. Workers would pay during their earning years and the present additional premium for "Part B" medical insurance would be eliminated.

4-10-71

Bid to Boost Federal School Funds Turned Back by Close House Vote

(Continued from Page 1)

and government employes, and in vocational education.

In two previous years, Congress bucked the Administration head-on to vote substantial increases in the education budget.

Both times, Pres. Nixon responded with a veto.

The bill carrying funds for the 1970 fiscal year was $1 billion over the President's budget request, and the effort to override the veto failed.

The bill carrying funds for the current fiscal year was $453 million above the budget—and that veto was overridden by substantially more than the required two-thirds majority in the House and Senate.

Efforts to further increase this year's education appropriations are expected in the Senate. And if they are successful, the chances of the House agreeing to a higher figure are considered good in view of the close vote on the Hathaway amendment.

The House bill did not include funds for a new $400 million college loan program sought by the Administration, since the legislation authorizing the program has not yet been enacted. If it is, a separate appropriation will be needed to fund it.

Civil rights supporters lost out in an effort to delete from the bill language inserted last year that prohibits use of federal funds to "force" the busing of students against the wishes of their parents.

Both sides agreed that the proviso, sponsored by Rep. Jamie L. Whitten (D-Miss.), has no legal effect in view of Supreme Court decisions. But the House insisted on keeping the language by two votes of 205-149 and 157-92.

If the Administration has its way, this year's bill could be the last major education appropriation acted on by Congress.

The President formally submitted the last of his special revenue-sharing proposals—a plan to lump virtually all of the funds for elementary and secondary education into a single package and turn the money over to the states.

There would be a general requirement that more than half the funds go to help disadvantaged students. But state and local school systems would have virtually a free hand in dispensing the money.

The President proposed to allocate $2.8 billion being spent this year on categorical programs plus $200 million in new funds—a total that would perpetuate the big and growing gap between authorized funds and appropriations.

Chairman Carl D. Perkins of the House Education & Labor Committee said he will give a committee hearing to the President's revenue-sharing proposal.

But Perkins added that he does not plan "to stand idly by and see good programs destroyed under the pretense of revenue sharing."

Both the House and Senate have scheduled Easter recesses, with the House not due to return until Apr. 19. The Senate will reconvene earlier, but is not expected to take up major business during Easter week.

Labor Board Cases Continue Steady Climb

There has been no let-up in the steadily increasing case load of the National Labor Relations Board.

During the last three months of 1970, the NLRB received 8,366 cases compared with 7,567 during the same period for a year earlier. Most of the increase came in unfair labor practice charges.

Of the 3,456 charges filed against employers, 1,398 were filed by AFL-CIO affiliates, 658 by independent unions and 1,400 by individuals.

Of the 1,918 charges brought against unions, 901 were by employers, 951 by individuals and the rest by other unions.

During the three-month period, the NLRB held 2,242 representation elections, unions winning 1,125 elections or 52 percent. AFL-CIO unions won 614 elections while independent unions won 511.

Inflation Alert Hit as Move To Stifle Steel Bargaining

PLANS TO REGISTER millions of new 18-to-21-year-old voters are discussed by COPE Director Al Barkan with delegates to the Washington Conference on the Youth Vote. The conference, sponsored by Frontlash, and the A. Philip Randolph Institute, drew delegates from 29 youth and civil rights groups and 13 unions.

Labor-Student-Civil Rights Alliance:

Nationwide Drive Launched To Register Young Voters

More than 100 young trade unionists, students and civil rights activists gathered in Washington to launch a massive campaign aimed at expanding the participation of young people in American political life.

A one-day conference jointly sponsored by Frontlash and the A. Philip Randolph Institute laid the groundwork for a nationwide voter-registration and education drive among young people in the 18-to-21 age bracket who will be eligible for the first time to participate in the 1972 national election.

Delegates from 13 labor organizations and 29 student, youth and civil rights groups heard vetern political action leaders spell out the urgent need for youth's help in building a liberal coalition capable of offsetting conservative financial power in 1972.

Among the speakers were COPE Director Alexander Barkan; Randolph Institute Director Bayard Rustin; Richard Scammon, co-author of "The Real Majority" and director of the Elections Research Center; Penn Kemble, director of the League for Industrial Democracy's Youth Project on Democratic Change, and Matt Reese, president of Matt Reese & Associates and veteran director of political campaigns.

Questions and comments showed that many of the young delegates already had acquired considerable political experience, some as members of the 18 student groups that make up Frontlash, others through COPE and other organizations.

Kemble noted that disillusionment with disruptive New Left programs is causing many young Americans to abandon the narrow isolationism that fragmented the liberal coalition in the 1960s.

"It's time for a new departure, time for students and all of us to abandon our self-righteous sanctimoniousness and work together to meet the day-to-day needs of all Americans," he added.

Rustin warned against the narrow "tribalism" that has led to a worldwide fragmentation of political activity. Separatist movements in Canada, Belgium, Wales and elsewhere have their counterpart among American youth and blacks who turn their backs on society and substitute "doing their thing" for effective political action, he said.

"Building a coalition does not mean that we have to agree with each other on everything, and support all of each other's positions; it means working in our own interests,

Job Safety Enforcement Keyed to Needed Funds

By John R. Oravec

Effective enforcement of the new Occupational Safety & Health law could be impeded by lack of money unless Congress acts soon to appropriate the needed funds in full.

The law takes effect April 28, but so far Congress has appropriated none of the funds requested by the Departments of Labor and Health, Education & Welfare to carry out their responsibilities under the act. Labor Sec. James D. Hodgson said he has assurances that the House Appropriations Committee would act on the requests before May 1. Meanwhile, he said, the department has been borrowing from other programs to get the job safety and health law under way.

Hodgson made his report to the AFL-CIO Standing Committee on Safety & Occupational Health, which expressed concern that a legislative campaign—not unlike the effort by organized labor that brought passage of the law—may be necessary to assure that the program is not starved by lack of funds.

AFL-CIO Pres. George Meany

(Continued on Page 8)

Meany Denounces 'Low-Wage' Stand

By Tom Castor

The Nixon Administration's latest "inflation alert," aimed chiefly at beating down wage proposals in forthcoming steel talks, was sharply denounced by AFL-CIO Pres. George Meany as a move to impose a "low-wage economy" in the United States.

Meany charged the White House pronouncement by the President's Council of Economic Advisers amounted to interference in the collective bargaining process. And he warned that the statement may foreshadow an Administration move to impose compulsory arbitration in the steel negotiations or a government settlement by injunction.

The "inflation alert," the third to be released by the CEA, criticized the Steelworkers' recent settlement covering 40,000 can industry workers as inflationary and asked the union to seek less for its 450,000 members in basic steel.

USWA Pres. I. W. Abel immediately rejected the proposal.

Abel's response was that the USWA's membership has been the victim, not the cause of inflation.

"Steelworkers have no intention of acquiescing voluntarily in any effort that would deny them an equitable settlement in negotiations with the basic steel industry," he declared.

"The collective bargaining policy of our union has been formulated and we intend to implement it at the bargaining table."

The report said that the three-year can settlement, which provides a 9-percent increase in wages and fringe benefits each year, was "clearly in excess of any realistic

(Continued on Page 3)

Cement Pact Sets Pattern For Industry

Chicago—The Cement Workers won a pattern-setting contract from Medusa Portland Cement Co. with benefits averaging $1 to $1.15 an hour over a two-year period for workers in four company plants.

Union Pres. Thomas W. Miechur said the settlement is "the best anywhere" in the industry in 1971. It was followed by similar settlements elsewhere, he said.

Effective May 1, workers will get wage, pension and other improvements the union said will average 18 percent for the contract term at Medusa. Votes on ratification are being conducted in company plants at Dixon, Ill., Manitowoc, Wis., Toledo, O., and Charlevoix, Mich.

The Medusa settlement calls for general wage increases of 36 cents an hour this year and 24 cents next year, with skilled employes getting increments between grades of 16 cents additional this year, plus an additional 20 cents next year.

(Continued on Page 8)

Economic Policy 'Void' Spurs Congress Action

House Speaker Carl Albert declared that Congress must take strong steps to pull the economy out of its slump by "moving into the void left by the inactivity of the Nixon Administration."

The Oklahoma Democrat noted that the unemployment rate for the past four months, has been at its highest average in nine years, the utilization rate for manufacturing at its lowest since 1958, and corporate profits running near a five-year low.

"All of the economic indicators now available suggest that we are still in the throes of the 1970 recession," Albert told a news conference.

"An economy operating at an annual rate of $70 billion below capacity, as ours was in the fourth quarter of 1970, needs priming badly, and government is the logical source."

To counteract the recession brought about by the Administration's economic policies, the Speaker listed these programs due to come before the House:

- A $2-billion emergency public works bill that would fund projects in areas hit by high unemployment. A vote on this measure already is scheduled.
- A separate bill providing $1.75 billion to set up a program of public service jobs that labor

(Continued on Page 7)

South Dakota Compensation Law Upgraded

Sioux Falls, S.D.—The South Dakota AFL-CIO won increased workmen's compensation benefits during the 46th session of the state legislature as well as exclusive recognition procedures for public employe unions.

Labor-supported amendments to the state's workmen's compensation law increase the percentage for determining weekly benefits from 55 percent of the worker's weekly wage to 66⅔ percent, and raise the top weekly benefit from $50 to $56.

Maximum medical and hospital benefits were increased from $75,000 to $175,000, and workmen's compensation insurance was made compulsory for employers, rather than elective.

The legislature also increased the maximum death benefit from $15,000 to $25,000 and the minimum from $5,000 to $10,000. It eliminated a provision whereby disability benefits could be deducted from death benefits in cases where death occurred as a result of an occupational disease.

Amendments to the South Dakota Public Employe Law provide exclusive recognition for employe organizations certified by secret ballot and for written agreements.

Formerly, the law said that public employe organizations could be granted informal or formal recognition and that settlements could be implemented by ordinance, resolution or memorandum of understanding.

Sen. Jackson Asks Economic 'Disaster' Aid

Areas hit by economic disasters should have the same claim to federal assistance as regions ravaged by natural disasters, Sen. Henry M. Jackson (D-Wash.) declared.

Jackson, representing a state reeling under heavy unemployment, told the Senate he is introducing two emergency bills to stimulate "a sagging American economy."

His proposed Economic Disaster Relief Act would authorize the President to channel special economic aid to depressed regional economies.

And a Conservation Jobs Act would be designed "to put men and women to work on neglected tasks in our national forests, parks, recreation areas and other public lands."

Jackson charged White House economic strategists with responsibility for the "man-made" recession.

"Instead of jobs," he said, "the country has been subjected to a blizzard of paper pronouncements designed to obscure the fact that the Administration has no real program to put America back to work."

Youth 'Skills' Center Honors Whitney Young

Selbeyville, Ky. — This town, where the late Whitney M. Young, Jr., grew up, will be the site of a "skills center" named in his honor and funded by the U.S. Dept. of Labor.

Plans call for the accommodation of 300 youths in training of whom 125 are expected to commute daily from nearby Louisville. Training will cover six areas: welding, automobile mechanics, secretarial skills, cooking, data computing and sales.

VOTER REGISTRATION LAW enacted with the support of organized labor is signed by New Mexico Gov. Bruce King. The law goes into effect July 1 and specifies that 15 registrars in each of the state's 32 counties must be appointed from a list of union members submitted by the State AFL-CIO. Witnessing the signing are, from left, State AFL-CIO Sec.-Treas. Neal Gonzalez, COPE Area Director Sherman Miles and Director Mary Sue Dawaliby of the State COPE Women's Activities. State AFL-CIO Pres. Alfonso B. Rodriguez was not present because of illness.

30% of Farms Found Violating Wage Floor

Some employers are underpaying "substantial" numbers of farm workers at a $1 million-a-year clip, the Labor Dept. reported.

The Wage & Hour Division's report on farm labor showed that nearly three of every 10 farms visited by investigators were found to be violating the minimum wage law.

Farm work was brought under coverage of the Fair Labor Standards Act in 1966. The law provides that a minimum wage of $1.30 an hour—30 cents below the minimum for nonfarm labor—must be paid to every worker in covered employment by employers who use more than 500 man-days of labor in any quarter of the preceding calendar year—the equivalent of seven full-time farmhands or 25 seasonal workers.

The report of cheating by growers who pay less than the legal minimum led Director Cesar Chavez of the AFL-CIO United Farm Workers to observe that "none of our members is subject to this kind of unfair and illegal wage treatment." Chavez added: "The best protection against this kind of mistreatment is a union contract."

Under a UFWOC contract, no employer can pay less than $1.75 an hour to covered employes. The average wage for all farm workers in California has increased by 54 cents an hour since the 1965 grape strike started. For grape workers alone the rise has been 75 cents an hour, Chavez reported.

But on farms where there is no union contract protection, violations "appear to be widespread," Wage & Hour Administrator Robert D. Moran said. He called on the division's 900 compliance officers to inform farm workers and employers on their rights and responsibilities under the law.

If this educational effort does not produce "more substantial" compliance, Moran said, "action will be sought against people who employ farm labor at less than the agricultural minimum wage rate."

Moran reported that "untold thousands of farm workers are either unaware" of the $1.30 wage minimum or "do not call violations to the attention of the Dept. of Labor for fear of losing their jobs." He added that many employers "do not appear to be aware" of their duty under the law.

Moran said the constant moving of migrant workers, lack of their names and addresses, and the fear of some workers that they will be denied future jobs all make it difficult to ferret out law violations.

Listing a broad range of employer violation categories, Moran said the use of sharecroppers in plantation areas of the South "sometimes poses an enforcement problem" because it is often "a thin veil to disguise valid employe status."

Another method of subterfuge, he said, is built around excessive charges for housing, firewood, food, water, electric current, sacks and buckets for use in harvesting—all effectively depriving farm laborers of the minimum wages "to which they are entitled under the law."

Wage-hour inspectors visit a small percentage of business places and farms in any one year. Their reports show an increasing number of law violations.

The AFL-CIO has repeatedly called for more vigorous prosecution of violators and more funds for a staff large enough to cope with the need for more frequent inspections.

45TH ANNIVERSARY of its founding was marked by the St. Louis Council of the AFL-CIO National Auxiliaries at a luncheon meeting. Shown left to right: seated, charter members Miss Minnie Ruhle of Carpenters Auxiliary 23, founded 53 years ago, and Mrs. Lilly Stein, who helped organize the Meat Cutters Local 88 Auxiliary 49 years ago; standing, past Pres. Nicholas M. Blassie of Meat Cutters Local 88; Missouri State Council Pres. Viola Moss; Executive Director Marcella Beatty of the National Auxiliaries; Pres. Oscar Ehrhardt of the St. Louis AFL-CIO, and Pres. Ann Moss, St. Louis Council of the Auxiliaries.

New England Hardest Hit:

Nixon Defers Curb On Shoe Imports

Pres. Nixon has deferred a decision on general import relief for the beleagured American shoe industry. But he did authorize the Secretary of Labor to consider trade adjustment assistance for 3,000 shoe workers in five states when the Tariff Commission became deadlocked on the issue.

Labor Sec. James D. Hodgson is expected to certify the 3,000 workers at 11 plants for assistance—the largest number of employes to be affected by a single decision under the adjustment assistance program.

The New England area continued to be hardest hit by rising shoe imports with the President's action affecting 900 unemployed or underemployed workers in Manchester, N.H., alone, and another 450 in Haverhill, Mass.

The President's action, however, didn't "come to grips with the real problems facing the (shoe) industry," according to Democratic Rep. James A. Burke of Massachusetts.

"Unemployment benefits and technical retraining are not the final solution to this problem," Burke said. "What is needed is action to restrict the flood of imports which has caused the reduction in jobs in the first place."

Burke, a member of the House Ways & Means Committee, through which any trade legislation must pass, termed Nixon's decision "a distinct disappointment" for shoe industry workers.

The United Shoe Workers represent employes at all but one of the plants—in Vandalia, Ill.—where workers are represented by the Boot & Shoe Workers.

USW Pres. George Fecteau called the trade adjustment benefits nothing but "burial expenses for an industry that is dying."

He said that 8,000 of his union's members have been forced out of work in 42 plant closings since 1969 due to "the millions of pairs of unessential, cheaply made, foreign shoes that are flooding this country."

The human toll among older workers is staggering, Fecteau said, noting that the average age of a shoe worker in Massachusetts is 56, and "that very few of these people have been able to find jobs elsewhere. Many have exhausted their unemployment compensation and are now on welfare."

Fecteau and John E. Mara, president and secretary-treasurer of the Boot & Shoe Workers, called import quotas the only hope for salvation of the American shoe industry.

Mara's union has filed for assistance, or is preparing to file, for about 4,000 of its members thrown out of work by imports.

Fecteau pointed out that the importers aren't doing the consumer any favors with the markup on foreign shoes at 200-300 percent as compared with 45-50 percent on American shoes.

Nixon's action came after a 2-2 vote by the U.S. Tariff Commission on whether workers in the 11 shoe plants became unemployed or underemployed as a result of increased imports.

Hodgson said the Labor Dept.'s Bureau of International Labor Affairs will initiate an investigation immediately to determine whether the 3,000 shoe workers are eligible for testing, counseling, training, placement and cash readjustment allowances.

Under provisions of the Trade Expansion Act of 1962, they could be eligible for weekly payments of up to $85 for 52 weeks. The payments can be extended for another 26 weeks for workers to complete training courses.

The companies involved and the approximate number of workers affected are: Jodi Shoe Co., Derry, N.H., 350 workers; Maine Shoe Corp., Brunswick, Me., 350; Foot Flairs, Inc., Manchester, N.H., 400; Brown Shoe Co., Mattoon, Ill., 400; Goldberg Bros., Inc., Haverhill, Mass., 275; National Ballet Makers, Inc., Medford, Mass., 40; Stage Door, Inc., Raymond, N.H., 150; Kramer Shoe Co., Haverhill, Mass., 175; Evangeline Shoe Corp., Manchester, N.H., 500; Bella Mia Footwear Mfg. Corp., Brooklyn, N.Y., 50, and Johnson Stephens & Shinkle Shoe Co., Vandalia, Ill., 400.

Steelworkers Break Ground On Apartments

Chicago—District 31 of the Steelworkers started construction here of a $7 million housing project to provide 357 apartments for families of low- and medium-income workers.

Work on the 32 two- and three-story garden apartment buildings is expected to be completed by the St. Joseph Foundation in about 18 months. The USWA district created the foundation to build and manage the apartment complex.

Monthly rents will range from $109 for a one-bedroom unit to $193 for a four-bedroom apartment. Facilities on the 13.2 acre plot in Chicago's Southeast Side include a community center, off-street parking and fully paid utilities, except for telephone.

The Germano-Millgate Apartments project will be constructed near the U.S. Steel Corp.'s South Works and will serve many USWA members employed at the plant.

The complex is named for District 31 Director Joseph Germano, who with USWA Pres. I. W. Abel and Chicago Mayor Richard J. Daley turned the first shovels of earth. Joining in the groundbreaking ceremony were the USWA executive board, area labor officials and civic leaders.

'We Won't Buy It':

White House Scored On Steel Wage Stand

(Continued from Page 1)

assessment of long-term productivity growth prospects."

"I don't think the Steelworkers are going to buy that," Meany said of the Administration's tactics as he adddressed the Utility Workers convention in Washington.

"I don't think the American trade union movement is going to buy that.

"What they are pointing toward . . . is the establishment of a low-wage economy in this country.

"And, if they look around the world . . . everywhere in the world where wages are lower, they will see what a low-wage economy means."

When the Administration tries to make labor the scapegoat by attacking wage proposals, it is simultaneously attacking "the purchasing power that is needed to keep this economy going," Meany said.

The "inflation alert" was issued the same day that USWA opened negotiations in New York City with the Alcoa and Reynolds aluminum companies on behalf of 18,000 of its members.

In all, contracts covering one million workers in the aluminum, steel and copper industries are up for negotiations this year.

The President's economic advisers warned that if the can settlement is applied to basic metals industries they will be further jeopardized by foreign competition which could mean increased unemployment.

But Abel replied that the average worker is "on the short end of the economic stick because of the disastrous economic policies of the present Administration which has given us both inflation and unemployment."

He charged that the Administration is trying to hide its own failures by blaming the worker and that "instead of proposing programs to restore the purchasing power of workers and put America back to work, the Administration is busily engaged in granting tax concessions to business."

Communications Workers Pres. Joseph A. Beirne, whose union already has begun negotiations for a half-million Bell System employes, said the new attack on union wage proposals came as no surprise.

"It was inevitable," Beirne said, "that the design of the Nixon Administration's approach to inflation would lead not to an attack on the causes of inflation, but upon the efforts of workers, through their unions, to achieve wage adjustments that would catch up with previous price increases."

The CWA is seeking a 25-percent increase this time around with Bell—and Beirne said, "we are doing this because rising prices have completely wiped out the benefits achieved in our 1968, three-year agreements, and our rising productivity has been completely unrewarded."

At a news conference accompaning release of the alert, Paul W. McCracken, chairman of the Council of Economic Advisers, expressed concern over the performance of the steel industry. But he refused to say what the Administration might do to hold down a wage settlement in steel, or what he thought would be a fair wage increase.

The "inflation alert" also touched on other sectors of the economy including construction wages, rail and truck freight rates, the price of oil and lumber and New York cab fares.

The report said increases in the price of lumber and oil should not have an adverse effect on the economy. It expressed alarm at rail and truck freight rate increases and the boost in New York cab fares.

UNION MEMBERS will not be the scapegoats for the Administration's economic policy failures, AFL-CIO Pres. George Meany tells delegates to the 17th convention of the Utility Workers in Washington, D.C. Unemployment resulting from these policies is a "disgrace" to the "richest nation on earth," Meany declared.

Rail Signalmen Weigh Board's Wage Proposal

A Presidential Emergency Board recommended wage increases totaling $1.61 an hour over a 42-month period for 13,000 members of the Railroad Signalmen.

The union's reaction was that the recommendation falls short of equity for the skilled workers who keep the nation's signal systems operating safely. A decision on acceptance or rejection will be made by the Signalmen's executive council at a meeting in Chicago Apr. 21.

The Signalmen will be free to strike at 12:01 a.m. May 15. They have gone through all the mediation processes of the Railway Labor Act seeking new contract terms. Appointment of the Emergency Board to make recommendations was the last step in the dispute.

The board, with Prof. Paul N. Guthrie of the University of North Carolina as chairman, recommended a contract providing wage increases at these intervals:

Five precent general increase retroactive to Jan. 1, 1970; an additional 4 percent effective Apr. 1, 1971; and consecutive 5 percent raises on Oct. 1, 1971, Apr. 1, 1972 and Oct. 1, 1972.

Two more across-the-board raises were recommended in the final contract months—15 cents an hour effective Jan. 1, 1973, and 10 cents on Apr. 1, 1973.

For workers with special skills, the panel proposed supplemental pay boosts of 30 cents an hour for signalmen, maintainers and higher-rated mechanics retroactive to Nov. 1, 1970, and 18 cents an hour to assistants and helpers.

The Signalmen have not had a wage increase since July 1, 1969.

Besides wages, the board recommended that the union accept the employers' offer of one additional paid holiday a year, and a fifth week of paid vacation after 25 years.

Also recommended by the panel were interest payments by the railroads on backpay, and wage parity between grades to bring rates on southern and western carriers up to the eastern rate level.

During board hearings, Pres. Charles J. Chamberlain and other union witnesses testified that the wages of their skilled members are among the lowest in the railroad industry. The union asked for wage increases ranging up to 54 percent for highly skilled workers over a three-year contract term.

Other railroad contract disputes still are pending. The United Transportation Union may set a strike date after management appeals have been disposed of by the courts. Still pressing for acceptable contracts are six AFL-CIO unions of shopcraft employes; the AFL-CIO Train Dispatchers, and the unaffiliated Locomotive Engineers.

Construction Panel Issues First Ruling

The Construction Industry Stabilization Committee issued its first ruling under Pres. Nixon's recent Executive Order, upholding the initial wage increases in a contract between the North Texas Contractors Association and Iron Workers in Dallas and Forth Worth.

The Iron Workers contract is part of an area-wide, multi-craft agreement, which becomes effective for the individual unions as their current contracts expire. It would provide increases of $1.40 an hour to crafts whose current wages and fringe benefits total less than $5 an hour, and $1.10 for others.

The stabilization committee approved the first scheduled increase of 30 cents. Iron Workers' previous earnings were $6.10 an hour in Fort Worth and $6.15½ in Dallas.

But the committee declined to approve the deferred increases in the settlement, saying they would be subject to future review by the appropriate craft board when it is established.

The committee decided that only wage increases on which negotiations were completed after midnight Mar. 28 would be subject to review by craft boards and the committee itself. Nixon's order became effective Mar. 29.

The stabilization committee also gave formal notification to all national associations of contractors and construction craft unions to report on the establishment of the craft boards and their membership.

In the absence of craft boards, negotiated wage settlements will come directly to the stablization committee for review.

Meanwhile, Housing & Urban Development Sec. George Romney designated the government's interagency committee on construction prices, which he will head. The committee, which is also required by the President's Executive Order, includes:

Treasury Sec. John B. Connally, Defense Sec. Melvin R. Laird, Commerce Sec. Maurice H. Stans, Labor Sec. James D. Hodgson, Transportation Sec. John A. Volpe, Deputy Director Casper W. Weinberger of the Office of Management & Budget, Chairman Paul W. McCracken of the Council of Economic Advisers and Administrator Robert L. Kunzig of the General Services Administration.

CONVENTION

The Maryland State & District of Columbia AFL-CIO will hold its 1971 convention in Washington, D.C., Aug. 9-12.

Utility Workers Widen Organizing Objectives

The Utility Workers organized 17 new union groups in the last 24 months but must concentrate in the future on organizing in related industries outside the utility field, officers reported at the opening session of the union's 17th convention.

"We are investigating new 'vistas' for organizing since 93 percent of the public utility enterprises in the United States have some form of union organization now," Pres. William R. Munger told the 433 delegates and 275 visitors.

Munger and Sec.-Treas. Leonard D. Knapp told the convention that wage settlements in utility industries have exceeded the 30-cents-per-hour average gain reported for workers in manufacturing, nonmanufacturing and construction fields for 1970. Settlements this year should continue to keep ahead of the cost of living and reflect increased productivity, they predicted.

Opening day speakers included AFL-CIO Pres. George Meany, Executive Director Bayard Rustin of the A. Philip Randolph Institute; Gerhard P. Van Arkel, union legal counsel, and the Rev. Philip A. Carey, S.J., director of Xavier Institute of Industrial Relations, New York City.

The convention was to end Apr. 17 with the election and installation of officers. Munger and Knapp announced they do not plan to run for new terms, and the executive board agreed to make recommendations on candidates before the final day.

Munger took over the top post on the death of long-time Pres. William J. Pachler last May 27. He and Knapp were executive board members before assuming their present positions.

At the opening convention session, delegates held a memorial service for Pachler, who helped found the union in 1945 and became its president in 1960.

Other convention business includes a decision on a constitutional amendment to increase dues on a sliding scale of 10 cents to 70 cents per member per month keyed to average wage increases won by the union for members.

Proposals to be acted on include a change from a 10-member executive board to one of 12 members, an increase in the term of board members from two years to four, and new requirements for payment of strike benefits.

School Board Shift Ends San Francisco Walkout

San Francisco—A 19-day teachers' strike ended here after the School Board and superintendent changed their minds about abolishing 340 classroom jobs and granting a minuscule salary hike for 3,500 public school staff members.

"We found a lot of 'fat' in the budget," said Pres. James Ballard of Local 61 of the American Federation of Teachers.

"The board recognized it and our members accepted a new board proposal."

Members of the union voted almost unanimously to return to work Apr. 12 after the Easter recess. Also voting to accept were members of the Classroom Teachers Association, an affiliate of the National Education Association.

The new agreement provides for retention of the 340 teaching positions the superintendent planned to abolish.

The school system agreed to hire 80 new teachers in September from ethnic and racial minorities, to permit binding arbitration of grievances for the first time, and to give eight half-days of in-service training time to those who need to brush up on reading and mathematics skills, bilingual education, ethnic history and similar subjects.

Teachers will get a 3 percent salary increase, plus 2 percent in fringe benefits starting July 1. Teacher aides will have 5 percent more in salaries and 2 percent in other benefits. The rejected offer was for a 1 percent increase.

Union members called the walkout Mar. 24. The NEA affiliate did not support the action but several hundred members did honor the AFT picket lines.

Elsewhere the AFT's local union in Newark, N.J., remained on strike and the Philadelphia School Board agreed to binding arbitration of a teacher reassignment that seemed headed toward another walkout.

The Newark strike is in its 11th week. Teachers were prepared to accept a fact-finder's recommendation for settlement of a contract dispute but a divided School Board turned it down. Mayor Kenneth Gibson told the press he is considering a compromise proposal.

Unplugged Loopholes

THE TAX REFORM Act of 1969 was an important step towards tax justice. But although it was the most sweeping rewrite of the federal tax code since 1912, some important tax loopholes remained and a few new ones may have been created.

The law aided low- and middle-income taxpayers, including increases in the personal exemption and the standard deduction and a special low-income allowance to relieve millions of poor families from an unfair tax burden.

But as Hobart Rowen, business editor of the Washington Post noted, there is still the need for reform "that leads to equal tax treatment per dollar of income."

Here are some of his comments in an article headlined "The Tax Breaks Are Still Fabulous for the Rich."

"That 'taxpayer's revolt' predicted just two years ago by former Treasury Sec. Joseph W. Barr seems to have pooped out. To be sure, the 1969 legislation that Barr helped inspire does provide a minimum tax, which forces even the rich to pay at least something.

"But that something is not very much, and indeed is a joke to those whose income is mostly wages or salaries. The loopholes are still big enough to drive a truck through—indeed, there are some new ones.

"Former internal Revenue Commissioner Mortimer Caplin says in a timely piece just published in the Indiana Law Journal: 'It is quite likely that there will continue to be large numbers of high-income individuals paying little or no federal income tax even after the Tax Reform Act is fully effective.'

"Since the Reform Act puts a mild squeeze on two old shelter favorites, the farm-loss racket and depreciation of commerical real property, the sophisticated, high-income taxpayer is shifting his attention to oil and gas production, and residential rental housing, where the breaks are still fabulous, and in some cases, even better than before.

"Perhaps the biggest loophole of all, provided you can finance it, is tax-exemption on bonds issued by local authorities. Judging from Treasury Sec. John Connally's strong defense of the tax-exempt loophole on a recent 'Meet the Press' show, there will be little effort by this Administration to change that.

"Yet it's hard to make a good case for continuing to exempt interest received from state and local bonds. Not even the minimum tax takes a nibble. The rationale for this unfair procedure is that without the exemption, local governments would have trouble raising capital. . . .

"To illustrate the point, exempting taxes on municipal issues is like saying to the person who buys a $1,000 state bond: 'In addition to your $50 interest from the state, we will give you $50 if you are in the 50 percent tax bracket, or $116.70 if you're in the 70 percent bracket.'

"There are similar giveaways, as Caplin says, in all the major loophole areas.

"The goal of the federal government should be to produce an equitable system—one that would tax each dollar of earned income the same way. . . ."

A Word Edgewise:

White House Strangely Silent On Tragic Pakistan Struggle

By John P. Roche

THE TRAGIC OUTBREAK of civil war in East Pakistan was unexpected. Even the Indians, living next door, were stunned. Pakistan, a country divided into two enclaves separated by a thousand miles of Indian territory, seemed improbable from the outset, but the fact that it had somehow survived for a quarter of a century led optimists to believe that the status quo could be maintained.

Now, in retrospect, the split seems inevitable, particulary since the division into East and West Pakistan also reflects an ethnic split between Muslim Bengalis and Punjabis, who have more in common with Afghans than with their fellow East Pakistanis.

The Indian government promptly had hysterics. Admittedly the picture was ghastly: the Punjabi soldiers machine-gunning Bengali rebels and offering to treat the American newsmen in similar fashion. Indian Prime Minister Indira Gandhi has a vested interest in a weak and divided Pakistan so her support for the Bengali separatists of East Pakistan has some Machiavellian basis.

However, in the long run, any prime minister of India who endorses the principle of ethnic separatism is throwing lighted matches into a powder magazine. If a number of her own constituents took the notion seriously, India too could go up in smoke. Suppose, for example, the Indian state of West Bengal (populated by Bengali Hindus) decided to join the Muslim Bengalis of East Pakistan?

What would you have then? A turbulent Bengali nation of about a 150 million wobbling near the border of the Chinese People's Republic. The whole Northeast Frontier region of India, long infiltrated by Red guerrilla operations, would be in limbo. The Indian state of West Bengal has been in a state of revolutionary turbulence for years.

Indeed, its "Marxist" state governments have been repeatedly busted by the prime minister and replaced by what is known as "president's rule," that is, direct rule from New Delhi. With Peking industriously scheming in this strategic area, it would be wise of Mrs. Gandhi to tone down her support of the Bengali rebellion against Pakistan.

As usual, everyone is blaming the United States. The fact that we provided Pakistan with the military equipment now being used against Bengali insurgents proves—at least to leading sectors of the Indian press and intelligentsia—that we have a personal responsibility for the current butchery in East Pakistan.

This has a certain plausibility until one recalls that if we, for instance, provided weapons to the Indian government with a provision they were not to be used in civil disorders, Madame Gandhi would be denouncing us in every available forum for intervening in the internal affairs of a sovereign state. In essence, we are caught in a replay of the Nigerian-Biafran confrontation—we will be damned, if we do, and damned if we don't.

WHAT THEN is American policy on the civil war in Pakistan? Washington has been strangely silent and one wonders. Obviously the place to look is Pres. Nixon's "Worldbook," the 60,000-word volume titled "U.S. Foreign Policy for the 1970s;" yet there we only learn that "South Asia's progress is important to us." That is encouraging, but what should we do when one part of a country is fighting another part?

Then, suddenly, you realize that the answer is hidden in another section of the President's dissertation. What do you do? You turn the matter over to the "National Security Council System," which will "marshal all the resources" of the government, refining the studies made at lower levels, "illuminating the issues and focusing the range of realistic choice before I make my decision."

In action terms, the Pakistani problem must have been turned over to an "Interdepartmental Group," from which it would go in turn to a "Verification Panel," a "Defense Program Review Committee," a "Senior Review Group," possibly "The Washington Special Actions Group," the "Undersecretaries Committee," and, at last, the "National Security Council."

If one suspects, as I do, that there is nothing effective we can do in the Pakistani crisis, this mechanical monstrosity may be ideal—it should prevent any policy from emerging until, at the earliest, 1974.

But suppose there is something we could and should do?

Bayard Rustin Says:

Fletcher Undercuts Negroes With Union-Busting Campaign

AN ALLIANCE is now taking shape which, despite the professed intentions of some of its members, will set back the black struggle for economic advancement. It is an alliance between liberals who think they are helping blacks by hurting unions, and conservatives who want to appear to be helping blacks precisely in order to hurt unions.

The basis of agreement is to smash unions by using the open shop and other anti-union measures. The effect will be to irreparably harm blacks who depend upon unions for their economic security, all the "liberal" cant to the contrary notwithstanding.

The Nixon Administration, with its sophisticated brand of conservatism, provides the ideal setting for such an alliance to take shape. The Administration's policies, which have hurt both unions and blacks, have been vigorously denounced by the trade union and civil rights leadership.

In order not to lose votes as a result of its policy failures, the Administration has unleashed Agnew to win over "the worker," and it is trying to appeal to Negroes by attacking unions in the name of fighting union discrimination in the construction industry.

The most forthright expression of this "pro-black," anti-union posture was given by Assistant Labor Sec. Arthur A. Fletcher in a speech delivered last month before a meeting of open shop contractors. Mr. Fletcher had nothing but praise for "a President and an Attorney General who support a specific anti-discrimination program in this field."

There was no attempt to analyze why the President and the Attorney General—Attorney General Mitchell, that great friend of the Negro!—might be taking this course. Mr. Fletcher was interested only in proclaiming, with great exuberance, that the Administration had finally "whipped" the unions.

Mr. Fletcher, let us remember, was speaking to open shop contractors, people who don't care about the color of a worker's skin, as long as he's not in a union and does not have to be paid union wages.

The open shop contractors applauded his speech not because they like Negroes and are interested in their welfare, but because they don't like unions. They would hardly have applauded if Mr. Fletcher had called for full and equal participation of black workers in the building trades at union wage scales.

Mr. Fletcher warned the open shop contractors that they should not take advantage of the assault on unions by exploiting a new source of cheap black labor. "Too often in history," he said, "black people have been used as strikebreakers, only to be put aside by management, and discriminated against by employers, when they had served the purpose of breaking the union."

But the contractors applauded just the same because they've been around too long. They know full well that breaking unions and getting cheap labor go hand in hand, and that the appeals to higher motives are only icing on the cake. "It is your responsibility," Mr. Fletcher said, "to see that the civil rights movement is not perverted into an anti-labor, anti-worker movement."

IT IS SHOCKING that Mr. Fletcher could seriously make this appeal to open shop contractors who have never made any effort to hide their hostility to unions. They know what he doesn't know—that business is business, and that the objective of the businessman is not to fight for racial justice but to make money, and if that means cutting wages, then so be it. It is for this very reason that unions were formed in the first place.

What Mr. Fletcher did not tell the non-union contractors is that Negroes depend on unions even more than whites. According to a study just released by the U.S. Dept. of Commerce, "For Negro men working year-around full-time in blue-collar occupations, union members earned about 50 percent more than their nonunion counterparts." The ratio of union to nonunion wages for whites was a good deal lower.

It is one thing to call for full and equal opportunities for minority groups workers in the building trades. It is an entirely different matter to call for union busting, yet this is what Mr. Fletcher has done. I am sure he will not welcome the terrible consequences this will have for Negro workers, yet he (and the conservative Administration he represents) is following this course anyway.

One thing is clear: that when Mr. Fletcher spoke before the meeting of open shop contractors, his audience understood what he was saying better than he did himself. He said, "The fight is for racial justice," but they heard, "The fight is against unions." What they knew, and what Mr. Fletcher seems incapable of grasping, is that the fight against unions is ultimately a fight against blacks as well.

In Meeting Social Needs:

Government Funds Stimulate Voluntary Service Agencies

GOVERNMENT ASSISTANCE to traditionally voluntary agencies is shaping a "new voluntaryism" that is better equipped to meet human and community needs, AFL-CIO Community Services Director Leo Perlis reported.

"There just isn't enough voluntary money to do the job," said Perlis, although some voluntary agencies have "mistakenly" led people to believe that they "can do it all." Voluntary action is essential to a "free and democratic society," he declared, and the fusion of government funds with voluntary manpower will help sustain that long-standing tradition in the United States.

Voluntary agencies "have a responsibility to say what they cannot do, as well as what they can do," and to encourage "government to accept its responsibility" in areas where help is needed, Perlis said on the network radio interview, Labor News Conference.

Perlis said that agencies receiving government funds should meet standards and criteria that assure they "comply with policies that promote the good of the country." Such groups, he said, "should be representative of society;" should include black, white, young and old on their governing boards; should keep their books "open to public inspection;" and their programs and projects "should be open to public scrutiny."

He said that while "some voluntary agencies have self-perpetuating boards" that are "not as responsive to the people as they should be," most of them "are legitimate—they are honest—have a lot of integrity, and they are doing a fine job."

NOTING THAT "in their zeal to spread the 'ideal federation,' many United Funds have left the impression that every worthy cause—especially in the field of health and welfare—could be included" under that "general umbrella." But, he said, that is neither practical nor "desirable." There must be preservation of "options and choices" for the people, he added.

Reporters questioning Perlis on the AFL-CIO produced public affairs program were Frank Swoboda of Business Week magazine and Alex Uhl of Press Associates, Inc. The program is broadcast Tuesdays on Mutual radio.

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Washington Window

By Press Associates, Inc.

WHEN THE SECRETARY OF LABOR and the Nixon Administration announced that the press conferences on monthly employment-unemployment reports and the Consumer Price Index, conducted by the Labor Dept.'s Bureau of Labor Statistics, would be discontinued, it produced a first-class Washington flap.

The Administration claimed that discontinuance of the press conferences would enable the media to receive the reports earlier and that their technicians would be available to answer questions of the reporters.

On the other side, there was concern expressed that went far deeper than the pride of the reporters or the time of the releases.

What was being jeopardized, many felt, was the sanctity of the reports issued by BLS—probably the most respected statistics-gathering group in the country.

They reasoned that if the objective, non-partisan BLS technicians were not holding press conferences to present unvarnished interpretation of statistics, the door was opened for the politicians to give their version of the reports.

Largely in response to the outcry against the ending of the press conferences, the Joint House-Senate Economic Committee, under Chairman William Proxmire (D-Wis.), announced that it would hold its own public non-partisan hearings on the reports.

The first witness at the hearing was Ewan Clague who was Commissioner of Labor Statistics for 18 years. He provided the panel and the large press corps in attendance a fascinating historical picture of the fight to keep BLS statistics out of politics.

The bureau, he said, was founded in 1884, partly in response to demands from both the fledgling AFL (which did not adopt its name until two years later) and the Knights of Labor.

Over the years BLS built up its reputation. Press conferences were held on an unscheduled basis; usually Sec. Frances Perkins would talk on broader subjects while the economic side was presented by BLS Commissioner Isadore Lubin.

Through some economic crisis periods the BLS continued to build up its reputation. Even in the post World War II period, when living costs went up 30 percent in a two-year period, it weathered the storm.

A HIGH POINT in confidence in the statistics was in May 1948 when the Auto Workers and General Motors signed a contract including a cost-of-living escalator clause using the Consumer Price Index as the base.

From the beginning, the technicians in BLS conducted the briefings and only in the 1960 elections did the employment-unemployment statistics become a political issue—not their accuracy but their release date.

One of the first things that Labor Sec. Arthur Goldberg did was to set the dates for the release of the reports—and press conferences—a year in advance.

Finally, Pres. Kennedy established the Gordon Committee of well-known national experts to review not only BLS but all government statistics. According to Clague, the Gordon Committee recommended "that the press conferences be returned from officials of the Dept. of Labor to the Bureau of Labor Statistics," adding:

"They had a feeling that this cloudy area between the Secretary talking policy, or between a Deputy Assistant Secretary giving a statistical report was not wise. So they recommended that it be changed."

Finally, when Labor Sec. Willard Wirtz read the Gordon Committee recommendations, Clague said, Wirtz "immediately issued an order and restored it to the Bureau of Labor Statistics' staff, where it has been ever since."

But now, with the abolition of the press conferences, there is apprehension that politics may, once again, raise its head.

"A NEW VOLUNTARYISM" better able to meet today's problems is the result of increased government assistance to traditionally voluntary agencies, AFL-CIO Community Services Director Leo Perlis, center, reported on Labor News Conference. Questioning him on the program, aired Tuesdays over Mutual radio, were Alex Uhl, left, of Press Associates, Inc., and Frank Swoboda of Business Week magazine.

House Vote on Federal School Funds

A labor-supported amendment to increase federal funds for education by about 15 percent was narrowly rejected by the House on Apr. 7 on a 191-187 teller vote.

On labor's scorecard, the 178 Democrats and 13 Republicans who supported the amendment cast Right votes (R), while the 43 Democrats and 148 Republicans who opposed it were Wrong (W).

Numerals show congressional districts; AL—at large; A—absent; P—present, but did not vote.

The Newly Franchised:

Campaign Opens For Young Voters

(Continued from Page 1)

but working together to achieve the goals on which we can agree," he said sounding a theme common to all speakers.

Rustin listed five issues that concern all Americans and on which students should work in their own interests:

- The declining quality and soaring cost of education, which is forcing a majority of college students to work in order to pay tuition.
- Unemployment, which is three times as high for younger citizens, who also face discrimination under a Labor Dept. proposal to reduce minimum wage standards for teenagers.
- National Health Security, which is needed as urgently by those under 30 as by those over.
- Inflationary interest rates, which impose crushing burdens on students forced to borrow to meet tuition payments, as well as on those establishing families.
- Pollution, which threatens the environment in which all Americans must live.

Barkan urged the youngsters not to set "too high a price" on their support of liberal candidates.

While labor bore the brunt of the 1968 liberal campaign effort, Barkan said, it is well aware that "no matter how strong we are, we can't do the job alone. We need you. We need all the allies we can get. We seek an alliance of pragmatists who want to win elections in order to bring about change."

Scammon, underlining the dimensions of the task, pointed out that the drive must embrace not only the 11 million 18-to-21 year-olds, but all of those who turned 21 since November 1968.

"In all, we are talking about perhaps as many as 25 million people," he said. "Only a comparative few are on campus. The vast majority are at home, working, or seeking work."

Reese, who spelled out the nuts-and-bolts problems involved in compiling lists of unregistered voters and the financial and manpower resources that must be found to put their names on the books, cautioned that a "giant conspiracy to prevent registration" must be overcome.

"Local registrars, under the present laws, can do practically anything they want," he said. "In most cases, they do everything they can to make it easy for the 'right people' to register, and to make it impossible for the 'wrong people'—that is, students, blacks, workers, the poor."

Until registration laws are reformed, he declared liberals should fight locally for longer hours and easier access to registration rolls.

A panel discussion was conducted by George Agree, director of the Committee for the Democratic Process; Evelyn Dubrow, legislative representative of the Ladies' Garment Workers; W. C. Patton, associate director for registration and voting of the NAACP, and David Jessup, Western States Field Director of Frontlash.

Workshops dealing with the specials problems of reaching potential young voters among workers, students and disadvantaged citizens were conducted by COPE and Frontlash staff members.

Policy 'Void' Spurs Action On Job Bills

(Continued from Page 1)

has said are "desperately needed" by state and local governments. This measure already has passed the Senate.

- Legislation that would increase the minimum wage from $1.60 to $2 an hour and broaden coverage.
- A two-year extension of the President's authority to establish wage and price controls.

Albert said he also favors moving ahead income-tax cuts, in the form of larger deductions, now scheduled for 1972 and 1973.

"We cannot afford to stand in place," said Albert, "yet in many ways we are really moving backward. When a labor force fails to grow over a period of months, in spite of increasing numbers of entrants and re-entrants—not to mention the thousands of veterans who will be returning to civilian life in the months ahead—we know that we have our work cut out for us.

"We do not believe that inflation alerts, selective controls on single industries and the massive impounding of appropriated funds are the correct actions at this time, and we accept the responsibility of providing the national leadership so urgently needed to end our prolonged economic slump."

Where the Action Is

WAYS TO REACH and register new voters among minority youth are explored in a workshop at the Washington Conference on the Youth Vote. At the head of the table are Earl Davis, left, COPE field coordinator, and Norman Hill, associate director of the A. Philip Randolph Institute.

AFL-CIO Interns Finish Training, Available for Work with Unions

With the AFL-CIO's first Intern Training Program drawing to a close, Federation Pres. George Meany has notified officers of affiliated internationals and state federations of the availability of 10 interns for employment in the labor movement.

The program was initiated last year by the Dept. of Education to provide highly skilled individuals with the technical know-how needed to serve today's trade unions.

"We have been very pleased with the individuals who were selected for this first year," Pres. Meany said in a letter to union officers.

"The AFL-CIO has made a substantial investment in order to prepare these interns with maximum exposure to, and involvement in, specific areas of organized labor.

"Now that this year's program is nearing conclusion, we are undertaking a job placement effort for the interns."

Meany said that anyone interested in interviewing interns for possible employment should make arrangements through Education Director Walter G. Davis.

Davis noted that the interns were accepted for the program on the basis of their commitment to the labor movement, the quality of their academic achievement and union program experience.

Since the interests of the AFL-CIO cover a wide spectrum of national and international affairs, Davis said, the program was tailored in great part to the individual needs of the headquarters departments where interns served—Civil Rights, Community Services, COPE, International Affairs, Legislation, Public Relations, Publications, Research and Social Security.

But other activities were required, including participation in political campaigns, a two-week formal institute at the Labor Studies Center, attendance at state AFL-CIO and international union conventions, attendance at central labor body meetings, special projects within each department, and required reading on the labor movement.

The following is a brief description of each of the interns participating in the 1970-71 program:

Vaughn Ball, 36, William Penn College, B.A., sociology, with graduate work in sociology at the University of Iowa. Ball is a former Meat Cutters shop steward and was active in COPE in his union. As an intern in the Dept. of Social Security, he participated in the investigation of nursing homes, helped prepare articles for the Federationist magazine and wrote first drafts of congressional testimony. Ball also served as a COPE volunteer in Alexandria, Va., while an intern.

Bobbie Jean Creque, 35, Central State University and Labor Studies Center Staff Development Program. Interning in the Dept. of Community Services, she was a delegate to the 1970 White House Conference on Children, planned a day-care publication, and worked with COPE in the Baltimore area.

George A. Humphrey, 25, St. Bonaventure University and Sacramento City and State Colleges. He is an Air Force veteran and a former Operation Frontlash organizer. As an intern in the Dept. of Legislation, he participated in drafting the labor-sponsored health security program and has done extensive legislative research in the fields of congressional reorganization, health insurance, OEO, the minimum wage, the 18-year-old vote, occupational health and safety, political campaign reform and solid waste disposal.

James T. Lonergan, 23, Wofford College, B.A., government. Interning in the Dept. of International Affairs, Lonergan did extensive research on the AFL-CIO's relations with labor organizations throughout the world. He was active in COPE during the 1970 elections and participated in Community Services conferences on strike assistance, the Red Cross and the Fire Fighters.

M. Catherine McCleave, 22, Ladycliff and Brooklyn Colleges and American University, B.A., history (specializing in labor history). During three summer vacations she worked in the Welfare Dept. of Sheet Metal Workers Local 28 in New York, and formerly worked in the federation's Pamphlet Division. As a COPE intern, she was very much involved in the campaigns of Maryland's Gov. Marvin Mandel and Sen. Joseph Tydings. After the elections, she did statistical analyses as part of the federation's drive to strengthen existing campaign spending laws.

Pamela B. Schnierle, 23, American University, B.A. government. A Chicago native, Miss Schnierle attended the University of Illinois Institute of Labor & Industrial Relations and was a member of the Illinois Labor History Society as well as the Haymarket Workers Memorial Committee. As an Education Dept. intern, she participated in union workshops at three universities and in the department's Galaxy Conference on Reaching the Union Member. She helped research the department's white paper on "The Administration's Role in Education" and served at the Labor Studies Center in tutorial reading and discussion programs covering labor's structure, politics, history and collective bargaining.

Barrett K. Seeley, 34, Pensacola Junior College, University of Minnesota, B.A., political science. Seeley has traveled extensively, working 15 months as a lab technician in Southeast Asia with the Thomas A. Dooley Foundation. He was president of the local chapter of the foundation in Minneapolis-St. Paul and did fund-raising for welfare work in Viet Nam and health programs in neighboring Laos. An Education Dept. intern, he developed materials for a Labor Studies Center Institute on "Critical Problems in State Government" and served as its chairman. He assisted in program planning for the studies center, arranging for speakers, designing program formats and class materials.

Albert R. Thomas, 24, A & T University, B.S., sociology, Rutgers University, M.A., labor education. Thomas served as a graduate research assistant at the Rutgers Labor Education Center and was chairman of the Black Graduate Students Association. He also has interned with the A. Philip Randolph Educational Fund and served on the staff of the Industrial Union Dept. in Charlotte, N.C. From 1960-65, he helped organize protest marches throughout the South and became chairman of the Greensboro, N.C., chapter of CORE in 1964. As a Dept. of Civil Rights intern, he has worked with the Government Employes in setting up educational programs and civil rights committees in AFGE locals. This summer he will be working with local unions filing cases with the Equal Employment Opportunity Commission.

Jane L. Van Sant, 24, University of Washington, B.A., history. Prior to becoming an intern in the Departments of Publications and Public Relations, she served as an editorial assistant on the Aero Mechanic Newspaper of Machinists District Lodge 751 in Seattle. Her by-line has appeared in the AFL-CIO News and she also has assisted on the Federationist. In the Dept. of Public Relations, her duties included selecting material to be entered in the Congressional Record on behalf of the federation and the drafting of accompanying statements. Miss Van Sant also participated in a special task force preparing a Speaker's Handbook on National Health Security.

John M. Volpe, 29, New York University, B.A., M.A., economics, expects to receive Ph. D., in September. Volpe has served as a Teaching Fellow at NYU and has lectured at Catholic University in Washington. As a Dept. of Research intern, he has worked in the areas of labor economics, public finance, international economics and on the effects of multinational corporations on American labor. He was co-author of "1971 Bargaining Preview" in the March issue of the Federationist.

Congress Pressed to Act:

Funds Still Lacking For Job Safety Law

(Continued from Page 1)

opened the committee session, which heard Hodgson, Assistant Sec. George C. Guenther and Under Sec. Laurence H. Silberman describe the steps already taken to implement the law.

An estimated 57 million workers in about 4.1 million plants, work sites and other facilities will be covered by the act.

The Labor Dept. is seeking $11 million for the current fiscal year which ends June 30 and another $24 million for Fiscal 1972 for administration and enforcement. HEW has requested $5 million currently and another $8 million for the following year.

Despite the funding problem, Hodgson attested that preparations have been effective and "we will be ready for Apr. 28 with a running start."

He cautioned that organized labor should not expect instant nationwide coverage even though he promised "this act will get the highest priority of the department."

The federation's committee expressed concern, however, on several points involving enforcement, standards and administrative practices:

- A 24-hour advance notice to employers before a plant or work site is inspected, thereby allowing employers to "whitewash" any violations of job safety and health standards.
- A 90-day deferral in enforcement after safety and health standards have been established.
- The small number of compliance officers that will be pressed into service for enforcement, with only 330 inspectors to be activated by the end of Fiscal 1972.
- Inadequate consideration of trade union applicants in recruiting compliance officers.
- The lack of information being issued by the Labor Dept. covering the enforcement.

The 18-member AFL-CIO committee, headed by Vice Pres. Richard F. Walsh, also warned against over-dependence on states to inforce their own safety programs.

Of the $11 million in funds the Labor Dept. is seeking for initial financing, more than half—$5.8 million—has been earmarked for state planning grants for job safety programs.

George H. R. Taylor, secretary of the federation's committee, pointed out that the Secretary of Labor has the authority to determine if the state safety programs meet the required federal standards. And since this authority is descretionary, the state programs could fall short of the law's objectives.

Taylor warned that close scrutiny of the state programs by organized labor will be needed to make sure that they meet the federal standards.

Guenther, who will oversee the administration and enforcement of the act, told the committee that union representatives will have an opportunity to participate in the in-plant and work site inspections. He stressed that if employers attempt to "whitwash" any safety or health violations, union representatives would be allowed to testify and the employers would be cited on that basis.

The committee was particularly critical of the plan for a 90-day moratorium on enforcement after the standards are issued. But to Silberman this was more of a "90-day familiarization period" to allow industries not previously affected to adjust in meeting the standards.

Guenther agreed to consider giving advance notice of inspections to union representatives along with employers in industries where unions have established job safety and health committees.

Hodgson, at his briefing in the AFL-CIO headquarters, unveiled the organizational structure of the Occupational Safety & Health Administration under Guenther. It will include a network of 10 regional offices, each responsible for several states or territories. The offices will be located in Boston, New York, Philadelphia, Atlanta, Chicago, Dallas, Kansas City, Denver, San Francisco and Seattle.

Dr. Marcus Key, director of HEW's Bureau of Occupational Safety & Health, told the AFL-CIO committee that his department would initially open four regional offices and later match the number the Labor Dept. will have in operation.

He said HEW is working on a list of toxic materials that are considered hazardous or harmful to workers. There are expected to be 450 toxic substances—chemicals, materials or various combinations—on which "threshhold limitation values" will be determined by a research and testing staff.

Key said HEW hopes to establish a central laboratory facility that would serve as a research institute to investigate the harmful effects toxic substances have on workers.

PROVISIONS FOR ENFORCEMENT of the new Occupational Safety & Health Act are outlined by Labor Sec. James D. Hodgson, center, prior to briefing the AFL-CIO Standing Committee on Safety & Occupational Health. With Hodgson are Federation Vice Pres. Richard F. Walsh, left, committee chairman, and George H. R. Taylor, secretary.

Wharton Head Of Group On Handicapped

Pres. Hunter P. Wharton of the Operating Engineers has been appointed chairman of the Labor Committee of the President's Committee on Employment of the Handicapped, Chairman Harold Russell announced.

The Labor Committee, in cooperation with leaders of organized labor, promotes the employment of the qualified physically and mentally handicapped worker through union publications and in contract negotiations. The committee also reaches union members to increase the acceptance of handicapped coworkers.

Wharton, an AFL-CIO vice president, succeeds Gordon Freeman, president emeritus of the International Brotherhood of Electrical Workers, as chairman of the Labor Committee. Freeman remains as vice chairman of the President's Committee. He was appointed to that post by Pres. Eisenhower and has served under four Presidents.

HUNTER P. WHARTON

Housing Crisis Tied To Economic Policy

The nation will not climb out of its housing crisis as long as the home building industry is used as a pawn in attempts to balance the economy, AFL-CIO Vice Pres. Joseph D. Keenan warns in an article in Housing Yearbook 1970.

"How long will we permit housing to be the whipping boy of our economy?" Keenan asks.

"No segment deserves it less," he stresses, "and no segment is less suited for use as an economic regulator or for economic balancing than housing."

The yearbook, which reviews problems and progress in housing and community development, is published by the National Housing Conference.

Hopes of averting disaster in home building were pinned to the Housing & Urban Development Act of 1968, notes Keenan, who is chairman of the AFL-CIO Housing Committee and secretary of the International Brotherhood of Electrical Workers.

But those hopes have been "dashed on the rocks of Administration policy," he declared.

"Instead of moving toward fulfillment of its goal—'a decent home in a suitable environment for every American family'—we have been deliberately pushed further away from it," he stresses.

Keenan notes that Pres. Nixon has conceded that the Administration's economic policies contributed to a "grievously crippled housing industry." But while the President claimed that the policies were necessary to control inflation, Keenan asserts that "they have not done that. . . . The truth is the Administration policies to end inflation have been a tragic failure."

What is needed, Keenan suggests, is a solid guarantee from government that residential construction will not be interfered with in achieving a steady rise in home building.

"There is not likely to be any great increase in capital investment in housing as long as the industry is used as a yo-yo of our national economy," he declares.

"And this is a major barrier to any large-scale industrialized housing, which the Administration sees hopefully as a way out of our housing depression."

Keenan also points out that organized labor "is not running in fear" from industrialized housing, nor is it trying to block it.

"We realize that in the long run innovations in building systems may create more jobs in the industry and may make some jobs year-around rather than just seasonal," he adds.

Noting that a number of unions have signed contracts with producers of factory built homes, Keenan says labor's objective is to see that homes are produced by trained and qualified union craftsmen at decent wages and under safe conditions.

"Equally important is our insistence on quality as well as quantity. We are not interested in creating the kind of instant housing today which will become tomorrow's lingering slums. We are interested in providing attractive, enduring homes."

The nation is failing to meet its housing needs not because it lacks the capability, Keenan suggests, but because it has been unwilling to "make the adjustments in our socio-economic-political system which the job requires."

"If we can mobilize a commitment to rebuild our cities and supply our needed housing, organized labor will be an active and productive partner," he asserts.

Clothing Union Kicks Off Talks For 125,000

New York—The Clothing Workers began negotiations for a new contract aimed at bringing wages of 125,000 union members in the men's and boys' clothing industry into line with the cost of living and with average hourly earnings of other American workers. The present agreement expires June 1.

Lagging wages have made it more difficult for the 700 manufacturers with whom the union bargains to attract and keep workers, ACWA Pres. Jacob S. Potofsky and Sec.-Treas. Frank Rosenblum said at the opening negotiating session.

The union's proposals were for a substantial wage boost and other improvements including increased retirement benefits, extended layoff benefits and severance pay for those who lose their jobs because of plant closings.

The ACWA bargaining team includes union vice presidents representing workers in all sectors of the industry.

Other improvements sought by the union include insurance benefits in the event of layoffs, limited vesting of retirement benefits for those affected by plant shutdowns, an improved maternity care provision, a fourth week of vacation for long-service employes, one additional paid holiday, and protection for workers whose employers "seek to import from, purchase from or license foreign firms" in the American market.

Labor Sounds Alert on Flood Insurance Plan

Union members across the country are being alerted to the National Flood Insurance Program that makes premiums available at federally subsidized rates.

AFL-CIO Community Services Director Leo Perlis has urged all state and city central labor councils to inform members of the advantages of the program.

The Dept. of Housing & Urban Development has listed 511 communities in 40 states eligible for the special insurance. Included are 49 communities in the upper Midwest which have been designated by the National Weather Service as subject to severe flooding conditions this spring.

But Federal Insurance Administrator George K. Bernstein reported that response to the flood insurance program has been weak in this area.

Perlis warned that if the federal flood insurance is available to a community, it must be purchased within one year of eligibility. If not, the property owner loses his chance to get other federally subsidized disaster aid.

To become eligible for the flood insurance coverage, Bernstein explained, communities must pledge to adopt land-use measures appropriate to the area.

Coverage under the federal program for single-family homes valued up to $17,500 is being offered at 40 cents per $100. Rates of 45 and 50 cents per $100 are available for more expensive homes. Policies for $5,000 coverage of household contents also are available at rates from 50 to 60 cents per $100.

4-17-71

Cement Pact Sets Pattern For Industry

(Continued from Page 1)

For the industry generally, the wage settlement will average from 31 to 54 cents an hour in the first year, 24 cents in 1972, Miechur predicted.

Lone Star Cement Co., Ideal Cement Co. and a number of smaller firms followed Medusa's lead, and the union reached a settlement with the Lehigh Portland Cement Co. on national contract issues, according to Miechur.

The Medusa pact includes improvements in pension, insurance and vacation plans, and improved protection for employes whose jobs are lost in permanent plant closings.

Employes affected by plant closings will get immediate unreduced pensions if their age plus years of service equal 65. Others may elect to transfer to other company plants and receive $1,000 in company-paid relocation compensation.

At Least $2 Needed:

Action Urged Now To Up Wage Floor

The AFL-CIO called on Congress to raise the minimum wage immediately to at least $2 an hour and to extend coverage to millions of workers now excluded from the law's protection.

Legislative Director Andrew J. Biemiller urged a House Labor subcommittee to improve on a bill it is considering that would raise the present $1.60 wage floor to $1.80 next January, and to the $2 level a full year later.

"The $2 minimum cannot be postponed until 1973," he declared. "Justice for low-wage workers demands quicker action.

In 1966, when the Fair Labor Standards Act was last improved, the $1.60 minimum was at least "tolerable," Biemiller said. "But it is utterly inadequate in 1971, in the face of five years of an inflation ary rise in living costs."

Biemiller, joined at the witness table by AFL-CIO Research Director Nat Goldfinger, stressed that the nation's economy "needs and must have the added purchasing power" of at least a $2 minimum wage floor.

The drive for a one-step jump to at least a $2 wage level received a surprise assist from one of the most influential members of Congress, Chairman Wilbur D. Mills (D-Ark.) of the House Ways & Means Committee.

Mills, generally a conservative on economic matters and normally immersed in the bills that come before his own committee, took the unusual step of holding a press conference to announce that he is introducing a bill calling for a one-step jump to a $2 minimum wage next February. Mills said the economy needs the purchasing power and a higher wage floor would reduce the costs of supplemental welfare assistance for the working poor.

Inner Cities' Jobless Rate At 9 Percent

By Tom Castor

Unemployment during the first quarter of 1971 hit hardest in the areas where it hurts the most—America's poorest neighborhoods—as the unemployment rate for urban poverty areas stood at 9 percent on a seasonally adjusted basis.

The actual jobless rate in the poverty neighborhoods of the nation's 100 largest metropolitan areas soared to 9.6 percent for the first three months of the year, against 8.5 percent recorded during the fourth quarter of 1970, the Labor Dept. reported.

This picture offered sharp contrast to the 4.9-percent jobless rate recorded for the same areas in the first quarter of 1969, or even the 6.3-percent rate in the first quarter of 1970.

The overall unemployment rate for the nation in the January-through-March period was 5.9 percent.

Seasonal adjustments were applied to the urban poverty area unemployment figures for the first time since the quarterly statistical series

STUDENT WINNERS of the 1971 Ability Counts contest of the President's Committee on Employment of the Handicapped stand at attention at the Tomb of the Unknown Soldier in Arlington National Cemetery. Shown presenting a wreath to the captain of the honor guard is Raelene A. Shelley of Mesa, Ariz., High School, first place winner. AFL-CIO state and area central bodies provided transportation and expenses for all of the state winners in the essay competition. **((Story, Page 10.)**

Look to '72:

Building Trades Hit White House Policy

Five thousand building trades leaders from all sections of the country looked to Congress for programs to pull the nation out of recession—and looked to the 1972 elections for an Administration that won't sit at the employer side of the bargaining table.

Delegates to the annual legislative conference of the AFL-CIO Building & Construction Trades Dept. gave warm applause to senators, congressmen and governors—Democrats and Republicans alike—who pledged support for labor's programs.

And they gave prolonged ovations to AFL-CIO Pres. George Meany and other speakers who denounced the White House for attempts to make "scapegoats" and "patsies" of organized labor, and served notice that Election Day of 1972 will be the time of reckoning.

The three-day legislative conference was to be followed by a day-long session on job safety and occupational health—focusing on the union role in implementing the new laws passed by Congress.

It found the delegates, nearly all of them local leaders of their unions, sharply resentful at the singling out of union building craftsmen for wage controls while the prices of goods and services they must buy continue to rise.

In a keynote speech to the conference, Meany served notice that America's workers are "fed up" with the Administration's efforts to paper over its economic failures with "rosy rhetoric and Madison Avenue gimmickry."

To loud applause, he declared that labor "will not accept the role of scapegoat for the failures of this

Job-Creating Plan Offers Aid to Cities

The House voted to launch a large-scale accelerated public works program to provide jobs as well as needed facilities in communities where unemployment is highest.

It authorized $2 billion in federal funds to be spent primarily for projects that are already blueprinted but have been shelved because local and state governments have run out of money.

These include sewage treatment plants, sewer and water systems, hospitals and health facilities, public buildings and street improvements, among others.

The bill, reviving a program that helped pull the nation out of the last recession, had strong labor support.

AFL-CIO Pres. George Meany, who testified for it at House hearings last month, termed it "revenue-sharing from a very practical viewpoint."

In a letter sent to all congressmen before the vote, AFL-CIO Legislative Director Andrew J. Biemiller said the legislation could put 170,000 persons to work this year and the overall impact could increase employment by as much as 420,000 jobs.

It passed the House by a one-sided 319-67 vote.

The Administration opposed the measure, but a Republican-led attempt to kill the accelerated public works section of the bill was soundly defeated.

A minority report by seven Republican members of the House

7 Students Win AFL-CIO Merit Scholarships

AFL-CIO Pres. George Meany announced the winners of six four-year college scholarships, each valued at up to $6,000, and one special scholarship of $1,000 awarded by the federation under the National Merit Scholarship Program.

The 1971 winners notified of their selection this week by Meany are:

Karen Fredrickson of Bigfork, Minn.; John F. Land, El Cajon, Calif.; Leonard R. Richmond, Alexandria, La.; Jack Holbrook, Soft Shell, Ky.; Timothy A. Richardson, Merrill, Wis.; Brendlyn D. Faison, Lorain, O., and John P. Spitals,

New Fair Credit Law May Curtail Right-Wing Extremists' Operations

By David L. Perlman

A new consumer protection law could force out of business a group of vigilante-type, extreme right-wing organizations that peddle dubious "investigative reports" to employers who want to screen out "radicals" and "troublemakers."

This little-known byproduct of the Fair Credit Reporting Act stems from provisions of the law designed to protect Americans from being denied credit, rejected for insurance or refused a job on the basis of false, misleading or outdated information furnished by a reporting agency.

Most such reports come from credit bureaus and are used by stores and banks to determine whether an applicant for credit or a loan is a good risk. Some reports—often including results of interviews with neighbors, employers and co-workers—come from private detective agencies and insurance investigative services.

And some—no one knows how many—come from such far-right organizations as the American Security Council and an organization with the innocuous-sounding name of Church League of America.

In response to a query by the AFL-CIO News, the Federal Trade Commission confirmed that the Fair Credit Reporting Act will clearly

STRENGTHENING LABOR'S ROLE in the American political process was the theme of an address by AFL-CIO Sec.-Treas. Lane Kirkland to the Communications Workers first national legislative conference in Washington. The conference, attended by more than 200 local officers and legislative chairmen, included discussion of labor's legislative and political objectives as well as individual contacts with senators and congressmen.

First National Conference:

CWA Parley Pushes Legislative Program

Delegates to the Communications Workers first national legislative conference spent a week on Capitol Hill urging support for organized labor's legislative objectives and calling congressional attention to the union's current negotiations with the Bell System.

More than 200 local officers and legislative chairmen from across the country participated in forums on labor-backed bills and heard prominent union and political figures give assessments of labor's chances with the 92nd Congress.

AFL-CIO Sec.-Treas. Lane Kirkland warned delegates that if the Nixon Administration had its way, labor would have little say in the legislative process. He stressed that legislative effectiveness is directly related to political action.

"We now have a recession created consciously and deliberately by a conservative Administration, motivated in part by a conscious effort to put the labor movement in its place," Kirkland said.

He charged that the Administration has made the Justice Dept. its "political hatchetman" and that the department is trying to intimidate labor unions into lessening their political activity.

"If that effort is successful," Kirkland declared, "you can be sure that the most effective instrument of progressive, democratic government will have been eliminated."

Lead-off speaker for the conference was Sen. Harrison A. Williams (D-N.J.) chairman of the Senate Labor Committee, who told delegates that "out of this Congress can come a program that will be the foundation for the next election campaign."

Legislative measures are needed, Williams said, to "improve the lives of average, middle-income people," and an administration is needed that will honor "the best of the hopes and aspirations of the average people of our land."

The conference was held in a Capitol Hill motel not far from the House and Senate office buildings, and time was set aside each day for individual contacts with legislators.

The delegates sought support for such labor-backed measures as National Health Security, a minimum wage of at least $2 an hour, social security improvements, extended unemployment benefits, tax reform and class action consumer suits.

They also sought comments on the CWA's stand in this year's contract bargaining with the Bell System.

CWA is seeking a 25-percent wage increase in the new round of talks recently initiated on behalf of a half-million Bell System workers.

CWA Pres. Joseph A. Beirne has written each member of Congress discussing the negotiations and the union's demand for "economic justice" and "economic decency."

Guild Conference Maps Program To Spur News Jobs for Minorities

New York—Establishment of a "minority skills bank" as a central source of job applicants was among major recommendations advanced by a Newspaper Guild conference here to break down the barriers to minority-group employment in the news industry.

The conference also called for a program of Guild scholarships to train minority employes, funded by both Guild members and management.

Delegates further recommended that locals negotiate "specific job descriptions . . . that are realistic and do not require more skill than necessary" as a major means of assuring the entry of minority-group members.

Noting that the Guild has long sought the achievement of equal employment opportunity, the conference said:

"Statistics continually show that despite repeated declarations of intent, the men who run the industry responsible for informing milions of people every day of the changes taking place in the world's most powerful nation have not brought about enough meaningful changes in their own empires."

"The news media," the statement declared, "are lagging way behind in acting to show they understand the reasons behind the nation's social movements."

The conference's recommendations will go to the Guild's Executive Board for consideration in its recommendations to the annual convention, July 12-16.

The conference chose Chester M. Hampton, assistant metropolitan editor of the Washington Post and a member of the Washington-Baltimore Guild, as interim coordinator of recruiting and training for minority groups.

The three-day conference was attended by 74 representatives of 26 Guild locals.

ANG Field Operations Director J. William Blatz told the conference that equal employment opportunity must be fought for like any other union demand, at the bargaining table with strike action as the ultimate weapon.

The conference cited government statistics showing that, while nonwhites made up 20 percent of the nation's population in 1969, they held only 6.2 percent of the jobs on 573 of the nation's largest newspapers, including 2.3 percent of the reporting jobs, 4.2 percent of the technical jobs, 5.3 percent of the sales jobs and 6.1 percent of the clerical jobs.

ANG Pres. Charles A. Perlik, Jr., who noted in his welcoming address to the conference that the Guild was now confronted with the task of putting its long-standing equal-opportunity policy into effective practice, said the Guild would participate in a conference to be called by the Association for Education in Journalism to centralize minority-referral and training efforts.

The conference recommended that Guild members contribute three percent of one week's salary a year to help set up minority-group scholarships and that management be asked to "live up to its responsibility by matching each Guild-produced dollar with two of its own."

Keynote speaker at the conference was Eleanor Holmes Norton, chairman of the New York City Human Rights Commission, who told the conference that minorities "have a right to expect the media to take energetic steps to make up for the disadvantages of the past, just as they expect this of other industries."

"The employment of minority reporters, editors, executives and clerks does have an effect on the overall ability of the media to achieve accuracy and sensitivity in covering stories relating to minority communities," she said.

Among those who addressed the conference on the progress of recruiting and training efforts in the industry were Norman Isaacs, immediate past president of the American Society of Newspaper Editors; Edward R. Cony, executive editor of the Wall Street Journal; Thomas E. Engleman, director of the Newspaper Fund, and Bernard Barnett, executive assistant to the Regional Manpower Administrator in the New York region.

Craig Sawyer, chief of the legal-counsel section of the Equal Employment Opportunity Commission, warned Guild locals to be on guard against tests and job qualifications unrelated to requirements for the job, which he said often act to screen out minority-group applicants.

Money, Land Costs Held True Housing Villains

New York—Treas. John T. Joyce of the Bricklayers declared that any serious attempt to slow down housing prices must be directed at the major cost areas—interest rates and land costs—as well as materials, profits and labor.

The focus of attention on construction workers is "unfair and misguided" because it omits the major inflationary pressures on the cost of housing, Joyce said at a luncheon sponsored by the League for Industrial Democracy and the New School for Social Research.

"It not only serves as a dodge to draw attention away from the real problem," Joyce observed, but it creates another danger—"the fact that, when problems are misidentified, it's going to be impossible to solve them."

He cited reports by the Bureau of Labor Statistics and the National Association of Home Builders showing that labor takes less than 20 cents of every dollar spent to build a house with the remainder going for materials, profits and overhead, financing, and land, particularly the latter two elements.

A 1-percent increase in mortgage interest rates raises the home owner's payments by 10 percent, Joyce emphasized. But still the construction worker bears the brunt of the blame for rising prices, he said.

Joyce noted that the union building tradesmen in major cities work an average of 1,500 hours a year and earn an average of $9,600, slightly above the Labor Dept's minimum family budget. Even that is $1,400 below the $11,000 the government says is needed by an urban family of four to maintain a "modest" standard of living, he emphasized.

The hourly rate in construction has to be relatively high, Joyce suggested, "to compensate first for the kind of work involved—the skill levels required and the risks that are faced; second for time lost due to bad weather, to offset good years with bad, and to make up for the reduced earning power of our men as they grow older."

He pointed out that the national unemployment rate in construction is "roughly 12 percent, running at twice the national average." And, he added, many others are underemployed, since they work fewer hours than they would normally.

Utility Workers Link Dues to Wage Hikes

Delegates to the 17th convention of the Utility Workers adopted a dues structure linked to union-won wage increases and elected new top officers for a four-year term.

The new officers, who were installed April 17 by former Sec.-Treas. Andrew J. McMahon, are Pres. Harold T. Rigley of Local 1-2, New York City; Vice Pres. C. Joseph Luciano of the same local; and Sec.-Treas. Marshall M. Hicks, regional director from Jackson, Mich.

Rigley, who has been a union executive board member, succeeds William R. Munger, veteran officer who accepted the newly created position of national executive vice president. Munger has been president since the death of William J. Pachler last year.

Luciano, an executive board member, succeeds Vice Pres. Reginald Brown, who retired. Hicks replaces Sec.-Treas. Leonard Knapp, leaving May 1 for a job with Consumers Power Co., a Michigan utility with headquarters in Jackson.

After long debate, the convention changed the constitution to provide that each year the percentage of the average increase won for members would be applied to the existing dues and per capita schedule.

The first such change will raise the present schedule 50 cents a member per month, payable no later than Feb. 15, 1972. The added income will be used by the UWUA to expand the international organizing staff and to provide additional services, Knapp reported.

The 1972 dues change will be based on an average increase of 7 to 8 percent, won by the union for members in 1970 and 1971 negotiations.

The constitutional amendment provides that for two years, 50 percent of the increase will go to the national union as additional per capita payments, with 20 percent going into the defense fund. After two years, the UWUA's share of the increase will level off at 30 percent.

Speakers including AFL-CIO Pres. George Meany and Sen. Hubert H. Humphrey (D-Minn.) addressed the 433 delegates. Others during the four-day convention were national COPE Director Al Barkan, Commissioner James T. Ramey of the Atomic Energy Commission, Chairman Vincent D. McDonnell of the New York State Mediation Board and Clement J. Lewis, new director of services for the union.

McDonnell praised officers of the New York local for helping reach a contract agreement last month covering 18,000 employes of Consolidated Edison Co.

HAROLD T. RIGLEY

Points Toward '72 Election:

Building Trades Conference Assails White House Policy

(Continued from Page 1)

Administration. We will not be the patsies for these people."

Both in his keynote and in a later address to a luncheon of delegates from his own union, the Plumbers & Pipefitters, Meany stressed the importance of the 1972 elections.

Now, he said, "we've got to look to Capitol Hill rather than to the Executive Mansion to get the things this country needs," including public works, health security, public service jobs and a higher minimum wage.

But after you've left here, he told the delegates, "go back home and think of 1972, think of Al Barkan and the COPE organization."

The AFL-CIO's Committee on Political Education, Meany said, is "the finest political organization in the United States." But its effectiveness depends on the work done at the local union level.

AFL-CIO Sec.-Treas. Lane Kirkland hammered away at the same theme. Building craftsmen and other union members, he said, are "aroused as never before" and after the next election, "there are going to be some changes made and we'll get back on the road to progress."

Pres. Nixon declined an invitation to address the conference but invited presidents of the building trades unions to a "general discussion" at the White House.

Seventeen union presidents met with the President and Labor Sec. James D. Hodgson for a 75-minute discussion that was described as "amiable" but obviously left both sides still far apart on the merits of the Administration's economic "game plan."

Later, addressing his union's luncheon, Plumbers & Pipefitters Pres. Peter T. Schoemann warned his members that "we are confronted with an Administration that has shown little understanding or sympathy for the needs and desires of working people."

He charged that the Administration "has created a business slump as a calculated national policy," apparently under the theory that if people are out of jobs and stop buying, "business will cut prices and inflation will slow down."

And when that plan didn't work, Schoemann said, the Administration "engineered one of the most brazen acts of demagoguery" by trying to blame construction workers as the cause of its economic troubles.

The answer, he stressed, "is at the polling places of the nation" in 1972. He called on every union local to "double and redouble its efforts in the field of political education."

At the opening of the legislative conference, Frank Bonadio, secretary-treasurer of the Building & Construction Trades Dept., said the Administration's initial suspension of the Davis-Bacon Act and subsequent wages curb had united the construction trades as never before.

"In hard times, we come together and work together for a common goal," he declared.

A key element of the conference was the lobbying on Capitol Hill as the thousands of delegates called on the congressmen and senators from their home states. They were armed with detailed explanations of major labor-supported bills and report forms to pass on the results of their interviews to the full-time trade union legislative representatives.

A number of congressional leaders made the trip the other way, coming from Capitol Hill to the vast ballroom of the Washington-Hilton Hotel, which turned out to be too small to accommodate the record attendance.

Among the highlights:

- House Majority Leader Hale Boggs said Congress will not stand still for the continued refusal of the President to spend funds Congress has appropriated for urgently needed programs including public works and housing.

He predicted that Congress will pass key bills on labor's priority list "and send them to the President. We would hope that he would sign them, but if he doesn't we will try in every case to override those vetoes."

- Sen. Richard S. Schweiker (R-Pa.) said the public service jobs will be enacted, even if it is necessary to override a presidential veto. He has broken with the Administration before, he reminded the delegates, to support labor's position on "the big votes that counted," including the rejection of the Haynsworth and Carswell nominations to the Supreme Court.

- Sen. Henry M. Jackson (D-Wash.) lashed out at the Nixon Administration's domestic record in speeches both to the full conference and to a luncheon of Sheet Metal Workers delegates.

No previous Republican administration has "made such a mess of economic planning," he charged. Jackson called on the Administration to unfreeze the $12 billion in appropriated government funds as a first step to getting the economy moving and providing jobs.

- Sen. Harrison A. Williams, Jr. (D-N.J.), chairman of the Senate Labor Committee, promised to move key union-supported bills quickly through his committee but stressed the need for union members to press their senators and congressmen to vote for them, and the President to sign them into law.

- Rep. Carl D. Perkins (D-Ky.), chairman of the House Labor Committee, criticized the Administration's lack of a "sense of urgency" in seeking funds to administer and enforce the Occupational Safety & Health Act.

- Sen. John V. Tunney (D-Calif.) charged the President and his aides with playing politics with unemployment. "They have tried to blame the sad state of the American economy on everyone but themselves, where the blame belongs."

Delegates gave a warm reception to New York's Gov. Nelson A. Rockefeller, despite his endorsement of general revenue-sharing without federal earmarking. But the governor made clear that he just as strongly supports direct federal grant programs, including "massive federal aid to education" and federal payment of all welfare costs.

AFL-CIO Legislative Director Andrew J. Biemiller told the delegates that "unlike this Administration," most congressmen and senators have "a friendly attitude" to the labor movement and are at least responsive to its problems.

He contrasted that with "the chief spokesmen of this Administration" who "are trying desperately to make scapegoats out of labor in general and construction labor in particular."

AMERICA'S WORKERS are fed up with the tactics of the Nixon Administration, AFL-CIO Pres. George Meany declared in keynoting the legislative and safety conferences of the federation's Building & Construction Trades Dept. Some 5,000 delegates came from all BCTD local unions.

WARM HANDSHAKE replaces the symbolic passing of the gavel as Peter T. Schoemann announces that he will step down as president of the Plumbers & Pipefitters. Martin J. Ward, right, the union's assistant president, will serve as acting president for the balance of Schoemann's term of office. Schoemann has been president since 1955 and a national officer since 1928.

Schoemann to Step Out As Plumbers' President

Peter T. Schoemann will step down as president of the Plumbers & Pipefitters, the union whose card he has proudly carried for 56 years.

He closed a speech to hundreds of his union's members attending the building trades legislative conference in Washington with a "personal message."

Schoemann told them he has asked the union's general board for a leave of absence starting June 1 and he reiterated that he will not be a candidate for re-election at the organization's convention in August.

Martin J. Ward, assistant general president and former secretary-treasurer of the union, will serve as acting president for the balance of the term.

And Schoemann told the delegates that it will be "both a pleasure and a privilege" to nominate Ward for president at the Denver convention.

Delegates gave ovations to both Schoemann and Ward, who has been a national officer since he was elected assistant secretary-treasurer in 1958 at the age of 39.

Ward, who began his apprenticeship as a pipefitter in 1937, became a business representative of his Chicago local in 1950 and business manager two years later.

After six years as a national officer, he was named general secretary-treasurer in 1966 and served in that post until his appointment as assistant general president in 1969.

Schoemann, who remains an AFL-CIO vice president, received his card in the Milwaukee Plumbers' Local 75 in 1914, served as a local union officer as well as a national vice president and also headed the Milwaukee Building & Construction Trades Council for 20 years.

He was named assistant to the general president in 1952 and served as acting president when the late Martin P. Durkin was given a leave of absence to serve as Secretary of Labor in the first Eisenhower Cabinet.

After the death of Durkin, who had returned to the union after resigning from the Cabinet post, Schoemann was named general president in 1955, and was unanimously re-elected at the union's subsequent conventions.

He served in important education posts in Wisconsin and is chairman of the AFL-CIO Committee on Education.

In his address to the union luncheon, Schoemann said he will remain available for consultation and he predicted that the union, under Ward's leadership, "will meet the challenges of the future as we have so successfully met the challenges of the past."

Davis Named to Panel On Education Services

Pres. Nixon has appointed AFL-CIO Education Director Walter G. Davis to a three-year term on the National Advisory Council on Supplementary Centers & Services.

The council evaluates the federal grant programs that support various supplementary education projects including child care and development, Head Start and others.

'Moonlighting' Rate Highest in Public Service

About 3.1 million nonfarm workers in the United States held more than one job during November 1970, with the highest percentage of moonlighting among male employes of state and local governments, the Bureau of Labor Statistics reported.

The BLS noted that the number of moonlighters in the nonfarm sector had increased by 800,000 when compared to December 1960 —the last winter month in which a multiple-jobholding survey was made.

The number of moonlighters with at least one job in agriculture in November 1970 was about the same as 10 years before at 780,000.

The highest moonlighting rate for men was 15.1 percent for state and local government employes, followed by 10.9 percent for workers in educational services and 10.3 percent for postal service employes.

For women, the highest rate was 5 percent in the postal service.

The moonlighting rate for whites ran generally higher than that for Negroes and other races in the 1960s, the BLS said. During the May-November period of 1970, this gap widened as the rate for minority groups dropped from 4.4 percent to 3.4 percent while that for whites showed a lesser decline from 5.3 percent to 5 percent.

Fact-Finding Stage Set for Postal Talks

The U.S. Postal Service failed to make any money offer to seven unions representing 660,000 postal workers after three months of negotiations on contract terms, forcing the talks into the fact-finding stage that could lead to arbitration.

Under the new Postal Reform Act, the unions and management of the new Postal Service will choose a three-member fact-finding commission from a list of names to be provided by the Federal Mediation & Conciliation Service. Commission members will have 45 days to investigate and report back, with or without specific recommendations.

If the parties then fail to reach agreement after another 45 days of bargaining, the dispute goes to binding arbitration.

Bernard Cushman, chief negotiator for the unions, was sharply critical of the Postal Service's failure to make any counter offer on wages. He charged that the proposals management did make were aimed at achieving "complete managerial freedom to act unilaterally."

The unions are seeking wage increases totaling about 30 percent over the next two years in a first contract. They have also proposed a 35-hour week, more holiday and vacation time, improved pension benefits and other improvements over present conditions.

Participating unions all hold exclusive national recognition for their crafts. They are the Letter Carriers, Postal Clerks, Post Office & General Services Maintenance Employes, the Mail Handlers division of the Laborers, Special Delivery Messengers, Post Office Motor Vehicle Employes—all AFL-CIO affiliates—and the Rural Letter Carriers, unaffiliated.

All are members of the new Council of American Postal Employes (CAPE).

MUSICIANS PRES. Hal C. Davis, left, talks with Sen. Alan Bible (D-Nev.) chairman of the Senate Appropriations subcommittee which heard the union leader's testimony on behalf of a requested $30-million appropriation for the arts. Davis, whose union represents 6,000 musicians employed by the nation's 1,400 symphony orchestras, reported on the financial difficulties which beset the modern orchestra.

Arts Funds Held Vital To Concert Orchestras

The existence of some of the nation's major symphony orchestras is threatened by sharply rising costs and an ever-increasing demand for public service concerts, Musicians Pres. Hal C. Davis told a Senate Appropriations subcommittee.

Davis said that the decision by Congress on a proposed $30-million grant for the arts "will determine whether they flourish and expand in a healthy economic environment or whether they will wither in the gloom of deepening financial crisis."

The proposed grant is a part of a $60-million endowment requested by the Administration for the National Foundation for the Arts & Humanities.

Davis, whose union represents 6,000 musicians employed by 1,400 of the nation's symphony orchestras, testified on behalf of the measure. He said that symphony operating costs had increased 59 percent during the 1963-69 period while revenues increased only 44 percent.

Currently, operating costs are increasing at a rate of 30 percent, while income from ticket sales has advanced 20 percent, the Musicians president testified, adding that philanthropy and private endowments have not filled the economic gap.

And in the face of dwindling financial resources, greater demands are being made on the modern symphony than ever before.

The Council of AFL-CIO Unions for Scientific, Professional & Cultural Employes also urged the subcommittee to recommend the full amount of funds requested by the Administration.

Jack Golodner, executive secretary of the council, noted in a letter to the subcommittee that the $60-million request is "reasonable in terms of the demands placed on the federal government and is more than justified in terms of the needs of the arts and humanities."

Davis said that park concerts, public appearances and children's concerts now account for two-thirds of all symphony performances and that these only add to the already large deficits.

"At this juncture in the history of the arts, when expenses are rising and private sources are unable to keep pace, public funds must be made available," Davis told the subcommittee.

He is serving as chairman of the National Labor Committee of the Partnership for the Arts, an ad hoc group seeking increased federal funding for the nation's financially troubled art institutions.

Prices Continue Climb, Food Costs Up Sharply

A sharp increase in food prices—especially supermarket prices—pushed the Consumer Price Index up another three-tenths of 1 percent in March, according to the Bureau of Labor Statistics.

And although the buying power of the average worker with three dependents increased by 59 cents a week, he still had only $90.92 a week in real spendable earnings to cope with the increased prices.

The March increase put the index at 119.8, which meant that families were paying $11.98 for the same goods and services which had cost them $10 in 1967, the base period.

On a seasonally adjusted basis, the annual rate of increase for the first quarter of 1970 was 2.7 percent—the smallest first-quarter increase since 1967.

"This has to be interpreted as good news, extremely good news," said Paul McCracken, chairman of the President's Council of Economic Advisers.

But prices still were 4.6 percent above a year ago, and AFL-CIO Research Director Nat Goldfinger noted that "the cost of living is still rising rapidly."

In the six months ended in March, the BLS said, the cost of living had increased by 4.1 percent. Living costs rose 5.5 percent in 1970 and 6.1 percent in 1969, the worst increase in 20 years.

Food prices in supermarkets during March rose 1.1 percent, the sharpest monthly increase since 1969. The overall increase in food prices was nine-tenths of 1 percent as compared with four-tenths of 1 percent in February.

The price of food, particularly meats, fresh fruits and vegetables, accounted for more than two-thirds of the rise in the CPI for March.

Charges for most consumer services continued to rise in March, but the overall index for consumer services remained unchanged for the first time in seven years because of the decline in mortgage interest rates.

The price of medical care continued to soar, rising another eight-tenths of 1 percent on the heels of an increase of seven-tenths of 1 percent in February.

Cost-of-living pay increases, the BLS said, will go to 43,400 workers and 825,000 military and 1,025,000 U.S. Civil Service retirees on the basis of the index.

The retirees will receive a 4.5 percent increase in annuities based on the increase in the national index from May 1970 to March 1971.

Meany Asks Support For Cancer Crusade

The nation's workers were urged by AFL-CIO Pres. George Meany to support the annual fund-raising and educational campaign of the American Cancer Society during April.

Meany said that the federation and the cancer society share "the conviction that the 1970s could be the turning point in the battle against the cruel disease."

Air West Employes Ratify Contract Gains

Chicago—The Air Line Employes Association announced that members working for Hughes Air West voted 1,413 to 35 to ratify a new 29-month contract covering the airline's station agents, ticket and reservations agents and office employes.

The new agreement provides top monthly salaries ranging from $755 for clerk typists to $1,090 for chief agents; paid vacations up to 32 days, and a $300 monthly pension after 20 years of service.

'Inflation Alert' Challenged:

Meat Cutters Blast Attack on Wages

Chicago—The Meat Cutters have added sharp criticism to organized labor's denunciation of the Nixon Administration's third "inflation alert," which said, among other things, that high meat prices were due to high labor costs in the industry.

"Such statements shield the guilty by indicting the innocent," said Meat Cutters Pres. T. J. Lloyd and Sec.-Treas. Patrick E. Gorman, in an open letter to Pres. Nixon.

Packinghouse wage increases, they declared, have added less than four-tenths of 1 cent to the cost of producing a pound of meat since 1967—when current inflation began.

"In those same years, however, food corporations have taken from consumers and from farmers an additional 8.5 cents on every pound of beef produced and 6.1 cents on every pound of pork," the Meat Cutters' letter noted.

"Such increases in revenue to corporations add up to more than twice the complete packinghouse wage cost for a pound of meat, which is running currently at a level of about 3.5 cents."

Although the two union officials conceded that Meat Cutters' wage increases had been substantial, they noted that packinghouse workers' productivity had increased to 112.1 pounds of meat an hour in 1971 in sharp contrast to 69.2 pounds of meat an hour in 1957-59.

"As a result," they said, "the wage cost of producing a pound of meat was less actually in 1969 than it had been 10 years before. And last year's rise in labor costs, when packinghouse workers won real wage increases of less than 3 percent, was scarcely measurable."

Lloyd and Gorman also charged that the President's Council of Economic Advisers had failed "to show alarm" over the failure of retail meat prices to drop as much as livestock prices have fallen.

A 12.4-percent drop in livestock prices during the fourth quarter of 1970 was hardly reflected in the decrease of only 4.2 percent in retail meat prices.

The Administration described this phenomenon as a short-run distortion which would be quickly offset by the next upturn in livestock prices. The real long-term problem, according to the report, is rising operating costs faced by the meat industry, particularly labor costs.

"To us," the Meat Cutters' letter said, "their game plan seems the crude and simple one of fighting wage increases needed to maintain the buying power of workers, while blessing with official nonrecognition the real inflationary thrust of corporate prices and profits."

The "inflation alert," issued Apr. 12 and aimed chiefly at beating down Steelworkers' wage proposals in upcoming negotiations with the nation's basic-steel giants, drew immediate condemnation from AFL-CIO Pres. George Meany and USWA Pres. I. W. Abel.

The alert criticized the Steelworkers' settlement in the can industry as inflationary and asked the union to seek less for its 450,000 members in basic steel.

The CEA's statement also brought criticism from Pres. Paul Jennings of the Electrical, Radio & Machine Workers, who called it "a shocking anti-worker statement."

Jennings said the alert was designed to divert attention from the Nixon Administration's "failure to take effective action on the nation's social and economic problems."

Stone Workers' Leader Dies in Hotel Blaze

Pittsburgh—Private funeral services were held here for Gaston LeBlanc, last president of the Stone Workers, who died in a hotel fire in Cleveland.

LeBlanc, 60, leaves his wife Shirley, former organizer for the United Electrical Workers, and two children. He joined the staff of the Steelworkers after presiding at his union's merger convention in St. Louis last winter, and was stationed in Johnstown, Pa. The Stone Workers are now part of the USWA.

LeBlanc was in the Hotel Carter, Cleveland, for a conference of local unions preparing to negotiate with the Harbison-Walker Refractories Co. Smoke suffocation injured several guests and LeBlanc was one of six who succumbed.

Bank Profits Still Soar Despite Interest Rate Dip

Some of the nation's biggest commercial banks showed sharp increases in net income during the first quarter of 1971 with the J. P. Morgan Co. posting a gain of 61.4 percent, according to Business Week magazine.

Business Week said that even though the recent dip in interest rates had cut into operating income, higher bond prices meant higher net income for most banks.

For example, the Cleveland Trust Co. showed a 14.8-percent drop in operating income during the first quarter at $6.2 million, but its net income rose to $8 million for a 60.4-percent rise over the first quarter of 1970.

The corporate earnings skid apparently has been checked after dropping more than 5 percent during the first three months of last year.

Business Week said early corporate reports indicate profits should be over the $42-billion annual rate recorded in the last quarter of 1970, although it noted that profits in that quarter were unusually low, due partly to the General Motors strike.

General Electric earned $91 million in the first quarter after a $43-million loss during the same period a year ago.

Auto sales were running more than 10 percent ahead of last year, Business Week reported, with Chrysler Corp. turning a $27-million deficit last year into a $10 million profit during 1971's first quarter.

By Unanimous Supreme Court:

Strict Guidelines Set In Southern Schools

The Supreme Court in a series of four unanimous decisions issued new guidelines for the desegregation of southern schools, upholding specifically the busing of students as a means of erasing the "last vestiges" of racial segregation.

The decisions, written by Chief Justice Warren E. Burger, reinforced the 1954 Supreme Court ruling that declared unconstitutional school systems based on race.

Burger said in handing down the decisions that the court's objectives remain the same: "to eliminate from public schools all vestiges of state-imposed segregation."

The decisions run counter to recent actions of the Nixon Administration and the Justice Dept. which had argued against busing and in favor of the "neighborhood" school concept. Justice Dept. lawyers had intervened on the side of southern school systems in the four cases.

The "de facto" segregation prevalent in some northern cities, that results from the isolation of Negroes in seperate neighborhoods, was not affected by the decisions.

Burger noted that the "northern-style segregation" was not included in scope of the decisions because the court was not deciding cases where segregation results from actions other than those of school officials.

The key decision of the four struck down the North Carolina anti-busing law and upheld all sections of a desegregation and busing order issued by a federal judge for Charlotte, N.C., and Mecklenburg County.

The high court also ordered increased cross-town busing of students in Mobile, Ala., to desegregate the entire school system.

It upheld a desegregation plan for Athens and Clarke County, Ga., under which students are assigned on the basis of race to schools away from their neighborhoods.

In issuing the new guidelines, the court covered these points:

- Desegregation does not require every school in every community to reflect the racial composition of the entire school system. But ratios are "a starting point in the process of shaping a remedy," and judges may employ this practice.
- It is not illegal to allow the continued existence of numbers of "one-race or virtually one-race schools within a district." However, school officials and judges must determine this is not a result of official actions.
- Gerrymandering of school district lines can be ordered by judges with widely separated attendance zones to achieve desegregation—even if the resulting zones are "awkward, inconvenient and even bizarre."
- The busing of students away from their neighborhoods is legal to achieve integration. "Desegregation cannot be limited to the walk-in school."

The court also asserted that all schools in a system must be of "like quality, facilities and staffs."

Burger said that all school faculties must be desegregated and declared that courts must make certain that school authorities do not build new schools or abandon old ones with the objective of re-establishing segregated schools.

Idaho Enacts Major Boost in Injury Benefits

Boise, Idaho—Democratic Gov. Cecil D. Andrus has signed into law a new workmen's compensation bill raising the maximum weekly benefit from $43 to $101.

Idaho AFL-CIO Pres. Robert W. Macfarlane hailed the new law as "the most significant advance in the Workmen's Compensation Bill since the original enactment of the measure in 1917."

The new benefits structure is tied to the average wage in the state and will increase automatically as wages go up.

Under the old system, the maximum benefit was $43 for a single person and $51 for a married man. With passage of the new law, the maximum in both cases will be approximately $101.

The injured worker would receive 60 percent of his weekly wage to a maximum of 90 percent of the average state wage. The minimum benefit would be 45 percent of the average wage, currently $112 a week.

A married worker also will receive 7 percent of the average state wage for each child up to five.

Rail Clerks Strike REA Over Changes in Rules

New York—The Railway & Airline Clerks, representing 20,000 employes of REA Express at 4,000 locations, called the first nationwide strike in REA history to protest unilaterally imposed changes in work assignments.

BRAC Vice Pres. Robert J. Devlin said the walkout by union drivers, clerks and warehousemen is virtually "100 percent effective."

REA Express, formerly owned by the railroads but now under other management, broke off negotiations with the union and put into effect a number of changes in Northeast area over-the-road truck routes, the union reported.

By so doing management violated the Railway Labor Act requirement that no changes in conditions can be made after the union or the company serves notice of intent to reopen the contract, Devlin said. BRAC served such a notice Apr. 1 of its desire to change the contract expiring June 30.

The walkout followed two rounds of talks with management over the proposed rules changes. The first ended Mar. 15 when REA ordered the route changes into effect, and BRAC warned its members would stop work in protest. The second breakdown in talks came when management decided to make the changes in spite of an Apr. 19 strike notice.

When the walkout started, management filed a lawsuit asking federal courts to fine the union $5 million in punitive damages and $1 million a day in compensatory damages. The union said it will defend itself if the case ever comes to trial.

NEW RENDITIONS of old labor songs are recorded during a taping session in New York City as a part of the COPE Report cassette project. Recording consultant John Gordy and engineer David Moyssiadis, lower left photo, monitor a play-back in the control booth. Arranger-conductor Lew Anderson, left, and singer Bill Elliott, collaborate on one of the songs, right photo. The first in a monthly series of COPE tapes will be available in May.

Court Opens Airline Cabin Jobs to Men

New Orleans—The 5th U.S. Circuit Court of Appeals has ordered Pan American World Airways to stop discriminating against men in employment of cabin attendants.

The appellate court told Pan Am it was in violation of the Equal Employment provisions of the 1964 Civil Rights Act by hiring only women as stewardesses for the job.

The ruling was on an appeal filed by Cello Diaz Jr., who had applied for a position as cabin attendant and was turned down.

The appeals court said that employing only women cabin attendants was in no way necessary to Pan Am's "primary function . . . to transport passengers safely from one point to another."

The ruling overturned a decision by a lower court upholding the airline on the grounds that customers preferred female attendants and that acceptable male attendants were difficult to find.

"While a pleasant environment, enhanced by the obvious cosmetic effect that female stewardesses provide," may be important, the appeals court observed, it is "tangential to the essence of the business involved."

Meany Testimony Excerpted on Tape

AFL-CIO Pres. George Meany's testimony before a Senate committee considering legislation to stabilize the economy has been excerpted into a tape recording suitable for a 5-minute radio spot.

The tape containing Meany's comments on the Administration's "double standard" is available from the AFL-CIO Dept. of Public Relations, 815 16th St. N.W., Washington, D.C. 20006.

Cassette Tapes Carry New COPE Programs

AFL-CIO Pres. George Meany, House Speaker Carl Albert, Rep. Martha W. Griffiths, Senators Gaylord Nelson and Edward M. Kennedy are available to speak at union meetings in May.

They are all available on the first program of COPE Report—a monthly series being inaugurated in May.

COPE Report is the new cassette tape project, composed of two 15-minute reports on a single cassette. One report is designed especially to be played at union meetings. The other side provides background information, facts and arguments for union leaders.

The music of the trade union movement—"Solidarity Forever," "Which Side Are You On?" "On the Picket Line," and "Roll the Union On"—has been especially arranged and recorded for the cassettes.

This is a sample of what is on the side designed for union meetings:

Meany on elections—"The important thing is, we've got to treat 1971 as if it were an election year itself, and we have to work just as hard as if the election were tomorrow."

Albert on the economy—"The persistence of 6 percent unemployment through the first quarter of 1971 should convince the most conservative that government must supply the stimulus to put people back to work."

Nelson on Pres. Nixon's veto of the 1970 Public Service Jobs Bill—"If the President had signed that bill last December, our state and local officials could be fully organized by now and could be in the process of hiring people for public service jobs immediately to help the employment situation."

Mrs. Griffiths on health care today—"The deductibles are becoming larger and the health care that you receive is less and less for more and more money."

Kennedy on National Health Security—"I believe we'll have a National Health Security bill on the President's desk before Congress adjourns for the 1972 elections."

Providing background for union leaders on the other side of the cassette are Meany, COPE Director Al Barkan, Legislative Director Andrew J. Biemiller and Research Director Nat Goldfinger.

COPE Report costs $1.50 a month for subscribing unions. Plans include making future shows adaptable for radio use.

Barkan promised this future for the project:

"COPE Report will be timely. It will hit hard. It will call them as we see them. . . . And we think it will result in an increase of interest, of involvement and of activity by our members in COPE's programs."

Boston Navy Yard Units Pick AFTE

Boston, Mass.—Two election victories for the Technical Engineers over an unaffiliated union at the Boston Naval Shipyard were announced by Pres. Maywood Boggs of the AFL-CIO Metal Trades Dept.

Non-professional technical employes favored AFTE over NAGE, Inc., by a vote of 142 to 89, with eight votes for neither organization. Professional employes in the technical group voted on two ballots—first for a separate representation unit, 59-37, and second for AFTE over NAGE, 57 to 23, with 17 votes for neither.

The two groups cover 148 professional employes and 344 nonprofessionals at the Navy yard.

The Attack on Wages

WE HAVE AN Administration moving toward a crackdown on labor at a time when they are giving big business tax incentives, increased speed of investment write-offs, all of the little gimmicks that they can do; at a time when the banks of this country are making profits beyond anything they ever dreamed of; at a time when executive salaries are reaching new heights, they are going to try and make labor the scapegoat.

What they are pointing toward, if they are successful—I don't think they are going to be successful—is the establishment of a low-wage economy in this country. And, if they look around the world, yes, everywhere in the world where wages are lower, they will see what a low-wage economy means. Over the history of this country the best customer for American industry is the American worker.

SO WHEN they are trying to beat down labor, when they are trying to make labor the scapegoat, they are launching a direct attack on the purchasing power that is needed to keep this economy going.

Well, this is what we face. I am sure that the Steelworkers are not going to be intimidated. I am sure the AFL-CIO, I am sure the Utility Workers are not going to be intimidated.

We are going to continue to demand our fair share of the wealth that is produced by this economy in which we live. And we are going to move ahead despite the actions of this Administration.

We have got a lot of things to do. A lot of things along the line that we have been doing for many years—things that affect all of the people because we take the position that anything that affects all of the people of this country has got to affect us because we represent quite a sizable percentage of the citizenry of this country.

So we are interested in the nation's health. We are interested in a national health plan that will make it possible for people who are ill to face that illness without the tremendous economic worry that comes from their inability to pay for being sick. And this affects all of the people of this nation.

AND WE ARE going to push the minimum wage up again. We are going to push it up to $2, and that still is not enough—but that looks like it's all that is possible to get out of this Congress—because your family needs, according to government statistics, for any kind of a decent living, are well above $2 an hour.

Then we have the pollution problem, the environmental problem that affects all of the people of this great country.

So we are going to play our part as the peoples' lobby, looking to protect the people at every step of the way because that means protecting our own, protecting ourselves.

And we are going to do this by the traditional methods that we have done in the past. We are going to sharpen up our political machine, which I think is as good as there is around this country, but we are going to make it better because the answer to a lot of the problems that we are facing is political action.

We are preparing in 1971 for the political action which is so important in 1972. I am sure that in this fight, in these efforts, we are going to have complete cooperation in the American trade union movement.

—From an address by AFL-CIO Pres. George Meany, Apr. 14, 1970 to the Washington, D.C., convention of the Utility Workers.

A Word Edgewise:

Fulbright's Pull-Out Campaign Seeks Return to Isolationism

By John P. Roche

WE SHOULD ALL be grateful to Sen. J. W. Fulbright. At last, speaking at Yale, he surfaced his fundamental assumptions about the proper direction of American foreign policy.

"Because of our continuing obsession with communism," he said, "we permit client states like Israel and South Viet Nam to manipulate American policy towards purposes contrary to our interests, and probably to theirs as well."

Earlier he had indicated that the United States was like a drug addict, hooked on anti-communism, and that the Israelis, the South Vietnamese, and others were little more than ideological "pushers."

There are, of course, factual problems with this analysis. Leaving aside the degree to which Israel qualifies as a "client state," the historical record of American relations with Israel suggests that the last thing the Jewish state wanted to do was get embroiled with the Soviet Union.

Indeed, before Israeli independence the Russians provided a good deal of support to the Jewish settlers. It was not based on philosemitism, but on the hope that the British, who controlled Palestine, could be driven out, thus creating a power vacuum in the Middle East. American policy trailed along behind the British.

Israel would have been delighted to keep out of the Cold War, but when Moscow began to support and arm the Arab states, Israeli survival dictated a commitment to the West.

This had nothing to do with communism versus capitalism—Israel is basically a democratic, socialist nation which has rejected both rugged individualism and bureaucratic collectivism. The Israelis never worried much about Soviet economic doctrines; their problem was Arab aggression sponsored by Moscow.

American support for Israel has never been based on any "obsession with communism." It has been built around the perhaps naive proposition that we should stand behind 3 million people threatened with destruction by Soviet client states. Indeed, had we been truly obsessed with Communist expansion among the Arabs, the obvious requirement of realpolitik was to ditch Israel, become the protector of the Muslims from "Godless, atheistical communism," and guarantee the future of all that oil.

The American Jewish community would have been outraged, but the other 95 percent of the electorate would probably have reacted roughly as they have to the massacres in East Pakistan. (Last year in a national college poll students were asked: "In the event of an armed conflict, should we back Israel with arms?" Sixty-one percent said "No;" only 18 percent "Yes." That is the view among the intellectual elite!)

Similarly in Southeast Asia, whatever the rhetoric of John Foster Dulles in 1954 may have indicated, in the 1960s we did not get hooked on anti-communism. We reacted to prevent an ally from being invaded and overwhelmed by an aggressive totalitarian neighbor. Whether the regime in Hanoi is dedicated to Marxism, animism, or vegetarianism is irrelevant to our fundamental concern: its imperialism.

THE FACT that South Viet Nam is not a model democracy is also irrelevant—unless one believes that the British and French should not have gone to war with Hitler Germany in 1939 because Poland was run by an authoritarian junta.

At any rate, those of us who have been arguing that the defense perimeter runs from Saigon to Sinai appreciate Sen. Fulbright's candor. Instead of wobbling along with the one-winged hawks in the Senate, he has laid his cards on the table face up.

If the American people decide to go home, Fulbright will be their tutor—you cannot conduct a half retreat from idealism. The withdrawal symptoms from addiction will affect every area of the world, every aspect of our national life. The syndrome is known as "isolationism."

The American Plan
Be Union-Buy Union
UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Msgr. Higgins Says:

Innuendo, Inaccuracy Load Paperback Attack on Chavez

RALPH de TOLEDANO, a Washington-based reporter, political biographer, and syndicated columnist, has just come out with a new paperback entitled "Little Cesar" — an obvious take-off on one of Edward G. Robinson's more celebrated roles. The book is a pot-boiler if I ever saw one.

Published by Anthem Books (a poorly camouflaged front for the National Right to Work Committee), it's a low-grade, mean-spirited hatchet job on Cesar Chavez, director of the United Farm Workers Organizing Committee.

Frankly it isn't worth the inexpensive butcher paper it's printed on, but since it is obviously aimed at a mass market and, within a matter of days, will probably be on sale in great quantities at newsstands and magazine racks all over the country, it can't be completely ignored.

To review it adequately, by verse and by chapter, and to correct all of its half-truths, sly innuendos, irresponsible gossip, and outright inaccuracies, one would need at least a dozen columns of this length. Since that's out of the question, here is a brief sampling of the author's more outrageous howlers.

Before getting down to particulars, let me make three general comments on the book.

In the first place, I do not for a moment question Mr. de Toledano's right to go after Cesar Chavez and the United Farm Workers Organizing Committee and to do so as fiercely as his own reading of the facts might seem to warrant.

In other words, objective criticism of Chavez and UFWOC is perfectly in order. Unfortunately, however, Mr. de Toledano's criticism, by and large, is anything but objective. To the contrary, much of it is demonstrably false and, worse than that, is almost pathologically venomous and vindictive in tone.

Secondly, it should be noted that, while Mr. de Toledano is hell-bent on destroying the reputation of Cesar Chavez as an individual, he seems to have had in mind a much larger purpose than that in writing "Little Cesar." I think what he really set out to do, in addition to knifing Chavez, was to try to persuade his readers, by dint of sheer repetition, that not only the closed shop but the union shop as well "runs directly counter to the First, Fifth and Ninth Amendments to the Constitution."

Thirdly, it should be noted that Mr. de Toledano makes much of the fact that he traveled to California six times to investigate the farm labor dispute in the state. He has my sympathy in this regard. Having made the same trip, for the same purpose, some 23 times during the past 14 months, I know that this kind of leg work can be rather tiring.

Be that as it may, there is not a single shred of evidence in "Little Cesar" that Mr. de Toledano, in the course of his safaris to the Coast, ever talked to Chavez or to any of his top associates. I don't think I am being unfair to Mr. de Toledano when I say that this certainly doesn't speak very well for his objectivity as a reporter.

I think that Mr. de Toledano's readers might also be interested to learn that, while he takes a number of hefty jabs and a number of potshots at certain clerical "agitators" and, more specifically, at the Bishops Committee on Farm Labor, he has never, to the best of my knowledge, talked to any of those clerics or to any member of the Bishops Committee or to any member of the committee's staff.

Even more importantly, from his point of view, we might have been able to spare him the embarrassment of getting caught red-handed at the sordid little game of reporting scurrilous and absolutely false rumors about Chavez and the Bishops Committee.

LET ME CITE but one example with reference to the latter point. Mr. de Toledano, in clear violation of the ethics of his own craft, cleverly manages to plant the impression with his readers—by the sleazy device of repeating, without comment, an outlandish rumor handed on to him by one of his California informants—that Chavez is turning over to the church certain funds which the growers are required by contract to contribute to UFWOC in support of the union's Economic Development Program.

The second part of this preposterous little exercise in rumor mongering says that Chavez is doing this as a kind of under-the-table payoff to the committee for favors allegedly rendered to the union.

I seriously doubt that Mr. de Toledano really puts any stock in this filthy little rumor. He is much too smart and much too sophisticated to fall for this kind of hairbrained gossip. Why, then, did he stoop so low as to give it a certain credibility by repeating it without comment?

Well, as he says himself, in another context, by way of criticizing the press for having printed what he regards as erroneous information about the pesticide issue in the grape dispute: "The press evidently printed these 'statistics' without bothering to ask where they came from. There was after all, no point in killing a good story."

In any event, so it goes repeatedly throughout Mr. de Toledano's miserable diatribe against Cesar Chavez and the United Farm Workers Organizing Committee. He simply can't bear to kill a good story — even if it's totally unfounded.

In summary, though he likes to think of himself as being first and foremost the completely objective reporter, and is so billed by his publisher, he comes through, in this book at least, looking not at all like an independent journalist, but rather like an old-style Sunday supplement gossip monger and, even more to the point, like a professional propagandist for the National Right to Work Committee.

Scapegoating Escalated:

Latest 'Inflation Alert' Exposes Nixon's Anti-Worker Position

THE LATEST "inflation alert"—keyed to holding down wages in coming steel negotiations—was branded by the chief AFL-CIO economist as a "shocking example" of the Administration's partiality for corporations and hostility to workers.

Nat Goldfinger, director of the Federation's Dept. of Research, charged the move is "an escalation of scapegoating" aimed at blaming workers for "all of the problems—all of the failures of the economic policies of this Administration." He said Pres. Nixon's "game plan was obviously ill conceived" and has been "one big flop" that has resulted in "a recession, followed by stagnation."

Blame for that situation rightfully belongs "at the doorstep of the Administration," he said, not on workers seeking better wages to offset past increases in living costs and loss of buying power. Goldfinger appeared on the AFL-CIO produced public affairs interview, Labor News Conference.

Goldfinger said that while corporate profits have declined since mid-1969, the actual situation is "not quite the way the Administration poses it." Stressing that "from 1960 until the middle of 1969 . . . the cash-flow to corporations in this country skyrocketed 91 percent," he said that the current profits picture is a "reflection of the recession—not a reflection of price reductions or even cuts in profit margins."

GOLDFINGER RENEWED labor's call for stepped up public investment and job-creation programs, pointing out that the Administration has "frozen . . . more than $12 billion" appropriated by Congress, for such badly needed projects as Appalachian regional development, low-rent public housing, basic water and sewer facilities, forest roads and trails and Model Cities.

The Administration's refusal to allocate that $12 billion is "shameful . . . particularly when the cities are in such a sad state," he declared.

Reporters questioning Goldfinger were Hobart Rowen of the Washington Post and Murray Seeger of the Los Angeles Times. The program is broadcast Tuesdays on Mutual radio.

By Press Associates, Inc.

WHEN CONGRESS turned its back on further support for the supersonic transport, it talked about the number of jobs—some 14,000—that unfortunately would go down the drain, but did nothing about them.

Republican Sen. Charles McC. Mathias, who has seen a lot of defense jobs cut in his own state of Maryland, was pretty bitter about this indifference.

"It is about time that the federal government and industry come together and establish a means of insuring workers and communities of protection against the harsh economic effects of sudden policy changes such as this," the senator said.

"While the SST is the latest example of employes of private industry being laid off because of a government decision, such a situation can be caused by any number of events from the termination of a major war to a bureaucratic decision to cease buying one type of airplane in favor of another model."

The death of the SST program came in the midst of a great deal of bitter debate not the least of which was its effect on jobs.

There are now three great classes of workers who have been caught in a job bind that is growing increasingly severe. There are the returning veterans from Viet Nam who will number some 800,000 by mid-1971. There are about 1.2 million workers in defense industries who will be in job trouble by that time, too, and there are about 200,000 civilian workers for the armed services whose jobs are slipping away.

In all, about 2.2 million workers are involved, most of them certain to add to today's 5 million unemployment unless the Nixon Administration and Congress do something drastic about them.

It is not as though the problem has suddenly come upon us. As long ago as December 1969, organized labor was pointing out its growing severity and was pleading for action to meet it.

THE AFL-CIO, through its research director, Nat Goldfinger, told the Senate Labor Committee that it was the obligation of the government to see to it that when the war in Viet Nam ended, every possible measure had been taken "to assist returning veterans and affected defense workers and communities to adjust to civilian employment."

Goldfinger cited the need for assuring a full-employment economy to absorb returning veterans and laid-off defense workers; he insisted that the government had a special obligation to its own civilian defense workers; he called for action on a wide variety of fronts that would strengthen the unemployment insurance system, step up retraining and give special help to the hard-hit areas.

At the same time the late Walter P. Reuther, then president of the United Auto Workers, presented the Senate committee with a "plan" to assure a smooth conversion from defense to civilian production. He called for ploughing back a portion of contractors' profits from defense production into a "conversion reserve" which would be used to benefit workers ultimately laid off.

The Administration has shown some awareness of the problem, notably as it affects Viet Nam veterans who are not being absorbed back into civilian life as smoothly as they should be.

The Dept. of Labor has stepped up various programs to help veterans find jobs and to move ahead with a $42 million program "to put jobless aerospace and defense scientists, engineers and technicians back to work."

But it has become increasingly clear that such measures are merely palliative and are not equal to the huge task of seeing to it that the 2.2 million workers eventually to be affected are "absorbed back into civilian life" as painlessly as possible.

"Jobs Are Needed Now," says one headline; "Unemployment Is Now the Top Problem," says another.

Congress should give top priority to the clear and urgent needs that defense cutbacks entail.

SINGLING OUT upcoming basic steel negotiations in its latest inflation alert is "a shocking example" of the Administration's partiality for corporations and hostility to workers, AFL-CIO Research Director Nat Goldfinger, center, charged on Labor News Conference. He was questioned by Murray Seeger, left, of the Los Angeles Times and Hobart Rowen of the Washington Post. The AFL-CIO program is aired weekly on Mutual radio.

How to Buy:

Major Gains Noted in Battle To Ease Credit Charge Rates

By Sidney Margolius

A **NATIONWIDE BATTLE** is shaping up over the amount of finance charges that retailers impose on "revolving" charge accounts. Even as labor and consumer groups in various states are seeking lower rates through legislative and court actions, large retailers are threatening that lower credit rates will force them to raise merchandise prices.

The main issue is the rate of 1.5 percent a month on the declining balance of the widely-used revolving credit and bank charge account plans. Figured as an annual percentage rate, this comes to 18 percent a year. Sometimes the true annual rate is even higher since many retailers calculate the fee on the previous month's ending balance without first subtracting the payments made for the current month. They nick you for a little more interest this way.

In several states now, legal steps have forced a reduction in the rate and the retailers are getting worried. The Washington State Labor Council led the way in 1968 by getting a public referendum which voted to establish a maximum of 12 percent a year on all retail credit plans. Soon thereafter the AFL-CIO called for a national campaign by state councils to bring retail credit rates down to no more than 12 percent a year. Then, in 1970 the Wisconsin Supreme Court ruled that interest rates over 12 percent are usurious, and the leading retailers there cut their rates accordingly.

In Minnesota the state labor council brought a lawsuit charging that the 18 percent was usurious. The lower court ruled that an annual interest rate of more than 8 percent for charge accounts did violate Minnesota's anti-usury law. The retailer involved, Montgomery Ward, is now appealing this decision to the state Supreme Court.

Meanwhile the Minnesota state attorney general has filed suits charging that banks sponsoring the Master Charge credit card plans are violating the anti-usury law by charging 18 percent a year.

In Iowa, too, the state attorney general has filed suits asking the court to order Sears, Younker's (a leading department store there), and the Standard Oil Co. of Indiana to stop charging 18 percent a year. The attorney general contends that Iowans are legally bound to pay only 9 percent interest.

Oregon labor organizations also called for a 12 percent ceiling. It had become noticeable that consumers in neighboring Washington were able to save up to $110 on financing a new car, and as much as $328 on financing used cars. (Used car financing rates are especially high. In many states, laws permit rates of 21 percent a year and more on used cars.)

You can imagine how worried the retailers and banks are by the rising tide of successful legal actions against the 18 percent rate. Now the backlash is starting. A bill sponsored by dealers and banks has been introduced into the Washington legislature to raise the credit to 15 percent.

Leading retailers also are warning that if they can't make money on credit fees they will have to raise prices on the merchandise itself. Montgomery Ward announced that its profits on credit sales had gone down last year. It made less than $6 million on credit sales of a little over $1 billion. The company said it would continue to resist efforts to reduce credit fees.

Actually the battle over interest rates is flushing the retailers out in the open. They are now being forced to admit publicly that most of them do make money on the finance charge, as well as on the merchandise. The fact that some may not have made as much profit last year as the year before is at least partly a temporary phenomenon resulting from the higher interest rates they themselves paid other lenders for funds to finance credit sales.

THE SPECTER of higher prices for the merchandise means that stores would try to get cash customers to help subsidize credit customers.

But the threat is a hollow one. If stores featuring credit plans charge more for the merchandise, stores which do most of their business for cash will have lower prices and get the customers. Consumers traditionally are sharper about comparing prices than comparing finance charges.

The irony is that even now you don't have to pay 18 percent for retail credit. You can borrow the cash for 12 percent a year or less at a credit union and shop with the cash in hand. Even most commercial banks charge less than 14 percent a year for personal and car loans, and some charge only 12 percent or a little less.

Interestingly, these are the same banks that promote retail credit plans like Master Charge and BankAmericard which charge 18 percent a year. Also, many consumers use revolving credit plans even more than they really need to, such as small purchases like minor clothing articles. These really should be cash purchases.

NEW APARTMENT COMPLEX for the elderly in Knox County, Ill., is viewed by William H. Moon, veteran editor of the Galesburg Labor News, for whom the project was named. Moon, a member of the Typographical Union, headed the Knox County Housing Authority for 25 years.

Effective Apr. 28:

Safety Act Provides Broad Protections

A **WIDE RANGE** of protections for workers is provided in the new Occupational Safety & Health law that goes into effect Apr. 28.

The law covers an estimated 57 million workers—in plants, on farms, in one-man shops, on construction sites, in addition to public employes, dock workers and many others—in 4.1 workplaces throughout the country.

A number of key provisions written into the law give the worker the right to have:

- Union or employe representatives accompany Labor Dept. compliance officers on inspection of workplaces.
- Copies made of inspection reports and complaints.
- **Special inspections requested if he believes there is imminent danger or a violation of a standard that could cause serious physical harm.**
- Dangerous substances identified by labeling or posting in workplaces.
- Monitoring of dangerous substances on the job by the Dept. of Health, Education & Welfare.
- Access to records of his exposure to dangerous substances.
- Violations found by HEW inspectors posted in the plant.
- Equal representation with management on the Secretary of Labor's advisory committee on development of standards.
- Public transcripts made of advisory committee meetings.
- An opportunity to appear as a witness in connection with the inspection of a workplace.

THE LAW also allows the worker to:

- Bring legal action in the U.S. Court of Appeals if he feels the government has failed to abate any imminent danger and he is injured as a result.
- Be informed by a government inspector if an imminent danger exists.
- Be informed by the employer of his protections and obligations under the act through the posting of regulations, notices and other means.
- Submit written data or comments on proposed standards.
- File written objections to proposed standards and to appeal the decision of the Secretary of Labor to the U.S. Courts of Appeal.

The law requires the worker to comply with all of its standards, rules, and regulations, although there is no penalty contained in the act for his failure to do so.

Penalties for willful or repeated violations by employers range up to $10,000. And if an employer fails to correct a violation in a set period, a fine of $1,000 a day can be imposed.

If the death of an employe results from a willful violation, the employer can be punished by a fine up to $10,000 and imprisonment up to six months. After the first conviction, the penalty is raised to $20,000 and one year in prison.

Soup to Nonsense:

Left on the Editor's Spike Are 'Almost' Stories Like These

By Jane Goodsell

MRS. ROGER BASCOMB summoned the police yesterday afternoon because her two-year-old son, Tommy, had been missing for several hours. After a fruitless search of the house and neighborhood, one of the police officers noticed that the Bascomb's beagle seemed to be trying to lead them somewhere. The dog, who answers to the name of Butch, was barking excitedly and running around in circles.

"Okay, Butch," said the officer. "We'll follow you. Let's go!"

Butch tore off eagerly, followed by the police. After a two-mile chase, Butch stopped dead in his tracks, pawed the earth under a syringa bush and gave several joyous yelps. He emerged with a large bone in his mouth. Tommy was later found, sound asleep, under his own bed.

* * *

Horace Quagmire, recently defeated in his bid for election to the post of auditor, was interviewed yesterday by the press. When asked to analyze underlying causes of his defeat, Quagmire replied, "Too many people voted for my opponent."

* * *

Tipped off by neighbors, police yesterday discovered two 86-year old twin brothers living a hermit-like existence in a dilapidated shack. The shack, which was unheated and had neither plumbing nor electricity, was piled high with old newspapers, dirty rags, tin cans, bottles and garbage.

A thorough search of the premises failed to reveal $200,000 in cash. Only 26 cents was found in a broken jelly glass.

* * *

Miss Dolores Smith, a go-go dancer in Las Vegas, became Mrs. Montgomery Hunt Bellowes III yesterday afternoon. Asked when she first realized that she had fallen in love, the blond beauty replied, "When I found out that his father is the board chairman of General Copper Mines."

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

Union Plea Renewed:

Steelworkers Urge Pension Safeguards

A plea for action to protect the pension rights of the nation's workers was made to a House Labor subcommittee by Pres. I. W. Abel of the Steelworkers.

He was accompanied by more than 1,000 Steelworkers who had come to Washington to press the case with members of Congress.

Abel testified that the USWA has private pension plans with employers that have reserves in excess of $3 billion. But this is not enough to guarantee fully the ability of many of the plans to meet all their obligations.

Abel renewed the union's appeal for passage of legislation that would assure workers a vested interest in private pension plans, require companies to fund pension plans and establish federal insurance of terminated plans which are insufficiently funded.

Abel noted that this is the third Congress to consider the legislation.

"The necessary homework has been done," he declared, "and action now can be taken so that a pension plan should not be a game of chance for workers."

The USWA president stressed the need for vesting of pension plans so that workers would not lose all their accrued pension rights because of a change in, or loss of, jobs. He cited figures recently released by Senators Harrison A. Williams (D-N.J.) and Jacob K. Javits (R-N.Y.) declaring that in some plans studied by them, 92 per cent of the workers lost all rights to benefits because of a lack of adequate vesting rights.

Regarding provisions to require funding of pension plans, Abel said virtually all industry spokesmen agree in principle on the need for such protection, they nevertheless oppose legislation to require it.

"The establishment of laws requiring the funding of pension liabilities is as legitimate a function of government as is the regulation of bank reserves to insure the safety of depositors' bank accounts," Abel declared.

He told the committee that a company paying a 65-year-old male retiree a pension of $300 a month would have a cost of only $16,640 under a funded plan while its average cost under an unfunded plan would be $51,840.

And pleading for federal insurance of pension plans, Abel cited the case of a Detroit company which decided to terminate its operations. The market value of the assets in the pension fund amounted to $731,000 while its liabilities were estimated at $2,306,000.

Only 30 percent of the plan's death benefits are payable and 352 employes—all of them with more than 17 years of service and some within a few years of retirement—will receive nothing.

"What do you tell a worker who has earned his living, and accumulated his pension credits for most of his working life, that will justify his losing not only his livelihood but his retirement pension as well?" Abel asked.

ACCOMPANIED BY more than 1,000 union members, Steelworkers Pres. I. W. Abel urges a House Labor subcommittee to approve legislation safeguarding earned pension rights "so that a pension plan should not be a game of chance for workers." Rep. John H. Dent (D-Pa.) is chairman of the subcommittee.

Social Changes Revealed by Census Hold Broad Implications for Nation

Statistics of the 1970 Census had barely cooled in the computers before experts began analyzing them to guage the shape of the future, the AFL-CIO Federationist notes in the April issue of the magazine.

The headcount of Americans was only the beginning of a process that will go on for a long time, says author Alexander Uhl of Press Associates, Inc., the labor news service, in an article "Charting America's Changing Face."

Starting from the central fact—total 1970 population of 203,184,772, plus 1,580,998 overseas on diplomatic or military missions—reporter Uhl moves to ancillary facts.

"Primarily," he writes, "the 1970 Census showed that we are still a growing nation, although our rate of growth has slackened. . . ."

While the population explosion that grew out of World War II appears over, he continues, "every indication is that the number of Americans will keep growing during the next decade at least," though at a lesser rate.

"By the end of the century we are expected to number some 275 million."

From these bare findings, Uhl turns to their broad implications:

- Crucial changes will have to be made in the apportionment of seats in Congress, and the redistricting to be done within each state as a result of the 1970 statistics.
- Important social changes have become obvious in the extraordinary shift of population within the nation, and in the tremendous growth of the suburbs at the expense of central cities and rural areas.
- Equally important changes in the industrial makeup of the nation will have a major impact on workers who must go where the jobs are.

One phenomenon of the 1970 Census, the study observes, was the unwillingness of some cities to accept findings that they lost population in the last 10 years. Typical was the District of Columbia, which protested a reported drop of 7,500 inhabitants to 756,000, until a recount showed an even greater loss.

As a result of the 1970 Census, California will gain five seats in Congress to give the state the largest delegation with 43 members. Other gainers will be Florida with three more seats, and Arizona, Colorado and Texas with one each.

States scheduled to lose congressional seats are New York, down two to 39; Pennsylvania, also down two; and Alabama, Iowa, North Dakota, Ohio, Tennessee, West Virginia and Wisconsin, down one each.

Each state affected by census changes must, under the Supreme Court's one-man, one-vote decision, redraw the lines of its congressional districts to match them as closely as possible in population based on the census results.

The article notes that the 1970 census shows regional growth greatest in the West, up 24.1 percent in population; followed by the South, 14.2 percent; the Northeast, 9.7 percent; and the North Central states, 9.6 percent.

"The process of evaluating the 1970 Census returns is still in progress", the article concludes, "but, already it is clear that even more than the many censuses before it, this one will have tremendous significance because of the pace of change that has occurred during the past 10 years and is continuing."

Jobless Rate Hits 9% In Poorest City Areas

(Continued from Page 1)

began in 1967. On that basis, the 9 percent jobless rate reflected little change from the fourth quarter of last year, the Labor Dept. said.

It noted, however, that "since the poverty neighborhood data reflect only four years of experience, rather than the eight years required by the Bureau of Labor Statistics (seasonal adjustment) method, the series may not be fully representative of true seasonal patterns."

Minorities continued to bear the brunt of joblessness in the poor urban areas with the rate for Negroes and other minorities at 11.3 percent for the first quarter, a 41 percent increase from the same period a year ago.

Whites in the poorest neighborhoods did not fare much better in the job market with an unemployment rate of 8.5 percent in the first quarter, a 38 percent increase over the year before.

The unemployment rates do not reflect "hidden joblessness" that exists in the ghettos as well as the rest of the nation because workers are giving up the search for jobs and leaving the labor force.

The Labor Dept. said 183,000 workers in the urban poverty areas —more on a seasonally adjusted basis—had left the labor force in the first quarter, bringing the percentage of the ghetto population seeking work down from 57 percent to 55.1 percent.

Minorities accounted for most of those leaving the civilian labor force with 134,000 giving up the search for jobs.

Jobs were scarcer, too, with employment dropping 350,000 over the year to 5.5 million.

And, the Labor Dept. said, 17 percent of the poverty area workers who did have jobs in the first three months of the year were employed only part time.

Unemployment rose over the year by 150,000 on a seasonally adjusted basis, totaling 546,000 in comparison with 395,000 during the first three months of last year.

The highest unemployment rate for any single group was 44.9 percent seasonally adjusted for minority group members in the 16-19 age group, against 42.8 percent in the last quarter of 1970.

The actual unemployment rate for all adult males in the ghetto areas rose to 8.5 percent from 7.2 percent in the previous three months.

Seasonally adjusted, the Labor Dept. said the rate dropped from 7.7 percent to 7.1 percent but was still well above the 4.7 percent recorded in the first quarter of 1970.

The rate for adult women also increased on an actual basis, from 6.1 percent to 7.9 percent. On a seasonally adjusted basis, joblessness for women was at 7.8 percent —the highest since 1967.

Retail Clerks Dedicate Dallas Regional Office

Dallas — The Retail Clerks opened a new nine-state South Central division office here in response to increasing requests for organization.

Eugene A. Britton will direct an organizing staff of 21 working from the new office at 1145 Empire Central Place. The states involved are Texas, Oklahoma, New Mexico, Colorado, Nebraska, Kansas, Missouri, Arkansas and Louisiana.

Newark Teachers Back, 10-Week Strike Settled

Newark, N.J.—Teachers returned to their classrooms after a 10-week strike with a pledge by their union to help build a strong community relationship.

The return of the strikers to the Newark city schools was marred by the attempt of the School Board president and some center-city parents to prevent 100 teachers from resuming their duties at five schools. The 100 had honored the picket lines of Teachers Local 481 during the long dispute over teaching conditions.

Some of the locked-out teachers later were readmitted and a union spokesman said "They all will be or there'll be another strike."

In Washington, AFT Pres. David Selden said he is confident the rights of all teachers will be observed and that the School Board's no-reprisal agreement will be carried out in good faith.

"Our chief objective during this long and bitter strike was to preserve the union and the contract. We have succeeded in both regards," Selden declared.

The strike, which began Feb. 1, was "caused entirely by the demand of the School Board to impose unfair work rules and assignments on teachers," Selden said.

Many problems remain despite the settlement agreed to by the board and the union after the intervention of a mediator and Mayor Kenneth A. Gibson, said Selden. He added: "We will work with all elements of the community to rebuild a good relationship."

Mrs. Clara Dasher, a union vice president, reported that she and 30 other teachers were barred by Board Pres. Jesse L. Jacob, who voted against the strike-ending agreement, from entering South Eighth Street School. Jacob's action was "clearly contrary to the contract we signed" Apr. 18, she said.

The union favors parent involvement in the schools "but not intimidation of teachers," Mrs. Dasher said.

The locked-out teachers were directed by principals at the five schools to report to School Board headquarters for reassignment. When board employes asked them to serve as day-to-day substitutes, the union advised them not to accept such assignment. Mrs. Dasher called it "punitive" and therefore illegal.

School officials kept the schools open during the dispute but at least half the 80,000 pupils and 4,400 teachers stayed out until the settlement.

A majority of the strikers voted to accept the compromise settlement terms. They included preserving the terms negotiated earlier this year in a first contract, with a modification of the grievance and arbitration procedure and a restatement of the duty of teachers to perform some nonprofessional tasks.

A major feature of the agreement was the board's consent to the reinstatement of 347 teachers who had been suspended during the strike pending hearings.

FIRST PLACE in the 1971 Ability Counts essay contest of the President's Committee on Employment of the Handicapped was won by Raelene A. Shelley of Mesa, Ariz., High School. Shown with Pres. Hunter P. Wharton, right, of the Operating Engineers, and Pres. Emeritus Gordon Freeman of the International Brotherhood of Electrical Workers. Freeman is vice chairman of the President's Committee and Wharton is chairman of its labor committee. State winners in the essay contest were brought to Washington by AFL-CIO central bodies.

Wharton Cites Progress In Aid to Handicapped

Labor has been fighting for many years to achieve justice for America's largest minority group—the handicapped—Pres. Hunter P. Wharton of the Operating Engineers told student essay contest winners from 47 states at an annual labor-sponsored luncheon in Washington.

"And I'm happy to report that we are making some solid progress," Hunter told the national winners of the 1971 "Ability Counts" contest conducted by the President's Committee on Employment of the Handicapped.

Wharton recently became chairman of the Labor Committee of the President's Committee, succeeding Gordon Freeman, president emeritus of the International Brotherhood of Electrical Workers, who is vice chairman of the President's Committee.

Five high school seniors, all 17, shared a total of $2,500 in prize money provided by the Disabled American Veterans. Transportation and expenses for the state winners, and those chosen for national honors from among the 35,000 contestants, were contributed by AFL-CIO state federations and city central bodies.

The IBEW sponsored a trip to Mount Vernon where George Washington lived until his death in 1799, the Tomb of the Unknown Soldier, and the graves of John F. and Robert F. Kennedy.

The luncheon at the Capitol was sponsored by the Carpenters. Help in arranging visits to the offices of senators and representatives was given by AFL-CIO Education Director Walter G. Davis, one of the contest judges.

First prize in the contest, the $1,000 Robert S. Marx Memorial Award, went to Raelene A. Shelley of Mesa, Ariz., High School. Other winners were: second prize of $600, Sydnee Thompson of McAlester, Okla., High School; third prize of $400, Jeri Ellen Hoffman, Southwest High School, Green Bay Wis.; fourth prize of $300, Mike Vandeveegaete, Powell, Wyo., Senior High School; fifth prize of $200, Kathleen Epeldi, Bishop Kelly High School, Boise, Idaho.

Contestants came from 47 states, the District of Columbia, Puerto Rico and the Virgin Islands. Before writing their essays they visited employers, officers of placement agencies, labor unions and other groups.

They talked with members of veteran's organizations, employer groups and with handicapped workers to help achieve the contest's objectives: to instill positive attitudes toward the handicapped and to focus national attention on the capabilities, potential and accomplishments of the handicapped.

On the third day of the students' Washington visit they heard Pres. Nixon welcome their interest in the handicapped at a Rose Garden gathering.

Wharton congratulated "these young people who have shown so clearly that they care, as we do, about achieving justice" for the 42 million Americans who are handicapped in some way.

The passage of the Occupational Safety & Health Act, Wharton pointed out, "was the climax of more than half a century of struggle."

It has, he said, "taken all that time to achieve a national commitment" by industry to "take simple, ordinary precautions to stop wasting the lives and the health of workers as they earn their daily bread."

Labor has "fought for literally hundreds of federal and state laws, dominated by the Manpower & Training Development Act of 1962, aimed at giving handicapped people the training and encouragement they need to make it on their own," he said.

"But we are not satisfied," Wharton added. "More and better rehabilitation and training programs are needed, and labor is going to fight for them." Unions are working to overcome prejudice, to write nondiscrimination clauses into union contracts, rewriting job descriptions and fighting, too, to see that jobs are provided for those who undergo training, he declared.

Strike Time Lost Down in February

Lost time caused by work stoppages in February declined to .13 percent of the estimated working time put in by the civilian labor force, the Bureau of Labor Statistics reported. Man-days lost in January due to strikes and lockouts were at the .19 percent level.

Although there were 490 work stoppages in effect in February, compared with 440 in January, the number of workers involved declined to 169,000 from 286,000 the month earlier.

Total man-days of idleness in February attributed to work stoppages dropped to 1.8 million, about the same level as the year-ago month, from 2.7 million in January.

Secret Blacklist Banned:

Fair Credit Law May Curb Far-Right Vigilante Tactics

(Continued from Page 1)

cover such organizations as well as the more conventional credit and investigative operations. The legislation, passed last October with strong labor support, goes into effect Apr. 25.

While the political blacklisting phase of employment investigations was not highlighted during congressional consideration of the law, congressional committees dealing with the legislation were at least aware of the problem.

At House hearings, Columbia University Prof. Alan F. Westin, who had directed a study on invasions of privacy, stressed that the legislation should be enacted "so that no Americans are secretly blackballed from their occupations, without redress of any kind."

Westin read to the House committee a letter from the Church League of America to leading business firms soliciting clients for its employment screening service.

The letter warned that "our working forces include more than a few radicals, socialists, revolutionaries, communists, and troublemakers of all sorts. The colleges and schools are educating and training thousands more who will soon be seeking employment."

It conceded that employers might be able to screen the education and experience of job applicants adequately. But, the letter warned, "little if anything is done to determine their philosophy of life" which could be "of paramount importance."

The league claimed that for more than 30 years "we have been intensely researching the activities of troublesome individuals, groups and publications, about which management would be well advised to be aware."

And, it boasted, "our files are the most reliable, comprehensive and complete, and second only to those of the FBI, which, of course, are not available to you."

No fee was mentioned, but the league "will be glad to send a representative, at your request, to go into this delicate matter at greater length."

There is nothing in the new law that bars the so-called church league and similar organizations from continuing to sell their "investigative" services to employers.

But both they and the employers who buy the services will be legally required to follow the same standards set for all other credit and investigative reports that might have an adverse effect on an individual.

The legislative ground rules are as follows:

- Credit bureaus and other third-party compilers of information are limited to providing credit reports for legitimate business users. Persons obtaining reports must certify that the information will be used only for such purposes as extending credit, employment or insurance underwriting. Any person who obtains information from a reporting agency under false pretenses can be fined $5,000 and imprisoned for up to one year.
- As a general rule, no adverse information more than seven years old may be included in a report. An exception is made for bankruptcies, where the time limit is 14 years, and in investigations for insurance policies over $50,000 and employment at an annual salary above $20,000.
- If the credit report results in an unfavorable determination — such as refusal of credit, a higher insurance rate or denial of employment or promotion—the user of the report must inform the consumer that adverse action has been taken at least in part on the basis of information obtained from a credit reporting agency, and give the name and address of the agency.
- The next step is up to the consumer. He may—at no charge within 30 days—obtain from the reporting agency disclosure of the substance of all non-medical information in its files. He may also obtain a list of firms or persons to whom the information was sent, during the past two years in the case of employment reports and during the past six months for other purposes.
- If any item is questioned by the consumer, who may be accompanied by one other person of his choosing, the reporting agency is obligated to reinvestigate it. If the unfavorable data is incorrect or cannot be verified, the agency must send a correction to persons who had received the report.
- If the information is disputed, the consumer may have his version of the espisode included as a brief statement in all future reports containing the challenged information.

Standards are even stricter for what the law terms "investigative" consumer reports, which includes data on an individual's "character, general reputation, personal characteristics, or mode of living" and would cover the ideological investigative groups as well as more conventional agencies.

Not only are they required to follow the same seven-year statute of limitations applied to credit reports, but they are obligated to reverify all adverse information more than three months old.

- Furthermore, an employer who requests such a report on a job applicant or an employe must notify the person to be investigated within three days of the date the report was ordered. The individual may then obtain promptly from the investigating agency a written disclosure of the nature of the investigation.
- As in the case of credit reports, the individual must be notified of any adverse action resulting from the report and has the same recourse as in the case of simple credit reports.

If the reporting agency has, through negligence, violated any of the provisions of the law—such as failure to delete obsolete material or inadequate verification—it may be sued for actual damages plus court costs and attorney fees.

If it can be proved that there was willful disregard of the law, punitive damages can be added to the penalty.

Employers, stores, banks and other users of the information failing to comply with the law are subject to the same legal penalties.

An employer who does not use a third party agency and does his own investigation is not covered by the law. However, a store or lender which denies credit solely on the basis of its own investigation must inform the consumer that he has the right to know the reasons for the denial of credit and that it will be disclosed to him if he so requests.

A court test may be necessary to finally determine whether government investigative agencies—such as the Civil Service Commission, which does the great bulk of federal job applicant clearances, and the Federal Bureau of Investigation—are affected by the law.

The law specifically includes in the definition of "person" covered by the law any "government, governmental subdivision or agency."

However, the Civil Service Commission said that its present legal opinion—subject to confirmation by Justice Dept. and Federal Trade Commission attorneys—is that its investigative operations are not covered. The reasoning here is that the government is a single employer and the commission—while receiving reimbursement into a revolving fund for the cost of investigations—is not a third party.

Commission attorneys acknowledge, however, that when they use credit reports obtained from credit bureaus as a basis for adverse action, they are governed by the same disclosure requirements as other employers.

And if the commission undertakes hiring investigations for state and local governments, as it may under a new intergovernmental cooperative program, it would very likely be obligated to follow the law.

Considering the importance in job clearance reports of the seven-year statute of limitations on adverse information, a court challenge to the government's interpretation would appear probable at some time.

The full impact of the new law depends, of course, on the degree of voluntary compliance and the ability of the Federal Trade Commission to uncover violations.

The commission's powers are limited to issuing "cease and desist" orders. FTC officials said that spot checks will be made to uncover violations—to the extent possible under the agency's budget and manpower resources.

The commission has not received any additional funds to enforce the program, which means that the resources it devotes to it will have to be taken from other enforcement functions.

Jobless Aid Upheld For Part-Timers

Harrisburg, Pa. — Pennsylvania's Unemployment Compensation Board of Review has ruled that part-time workers are full-fledged members of the workforce and are therefore entitled to unemployment benefits during layoffs.

The ruling was hailed as a landmark decision for all part-time workers in Pennsylvania by Henry Dropkin, manager of the Clothing Workers Scranton and Wilkes-Barre District Joint Board.

The union had filed the case with the review board on behalf of 85 part-time workers who were among 450 employes of the Brooks Mfg. Co. at Old Forge, Pa., laid off for eight months last year.

Their claims for benefits on a prorated basis were denied on the ground that part-timers never had been regarded as genuinely attached to the labor force for unemployment compensation purposes.

Dropkin said the review board's new interpretation of the law will affect 12 percent of the 140,000 needle trades employes in Pennsylvania.

To at Least $2:

Quick Action Sought To Raise Pay Floor

(Continued from Page 1)

But the Mills bill would only allow the farm workers' wage floor to rise to $1.50 an hour. The bill before the Labor subcommittee, introduced by Chairman John H. Dent (D-Pa.), would bring farm workers to the full $2 level in a series of steps. Under present law, their minimum wage is frozen at $1.30 an hour—30 cents less than other covered workers.

The Dent bill would also extend coverage to nearly 5 million employes of federal, state and local governments now exempt, and it would eliminate some of the overtime pay exemptions in present law.

Biemiller, in his testimony, said the AFL-CIO believes all workers should be protected by a minimum wage but said the Dent bill "would make a significant start in this direction."

The AFL-CIO testimony also sharply attacked the argument of some Administration and business economists that a lower minimum wage should be set for teenagers to reduce their high jobless rate.

Three Unions Ask $2.50 Pay Floor

Three unions joined in urging a House Labor subcommittee to approve a $2.50 minimum wage and to close additional exemption loopholes in the present law.

Appearing together were Auto Workers Vice Pres. Nelson Jack Edwards, Clothing Workers Vice Pres. Howard Samuel and Meat Cutters Vice Pres. Leon B. Schachter.

A two-step raise to $2 by 1973, as proposed in legislation before the subcommittee, "would still leave millions of hardworking Americans in poverty," they said.

Their statement argued that for the good of the nation and "for social justice," low-paid workers should receive "a fairer share in income distribution."

Biemiller warned that this would result in displacement of working heads of families and allow "unscrupulous employers" to pocket the extra profits they would make by paying teenagers a lower wage.

Scoffing at the argument that a lower wage would reduce teen-age unemployment, Biemiller added:

"If there were any validity at all to arguments for a lower minimum wage for teenagers, then these people should be advocating an even lower minimum wage for black teenagers because unemployment rates for young blacks are much higher than for other teenagers.

"Natuarally, no one in his right mind could support this kind of ridiculous proposal. But, really, it is no more ridculous than a lower minimum wage for all teenagers."

The answer to teenage unemployment, Biemiller stressed, is "a growing economy and full employment." He told the House panel that when private industry can't provide the jobs, "there should be a federal program of public service employment—for both adults and teenagers."

A "single standard" of at least $2 an hour minimum should apply to all workers covered by the law—young and old, black and white, male and female, whether on farms, in industry or in services.

The AFL-CIO testimony endorsed a provision of the Dent bill providing automatic increases in the minimum wages for workers in Puerto Rico and the Virgin Islands.

While "emergency legislation is needed now" to improve the Fair Labor Standards Act, Biemiller served notice that the AFL-CIO will be back in the future "urging more improvements."

He urged the subcommittee and the full Labor Committee to speed the legislation to the House floor "as rapidly as possible."

Maritime Trades Urge Fund, Cargo Priorities

The AFL-CIO Maritime Trades Dept. has urged Congress to give first priority to formerly unsubsidized shipping lines in allocating funds to build and operate new ships under the Merchant Marine Act of 1970.

"Congress and the Executive Branch have an obligation to right some ancient wrongs" by giving aid to "the two-thirds of this industry which existed unsubsidized for 34 years," declared MTD Pres. Paul Hall in statements to the House Merchant Marine & Fisheries Committee and the Senate Merchant Marine subcommittee.

Hall, who is also president of the Seafarers and an AFL-CIO vice president, pointed out that since 1936 only one-third of the industry had received construction and operating subsidies from the federal government, making these companies into an "artificially created elite corps" within the maritime industry.

The MTD called for a "catch-up arrangement" for the previously unsubsidized operator, including "enunciation of a clear federal policy that he is going to have first position for the dollars which are available."

The statements proposed giving the previously unpublicized operators "first call on government cargoes for the immediate future," pointing out that these cargoes represent the only hope these operators have for economic survival during the five-year transition period from the old maritime law to the new one.

"Until he can build subsidized ships and operate subsidized ships," Hall declared, "the illusion of competing wtih the foreigner is nothing more than that: an illusion."

He urged more concerted effort to put government-sponsored agricultural and foreign aid cargoes into American bottoms, declaring:

"There is something ludicrous about the federal government, on the one hand, embarking on a program to revitalize the American merchant marine, while on the other hand it forces the American ship operator to go, hat in hand, to that same government in search of its cargo.

"It is even more ludicrous for the government to exhort business and industry leaders in this country to 'ship American,' when the pattern over the years has been for the government, itself, to 'ship American' only reluctantly, only in half-hearted fashion, often only as a last resort."

SCHOLARSHIP WINNERS qualifying for AFL-CIO grants for their college studies include five of the six students who will receive $6,000 each in financial assistance. From top left are Brendlyn D. Faison, Lorain, Ohio; John F. Land, El Cajon, Calif.; Leonard R. Richmond, Alexandria, La.; Jack Holbrook, Soft Shell, Ky., and Timothy A. Richardson, Merrill, Wis. At bottom right, is John P. Spitals, Hillside, N.J., who will receive a special $1,000 scholarship award. The photo of the sixth $6,000 scholarship winner, Karen Fredrickson, Bigfork, Minn., had not arrived by AFL-CIO News presstime.

AFL-CIO Scholarships Awarded To Seven Outstanding Students

(Continued from Page 1)

Hillside, N.J., the winner of the special $1,000 scholarship.

All of the winners this year are children of union members and will attend the colleges of their choice. The winners are selected each year on the basis of high school records, evaluation by teachers and the results of competitive tests given by the non-profit National Merit Scholarship Corp.

For the purposes of the selections, the country is divided into three zones and two students are selected from each of these zones. The awards are good for enrollment in any accredited college or university the winner may choose, and for study in any subject. The actual amount of each scholarship, up to $1,500 a year, is determined by the NMSC on the basis of college costs and family needs.

Meany in congratulating the winners said: "Organized labor has supported the establishment and improvement of the American system of universal free public education since its very beginning. The AFL-CIO looks forward to the day when all young people will have the opportunity to develop to the fullest measure of their capacity, regardless of their financial status."

He said "the impressive record made by previous winners of AFL-CIO Merit Scholarships is the evidence that underlies our conviction that every student should have the same opportunity, and our determination to help create a society in which that goal will be realized."

Sketches of the winners follow:

Karen Fredrickson, of Bigfork High School, Bigfork, Minn. is the daughter of A. D. Fredrickson, a member of Grand Rapids Federation of Teachers, and Therese Fredrickson, a registered nurse at Northern Itasca Hospital. She finished at the top of her class and plans to study at Carnegie Institute in Pittsburgh. She has taken part in many of her school's activites including chorus, library club, newspaper staff, chairman of publicity for Junior Class play, co-chairman of the Candy-Stripers, speech, debate, co-editor of the annual, and Pep Club.

John F. Land, of Santa Ana High School, Santee, Calif., is the son of John H. Land, a member of Painters Local 333, San Diego, and Doris I. Land, a bookkeeper at Foodmaker, Inc. He was at the top of his graduating class of 384 members and plans to attend California Institute of Technology at Pasadena to study physics. He was elected to the presidency of the Associated Student Body and he is also serving as president of the International Club and California Scholarship Federation.

Leonard R. Richmond, of Alexandria Senior High School, Alexandria, La., is the son of Mr. and Mrs. James M. Richmond. He plans to specialize in mathematics at Louisiana State University at Baton Rouge. In a class of 246 members, Leonard was second in scholastic standing. Although his main interests are theoretical physics and mathematics, he complements these with music, philosophy and church work. His father belongs to the Plumbers & Pipefitters.

Jack Holbrook, of Hindman High School, Soft Shell, Ky., is the son of Mr. and Mrs. William Holbrook. He plans to study mathematics at the University of Kentucky at Lexington. He finished second in a class of 112 and has a keen interest in world problems. His father, a member of the Electrical, Radio & Machine Workers, works for the Frigidaire Division of General Motors Corp., and his mother, Louise, is housewife.

Timothy A. Richardson, of Merrill High School, Merrill, Wis., is the son of Mr. and Mrs. Peter Richardson. He plans to study electrical engineering at the University of Wisconsin. He was at the top of a class of 290 students and his chief interest is in the field of mathematics. Scholastically he has maintained a straight "A" average. He is an enthusiastic worker with several musical groups that perform free for any group requesting their services. His father is an Instrumental Music Teacher with the Merrill Board of Education and a member of the Musicians. His mother works for the Weinbrenner Shoe Corp. and is a member of the Boot & Shoe Workers.

Brendlyn D. Faison, of Admiral King High School, Lorain, O., is the daughter of Mr. and Mrs. Folton G. Faison. She plans to study modern languages at Wellesley College, Wellesley, Mass., after graduating third in a class of 434. Her teachers attest to her scholastic record of excellence with considerable academic ability documented by test scores. Her father is a bricklayer's helper at the U.S. Steel plant at Lorain-Cuyahoga and her mother is an elementary teacher with the Lorain school systems.

John P. Spitals, of Hillside High School, Hillside, N.J., is the son of Mr. and Mrs. John V. Spitals. He plans to study for a medical profession at Brown University, Providence, R. I. For the past few years, he has followed a dual program of scholastic work coupled with personal investigation. He is currently editor-in-chief of his high school paper and has organized many rock bands, participated in dramatic presentations, worked in creative motion pictures and contributed to the year book and literary magazine.

GEORGE CRAIG retired recently as AFL-CIO regional director in the Philadelphia-Camden area after five years in that office. The regional staff serving Pennsylvania, New Jersey and Delaware, will be headed by John Lorden, formerly of the Baltimore region.

$2 Billion in Aid:

Public Works Plan Approved by House

(Continued from Page 1)

Public Works Committee first criticized the bill as "inflationary." And in the next breath, it said the bill shouldn't be enacted because the "high hopes of the unemployed will later be dashed to disillusionment" when it turns out that there won't be enough jobs to go around.

Committee Chairman John A. Blatnik (D-Minn.) responded that while the legislation is not the "complete answer to all our economic problems," it is "a timely and effective means of stimulating employment."

A similar but smaller-scaled measure enacted in 1962 generated 210,000 man-years of employment by mid-1964, according to an official U.S. Dept. of Commerce estimate at the time.

The accelerated public works funds would be spent in communities where unemployment is above 6 percent, in designated redevelopment areas and economic development centers, and where unemployment among returned Viet Nam veterans is 25 percent above the national unemployment rate. Federal funds would pay for 80 percent of the cost, but communities that can't come up with matching funds would be eligible for 100 percent federal financing.

Also included in the omnibus bill are extension and expansion of economic redevelopment programs and the Appalachian Regional Development Act.

The Appalachian section of the bill is similar to legislation that has already passed the Senate. This overlapping will make it possible for the measure to go directly to a House-Senate conference committee, an important time-saver.

Meanwhile, another job-creating measure strongly supported by the AFL-CIO moved a step closer to House action.

A House Labor subcommittee approved a public service employment bill that would enable local and state government agencies to hire unemployed workers.

An appropriation of $750 million the first full year would rise to $1 billion in each of the three succeeding years. A broad range of jobs could be filled with federal funds, including health, education, recreation and environmental services.

The Senate has already approved a public service jobs program—with bipartisan support despite the Administration's opposition.

Last year, Pres. Nixon vetoed a manpower bill that earmarked funds for public service jobs with a caustic reference to "WPA-type jobs."

The Senate neared a final vote on legislation, supported by the AFL-CIO and the Leadership Conference on Civil Rights, to authorize $1.5 billion to help school districts facing desegregation and integration problems finance extra costs and achieve quality—as well as equality—in education.

After two days of sometimes-heated debate, the Senate rejected an amendment by Sen. Abraham Ribicoff (D-Conn.) that would have wiped out the distinction between southern school districts where continued segregation has been ruled a heritage of generations of legally segregated schools, and northern districts where racial "imbalance" developed without sanction of law.

The 51-35 vote against the Ribicoff amendment found northern liberals and conservative southerners on both sides of the issue, with the NAACP on record against it.

The Only One That Can Handle It

Aspen Institute Forum Backs Health Security

Aspen, Colo.—The Aspen Institute for Humanistic Studies has endorsed the concept of the National Health Security program "to make quality comprehensive health care available to all."

The endorsement came at the institute's American Assembly on the Health of Americans which was attended by leaders from community groups and health care experts from government, labor, higher education and business.

Comprehensive health care should be available to all citizens, regardless of their income, where they work and whether they are sick or well, the assembly said.

Examining the symptoms of the nation's health care crisis, the assembly declared that "the chaotic state of the health care system is largely to blame."

It also cited existing poverty factors—poor housing, poor education and poor nutrition—that contribute to the prevalence of disease.

To meet the need for universal health care, the assembly statement said, "the nation must move as quickly as possible to guarantee that medical services and facilities are available in sufficient quantity."

"The primary emphasis of the nation's health strategy should be on preventative and ultimately less expensive care," the assembly advised. "The enactment of legislation that would offer government subsidies in the event of catastrophic illness should not be the first step toward national health insurance."

It called for a shift from the traditional "after-the-fact payments to hospitals and doctors" to a pre-paid annual fee basis—much like the programs long supported by organized labor.

The program should be financed entirely by tax funds, the assembly urged, although a minority of delegates did not totally agree that public funds should cover all the costs of the program.

The majority statement stressed that the funding mechanism—based on tax revenues—should provide both structural and financial incentives for improvement and innovation in the delivery and content of health care.

It also called for a closer alliance among health centers, hospitals, nursing homes and doctors to achieve a more comprehensive delivery system.

"To deliver comprehensive care under any system of payment," the assembly noted, "such alliances are essential."

Singers Score Major Gains in Recording Pact

New York—Two annual rate increases of 10 percent each were won by the Television & Radio Artists for singers in a new three-year agreement with the recording industry. Singers total about 4,000 of the union's 22,000 members.

The first rate increase is retroactive to Apr. 1 and the second takes effect next Apr. 1. Other improvements include an increase in pension and welfare contributions from 5 percent to 6.5 percent, a boost in the late-payment penalty from $1.50 a day to $2.50, premium pay of $2.50 for each hour worked between midnight and 6 a.m. and on Saturday and Sunday, except on show recordings of cast albums.

The agreement provides that the local AFTRA office will be informed seven days in advance of any cast recording.

At any recording of a concert, club date or night club date, each singer will be paid for a minimum of two sides for each day's recording, whether or not any of the recording ever is released, the parties agreed. When the record is released, payment will be made for each side and there will be no crediting of the original amount paid.

AFTRA Executive Sec. Sanford Wolff said other rate changes were made relating to original cast albums, sound effects, and other features of the National Code of Fair Practice for Phonograph Recordings.

Negotiations began Feb. 10. Final terms were accepted by members of AFTRA's national board in Los Angeles, Chicago, and New York and by singers' caucuses in those cities and Nashville.

Proposed Rail Layoff Protection Denounced as 'Grossly Deficient'

An estimated 80 percent of railroad employes affected by the congressionally sponsored takeover of passenger trains will get "no protection whatever" from management proposals approved by the Secretary of Labor, two union groups charged.

The Congress of Railway Unions and the Railway Labor Executives Association said in a statement that the "labor protective conditions" proposed by Sec. James D. Hodgson are "almost meaningless" for the 16,000 or more workers who will be laid off or "bumped" to less favorable positions when the National Railroad Passenger Corp. takes over the skeleton of passenger service remaining after May 1.

The corporation—a quasi-public utility originally called Railpax but now known as Amtrak—plans to take over equipment and services on 184 passenger routes and to pay participating railroads for the use of their equipment. Hodgson has certified a section of the contract involving displaced workers which the railroads are being asked to sign.

At hearings by the House Commerce Committee, April 21, Chairman Harley O. Staggers (D-W. Va.) charged that service on the Amtrak network will be "grossly inadequate" and proposed that Congress call the legislation back for review.

"If the routes are not improved," Staggers said, "I would recommend to this committee that they pass a bill dropping Railpax," now Amtrak.

Citing prospects that 16,000 railroad workers will lose their jobs, Staggers said "that is another thing I never would have voted for . . . because I believe this should be worked out through job attrition." Also, he charged, the new corporation lacks contracts with many railroads to take over their passenger service.

Labor witnesses have offered to pinpoint their objections for the committee.

Executive Sec. Donald S. Beattie of CRU and Taylor Soop of RLEA prepared to call meetings of their 25 affiliated unions to decide whether to file a court challenge to conditions they assailed as being more favorable to the employers than the workers.

The two organizations called Hodgson's list of conditions "grossly deficient" and far less protective than the job protective conditions previously negotiated by individual unions and rail managements down the years.

Hodgson, in announcing what he called "fair and equitable conditions" for passenger service crews, said workers displaced by cuts in service could be paid present wages for up to six years. But the language of the agreement adds "provided, however, that the protective period . . . shall not continue for a longer period . . . than the period during which such employe was in the employ of railroad" prior to his displacement or dismissal.

Dismissed workers also would have the option of accepting a lump sum payment instead of monthly pay. There is a provision also for moving expenses for employes whose trains have been discontinued.

Attorneys for the CRU and RLEA said in their analysis that the 23-page Hodgson plan is a "mumbo-jumbo of words and phrases that mean virtually nothing. It is worded so all of the proof of service to secure protection would be placed on employes who have no access to carriers' records."

During the entire course of negotiations, the unions reported, union representatives never met with Hodgson, who did meet with the employers' chief negotiator.

The final version of the conditions was sent to management but never was sent to the unions before being published, they charged.

"Negotiation was a one-way street," they said in summary.

Rubber Workers Create Industrial Hygiene Post

Akron—Louis S. Beliczky has been named to the newly created post of industrial hygiene director for the Rubber Workers.

Beliczky will be involved in implementing health and safety programs negotiated with the major rubber companies last year to protect URW members.

Oklahoma Crafts Extend Outreach

Oklahoma City—The Southwestern Oklahoma Building & Construction Trades Council was awarded its fourth Labor Dept. Outreach contract to prepare 40 minority youths for building trades apprenticeships.

The new one-year contract for $48,818 will run through next March, Manpower Administrator Paul J. Fasser, Jr., reported.

In three previous contracts, the AFL-CIO building trades council placed 143 trainees as apprentices. Sixty of the apprentices were placed through the council's last contract, which had a goal of placing 40 apprentices.

The council is represented in 55 southwestern Oklahoma counties.

Piano Workers Hit by Imports Eligible for Aid

The Labor Dept. has certified 120 members of the Piano & Musical Instrument Workers Union—affiliated with the Carpenters—for trade adjustment assistance because they lost their jobs due to the impact of imports.

The unemployed workers were with the Wurlitzer Co. in DeKalb, Ill. Significant layoffs of production workers started in January 1970 as output declined.

The Carpenters filed a petition last February requesting that the workers be made eligible for aid under the Trade Expansion Act of 1962. The Labor Dept. certified workers who became unemployed or underemployed after Jan. 29, 1970, for the benefits.

Worker assistance under the act of 1962 provides for cash readjustment allowances, testing, counseling, training and job placement.

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, May 1, 1971 | No. 17

Health Security Bill Held Key to Quality Care Goals

BASIC CRAFT SKILLS are taught soon-to-be discharged servicemen in a Project Transition program at Fort Lewis, Wash., by instructor Ray Mortostica of Carpenters Local 470. Several AFL-CIO building trades unions are participating or are about to enter the program. **(Story, Page 2.)**

Public Jobs Bill Voted by House Unit

The House Labor Committee turned thumbs down on Pres. Nixon's revenue-sharing plan and voted 21-10 approval of a public service employment bill strongly supported by the AFL-CIO.

It would authorize up to $4 billion in federal funds over a four-year period to enable cities, states and counties to hire unemployed workers for job vacancies they don't have the money to fill.

The program would continue so long as the national unemployment rate is 4.5 percent or higher—and thereafter in local pockets of high unemployment with a 6 percent jobless rate.

Its House sponsor, Rep. Dominick V. Daniels (D-N.J.), estimated that the program would provide 150,000 jobs immediately and up to 500,000 over the life of the program.

A similar bill limited to two years has already passed the Senate with strong bipartisan support. The Senate also turned down an attempt to tie it to the President's revenue-sharing concept.

The House committee voted down the revenue-sharing substitute on a 20-9 vote, with only Republicans backing the Administration plan and all committee Democats opposed. The President had sought to scrap existing federal manpower training programs and turn the money over to states and cities. They could use part of it for public service jobs—but only by diverting funds from existing manpower programs.

The House bill still needs Rules Committee clearance, but Democratic leaders have given it a high priority label. In terms of job creation, it is a companion measure to the accelerated public works bill the House passed late in April by a big vote. The goal of both programs is to put the unemployed to work providing facilities and services communities need.

Before approving the public service jobs bill, the committee approved an amendment giving hiring preference to discharged servicemen returning from the Indochina war to a recession-dampened economy.

The committee also voted to limit the number of professional-level jobs that could be filled under the program to a maximum of one-third of the total, with a salary ceiling of $12,000.

The House committee bill

Labor Says Alternatives No Solution

By David L. Perlman

Labor called on Congress to adopt a Health Security program geared to the single goal of high standards of medical care for all Americans—"rich and poor, working and unemployed, young and old."

The Health Security bill cosponsored by 25 senators and 80 House members would meet that goal, AFL-CIO Legislative Director Andrew J. Biemiller testified at Senate hearings.

Neither the Administration bill nor a variety of other token measures that have been introduced would do so, he declared. "The profit-making philosophy of the market place—to make money for those who provide and finance medical services—is not an acceptable philosophy for medical care."

In separate testimony, Biemiller appeared before a House Commerce subcommittee to urge extension and expansion of various programs to overcome the shortage of trained health professionals, including doctors and nurses, and to encourage medical personnel to practice in shortage areas.

Biemiller said present shortages of doctors and nurses sometimes makes medical care unavailable even to those who can afford it.

Biemiller and Auto Workers Pres. Leonard Woodcock, who also testified before the Senate Finance Committee, rejected arguments that the labor-supported Health Security plan would be too costly.

In fact, Biemiller stressed, it is the only one of the proposed programs that would hold down soaring health care costs by providing effective controls and "restructuring of the present wasteful, inefficient system."

5,000 Covered:

Farm Workers Sign Big Lettuce Grower

Oxnard, Calif.—The United Farm Workers and the nation's largest independent lettuce grower signed a two-year contract with benefits for some 5,000 harvest employes in Arizona, California, Colorado and New Mexico.

The contract was signed in a Beverly Hills law office by UFWOC Director Cesar Chavez and Pres. Mel Finerman of Mel Finerman Co., Inc., producer of more than 150 million lettuce heads per year.

The signing followed negotiations by Chavez and a union committee that included Finerman field hands. Also participating was AFL-CIO Director of Organization William L. Kircher.

Chavez called the contract a breakthrough in UFWOC's campaign to win union wages and conditions for agricultural workers. He said at a press conference that "we hope this will open the door to the other independent shippers."

Finerman told newsmen that his firm never had signed a union contract before. He added: "We feel it's a fine contract and one we can live with."

The new pact, effective May 5—a Mexican holiday—gives Finerman employes a wage of at least $2 an hour, a higher rate per box or head, a medical fund contribution by the employer, grievance procedures and health-safety clauses, including protection against harmful pesticides.

Each crate of Finerman lettuce will bear the "Thunderbird" label of the farm workers' union.

Chavez said the agreement is especially notable because it was reached through straightforward negotiations without any need for a work stoppage or boycott.

As Chavez spoke, a representative of organized vegetable growers predicted they would continue refusing to negotiate contracts. At the same time, several "leading produce growers" in the San Diego area told the New York Times they may move their farming operations to Mexico or "go out of business

(Continued on Page 6)

AFL-CIO Asks No-Fault Auto Insurance Plan

"No-fault" auto insurance is needed to hold down soaring premium costs and assure prompt compensation for injuries, the AFL-CIO testified.

The Nixon Administration wants to leave the matter to state regulation and is supporting a congressional resolution that would merely urge states to experiment with new forms of auto insurance, including the no-fault concept.

If it is left to the states, AFL-CIO Legislative Director Andrew J. Biemiller told a House Commerce subcommittee, it would be a "safe forecast" that nothing would be done "for many, many years—if ever."

But, he stressed, "the crisis in auto insurance calls for action now."

(Continued on Page 7)

Jobless Benefit Cutoff Barred on Appeals

The Supreme Court unanimously struck down a section of California's unemployment insurance law that automatically cuts off benefits to a jobless worker when an employer contests the award.

All the justices joined Chief Justice Warren E. Burger in ruling invalid the cutoff provision of the law—and 47 other state laws like it—and in upholding an injunction against the cutoff issued by a three-judge district court panel in San Francisco.

The opinion by Burger hinged on the point that the California Unemployment Insurance Code violates the federal Social Security Act, which requires that state programs must be "reasonably calculated to insure full payment of unemployment compensation when due."

It "seems clear," the court said, that the California procedure, which suspends payments for seven to 10 weeks pending an appeal after an initial determination of eligibility has been made, is "not reasonably calculated to insure full payment of compensation when due."

The ruling was a victory for the AFL-CIO and other organizations. The federation submitted a friend-of-the-court brief last January asking the justices to reject an appeal by the California Dept. of Human Resources Development.

The AFL-CIO brief noted that under the California law, when an employer filed an appeal, no benefits could be paid a jobless worker out of the compensation fund. That fund had reserves of

'Class Prejudice' Cited In Attacks on Craft Pay

New York—"Old-fashioned class prejudice" against men who work with their hands is feeding the "myth" that high construction wages are keeping America from meeting its housing goals, AFL-CIO Sec.-Treas. Lane Kirkland charged.

Kirkland probed the reasons for the "abject failure" to meet America's critical housing needs in an address to the Citizens Housing & Planning Council of New York.

He cited the high interest rates, the soaring land costs, the government priorities that sacrifice public investment and thus "assure the decay of municipal facilities and urban life."

And he spoke bitterly of the "carefully cultivated" attempts to shift the blame to the nation's construction workers.

Despite supposedly high hourly rates, Kirkland noted, the average union construction worker in a large city will earn about $9,600 "in a fairly good year" when he might put in 1,500 hours of work. And for 1970, his average annual income was only about $8,650.

(Continued on Page 7)

1,500 CLOTHING WORKERS march down the streets of Boston to protest the sale of imported suits from Spain at the Jordan-Marsh store. Leading the march were children of members, carrying a banner "Please Help My Daddy Keep His Job." Nearly 2,000 ACWA members have lost their jobs in 10 recent plant closings in New England attributed to competition from imports produced in low-wage countries.

Railroad Unions, Passenger Group Fight to Block Takeover by Amtrak

The AFL-CIO Railroad Employes' Dept. and 17 rail unions launched a vigorous fight in the courts and Congress to delay the takeover of passenger service May 1 by a quasi-public corporation whose contracts they have challenged as unlawful.

The department and the unions asked the U.S. District Court for the District of Columbia to invalidate the certification by the Secretary of Labor of the new National Rail Passenger Corp. (Amtrak). They urged the court to rule that contracts signed by Amtrak and 19 railroads are null and void and to order the parties not to discontinue passenger service until valid contracts are entered into.

The unions were joined in their opposition to the proposed new system by the National Association of Railroad Passengers. Both groups testified at hearings before House and Senate subcommittees. Individual Congress members also are opposing Amtrak as now constituted.

A call for a six-month delay in the elimination of existing routes came from Senate Majority Leader Mike Mansfield (D-Mont.), who warned the Senate subcommittee that there is "likely to be a monumental transportation disaster" if train service is cut in half when Amtrak takes over from the railroads.

Mansfield won support from Senate Commerce Committee Chairman Warren C. Magnuson (D-Wash.), who said he would be "glad to personally introduce" delaying legislation.

Before Mansfield testified, the subcommittee delayed action on the appointment of seven persons by Pres. Nixon to serve as Amtrak directors.

The directors disclosed at the hearing that Roger Lewis of New York City, president of General Dynamics Corp., will head Amtrak and be paid $125,000 a year in salary. Nixon's other appointees include Pres. Charles Luna of the United Transportation Union, one of the unions suing Amtrak, Labor Sec. James D. Hodgson and three railroads.

Pres. C. L. Dennis of the Railway & Airline Clerks, another of the unions engaged in the suit, declared at a Washington press conference that Hodgson's proposed new "protective conditions" would provide little or no protection for some 80 percent of the workers who will be laid off or demoted when Amtrak takes over.

Various railroad union officials have estimated that between 16,000 and 26,000 workers will lose their jobs under Amtrak.

Hodgson's approval of layoff terms proposed by the railroads requires the employers to provide another job or full income for up to six years, based on length of service of displaced workers.

Dennis said the plan is two years longer than under the "New Orleans agreement" the railroads offered to follow, but would put the burden on workers to prove they are laid off because of Amtrak and not because of economic conditions.

Dennis called this "an intolerable plan" and said he believes his members will not let the Secretary of Labor "take away their job rights."

Crafts Prepare GIs For World of Work

Soon-to-be discharged servicemen are receiving basic training in job skills from AFL-CIO building trades unions to prepare them for civilian life.

The training is being conducted through Project Transition in cooperation with several unions and management groups.

The returning servicemen will face an overall unemployment rate of 6 percent. But the need for job skills is even more significant as joblessness among veterans is running at 10 percent.

Participating in Project Transition so far are the Carpenters, Bricklayers, and the Plasterers & Cement Masons. The Plumbers & Pipefitters are about to get started in the program as soon as their proposals to the federal government are approved.

Supplementing the project is the AFL-CIO Veterans' Assistance Program, operated by the Human Resources Development Institute at four separation centers on the West Coast.

The Carpenters recently were awarded a $646,000 contract by the Labor Dept.'s Manpower Administration to train 1,400 servicemen at 10 military installations.

The Bricklayers have a joint contract with the National Association of Home Builders to operate the program at 12 installations. The Plasterers' program is being sponsored jointly with the Portland Cement Association at 10 installations.

Instructors from the BCTD unions are going on the military bases to provide pre-apprenticeship training to the GIs during their last six months of service.

After their training and discharge, the veterans can designate the location and craft in which they wish to continue.

Courses cover a six-week period, offering 240 hours of related classroom instruction and skills training. About 20 servicemen are in each class. The course of study covers methods, use of hand tools, mathematics, blueprint reading and practical experience in the designated trades.

The basic aim of the program is to provide trainees basic skills of a trade, since many entered the service with little or no job qualifications and are about to muster out no better off.

The training is expected to enable the veterans to be equipped with some job abilities and allow them to more readily adjust to economic conditions of civilian life.

Employment opportunities for the trained veterans are being developed with union locals, district and state councils and international unions.

The Labor Dept. reported that about 12,000 servicemen in 35 installations were trained through Project Transition during Fiscal 1970 at a cost of $4 million.

The Carpenters also have been awarded an 18-month contract for $2.6 million to train 3,000 disadvantaged jobless workers. Under a previous 30-month contract, the Carpenters completed training of 7,856 workers—2,241 over the contract goal.

At the start of 1970, the union had 2,862 trainees in active programs covering pre-apprenticeship, apprentice-entry, and journeyman skills-upgrading.

Under the new contract, training will be conducted by the Carpenters in 46 states and the District of Columbia.

For Federal Workers:

Blue-Collar Pay Bill Pushed in Congress

AFL-CIO unions and councils representing a solid majority of the federal government's blue-collar workers joined in urging Congress to legislate long-sought improvements in the wage-setting procedures.

Pay scales for more than 600,000 blue-collar workers are set by wage boards on the basis of prevailing area rates for similar jobs in private industry.

The union-supported bill—an improved version of legislation Pres. Nixon vetoed two hours before the 91st Congress adjourned—would:

- Increase the number of pay step-ups from three to 10, thus matching the range of automatic increases provided for salaried federal employes.
- Strengthen the role of unions in the pay-setting procedure.
- Broaden coverage to include some 70,000 employes of self-financing government services. such as military post exchanges.
- Establish a standard, nationwide shift differential of 7.5 percent for the night shift and 10 percent for the lobster shift.

Union witnesses also urged the addition of a guarantee that annual pay adjustments will not be less than the increase in the cost-of-living.

Hearings were under way concurrently in both the House and Senate Post Office & Civil Service Committees.

John A. McCart, director of the AFL-CIO Government Employes Council, testified before the Senate panel. Pres. John F. Griner of the American Federation of Government Employes and William H. Ryan, representing the 22 affiliates of the AFL-CIO Metal Trades Dept., testified at House hearings. Both had earlier appeared before the Senate committee.

The union witnesses spoke out strongly against a newly-introduced Administration bill, proposed in an apparent effort to head off the labor-sought legislation.

It would make a bad situation worse, the unions contended.

The Administration bill would assign the task of conducting area wage surveys to the Bureau of Labor Statistics, thus abolishing present union participation in wage survey teams. And it would give virtually unchecked power over the operation of the prevailing wage system to the chairman of the Civil Service Commission, who would be the "agent" of the President.

McCart told the Senate panel that the Administration proposal makes no improvement in present procedures and takes away rights unions now have.

Committee Chairman Gale W. McGee agreed. He saw nothing in the Administration plan "that would benefit the workingman." And he predicted the committee will report an entirely different bill. It is too bad, he suggested, that Administration policy-makers "have failed so miserably to see the handwriting on the wall."

Griner charged at the House hearings that the Administration's goal is "a law under which blue-collar employes will have even less than they have now."

He warned that failure to improve and reform wage board procedure and to allow unions a real voice in determining conditions could lead to "a serious crisis" in worker morale in the federal service.

The government's blue-collar workers, he said, are "seriously underpaid, suffer first and most from reductions-in-force, from contracting-out, and from management manipulation of their conditions of work."

Ryan, who is also national coordinator of the Government Employes Dept. of Machinists, stressed the importance of having an impartial chairman to head the labor-management Prevailing Rate Advisory Committee.

Under the present coordinated federal wage system, with a chairman appointed by the Civil Service Commission presiding over an advisory panel of five union and five management representatives, Ryan said unions "are continually faced with 6-5 votes against any realistic proposal we set forth."

He also said the present pay-setting procedure, which generally ignores area construction rates, often results in contractor employes and government employes working side by side at federal installations —"and the government employe receives considerably less hourly wages."

Two Rail Pacts Signed, Signalmen Reject Terms

Chicago—Two railroad unions, the Train Dispatchers and the Yardmasters, reached contract settlements with employers but a third, the Railroad Signalmen, rejected Presidential Emergency Board recommendations as inadequate and authorized their president to set a date for a possible walkout.

The Signalmen resumed negotiations in Washington at the request of the National Mediation Board after rejecting a proposed settlement that "completely overlooked the skill differential factor" and failed to correct "severe inequities in the wage structure and working and living conditions" of signalmen. The recommendations also fail to give semi-skilled workers, assistants and helpers the raises given other railroad workers in recent settlements, the union said.

The Signalmen will be free to strike May 15. They have gone through all the negotiations and mediation the law requires, Pres. Charles J. Chamberlain pointed out.

The Dispatchers won pay increases totaling 43.6 percent compounded over 42 months for some 3,000 members. Pres. Charles R. Pfenning said average pay of $41 a day will rise by steps to nearly $59 as of Apr. 1, 1973. Other benefits include improved holiday pay, a fifth vacation week, and better health and accident insurance.

The Yardmasters, representing 5,000 railroad employes, announced a settlement in line with other recent rail agreements. They gave no details.

Still unsettled are railroad contracts with the United Transportation Union, six AFL-CIO shopcraft unions, and the unaffiliated Locomotive Engineers.

At Building Trades Session:

Active Labor Role Stressed For Policing Job Safety Law

Delegates to the building trades safety conference were warned not to expect instant protection from the new federal job safety and health law and that effective enforcement will depend on how active a role organized labor takes in policing safety violations.

More than 3,500 delegates took part in the one-day safety program that followed the annual legislative conference of the AFL-CIO Building & Construction Trades Dept.

Safety specialists from building trades unions and government officials were on hand for discussions focusing on the new Occupational Safety & Health Act that went into effect Apr. 28.

Pres. Hunter P. Wharton of the Operating Engineers stressed that labor's representatives must be well informed on the provisions of the law if their members are to receive its full protection.

Wharton said the new law provides what has been lacking for years to make occupational safety work—"a statutory mandate for the federal government to assure that the working men and women of America do not suffer injury or illness as a result of their jobs."

The new law provides both "the tools and penalties to achieve that end," Wharton noted. He termed the BCTD program "the beginning of what will be, of necessity, a continuing process of education and orientation in safety for all of us in the trade union movement."

Representing government at the conference were Assistant Labor Sec. George C. Guenther, who will oversee the administration and enforcement of the law, and Dr. Marcus Key, director of the Occupational Safety & Health Bureau in the Dept. of Health, Education & Welfare.

Barry Brown, top safety officer for the Michigan Dept. of Labor, warned that many problems face the states in establishing safety programs that meet federal standards as the law provides. He predicted it would take at least three years to achieve this goal.

Brown advised the safety representatives to educate their unions on the problems facing them in striving to have state legislatures adopt firm standards.

He urged the crafts to enlarge their safety committees and form trade councils to strengthen state legislative campaigns on safety issues.

Confusion will likely exist during the first year of dual enforcement of the safety law, Brown said, as the authority for plant and job-site inspections will vary from state to state.

Alan Burch, former safety director of the Operating Engineers, told the conference that states should undertake research into the mortality rates for workers in the construction industry. He noted that the life span of operating engineers averages 52 years, compared with 62 for the average American male.

Burch was sworn in Apr. 28 as a member of the Occupational Safety & Health Review Commission.

Guenther reported that 41 governors have responded to the Labor Dept.'s announcement that state legislatures should adopt statutes in conformance with the federal law. He said he was gratified with the response, "but we want everyone—the 50 states, the District of Columbia and Puerto Rico—in the act."

Guenther pointed out that state plans for safety programs are subject to federal approval. Federal grants can be withdrawn if states fail to live up to the plans they submit, he added.

Guenther was questioned on a proposed Labor Dept. practice that would allow employers 15 working days to contest a citation, penalty or order of abatement for unsafe working conditions.

He said compliance officers would be empowered to prescribe a variety of abatement periods, depending on the seriousness of conditions. He assured the delegates that immediate action would be required where imminent danger exists.

Dr. Key reported that his Occupational Safety & Health Bureau at HEW will concentrate on the research of toxic materials in the workplace, tolerance levels for workers, medical monitoring and labeling recommendations.

Broad new areas of study must be undertaken by the bureau, Key said. He noted that data documenting occupational disease problems in construction is scanty. One reason for this, he suggested, is mobility of workers, who often switch to another company or job before an illness is reported.

ON-THE-JOB HEALTH PROBLEMS affecting workers in the United States and Britain are discussed during a week-long seminar on occupational health conducted by the Mt. Sinai School of Medicine at City University of New York. From left are Dr. Irving J. Selikoff, director of the medical school's Environmental Services Laboratory; Dr. M. L. Newhouse of the British Trades Union Congress; George H. R. Taylor, AFL-CIO occupational safety and health specialist, and Dr. Harry Heimann, assistant director of the environmental laboratory. More than 100 safety representatives from a number of international unions attended the seminar.

Louisiana Labor Enlists In Health Security Fight

Baton Rouge—The Louisiana AFL-CIO voted unanimously at its 16th convention to join the fight for passage of National Health Security legislation after hearing AFL-CIO Social Security Director Bert Seidman describe the health care crisis facing the nation.

"The AFL-CIO is in this fight to the finish," Seidman told the delegates. "To win it, we will need a total effort from the entire labor movement to convince America that National Health Security is not only essential but long overdue."

Three leading Democratic senators joined Seidman in urging a united effort for health care and other basic needs of workers and their families. They were Hubert H. Humphrey (Minn.), Edward M. Kennedy (Mass.) and Edmund S. Muskie (Me.)

The convention also called on state labor organizations to establish a Committee on Political Education in every locality and to work with state and area central bodies in the 1971 and 1972 political campaigns.

The delegates authorized the officers to hold a statewide COPE conference in September. They returned state federation leaders for another term without opposition. They are Pres. Victor Bussie, Sec.-Treas. E. J. Bourg, Sr., and Vice Pres. A. P. Stoddard.

James E. Flynn of the Communications Workers replaced Joe Kaplan of the United Transportation Union as an executive board member from the Alexandria area.

Seidman reported that nearly all workers under union contracts have some kind of health plan, but constantly rising medical costs have kept many union members from getting anything like adequate medical protection.

About 80 percent of Americans under the age of 65 have some coverage of hospital costs, and a slightly smaller proportion have surgical coverage. But more than half the population under 65, Seidman emphasized, has "no coverage whatever" for physicians' home and office visits.

Four health care bills are pending. One is the Nixon Administration bill, described in a Nixon message two months ago but just submitted to Congress. Seidman said it is "as full of holes as a Swiss cheese," with four separate programs for different groups of citizens.

Other proposals were drafted by the insurance industry, the American Medical Association, and a group favoring "catastrophic health insurance." All the alternatives are inadequate to do the full job of protection that Americans need, he said.

But the National Health Security plan, introduced in the Senate by Kennedy and 23 others, and in the House by Rep. Martha W. Griffiths and 76 others, would bring quality health care to all Americans, Seidman predicted.

Focusing on the nation's economic ills, Muskie called on the Administration to "stop putting all the blame for inflation on the backs of construction workers. . . . Stop making organized labor a scapegoat for the failures of this Administration."

Humphrey flailed the Administration for the recession, which he said was caused neither by accident nor the workings of the economy.

"It came because it was planned, manufactured and premeditated," Humphrey declared.

He also called on all Americans to join a "massive campaign to get the North Viets to assure humane treatment and to release U.S. prisoners of war" and urged Pres. Nixon to "disengage and withdraw from Viet Nam as soon as possible."

Congress Pares Down Funds for Safety Law

Congress voted supplemental start-up funds for the operation and enforcement of the new Occupational Safety & Health Act, but not before the House Appropriations Committee lopped off nearly one-third of the amounts requested.

A total appropriation of $11.8 million was granted less than a week before the law went into effect Apr. 28. The Departments of Labor and Health, Education & Welfare had sought a total of $16.2 million to cover the start-up costs and operations through the end of June 30.

A $10.9 million request by the Labor Dept. was cut back to $7.8 million. The final amount includes $3.7 million for administration and enforcement and another $4 million to be doled out to states for their job safety programs.

The HEW request of $5.3 million was trimmed to $4 million for initial costs in fulfilling its responsibilities under the law and establishing a new National Institute for Occupational Safety & Health.

Congress also cut back a $100,000 request for the Occupational Safety & Health Review Commission to $75,000.

The Labor Dept. and HEW had been borrowing money from other programs to set up operations and train personnel in an effort to meet the Apr. 28 effective date of the act.

Although the Senate went along with the House in approving the reduced appropriations, the House action met with stiff criticism.

Sen. Harrison A. Williams, Jr., (D-N.J.), chief sponsor of the law that was enacted late in the last session of Congress, said he was distressed by the cuts "because of the impact they will have on the critical start-up phase of this important new program."

Sen. Jacob K. Javits (R-N.Y.) termed the reductions "disturbing" and predicted that efforts to build the occupational safety and health program to desired levels would be seriously impaired.

Because of the imminence of the effective date of the law, both Javits and Williams called for passage of the appropriations bill. But they urged Congress to adopt a second supplemental bill to restore the full appropriation sought by the Labor Dept. and HEW.

The AFL-CIO Standing Committee on Safety & Occupational Health had earlier expressed concern over the delay in appropriating of funds.

A number of international union officials are expected to appear at Senate and House hearings on the Fiscal 1972 budget seeking full funding of the job safety program.

ON-THE-JOB PROTECTIONS of the new Occupational Safety & Health Act are covered in detail at the Building & Construction Trades Dept. legislative and safety conference in Washington, D.C. From left are Director Barry Brown of the Michigan Dept. of Labor, Director Marcus Key of HEW's Bureau of Occupational Safety & Health, Assistant Labor Sec. George C. Guenther, who will oversee the administration and enforcement of the law, and Alan Burch, former safety director of the Operating Engineers and now a member of the Occupational Safety & Health Review Commission.

One Minimum Wage for All

THE SIMPLEST, most direct and least expensive way to eliminate most poverty is to modernize the Fair Labor Standards Act.

A $2 minimum wage is a floor—and that's all. But it is a floor that will benefit the entire economy by building purchasing power, eliminating some welfare costs and eradicating the blight of poverty from a big section of struggling America.

To all of those who cry that increasing the minimum wage brings rising unemployment, we point to the record. The Congress requires, by law, reports on the effects of minimum wage. Reports by Secretaries of Labor—in both Republican and Democratic Administrations—have shown substantial benefits and only rare, isolated instances of adverse effects, involving a few, small firms and very few employes.

Some opponents of FLSA improvements claim that minimum wage legislation puts young people out of work. We are concerned about unemployment among teenagers; however, the evidence indicates that recent high levels of youth unemployment are not due to FLSA provisions.

To understand the employment problems of youth, it is important to remember that teenage unemployment has always been higher than the national average for all workers. This is because teenagers are new jobseekers; seek only part-time employment near home; look for temporary summer jobs and then return to school.

There are some who argue that teenagers should receive a lower minimum wage than adults. A lower minimum wage for teenagers would have four distinct disadvantages:

- Displacement of working heads of families.
- Blatant discrimination against young workers.
- Loss of dignity in the work they perform.
- An unfair increase in profits for those unscrupulous employers who would discriminate against teenagers by paying them a lower wage than adults for the same work.

IF THERE WERE ANY VALIDITY at all to arguments for a lower minimum wage for teenagers, then these people should be advocating an even lower minimum wage for black teenagers because unemployment rates for young blacks are much higher than for other teenagers. Naturally, no one in his right mind could support this kind of ridiculous proposal. But, really, it is no more ridiculous than a lower minimum wage for all teenagers.

A growing economy and full employment—in other words, increased jobs—will solve teenage unemployment. And when there are insufficient job opportunities in the regular job market, then there should be a federal program of public service employment—for both adults and teenagers. This would create jobs for the long-term unemployed and seriously underemployed and provide badly needed public services, such as in parks, recreation, hospitals, schools and other public and private non-profit facilities.

We believe that a single standard minimum wage of at least $2 an hour should apply to all workers covered by the Fair Labor Standards Act—young and old, black and white, male and female. Multiple minimums for different categories of workers would be discriminatory, and we flatly oppose them.

—From AFL-CIO testimony before the House Labor Committee on FLSA legislation.

'The Time Is Now!'

A Word Edgewise:

Flap Over TV Documentaries Zeros In on Basic Freedoms

By John P. Roche

IN THE CURRENT DISPUTE over the right of the television networks to refuse to turn over to a congressional investigating committee the raw materials from which news programs were prepared, a number of variables have to be considered.

Take the matter of editing of a presidential discussion. Reacting to my criticism of CBS's editing a 30-minute talk with Pres. John F. Kennedy, in which some hot topics were explored, Walter Cronkite argued that the 18 minutes cut were insignificant. He offered me the full, unedited text. It should provide an independent basis for judgment.

This is an eminently fair proposal and it should apply across the board to edited conversations, particularly when they deal with controversial subjects. Similarly the public has a right to know exactly who are the mysterious "high White House sources," "informed intelligence officials," that flit in and out of the front pages and the TV news programs.

One of the journalistic curses of our time is the "background interview" in which all sorts of policy matters are discussed for attribution only to "a well-informed State Dept. source." It could be the Secretary of State—or the janitor.

Yet, without for a moment accepting the notion that the Fourth Estate is a free and independent sovereign, the last thing we need is a bunch of congressional snoops digging around in wastebaskets to find out what changes were made between draft 4 and draft 5 of a TV news scenario. Or who made them. Or whether whoever made them was a veteran of the Abraham Lincoln Brigade or of the Ku Klux Klan.

TV is a powerful medium and the impact of distortion is virtually irreversible, but that is one of the risks we take in implementing the principles of a free society.

Admittedly freedom makes life very complicated, particularly for those in high office in a democracy. So far as most Americans are concerned, there is no real crisis in Pakistan. Sure, the papers carry stories about the army gunning down Bengalis armed only with scythes and pikes. But there is no blood on the TV screens.

The Pakistani government simply kicked out all the correspondents and confiscated their films and notes. When one reporter tried to go out into Dacca and look around, an officer threatened to shoot him, noting coldly that if he could shoot his own countrymen, a few foreign journalists would hardly spoil his day. That was that.

Similarly, the CRS (the French riot cops) put on displays of brutality that make the Chicago police look like altar boys. French State Television avoided the subject completely; indeed, there was better TV coverage of the Paris riots in New York than in France.

CONTRAST THESE episodes with the full, free and often hair-raising coverage of domestic violence in the United States and the war in Viet Nam. Sometimes it has seemed irresponsible—there are documented cases where the arrival of the TV trucks obviously triggered off events—and the CBS "invasion" of Haiti was in a category by itself. At the same time, we can be proud that in our allegedly "repressive" society freedom of the press, and of the media generally, has a meaning unmatched elsewhere in the world.

To revert to an earlier theme, we don't need a brawl between the Administration or Congress and the media to deal with whatever bias may exist. We need constant argument between spokesmen for various truths on TV news programs (not on little forums held in the small hours of the night).

On Laos, for instance, you now see the "news" and then, vacuum packed, some "news interpretation." But life doesn't come wrapped like that: all news is to some extent interpretation. Those of us who believe in truth in packaging should fight for a new format reflecting the maxim that one man's truth is another's propaganda.

Jobs Sacrificed for Profits:

Updating U.S. Trade Policies Needed to Meet New Problems

The following is excerpted from an address by Robert G. Rodden, special assistant to Machinists Pres. Floyd Smith, at a recent symposium on international trade at the University of Kentucky.

OUR ONCE LARGE technological lead in the aerospace industry has been sold for profit—the industry's profit—to foreign countries. When for example, Japan wanted the F-104 Starfighter, built by IAM members at Lockheed in California, it arranged to have it built in Japan.

Lockheed not only shipped over the designs, tools and equipment, but supplied the supervision needed to train the Japanese workers. Now, of course, Japan has the technology as well as the plane.

This is increasingly the pattern. When other countries want our goods they insist that they be produced so far as possible by their workforce. But the opposite is not true. Not long ago, for example, the Dept. of Defense ordered 30 Harrier VTOL jets from a British producer. Now the Marine Corps wants 30 more.

The British government will sell us the plane but not the technology. They insist that their planes be built by British workers in British plants. We're even having problems getting maintenance agreements so that American firms can service these planes after they are delivered.

All the examples we have pieced together pose a serious question for the American people. We're told that we needn't worry if one industry is killed off by foreign imports. In the 1940s we were told not to worry if the bicycle industry folded up. In the 1950s we were told not to worry about the plight of the typewriter and office machine industry. In the 1960s we were told not to worry about plant closings and job exports in electronics. Today we are told not to worry if aerospace, roller chain, irrigation equipment, machine tools, and other plants are moved overseas.

We are told we needn't worry about multinational corporations that invest billions of dollars overseas.

We're told we needn't worry about the hundreds of American plants that produce goods below the Mexican border for export into U.S. markets. We're told we shouldn't worry because American corporations pay peon wages in Mexico and Haiti and coolie rates in Taiwan, Korea, Hong Kong and Japan.

Evidently, we're to assume that we can live off our investments in the rest of the world.

But the question is: whose investments? How is this going to help the working man who has only his labor to invest?

An even more critical question is: what kind of a country are we going to have? It is true that some countries have sacrificed agriculture for industry. But can we sacrifice industry for overseas investments? If so, what happens next? Is everybody going to become a coupon clipper or an insurance man or a fried chicken franchise operator?

Can we really let so much of our crucial manufacturing capacity be exported?

There are no easy answers to the problems being raised by world trade, but it's time that some of the so-called experts started to realize that the problems are serious.

Neither the Machinists union nor the labor movement is advocating economic isolation. But we wonder why we are expected to view trade as a two-way street when other nations do not. We wonder about the experts who tell us that we risk retaliation if we erect barriers to imports from other countries when the fact is they already have.

Our so-called friendly trading partners have set up all kinds of barriers to block our goods. They control their import structures and subsidize their manufactured exports. As a result, they not only have full employment but labor shortages. In the meantime, we play by the old rules—especially where manufacturing is concerned—and we have serious, growing unemployment and economic stagnation.

Only in the USA is it considered unfriendly to set quotas on foreign manufacturers. Only in the USA is a quota assumed to stop all trade.

INTERESTINGLY ENOUGH, those who reject the principle of protection so far as working men are concerned seek protection for other kinds of producers in our society. They approve of quotas on beef from Argentina that protect the ranchers. They like quotas on imported oil that protect oil billionaires. They don't consider it protectionist if corporate farmers enjoy quotas on cheese, peanuts, sugar and a host of other agricultural products.

It is only when it comes to manufactured goods and the jobs of working men that quotas suddenly become economic isolationism.

There are no easy answers to the problems that are being raised by our present trade policies. We do know, however, that we're being hurt by these policies and that the theories on which they are based should be re-examined.

At the very least we could do what other countries do. We could control the export of capital through a variety of tax arrangements and even direct control. We could repeal those provisions of the Tariff Code that actively encourage and subsidize the export of capital and jobs. We could adopt quotas on goods from overseas that are destroying critical U.S. industries.

After looking out for the interests of the rest of the world for the past 30 years, it is time we started looking out for our own interests. If we don't, no one else is going to.

Public Awareness Grows:

Nursing Home 'Horrors' Spur Demand for Government Action

GROWING AWARENESS of the "horrors" in many of the nursing homes where 1 million retired Americans spend their declining years has spurred public demand for federal action to revamp the $3 billion industry, an AFL-CIO spokesman declared.

Although $2 of every $3 paid for nursing home care comes from either states or the federal government, AFL-CIO Social Security Director Bert Seidman said that enforcement of quality and safety standards is inadequate.

"It shocked us to discover" that the Dept. of Health, Education & Welfare has just one part-time employe working on enforcement of the standards set forth in the Medicaid law, he declared on Labor News Conference.

Appearing with Seidman on the AFL-CIO produced public affairs interview was William Hutton, executive director of the National Council of Senior Citizens, who stressed that regulation of nursing homes is so lax that accidents such as the salmonella poisoning that killed 25 patients in a Baltimore home last year "could occur in any nursing home, in any state of the union."

Hutton declared: "It's a real disappointment to us at the National Council that the Administration has failed to move against" nursing homes that "do not meet federal standards, even though federal money is paid for the patients."

HUTTON AND SEIDMAN agreed that lack of physician care is a major shortcoming of the present nursing home system. They pointed out that the Kennedy-Griffiths Health Security bill now pending in Congress "encourages the development of close affiliation between nursing homes and hospitals," which would improve the "medical supervision . . . of long-term care of the chronically ill and the elderly."

Seidman declared that under the present system "the admission of an aged patient to a nursing home is, for the patient's physician, often an act of disposal, rather than a positive act of medical management." He and Hutton agreed that too often in the nursing home industry, the "profit-making interest comes first."

By Press Associates, Inc.

IN MARCH the U.S. Supreme Court handed down a unanimous decision which is expected to have far-reaching effects in such areas as job entries, promotions and transfers.

The court held that it is a violation of Title VII of the Civil Rights Act of 1964 to require applicants to take tests which are not directly and specifically tied in with the job performance.

Employers cannot, for example, require a high school diploma or a certain IQ unless it can be conclusively proven that these are essential prerequisites for job performance.

In the decision, Griggs vs. Duke Power Co., the court held that the Wonderlic Personnel Test and the Bennett Mechanical Aptitude Test were not sufficiently job related and were, consequently, invalid.

Delivering the opinion of the court, Chief Justice Warren Burger declared:

"The objective of Congress in the enactment of Title VII is plain from the language of the statute. It was to achieve equality of employment opportunities and remove barriers that have operated in the past to favor an identifiable group of white employes over other employes.

"Under the act, practices, procedures or tests, neutral on their face, and even neutral in terms of intent, cannot be maintained if they operate to 'freeze' the status quo of prior discriminatory employment practices."

The full breadth of the decision is seen in this part of the opinion:

"The facts of this case demonstrate the inadequacy of broad and general testing devices as well as the infirmity of using diplomas or fixed measures of capability. History is filled with examples of men and women who rendered highly effective performance without the conventional badges of accomplishment in terms of certificates, diplomas or degrees. Diplomas and tests are useful servants but Congress has mandated the common-sense proposition that they are not to become masters of reality."

Prof. George Cooper of Columbia University's law school, who wrote one of the briefs in the Supreme Court case, declared "it's a decision that could be revolutionary in its impact and at a minimum it will cause serious changes."

He said that one major effect would be to require personnel managers to "really do their jobs" rather than rely on the use of general intelligence tests in hiring and promoting.

THE RULING GOES even further in upholding the Equal Employment Opportunities Commission's Administrative Guidelines on Employe Selection Procedures.

EEOC, in notifying employes of the court decision, is recommending that whether or not their union has ever been a party in a Title VII action involving employe selection procedures, they should review procedures that are:

- Unilaterally developed and applied by the employer.
- Within the scope of collective bargaining agreements.
- Within joint apprentice standards.
- Developed and applied by local and national unions as part of union procedures such as entry into membership.
- Developed and applied by local and national unions as employers.

The National Association for the Advancement of Colored People's Legal Defense Fund declared that "we are now ready to proceed with scores of cases involving many thousands of workers who have been denied jobs or promotions because of non-job-related tests."

The "flood of litigation" may or may not evidence itself but there seems little question that job tests in most industries will be fundamentally altered by the court decision.

THE HORRORS exposed in many of the nation's nursing homes have spurred a growing public demand for federal action to correct abuses, according to AFL-CIO Social Security Director Bert Seidman and National Council of Senior Citizens Executive Director William Hutton, second and third from left. They were questioned on Labor News Conference by James Welsh, left, of the Washington Evening Star and Theodor Schuchat of the North American Newspaper Alliance. The AFL-CIO public affairs interview is broadcast Tuesdays on Mutual radio.

MEDICAL AND HEALTH CARE provisions of the labor-sponsored National Health Security bill are outlined by Rep. Martha W. Griffiths (D-Mich.) during the Communications Workers' first national legislative conference in Washington, D.C.

Tax Ruling Perils Jobs, Coopers Delegates Told

Niagara Falls, Ont.—The Coopers negotiated larger increases in the last contract year than in any of the previous 20 years, but face stronger challenges in the immediate future, Pres. Ernest D. Higdon reported at the union's 40th biennial convention.

Layoffs have been plaguing the barrel industry and jobs may become scarcer when distillers start storing a new light whiskey in used barrels next year, Higdon warned.

Whiskey flavor, color and aroma are affected by the type of barrel used by distillers. The Alcohol Tax Unit of the Treasury Dept. ruled in 1969 that distillers of bourbon whiskey can continue to cite the age of their product when stored in new charred oak barrels but may switch to used barrels after July 1972 for new light whiskies they all plan to market. Age may not be claimed for such whiskies.

That will affect jobs, and Higdon said the Coopers fought unsuccessfully against the change at the tax hearings.

Some 51 delegates from 23 local unions in the United States reported that employment remains steady at present, with some peaks and valleys.

Officers for a new two-year term were installed on the final day by retiring Vice Pres. Howard Rollins. Higdon and Vice Pres. George F. Calvert were re-elected. Clarence B. Morgan of Louisville, Ky., and Edgar Barber of Monroe, La., were elected vice presidents for a first term. Robert L. Shaw of Hernando, Miss., moved up from fourth vice president to third.

The delegates modernized the union's 75-year-old constitution and changed the per capita dues structure from a flat $2.55 a month to one hour's pay per month. Strike relief rules were modified to permit payments for longer periods.

Since the last convention, union members in Louisville, Baltimore, Lebanon, Ky., and Lebanon, Mo., were forced to take strike action after a 20-year period without strikes. All the disputes have been settled with contract improvements, union officers reported.

The delegates made plans for 1972, when all contracts expire, and heard an analysis of contract problems and court decisions from Herbert L. Segal of Louisville, the union's general counsel.

Atlanta was chosen for the 1973 convention.

CWA Parley Spurs Support Of Wage Goals

Several hundred Communications Workers delegates completed a week-long legislative conference in Washington that developed overwhelming congressional support for the union's bargaining goals, CWA Pres. Joseph A. Beirne reported.

The conferees, local legislative chairmen from all over the United States, heard a series of speakers in the mornings and spent afternoons and evenings on Capitol Hill in personal discussions with their senators and House members.

Among the speakers were Sen. Hubert H. Humphrey (D-Minn.) who discussed social issues, including pending welfare legislation; Rep. Martha Griffiths (D-Mich.) who outlined the National Health Security bill she has sponsored and Sen. Frank Moss (D-Utah) who spoke on consumer issues.

Sec. of Labor James D. Hodgson gave the conferees the Nixon Administration's view of the nation's current economic situation.

An up-to-date bargaining report was delivered by Louis B. Knecht, assistant to Beirne.

CWA employed a novel technique for the section of the program describing how bills become law. The campaign broadcasting bill, which CWA supported and Pres. Nixon vetoed, was used to show the steps a bill goes through and the lobbying techniques which operate for or against a bill. The presentation was done with slides and tape.

Lettuce Pact Covers 5,000 Farm Workers

(Continued from Page 1)

entirely" if the AFL-CIO succeeds in organizing their field workers.

A boycott against non-union lettuce growers was launched last Sept. 16 after some growers in the Salinas area refused to recognize UFWOC or negotiate with it on the ground they previously had signed contracts with the Teamsters.

UFWOC announced a moratorium on the boycott Mar. 17 while discussions with the Western Conference of Teamsters continued. Later, Chavez and AFL-CIO Pres. George Meany announced that the dispute between the Teamsters and UFWOC had been resolved.

The agreement, they said, ends the boycott by providing a method for solving disputes over jurisdiction.

Under the plan, representatives of the Teamsters and UFWOC have five days to resolve a dispute. If they fail, the issue is referred to the Bishops Committee on Farm Labor of the United States Catholic Conference—a committee that has mediated previous disputes.

Inability of the committee to settle a dispute within 15 days will result in referral of the issue to Meany and Frank Fitzsimmons, general vice president of the Teamsters, or to an arbitrator or arbitrators appointed by them for final and binding resolution.

SCHOOL ADMINISTRATORS and Supervisors Organizing Committee receives a charter of affiliation from AFL-CIO Pres. George Meany in Washington. Left to right, Max H. Frankle, Thomas S. Burke, Shirley Brown, Joseph Penn, Norman Anthony, Meany, Walter Degnan, Joseph H. DiLeonarde and Albert L. Morrison. Degnan is organizing committee president. Burke is secretary, Anthony a steering committee member, DiLeonarde and Morrison are vice presidents. Affiliated groups to date are from New York City, Chicago, San Francisco and the District of Columbia.

CBC Study Shows Impact:

GE, Westinghouse Hit on Jobs Export

Cleveland—Leaders of unions representing 200,000 General Electric and Westinghouse employes measured the destructive impact of the two corporations' overseas operations and prepared to launch counter measures.

The Steering Committee of the AFL-CIO Coordinated Bargaining Committee, at its spring meeting here, released an economic study that shows:

- GE's overseas workforce is increasing at more than five times the rate in the U.S.
- GE owns more than 80 manufacturing plants in 24 foreign nations. Westinghouse controls more than 40 overseas companies.
- Besides their outright holdings, both companies own large blocks of stocks in their foreign "competitors," and are tied into a worldwide network of interlocking licensing and trade agreements.
- As a result, both companies have all but abandoned the making of consumer products in the U.S., and orders for heavy electrical equipment, such as generators and turbines, are rapidly shifting abroad, as well.

Television and radio sets made in Japan, Taiwan, Hong Kong and elsewhere are imported for sale in the rich U.S. consumer market under the parent corporate label and sold at high U.S. prices.

"Profits, not patriotism, are the goals of these corporations," the CBC said. "There is no regard for our country's national interest, no regard for American workers."

At the same time, the report said, there is little advantage for foreign workers, whose sweatshop wages make it impossible for them to buy the products they make.

"Where GE and Westinghouse go, their antilabor policies follow: sweetheart contracts in South America, union busting in Spain, starvation wages, no job security.

"Millions of foreign workers get their only impression of our country from the labor policies and practices of these two profit-hungry corporations," the CBC said. "Perhaps this makes anti-Americanism more understandable."

Misguided U.S. government policies are compounding the problem, the committee pointed out. Besides encouraging U.S. corporations to export U.S. jobs, technology and capital, the Administration is steadily stepping up government purchases of such major items as TVA generators from overseas makers.

James Compton, Steering Committee chairman, declared that these matters "vitally affect our members and the whole national economy."

He said the CBC will work closely with overseas unions, through the International Metalworkers Federation, to "see that all who work for these two giant corporations receive fair wages and decent working conditions. The CBC considers this entire question a vital concern in the 1973 negotiations with General Electric and Westinghouse."

Unionists Join Agencies On Crime, Alcoholism

Two AFL-CIO Community Services representatives have been named to the staffs of national councils dealing with community problems on crime, delinquency and alcoholism, CSA Director Leo Perlis announced.

B. G. Culver, a former president of Barbers Local 499 in Terre Haute, Ind., was appointed to the National Council on Crime & Delinquency.

Arthur J. Stump, past president and a founder of Auto Workers Local 1350 in the Philadelphia area, was appointed to the National Council on Alcoholism.

Culver, 41, will have the job of developing wider labor participation in union and community programs for the prevention of juvenile delinquency and youth crime. He'll be working in a number of cities through local central bodies and their community services committees.

Culver formerly was the CSA director for the Terre Haute United Fund, representing the Wabash Valley Central Labor Council. He also has served as COPE chairman for the local council, the Indiana State Barbers Association and in Indiana's 6th Congressional District.

Stump, 48, will be involved in efforts to increase the participation of labor and management in prevention and treatment of alcoholism. A graduate of Temple University, he has conducted a number of union leadership courses at institutes at the University of Pennsylvania and Rutgers. He also has held membership in the Furniture Workers, Insurance Workers and the forerunner union of the State, County & Municipal Employes.

The AFL-CIO is represented on the board of the National Council on Crime & Delinquency by Pres. Hunter P. Wharton of the Operating Engineers and Federation General Counsel J. Albert Woll.

Representing the federation as directors of the National Council on Alcoholism are William M. Dunn of the Communications Workers and James F. Horst of the Transport Workers.

Hodgson Delays Testimony:

Labor Presses Case For Pay Floor Hike

Labor's case for a higher minimum wage and extended coverage was reinforced by testimony of two AFL-CIO affiliates as the Nixon Administration was still trying to shape a policy position on the legislation.

At House hearings, the AFL-CIO and a number of unions have called for an immediate increase in the federal wage floor to at least $2 an hour, along with a substantial expansion of coverage under the Fair Labor Standards Act.

Labor Sec. James D. Hodgson had been scheduled to testify on Apr. 29, the final day of the current round of a hearings by a Labor subcommittee headed by Rep. John H. Dent (D-Pa.).

On the eve of his scheduled testimony, Hodgson abruptly cancelled out. He was not in a position to testify at this time, Hodgson indicated, but could appear at a later date.

Hodgson had been expected to support some advance in the minimum wage. But he was reportedly unable, by the deadline for his testimony, to work out Administration policy clearance with the White House and Commerce Sec. Maurice H. Stans.

Meanwhile, union witnesses completed the presentation of labor's case for wage-hour law improvements.

Speaking for Service Employes Pres. David Sullivan, SEIU Executive Sec. Thomas R. Donahue said the concept of the "working poor" is indefensible.

"These are people," he said, "who work fulltime, all year, at jobs which are needed and contribute to the economy and yet are paid at sub-poverty wages. This is wrong."

Donahue reminded the subcommittee that the $1.60 wage enacted in 1966 is worth no more than $1.38 in terms of current buying power.

"We associate ourselves entirely with the testimony of the AFL-CIO," he said, urging the House panel to "recommend an immediate increase to at least $2."

The proposed expansion of coverage to all public employes is very much needed, the Service Employes testified. And the union strongly urged the subcommittee to repeal the overtime exemptions which now apply to various groups of establishments, including theaters, bowling alleys, hotels, motels, restaurants, nursing homes and hospitals.

Elimination of overtime exemptions was also stressed in testimony by the Fire Fighters.

Alvin E. Davis, staff representative of the union, strongly supported the proposed coverage of all public employes and noted that the Fire Fighters have long sought inclusion in the law.

While an increasing number of jurisdictions have adopted the 40-hour week for fire fighters, there are some that require fire fighters to be on duty as long as 96 hours a week and the federal government itself compels fire fighters employed by the Defense Dept. to put in a 72-hour workweek.

Canada, Davis noted, covers public employes in the same manner as industrial workers in all labor legislation, and the United States should do the same.

"There never has been any real justification to exclude any American worker from the provisions of the Fair Labor Standards Act," he declared.

MINIMUM WAGE INCREASE to at least $2 an hour and expanded coverage is needed now, AFL-CIO Legislative Director Andrew J. Biemiller testifies at House hearings. With him at the witness table is Nat Goldfinger, the federation's research director.

'Class Prejudice' Cited In Attacks on Craft Pay

(Continued from Page 1)

Kirkland contrasted this with the Labor Dept.'s report that an urban family of four needs about $11,000 a year for a "modest" standard of living.

"What, then, is all the noise about?" he asked. "Why are wages that are so far below the level required for a 'modest but adequate' standard of living denounced as excessive? Why are construction workers singled out for attack?"

One reason, Kirkland suggested is the "class prejudice" of those who consider themselves the "elite."

"They cannot abide the idea of a worker—particularly one who works with his hands—making as much as $10,000 a year. It is all right for their own sons to start at $12,000 a year as management trainees." But for a skilled craftsman with a family to support, crossing the "magical five-figure line" is a sign of "grasping materialism."

Construction workers "more than earn their pay," Kirkland said. And he told his audience that the AFL-CIO takes the position "that all workers and their families should enjoy at least a 'modest but adequate' standard of living, whether inflation pushes that figure to $11,000 or $15,000 or $50,000 a year."

And, he warned, while the hostile attention is now centered on the construction industry, "the larger objective" is to thwart all unions in their efforts to catch up with lost buying power.

"Scapegoating the building trades," Kirkland stressed, "will not build the 26 million new housing units we need in the decade ahead."

To reach this goal, he said, interest rates must be brought down to reasonable levels, direct public outlays for low-income housing must be vastly increased," and land speculation that sends prices soaring must be curbed by establishing land banks to acquire and set aside the land that will be needed in the future "for the development of new communities and other socially useful purposes."

Kirkland emphasized also that "new housing cannot exist in isolation. It creates the need for new mass transit systems, schools, roads, sewers, hospitals, libraries, airports, and other public facilities."

Unless there is a "national, coordinated effort, supported by massive and planned public investment, "we will not build the homes we need," he warned. And the housing that is built "will soon be engulfed in violent crime and traffic jams, polluted air, spreading slums and decaying schools."

The positive values of achieving the goal of decent housing for all Americans would go beyond the immediate problem of shelter for the ill-housed, Kirkland noted.

"It would not only generate new jobs for the unemployed and open the way to new advances toward racial and social justice. It would also enhance our political health by strengthening confidence in the capacity of democratic government to see, to act and to do.

"And by demonstrating that one great social problem can be solved, it would help to reduce the apparent scale of obstacles to the solution of others."

Samuels Named To IUD's New Job Safety Post

Sheldon W. Samuels has been named to the new post of director of Occupational Health, Safety & Environmental Affairs in the AFL-CIO Industrial Union Dept.

Samuels is the former chief of fields services for the Air Pollution Control Office of the U.S. Environmental Protection Agency.

The new department will oversee IUD activities in the government's administration and enforcement of the new Occupational Safety & Health Act that went into effect Apr. 28.

IUD Pres. I. W. Abel, in announcing Samuels's appointment, said that full implementation of act will be achieved "only if the labor movement knows what the law is all about, educates its membership, stimulates appropriate government action, and generally polices the law to assure honest administration."

"Anything short of an all-out commitment on the part of the labor movement will mean another splendid achievement relegated to the meaninglessness of a paper law," Abel stressed.

Samuels has served as public information director for the New York State Air Pollution Control Board and executive secretary for the New York State Action for Clean Air Committee.

Rep. R. J. Corbett Dies, Veteran Republican

Pittsburgh—A veteran Republican congressman, Rep. Robert J. Corbett, died here at 65.

Corbett, a moderate who often had labor support, was the senior Republican on the House Post Office & Civil Service Committee.

Jobless Benefit Cutoff Barred on Appeals

(Continued from Page 1)

$1.3 billion in 1969, the federation stressed.

The result was that whether the employer or the jobless claimant appealed from an initial ruling, it was the claimant who had to bear the costs of delay.

In another labor-related case, the Supreme Court refused to grant an employer's appeal for review of Massachusetts court rulings upholding payment of welfare benefits to strikers.

ITT Lamp Division of the International Telephone & Telegraph Corp. filed the petition. It claimed the state had in effect intervened in a 1970 labor dispute on the side of 833 striking Teamsters at ITT's plant in Lynn. The U.S. District Court and the 1st Circuit Court of Appeals, both in Boston, refused to enjoin the state welfare department from paying welfare benefits to 172 of the strikers.

The appeals court asserted that states have a legitimate interest in "minimizing hardship to families of strikers, avoiding conditions that could lead to violence and in forestalling economic stagnation in local communities."

The U.S. Chamber of Commerce filed a brief supporting the employer's claim.

The Supreme Court voted 5-3 to reject a challenge to another California law. The majority upheld a 1950 state law permitting voters in a community to block construction of low-rent housing for the poor. The law on local referendums has been used to prevent the construction of nearly half the federally-financed low-rent housing proposals in California in the last 20 years, opponents charged in court briefs.

Justice Hugo L. Black wrote the opinion reversing a lower court ruling that the law is unconstitutional because it discriminates against the poor. He was joined by Burger and Justices John M. Harlan, Potter Stewart and Byron R. White. They agreed there was no evidence the state law was aimed at any racial minority but instead permits "democratic decision-making."

Justices Harry A. Blackmun, William J. Brennan, Jr., and Thurgood Marshall dissented.

Delegation Named To ILO Conference

A delegation of six labor representatives has been named to attend the annual meeting of the International Labor Organization in Geneva as advisers to U.S. Worker Delegate Rudolph Faupl.

The advisers are S. Frank Raftery, president of the Painters; Thomas F. Murphy, president of the Bricklayers; Charles West, vice president of the Machinists; Miles Stanley, president of the West Virginia AFL-CIO; Edward Hickey, labor attorney; Bert Seidman, director, AFL-CIO Dept. of Social Security.

Legislative Drive Opens For No-Fault Insurance

(Continued from Page 1)

The AFL-CIO gave its endorsement to a bill introduced by Rep. John E. Moss (D-Calif.) and similar legislation sponsored by Sen. Philip A. Hart (D-Mich.) that would establish a basic system of no-fault auto insurance.

Discussing the House bill, Biemiller said "it would institute compulsory insurance for all motor vehicles and forbid insurers to refuse, cancel or fail to renew insurance—except for loss of operator's license or failure to pay premiums."

All economic losses due to injury or death would be fully paid and victims of "catastrophic harm" such as permanent disability and severe disfigurement could still sue for additional compensation under the traditional liability system.

Biemiller told the House panel that a 24-volume Dept. of Transportation study clearly demonstrates the need to change the present auto insurance liability system that:

- Costs $1.07 to operate for every $1 paid out in net benefits to victims.
- Pays benefits to only 45 percent of all fatally or seriously injured victims of auto accidents.
- Compensates only one-third of actual economic losses of victims with the largest losses, while overpaying those with small losses.
- Delays final payments to seriously injured victims an average of 16 months.
- Contributes more than 200,000 cases a year to the nation's court load and absorbs more than 17 percent of the country's total judicial resources.

The Dept. of Transportation report, Biemiller noted, concluded that "the existing system ill serves the accident victim, the insuring public and society. It is inefficient, overly costly, incomplete and slow. It allocates benefits poorly, discourages rehabilitation and overburdens the courts."

In view of the documented need, Biemiller urged, Congress should act promptly and not buck the problem to the states.

100 to Train Under 2 New Outreach Pacts

The AFL-CIO will prepare 100 minority youths for apprenticeships in the building trades—50 each in Memphis, Tenn., and Charleston-Huntington, W.Va.—under two new Outreach contracts with the Labor Dept.

A one-year contract for $74,705 to the federation's Human Resources Development Institute will finance the Memphis project. Under a previous contract, the HRDI placed 34 minority apprentices in the building trades and another 27 as construction laborers in Memphis.

The West Virginia Building & Construction Trades Council received its first Labor Dept. contract for $76,745 to operate its Outreach program in Charleston and Huntington.

Ten weeks of concentrated tutoring will be offered the minority youths recruited in the two projects to prepare them for apprenticeship entry tests.

Labor Tells Congress:

Health Security Bill Key to Quality Care

(Continued from Page 1)

Woodcock told the committee that the Administration's heavily scaled-down insurance program "reminds me of the old 'buffalo policy.' There are deductibles, co-insurance clauses, exclusions, loopholes and gaps—so much fine print that it resembles the policy that covers you only when you are run over by a herd of buffaloes in downtown Detroit, at high noon."

Biemiller reminded the committee that "organized labor has been fighting for national health insurance for more than 30 years" and makes up the largest group of users of health services in the nation.

The legislation it supports, he stressed, "is the health consumer's bill. It is not organized medicine's bill. It is not the program of the insurance carriers."

Under the Health Security bill, whose principal sponsors are Senators Edward M. Kennedy (D-Mass.) and John Sherman Cooper (R-Ky.) and Representatives Martha W. Griffiths (D-Mich.) and James C. Corman (D-Calif.), universal coverage would include:

- Full payment of all physician and surgical services, including preventive care and physical examinations.
- Full payment of all hospital services, hospital-affiliated nursing home care, outpatient services and home health care.
- All medicines provided by a hospital or prepaid group practice.
- Other services including optometrists, podiatrists, pathology, radiology and ambulance.
- Dental care for those under 15, later to be extended to cover all ages.
- A broad program of active mental health treatment.

Biemiller stressed that "by providing the complete range of benefits, there is no need for a separate catastrophic plan as a companion to health security."

So-called catastrophic insurance does not fill the wide gaps in conventional health insurance coverage, Biemiller said. But the Health Security legislation "would eliminate catastrophies by providing all necessary benefits."

Half the cost of the program would be financed by the government, he noted. But the government's contribution—which for the 1970 fiscal year would have been an estimated $20.5 billion—would be only twice what the federal government already pays out in various health care programs.

The balance would come from a 3.5 percent employer payroll tax, a 1 percent tax on the first $15,000 of a worker's earnings and a 2.5 percent tax on income of the self-employed. But workers and employers would no longer have to pay the present Medicare tax, which amounts to eight-tenths of 1 percent of the first $7,800 in earnings.

"Alone of all the bills introduced in this Congress," Biemiller concluded, Health Security "will benefit all Americans—doctors, patients, hospitals—everyone. And we are convinced that now is the time to do it."

In his testimony before the House Commerce subcommittee, Biemiller stressed that "we cannot implement the concept that all of the American people should have the right to health services unless we have the manpower resources."

And beyond that, he said, the doctors, nurses, technicians and health care facilities must be distributed in a "rational" manner, where the need for the services exists.

While critical of a number of provisions of Administration bills in these areas, Biemiller strongly supported Administration proposals aimed at encouraging development of prepaid group practice "health maintenance organizations."

He said expansion of the programs to assist medical and nursing students and schools is especially vital now "because the next few years are likely to be a preliminary 'tooling up' period to prepare for a national health program for all Americans."

'This Will Ruin Our Racket!'

Labor Renews Support For Consumer Agency

The AFL-CIO reiterated its support for an independent federal agency for consumers, but also said the present consumer office in the White House should be retained and given legal status.

Testifying before a House subcommittee, AFL-CIO Legislative Rep. Kenneth Peterson traced labor's support of such legislation, beginning with Sen. Estes Kefauver's bill to establish a Department of Consumers in 1959.

But now most consumer spokesmen are not seeking a full-fledged Cabinet department of consumer affairs. "Rather, two specific concepts have emerged," Peterson said, citing one as the need for an office in the White House to oversee and coordinate federal consumer programs and the other as an independent agency to function as the consumer's advocate in the courts and before regulatory agencies.

Each would have some conflict in performing the other's role, Peterson said.

He praised the bill introduced in the House by Rep. Chet Holifield (D-Calif.) because it provides for both. Last December, Peterson recalled, the independent Consumer Protection Agency barely missed being created when it passed the Senate 74-4 and was recommended by a House committee by 31-4, only to die on a 7-7 tie vote in the House Rules Committee. But under that bill the Consumer Protection Agency would have been given both roles, as consumers' advocate and federal coordinator. And a separate bill would have assigned both roles to the White House office.

Peterson praised the present bill as superior and explained that labor "was not wedded" to the idea of a full-fledged Dept. of Consumer Affairs, although it has long supported the creation of such a department.

"Of particular importance is the location of the consumer advocacy function in a separate agency without specific ties to any other government department or bureau," Peterson stressed. "We would not wish, for example, that this office be located in the Dept. of Justice, as was proposed last year by the Administration. Nor would we want it in the Federal Trade Commission."

The absurdity of placing the agency in the FTC was pointed out by Rep. Florence Dwyer (R-N.J.), who said, "It is difficult to see how an effective consumer oversight can be maintained when the one charged with oversight is placed under the one to be overseen." Another House bill would place the office under the FTC.

Peterson cited several other provisions of Holifield's bill which make it superior to the other House bill, such as providing for a Consumer Advisory Council and for the continuation of the functions of the now expired National Commission on Product Safety.

He also said "labor would be greatly concerned" over the considerable time that may elapse before "comprehensive new product safety legislation is actually enacted. For that reason, he said, the AFL-CIO favors its inclusion in the present bill and opposes the Nixon Administration proposal that the Dept. of Health, Education & Welfare be given authority over product safety.

Peterson also expressed regret that wide investigative powers had been deleted from the bill and said the AFL-CIO hopes they would be restored, possibly "more narrowly drawn so as to avoid any dangers of invasion of privacy."

REA Strikers End Walkout, Resume Talks

New York—Negotiations between the Railway Clerks and REA Express resumed here after a court ordered the freight agency to restore all drivers, clerks and platform men to the jobs they left Apr. 19 and to make no change in drivers' routes during contract talks.

Some 20,000 BRAC members stopped work at 4,000 locations across the country when REA Express management broke off negotiations with the union and unilaterally changed truck routes. It was the first national strike by the union against the company.

When management asked for an injunction, the union agreed to return to the status quo if management would do likewise. U.S. District Court Judge Newell Enfield issued a temporary restraining order in Atlanta.

The order directed the union to call off the strike and required REA Express to rehire all BRAC members no later than 8 a.m., Apr. 28, and to maintain the status quo on all truck route assignments pending the outcome of negotiations.

BRAC Pres. C. L. Dennis said "it was the company's effort to change the truck routes without regard for the needs of the men, and with danger to their income and job security, that caused the strike."

The court order, he said, "is recognition of the rights of these thousands of drivers. We shall do our best to negotiate satisfactory work agreements within this new climate, and in the framework of the judge's order."

5-1-71

Senate Passes $1.5 Billion Plan For Quality, Integrated Schools

The Senate put aside partisan differences and voted 74-8 to authorize up to $1.5 billion in federal funds for the goal of achieving quality education as a byproduct of racially-integrated schools—in all parts of the nation.

The final version of the bill combined the quality education goals stressed in legislation originally introduced by Sen. Walter F. Mondale (D-Minn.) with the financial aid for school desegragation proposed last year by Pres. Nixon.

With support from civil rights groups, labor and the Administration, the bill hammered out in the Senate Labor Committee survived virtually intact after a week of debate and voting on amendments.

Over a two-year period, the federal funds would be allocated to school districts seeking to develop integration programs, whether in response to court orders based on wiping out remnants of legal segregation or to overcome "de facto" segregation based on housing patterns.

To qualify for grants, school districts must agree to maintain at least one "stable, quality, integrated" model school, whose student body would be "substantially representative" of the racial balance in the community.

The legislation specifically forbids any aid to private segregated academies, schools that limit minority participation in extra-curricular activities, schools that fire a disproportionate number of minority-group teachers in order to integrate, and schools that use various teaching systems that have the effect of keeping black and white students in separate classes during a substantial portion of the day.

In addition to the direct aid to school districts, the legislation would earmark $225 million for metropolitan area programs such as educational parks, to which children would come from various parts of town, and experimental programs in linking city and suburban school systems.

The legislation must still be acted on by the House and then the money authorized would have to be appropriated in a separate bill.

On the final passage vote in the Senate, seven hard-core southerners voted against the bill. But others joined in supporting the legislation which will make it financially easier for communities in their states to comply with court desegregation orders.

Mendel Rivers' Godson Wins S.C. House Seat

Charleston, S.C.—A 28-year-old Democrat, Mendel Davis, won a special election for the House seat of the late L. Mendel Rivers, who had been chairman of the House Armed Services Committee and one of the powers in Congress.

Davis was the godson of Rivers and had served as his aide in Washington. He won by a plurality over a Republican, a black woman running on a third-party ticket and a write-in candidate.

House Panel Backs Public Service Jobs

(Continued from Page 1)

would provide 100 percent federal financing for the program, while the Senate version would provide 90 percent federal funds. Last year, Pres. Nixon vetoed a comparable public service jobs program that called for 80 percent federal funding.

In another move to free federal funds to overcome the recession, Rep. Thomas P. O'Neill (D-Mass.), the House assistant Democratic leader, introduced a resolution directing the President to spend most of the $12.8 billion in funds Congress has appropriated for various programs.

O'Neill charged that Nixon had impounded the funds to force hard-pressed mayors and governors to become salesmen for his revenue-sharing plan.

Labor Assails 'Giveaway' In Tax Break to Business

NEARLY 15,000 CITY WORKERS rally in Manhattan to protest budget cuts and curtailment of programs by New York Gov. Nelson A. Rockefeller that put their jobs in jeopardy. They later boarded 350 buses bound for the state capitol in Albany to appeal for the restoration of the funds and programs. **(Story and additional photo, Page 12.)**

Youth Vote Plan Ratified By 26 States

More than half the states have already ratified a labor-supported constitutional amendment to allow 18-year-olds to vote in all elections.

A new spurt of six ratifications since Apr. 27 brought the total to 26—only 12 short of the three-fourths majority required to write the 18-year vote into the U.S. Constitution.

Despite some signs of increased conservative opposition, no legislature has rejected the amendment although some have adjourned without action this year.

Federal law already gives 18-year-olds the right to vote in national elections—for congressman, senator and president. However, the Supreme Court has ruled that state laws govern eligibility for state and local elections, thus requiring a constitutional amendment to assure nationwide uniformity.

The proposed amendment was sent to the states for ratification in late March—endorsed by a 94-0 vote in the Senate and 400-19 approval in the House.

Its ratification progress to date has been among the fastest in the nation's history.

The latest group of state legislatures to vote ratification consists of Colorado, Pennsylvania, Texas, South Carolina, West Virginia and New Jersey.

Earlier ratifications had come from Alaska, Arkansas, California, Connecticut, Delaware, Hawaii, Idaho, Indiana, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, Nebraska, Tennessee, Vermont and Washington.

State AFL-CIO central bodies have been actively supporting the ratification drive and the national labor movement has long endorsed an 18-year voting age.

The federation's Executive Council, calling for enactment of the constitutional amendment, termed it "impractical to have one age standard for voting for federal office and another for state office."

And on the merits of the issue, the council stressed, "we believe that 18-year-olds should have the vote."

Of the legislatures which have not yet ratified the amendment, fewer than the required 12 are still in regular session. But several which have adjourned are expected to be called into special session later this year so the possibility of completing ratification during 1971 still exists.

Even if the drive should fall short this year, there is a good chance that ratification by 38 states can be achieved early in 1972, well before Election Day.

Scores Plan For Faster Write-offs

By David L. Perlman

The Nixon Administration's plan to cut business taxes by allowing firms to claim bigger depreciation allowances on equipment is "dead-wrong" economic theory and of questionable legality, the AFL-CIO charged.

Labor protested the "tax giveaway" of from $3 billion to nearly $5 billion a year at Internal Revenue Service hearings on the proposed new regulations.

Most of the revenue lost by the government if the plan goes through will be pocketed by the nation's largest and richest corporations, AFL-CIO Research Director Nat Goldfinger testified.

He termed this "19th Century trickle-down economics" and stressed that it "runs directly counter to the urgent need for tax reform." (Excerpts, Page 6.)

The new Treasury rules would permit business firms to write off the cost of machines and equipment at a rate 20 percent faster than permitted under existing guidelines. Furthermore, they would no longer have to show that they are actually replacing machines and equipment at about the rate they are being written off.

Sen. Birch Bayh (D-Ind.), the first witness at the Internal Revenue Service hearings, termed the entire proceedings "an elaborate charade" since Treasury officials had made it clear that the new rules will go into effect "regardless of what is said or done at these hearings."

Earlier, Sen. Edmund S. Muskie (D-Me.) charged that the Administration is plunging ahead with the

(Continued on Page 4)

House Panel Votes Stronger EEOC Powers

The House Labor Committee voted 21-12 approval of a bill strengthening enforcement of the nation's fair employment law, expanding its coverage and eliminating overlapping jurisdictions with other federal programs.

It approved intact the bill that had been endorsed by the AFL-CIO and leading civil rights groups. An attempt to substitute a weaker, cumbersome Administration proposal was rejected, 19-14.

Under the committee bill, the federal Equal Employment Opportunity Commission would be given enforcement powers patterned after the procedures of the National Labor Relations Board in dealing with unfair labor practices.

The EEOC, after hearings, could issue "cease and desist" orders directing employers, unions or employment agencies to remedy illegal job discrimination.

6% or Higher:

Severe Joblessness Hits 52 Major Areas

By Tom Castor

The number of major labor areas in the United States with substantial unemployment rose to 52 in April, the highest level since May 1962, the Labor Dept. reported.

The term "substantial" unemployment is applied to areas where joblessness is running between 6 and 12 percent, or higher.

Three of the nation's major job centers were added to the list last month, and one—New Orleans—was taken off after showing increased employment in construction, government, trade, and an upturn in ship and boat building.

Only 11 of the top 150 labor markets in the nation were in the "substantial" category a year ago, and only six had such high rates of unemployment when Pres. Nixon took office in January 1969.

Assistant Labor Sec. Malcolm R. Lovell Jr., listed the three newcomers with the following explanations of increased joblessness:

- Hartford, Conn.—reflecting layoffs in aircraft manufacturing and smaller declines in the production of machinery, electrical equipment, fabricated metals and other durables. This is the first time Hartford has made the "substantial" list since the area classification program was inaugurated 20 years ago.
- Newark, N.J.—returning to the list because of "declines of employment in electrical and nonelectrical machinery, rubber and plastics." Newark had been in the "moderate" bracket—3 percent to 5.9 percent—since June 1964.
- Charleston, W.Va.—suffering increased joblessness because of the return of many residents who lost jobs in other parts of the country.

Twenty-five smaller labor areas were added to the "substantial" list in April, bringing the total to 687.

Of these, 484 are classified as having "persistent" unemployment, meaning that the jobless rate has been 6 percent or more for a year and has been at least 50 percent above the national average for several years.

Six of the major labor areas also have persistent joblessness: Fresno and Stockton, Calif.; New Bedford, Mass.; Muskegon-Muskegon Heights, Mich., and Mayaguez and Ponce, Puerto Rico.

55% of Public Supports Health Security Concept

The concept of National Health Security, which has the strong endorsement of the AFL-CIO, also has the approval of the American people by 55 to 30 percent.

Pollster Louis Harris reported the favorable response to new federal legislation aimed toward "a comprehensive health insurance program which would combine federal government, employer and employe contributions into one health insurance system."

Only National Health Security—introduced by Representatives Martha W. Griffiths (D-Mich.) and James Corman (D-Calif.) and Senators Edward M. Kennedy (D-Mass.), William Saxbe (R-O.) and John Sherman Cooper (R-Ky.)—fits that description.

All other proposals before Congress, including the Nixon Administration program, involve reliance on many private insurance companies instead of one health insurance system.

The Harris poll also reports highly favorable public response to two integral parts of the Griffiths-Kennedy Bill—establishment of neigh-

Trades Elect Bonadio As Haggerty Retires

C. J. Haggerty has retired as president of the AFL-CIO Building & Construction Trades Dept. and will be succeeded by Frank Bonadio, the department's veteran secretary-treasurer.

Haggerty served as president since 1960—"with excellence and distinction," the department's executive council said in accepting with "reluctance" his decision to retire for reasons of health.

The department leaders praised Haggerty's "notable service to the American labor movement for more than half a century" and proposed that the BCTD convention in November name him president-emeritus.

Bonadio, elected to fill out Haggerty's term of office, is a vice president of the Sheet Metal Workers, a former officer of the Baltimore Building & Construction Trades Council, and a former international representative of his union.

He was elected secretary-treasurer of the Building & Construction Trades Dept. in 1954.

The department's executive council will meet again in several weeks to name a new secretary-treasurer.

Haggerty took out his card in the Lathers in Boston in 1915, but he moved to California in 1921 and rose to head the state's labor move-

(Continued on Page 11)

A TALENT SHOWCASE featuring the union performers who are caught up in a chronic job-shortage is staged by the New York City local of the Television & Radio Artists. The AFTRA actors, singers and dancers performed before an audience of casting directors, agents, producers and talent coordinators in an effort to improve job opportunities for the local's 7,000 members.

Job Training, Racial Cooperation Help Build Unions in Mississippi

Pascagoula, Miss.—What was a disintegrating situation here just a few months ago could be emerging into a model program of racial and industrial cooperation.

As a result of the extensive involvement of organized labor on many levels, Ingalls Shipbuilding has an effective recruiting and training program which should enable it to fulfill its multimillion dollar federal contracts, bringing a sizable benefit to the workers and community of Pascagoula.

"During early fall of last year, I was fearful that we would lose bargaining rights at the shipyard," says Mississippi AFL-CIO Pres. Claude Ramsay. "Today I am very optimistic about the situation. The Metal Trades Council is now a viable and strong organization, racial discrimination has been completely eliminated and our unions are doing an excellent job of representing their members."

Three years ago, Litton Systems, Inc., bought out the old Ingalls shipyards and asked the state for a $150 million bond issue with which to go after big federal contracts for the renovated shipyards. The bonds were floated and the contracts were landed.

But what Ramsay found last fall included:

- A Litton recruiting program which had brought in 3,000 workers in six months only to have 1,000 of them head right back out again because of a critical housing shortage and a disappointing pay schedule.
- A contentious racial situation, stemming in no small part from a secret agreement between management and federal officials assuring that a quota of blacks would be hired as long as the blacks dealt only with a "biracial committee" of management people and didn't take their problems to the union, in this case the Metal Trades Council, which had won bargaining rights at Litton's two Pascagoula shipyards.
- A group of community organizations which were drawn into supporting the "divide and conquer" campaign against the unions.

"After surveying the situation," Ramsay recalls, "I advised the Metal Trades Council that it appeared we had a hell of a fight on our hands to survive but that we had no intention of rolling over and playing dead."

Over the following weeks, labor representatives were able to convince the Litton management that their recruiting program needed the help of experts in the manpower field and their basic collective bargaining agreement needed reopening.

Meanwhile, the support of the community organizations was won and the Metal Trades Council negotiated a model supplement to the basic agreement which eliminated any semblance of racial discrimination.

The AFL-CIO Human Resources Development Institute helped with the manpower problems. At present, 250 are being trained for pipefitting, welding and machinist jobs, with programs to train an additional 160 pipefitters, 90 electricians, 80 sheet metal workers and 80 machinists scheduled to start during May and June. Overall, Litton manpower requirements are projected to be 1,060 each three months for the remainder of 1971 and the first half of 1972.

The programs call for seven weeks of "vestibule" training and 17 weeks of "on-the-job" training, during which the trainee is paid, usually at the minimum wage, but with a decisive increase as soon as he joins the regular workforce.

Three Mississippians have been named to staff the Pascagoula office and handle the recruiting and training. HRDI assigned manpower representative C. B. Turner of the Machinists. John Jenkins of the Laborers was sent in by the Joint Apprenticeship Program of the A. Philip Randolph Educational Fund-Workers Defense League, which is administering the program, as it does with Outreach programs across the country. Bob Thomas, recently the key figure in a campaign to organize city workers in Jackson, Miss., is also assisting at the Pascagoula office.

Much still remains to be done. HRDI is starting a buddy system, whereby older workers help shepherd the newcomers to the job. The housing will not appear overnight and—perhaps most important—negotiations are continuing on the contract reopener.

But, as Ramsay pointed out, the situation is a vast improvement over a few months ago. For that, he says, much of the credit goes to such people as Maywood Boggs, president of the Metal Trades Council; E. T. Kehrer and William Pollard of the Dept. of Civil Rights; Robert McGlotten and Peter Babin of HRDI, and as well as Ernie Green and Bill Ross of the Randolph Institute-WDL.

For Success at Polls:

Rights Gains Tied To Labor Alliance

Chicago—The need to further strengthen the labor, liberal, civil rights coalition in preparation for the 1972 election was the dominant theme at the second national conference of the A. Philip Randolph Institute.

The conference drew 400 delegates from 31 states, including top officials of the labor and civil rights movements.

"Our first task is political—to build a majority liberal coalition," said a statement of purpose prepared for the conference by AFL-CIO Vice Pres. A. Philip Randolph, Bayard Rustin, director of the Randolph Institute and Norman Hill, assoicate director.

"If we are successful politically, we can then proceed to the greatest challenge of all: transforming the institutions of American society to wipe out the evils of poverty and racial injustice and to build a society where equality is the just reward of each and every citizen," the statement said.

The three civil rights leaders declared that American minorities are on the threshold of an era of major changes in the social and economic structure of the nation.

"Never before in the history of the United States have black Americans been in such a strategic and influential political position.

"Let us not waste this opportunity."

Toward these ends, Rustin told the conference, labor's registration and voting campaigns must include special efforts among newly franchised black and white 18-year-olds.

"The economic issue has finally come through," Rustin said. "Everyone is being squeezed. The economic issue is the one on which we can organize a coalition. The false issues are being kicked out."

Rustin said that the entire economic picture in the nation is changing in favor of such a coalition with "the blue collar worker out there against Nixon—right there with the blacks and the students."

Blacks, on the other hand, are learning the value of union membership, said Rustin, quoting Census Bureau figures showing that Negroes in unions earn 50 percent more on the average than unorganized black workers.

He said the road to economic freedom and justice for blacks is the ballot box and the union card.

AFL-CIO Sec.-Treas. Lane Kirkland reminded the conference that because the economic policies of the Nixon Administration are anti-labor, they are therefore anti-civil rights.

"There is no way to hurt labor without hurting the black community," said Kirkland.

"An end to the heritage of slavery will not come from union-busting . . . engineered recessions, inflation, high interest rates and the continuing neglect of needs," he said.

"It will come from the vision and the goals and the programs of the labor movement."

Al Barkan, director of the AFL-CIO Committee on Political Education, recalled that COPE and the Randolph Institute had won crucial victories in the 1970 elections and said they can do it again in 1972—"if we can do the registration job."

Randolph himself praised the institute which bears his name for bringing labor, religious, civil rights and other groups together "to spread the new gospel of the brotherhood of mankind.

"The black man will not achieve complete liberation unless he has the support and promise of organized labor," he said.

Unemployment Above 6% in 52 Key Areas

(Continued from Page 1)

Those areas in the "persistent" category are potentially eligible for federal assistance under the Public Works & Economic Development Act of 1965.

The number of major labor areas with low unemployment—1.5 percent to 2.9 percent—dropped over the year from 48 to 7 locations.

The "moderate" bracket—3 percent to 5.9 percent— accounted for 91 of the major labor areas, the same as a year ago.

There were 39 areas with 6 percent to 8.9 percent unemployment as compared with only 9 such areas a year ago.

Ten job centers had unemployment in the 9 to 11.9 percent range, and in three major labor areas joblessness was 12 percent, or higher.

'It Keeps Spreading!'

Offer Called 'Irresponsible':

CWA Sets Deadline In Bell System Talks

New York—The Communications Workers handed the Bell System a deadline of May 19 to come up with an adequate wage offer or face the possibility of a strike.

"If a satisfactory and adequate proposal is not out on the table at that time," CWA Pres. Joseph A. Beirne warned, "I am sure the CWA executive board will reject it and order a secret strike vote among our 400,000 members in the Bell System."

Beirne said the first round of talks with Bell affiliates, covering about 200,000 telephone workers are "in deep trouble" because of Bell's "irresponsible" bargaining posture.

The CWA will negotiate contracts covering all its members in the Bell System this year, and current talks will set the pattern for industry settlements.

The union's executive board decided here in a special one-day session that negotiations would continue even though the first cluster of Bell contracts expired April 30 and May 1.

Presidents of 21 installers locals also met with Beirne.

The CWA leader termed Bell's first counterproposals to the union "wholly inadequate."

The union's Bell System Collective Bargaining Council decided on a goal of 25 percent in a one-year contract.

CWA said Bell's first counterproposal, which came hours before contracts expired, amounts to about 10.5 percent in the first year of a three-year pact and 2.75 percent in each of the last two years, plus a cost-of-living adjustment in the last two years amounting to about 50 cents a week for each one-half point increase in the national Consumer Price Index.

The increases would amount to $19.50 to $22 a week for top-rate craftsmen in operating telephone companies, and $11.50 to $14 a week in maximum rates for operators and clericals.

"First offers from Bell have always been improved," Beirne said. "It would be irresponsible on CWA's part to end the negotiations now. We don't meet irresponsibity with irresponsibility."

But the CWA blasted Bell and its parent company, American Telephone & Telegraph on two other points.

Beirne said AT&T had unilaterally put into effect a cost-of-living increase in pensions now being paid to retired Bell System workers.

Also, the union said it had learned that management is trying to recruit strikebreakers for use in the event of work stoppages.

The CWA executive board will meet again May 19 in Washington, and the union said it will televise a report of that meeting May 23.

Fire Fighters Win Federal Job Ruling

The Fire Fighters won the right to represent captains and inspectors in federal government fire prevention units in a case decided by Assistant Labor Sec. W. J. Usery, Jr.

The U.S. Naval Weapons Station at Yorktown, Va., had attempted to exclude them from voting in a union representation election. But the Labor Dept. ruling held that the duties of the fire officers did not match the supervisory criteria which would have excluded them from the bargaining unit.

Fire Fighters Pres. William H. McClennan hailed the decision and saw it as "a very strong precedent" applying "both in and outside of federal employment."

VETERAN LABOR ORGANIZER Irwin L. DeShetler is saluted by friends and associates at a retirement party at a park near Delano, Calif. From left are Executive Sec. Sigmund Arywitz of the Los Angeles County AFL-CIO, DeShetler, AFL-CIO Director of Organization William L. Kircher and Director Cesar Chavez of the Farm Workers. DeShetler, a former president of the Glass & Ceramic Workers, has served as a regional officer for the CIO and AFL-CIO and also as the UFWOC coordinator.

Fire Fighters Present News Media Awards

Thirty-nine reporters, photographers and newscasters have won prizes and citations in the annual media awards contest of the Fire Fighters.

IAFF Pres. William H. McClennan said cash awards and certificates will be presented to the winners among the 300 entrants in the contest, limited to news stories, broadcasts and photos illustrating the "professionalism and hazardous nature" of fire fighting in the United States and Canada in 1970.

McClennan said the "increasing public interest in, and awareness of, the problems and hazards of the fire service are dramatically shown by the record number of entries—more than 300."

Fire fighters are encouraged, he said, to find that the news media are "trying hard to help the public understand their role as dedicated, skilled public servants."

Judges of the 1971 contest were AFL-CIO Director of Public Relations Albert J. Zack, Warren Y. Kimball of the National Fire Protection Association, Boston, and Frank Swoboda of McGraw-Hill Publications.

First prize winners, who will receive $500 and a plaque, are:

- Jerry Condo of the Marietta, O., Daily Times for a "gripping and complete account of how fire fighters averted an even more serious mass tragedy" when 21 persons died in a nursing home fire. The account, submitted by IAFF Local 442, was judged best among newspapers of less than 100,000 circulation.
- Chris Golembiewski of the Detroit News for the best story in newspapers of more than 100,000 circulation. The story told how Detroit fire fighters, in cooperation with other groups, train inner city boys in fire prevention and control, "and make friends." The firemen are members of IAFF Local 344.
- William Murphy, Brockton, Mass., Enterprise, for the best photo in the under-100,000-circulation field. It depicted a major fire at the Redlands Apartments. IAFF Local 144 submitted the enrty.
- **Ron Moscati, Buffalo, N.Y., Courier Express, for a photo captioned "Fire Fatal to Baby Despite Rescuer's Heroic Effort." The paper is in the more than 100,000-circulation category. The picture was entered for award by IAFF Local 282.**
- Frank O. Mathie, Harry Elatkin, Sam Stone and Phil Risser of WLS-TV, Chicago, for a graphic television report on the "hazards and problems that winter brings to fire fighters."
- Tom Weibell of Stations WRFD and WNCI, Columbus, O., won first for radio coverage with a program titled "Ride with Squad 8." The judges said it was a "gripping word picture of what a fire fighter faces routinely as he rushes to head off disaster."

Second prize awards of $250 were won by Jann Hess, Beaverton, Ore., Valley Times; Damon Stetson, New York Times; Art Grasberger, Tucson Star-Citizen; John White, Chicago Daily News; Ray Rafferty, WBAL-TV, Baltimore, and John Burns, CHML Radio, Hamilton, Ore.

House Panel Votes Stronger EEOC Powers

(Continued from Page 1)

The EEOC orders could be challenged in federal appellate courts, as is the case with NLRB rulings.

This contrasts with the Administration plan, which would merely authorize the EEOC to file suit in federal district court. The agency would have no enforcement power of its own and an additional layer of court proceedings would be imposed before a case reached the appellate level.

The House committee bill, sponsored by Rep. Augustus F. Hawkins (D-Calif.), would substantially expand coverage by bringing under the law:

- All employes of state and local governments.
- Establishments with eight or more employes, as compared with the 25 or more under present law.

In an important step to avoid conflicts in jurisdiction and interpretation of the fair employment law, the responsibilities of the Labor Dept.'s Office of Federal Contract Compliance would be shifted to the EEOC.

The EEOC would also be given jurisdiction over enforcement of anti-discrimination policies within the federal civil service—a function now performed by the Civil Service Commission. And it would have the power, now reserved to the Justice Dept., to bring suits to end patterns of discrimination covering large groups of workers.

Before the bill can reach the House floor, it needs clearance from the House Rules Committee—which last year bottled up similar legislation. The Senate in the last Congress approved a heavily-amended EEOC bill, which died with adjournment.

The Equal Employment Opportunity Commission was established as part of the 1964 Civil Rights Act, which bars job discrimination based on race, religion, national origin and sex.

Pilots Accuse Braniff Of 'Bugging' Meetings

The president of the Air Line Pilots charged Braniff Airlines with "bugging" meetings of union members during contract bargaining periods and with falsifying the amount of pay received by flight crews.

ALPA Pres. John J. O'Donnell accused Braniff of using "intimidation, inaccurate statements, public pressure and wiretapping" to "influence the lawful course of contract negotiations between management and its 1,000 pilots."

O'Donnell said ALPA has evidence that management "bugged" pilot planning meetings and pilot conversations. He cited a news story in the Dallas Morning News quoting a company official's admission that ALPA strategy meetings have been "bugged." The same official was quoted as saying "we have had your phone lines tapped since Apr. 12."

"I am appalled," O'Donnell said, "that a reputable American company would stoop to such underhanded and unlawful Gestapo-like tactics. . . . I hope Chairman Harding Lawrence will take immediate action to stop this highly immoral practice."

ALPA intends to "seek legal resource" against such an "infringement of basic human rights," he said.

O'Donnell said company rates of pay are below those of comparable airlines, but management in a statement to the press, "attempts to delude the public into thinking every pilot makes over $30,000 a year." Braniff pilot pay, he said, actually is "below the national average of $24,000 annually."

On the subject of pay, the union president told Washington's Aero Club that the jet pilot's pay "has gone steadily down, not up" in relation to productivity.

O'Donnell said that pilot pay in 1939 was $768 a month, or 25 cents for each 100 seat-miles flown. Those who fly today's huge planes get $4,753 a month, or 3 cents per 100 seat-miles.

While a senior captain flying international routes may get $60,000 a year, a new pilot earns only a little more than $8,000 a year and veteran flyers average $24,000, he reported.

O'Donnell rejected a proposal by 12 airlines to bargain jointly with the unions involved because that would result in the government "handling the industry's relations." He voiced opposition also to the use of sky marshals. He declared "absolute airport security is the only answer to keeping saboteurs and hijackers out of aircraft."

Federal Arts Aid Called Vital for Jobless Actors

The growing deficit facing professional theaters has caused high unemployment among actors, Executive Sec. Angus Duncan of Actors' Equity reported in letters to Rep. Julia B. Hansen (D-Wash.) and Sen. Alan Bible (D-Nev.).

Duncan expressed Equity's strong support for a proposed $30-million appropriation for programs of the National Endowment for the Arts and for additional administrative funds.

Previous grants have helped establish and support dozens of professional theaters across the country. But, Duncan explained, the theater cannot pay its own way.

Non-profit theaters cannot expand their services and at the same time keep admission prices within the means of most Americans, Duncan said. The result of the increasing deficit has been curtailed seasons, reduced casts and even the collapse of some theater organizations. He pointed out that the average workweek finds only 26 percent of Equity's membership employed.

AFL-CIO Legislative Director Andrew J. Biemiller also wrote the chairmen of the House and Senate Appropriations subcommittees in support of the funding request—and the entire $60 million sought for the arts and humanities program.

The labor movement, he said, has helped achieve increased leisure time for Americans. And government aid to the arts will encourage use of this leisure time "to enrich lives."

Duncan made a similar point in his letter:

"At a time when increasing numbers of our population are searching for enriching leisure time pursuits," he said, "the creative, talented men and women who could help provide it in the theater are being discouraged, frustrated, forced to abandon their careers."

Duncan said appropriation of the funds would increase support for regional theaters and encourage tours by existing professional theaters, giving more Americans the opportunity to enjoy the theater.

Buffalo Labor College Cites AFL-CIO Staffer

Buffalo — The Labor-Management College gave its annual "bishop's plaque" awards to Joseph J. Lovas, AFL-CIO staff representative, and Pres. Claude F. Shuchter of the Chamber of Commerce at the college's 33rd commencement dinner. Lovas was cited for helping promote "social justice and harmony in our industrial society."

Lovas has been an active union member for some 35 years. The award he won is named for Bishop James A. McNulty of the Catholic diocese.

Labor Board's Reduced Staff Sets Record

The National Labor Relations Board processed the heaviest workload in its history in Fiscal 1970 with a staff shrunk by budget cuts to 1965 proportions, the agency's top legal counsel said in his annual report to Congress and the President.

NLRB General Counsel Arnold Ordman reported that a record 33,581 unfair labor practice charges and election petitions were filed in the board's 31 regional offices last year—a flow of new business that keeps increasing every year, regardless of budget cuts.

The 1970 total was a 7 percent increase over Fiscal 1969, and a 56 percent increase in the last 10 years.

"The steadily increasing workload, and limitations on hiring, have brought the agency face to face with one of the most challenging problems" since its beginning in 1935, the report noted.

It spelled out the arithmetic of the load borne by NLRB employes:

- Investigation of nearly 33,600 charges and petitions in the fiscal year.
- A record 2,147 unfair practice complaints issued against employers and unions.
- A record 5,228 unfair practice cases settled or adjusted without going to trial before an examiner.
- 1,418 appeals from refusals by regional directors to issue complaints.
- 1,047 unfair practice and injunction hearings completed.

The statistics also cited completion of 2,011 election hearings, decisions by regional directors in 1,795 election cases, 6,792 agreements by employers and unions to proceed to an immediate election, 8,161 elections conducted in cases marked closed.

The workload was borne by a field staff pruned to 1965 levels, when the annual intake of new cases was 29,000 as compared with the past year's 33,581.

Another great achievement of NLRB, according to Ordman, continues to be the "overwhelming number" of labor dispute cases handled in regional offices and "administratively closed" without the need for formal hearings and decisions by trial examiners or the five-member board.

In Fiscal 1970, more than 18,000 unfair practice cases—91.8 percent of all such cases disposed of that year—were closed by withdrawal, dismissal or voluntary settlement.

Of the 12,000 election cases closed in 1970, only about 18.6 percent required formal hearings and decisions. The rest were disposed of as follows: 54.4 percent by election agreements, 21.7 percent by withdrawal, 5.1 percent by dismissal, and 0.2 percent by expedited election procedures.

Summing up, the report said 28,000 or 88 percent of all 1970 cases were disposed of at the regional office level without formal hearings or decisions.

Stage Employes Elect Powell Vice President

Albuquerque, N.M.—Edward C. Powell was elected vice president of the Theatrical Stage Employes at a meeting of the union's executive board here.

Powell, business agent of IATSE Local 16 in San Francisco, fills the vacancy created last October when Patrick J. Ryan was elected secretary-treasurer of the union. Powell is a delegate to the AFL-CIO and serves on the legislative committee of the San Francisco Labor Council.

JOHN DEWEY AWARD for 1971 is presented to Charles C. Silberman, right, by Pres. Albert Shanker of Teachers Local 2 in New York City. Silberman was honored at the local's annual spring conference for his contribution to education through his books, "Crisis in the Classroom" and "Crisis in Black & White."

Action Urged to Revive Passenger Ship Service

Pres. Joseph Curran of the National Maritime Union offered Congress and the Administration a program for returning laid-up passenger ships to service and warned against plans of the shipowners and bankers to sell the ships to foreign operators sailing under foreign flags.

Curran was one of a number of witnesses who testified before the House Merchant Marine Committee at hearings called by Rep. Edward A. Garmatz (D-Md.). The chairman said the committee's purpose is not to clear the way for the sale of the ships but to "determine how American flag ships can once again enter the commerce of the world."

Curran testified that seven of the nation's finest cruise ships were taken out of service in the last two years and are now in layup. Four more ships with passenger accomodations have been operating only as freighters since January, and four vessels on the West Coast are the only passenger ships still sailing under the U.S. flag, he said.

"We must advise you that there will be no peace on the waterfront" if further efforts are made to sell the laid-up ships to foreign-flag operators, Curran told the committee.

He explained: "We are not threatening. . . . We are talking about the mood of thousands of men and women . . . skilled, loyal seamen, solid responsible citizens who will not see these magnificent ships . . . go foreign because of the irresponsibility of shipowners and their bankers, and the incompetence of government officials."

Curran offered a program calling for drastic changes in management structure and operating methods; revisions in subsidy laws and government policies; and "the full cooperation of the unions' to substantially reduce operating costs and to assure no interruptions of service."

The NMU president called on the committee to consider the long range significance of passenger ships in terms of "the lasting importance of these ships to the nation," and the short range significance of the effects of "pulling the rug out from under an important industry and its employes in a period of severe economic recession and industrial dislocation."

There is now no American-flag passenger service from East and Gulf Coast ports. Removal of that service wiped out 3,300 jobs aboard ship plus about 24,000 longshore, shipyard and other jobs in supporting industries, Curran testified.

Seamen's jobs have declined from 49,000 to 32,000 in the last 10 years, a loss of more than a third. Curran said the maritime program adopted by Congress last year will "vastly improve the quality" of the U.S. merchant marine, but the new automated ships will produce as much income as three to five conventional vessels and with smaller crews. The prospects are for an additional loss of 6,600 seamen's jobs, the NMU president said.

'Giveaway' Charged:

Labor Scores Cut In Business Taxes

(Continued from Page 1)

tax giveaway in the face of a Treasury Dept. warning that its action may be illegal in the absence of legilsation.

The memorandum he cited was written last December by John S. Nolan, deputy assistant Secretary of the Treasury, and questioned whether the government could simply abolish the requirement that depreciation timetables be related to the actual rate of replacement of obsolete equipment.

Nolan told newsmen that the memorandum had been hastily written and said he changed his opinion after further study.

Besides being of dubious legality, the Treasury's new rules are poor policy, Goldfinger said at the hearing.

"The proposed multi-billion dollar tax bonanza to business will produce very little, if any, significant lift to the economy in the short run," he said. "It will add to economic instability in the long run and provide additional after-tax funds to business for investments in foreign subsidiaries, which displace U.S. production and export American jobs."

There is no shortage of productive capacity to justify the proposed tax stimulus, Goldfinger noted.

America's problem, he said, "is not enough sales, not enough customers, not enough public investment, not enough consumer buying power and consumer confidence about the future of jobs and income."

If business firms get a multi-billion dollar tax windfall, someone has to make up the revenue loss. And the victims, Goldfinger suggested, will be the middle-income and low-income taxpayers.

"It will add yet another loophole to the federal tax structure at the expense of urgently needed public facilities, utterly ignoring the decay of America's cities and urban life."

The AFL-CIO will continue the fight in Congress if the Administration goes ahead with its plan, Goldfinger declared.

He called on the Treasury Dept. to rescind its proposed ruling "and to get on with the unfinished business of tax reform."

And the $3 billion to $5 billion in revenue the Administration is prepared to give up should be used instead "to help meet the American people's urgent needs for improved and expanded public facilities and services."

Federal Grant Aids Training In Pittsburgh

A voluntary program to prepare 314 minority workers for the building and construction trades as journeymen and apprentices was launched in Pittsburgh with a $471,255 grant from the Labor Dept.

The one-year contract calls for upgrading the skills of 156 construction workers from the minorities to become fully qualified journeymen and for preparing another 158 minority youths for apprenticeships.

Members of AFL-CIO building trades unions will provide instruction and supervision under the "Pittsburgh Plan."

Paul J. Fasser, Jr., manpower administrator for the Labor Dept., said the financial support being given the project shows the concern of the department "for making sure the Pittsburgh Plan works."

Hillman Honors Given 3 Writers, TV Network

New York—A national television network, a journalist, a magazine writer and a former U.S. Attorney General received Sidney Hillman Foundation Awards for outstanding achievement in mass communications during 1970.

The awards, each consisting of a scroll plus $500, were presented at a luncheon by Pres. Jacob S. Potofsky of the Clothing Workers, who also heads the Hillman Foundation.

The awards went to:

John Kifner, for his series of articles in the New York Times exploring the roots and consequences of the tragedy at Kent State University.

Ramsey Clark, former U.S. Attorney General, for his book, "Crime in America" on approaches to the many-faceted problem of crime, published by Simon & Schuster. Theodore Sorenson, former White House aide to Pres. Kennedy accepted the award for Clark.

Christopher H. Pyle, writer and former captain in Army Intelligence, for the first expose of military surveillance of civilians, including elected officials, in the Washington Monthly.

Walter Cronkite, commentator, and Ron Bonn, producer, of the Columbia Broadcasting System, for a series, "Can the World Be Saved?," presenting regular and extensive coverage of major environmental problems on its regular CBS news television program.

The Sidney Hillman Foundation was created by the Clothing Workers shortly after the death of Hillman, the first president of the union, in 1946. Potofsky, who succeeded Hillman, has described the foundation's purpose as "perpetuating Hillman's philosophy and broad-ranging interests and concerns."

HILLMAN FOUNDATION Awards for outstanding achievement in mass communications during 1970 were presented during a luncheon in New York by Clothing Workers Pres. Jacob S. Potofsky, left. Alan Barth of the Washington Post, third from left, addressed the luncheon. Recipients, from left, were writer Christopher H. Pyle, Ron Bonn of CBS, Theodore Sorenson (accepting for former Atty. Gen. Ramsey Clark), Walter Cronkite of CBS and John Kifner of the New York Times.

Nixon Optimism and the U.S. Economy

After more than two years of surging unemployment and rising consumer prices, Pres. Nixon remains optimistic about the Administration's economic policies.

"You have to be an optimist, in dealing with the future of this country," the President told the Chamber of Commerce recently.

In his economic report to Congress earlier this year, Nixon charged that "the excesses of 1966, 1967 and 1968" were responsible for the economic woes of 1970. He promised that "1971 will be a better year, leading to a good year in 1972—and new steadiness of expansion in the years beyond."

When the Nixon Administration took office, it laid down its number one economic priority: Halt inflation by cooling the "over-heated" economy without increasing unemployment.

In his first press conference as President on Jan. 27, 1969, Nixon noted that prices were then going up at an annual rate of 4.8 percent and said that the primary responsibility for controlling inflation "rests with the national Administration and its handling of fiscal and monetary affairs."

"We assume that responsibility," he declared. "We think we can meet it . . . we can control inflation without an increase in unemployment."

The solution the Administration came up with was a new economic "game plan" linked to a clamp-down on government expenditures and a tight-money policy that made private capital and credit harder to get and sent interest rates soaring to their highest level in more than 100 years.

Organized labor and many private economists warned that the Administration's policies smacked of a plan to check inflation by sacrificing jobs. But the White House denied any such intent. Paul W. McCracken, who was later to become chairman of the President's Council of Economic Advisers, said in a Senate hearing that "we can't take a sledgehammer approach" to the problem of inflation that would risk high unemployment.

The President himself said in a letter to AFL-CIO Pres. George Meany on Feb. 19, 1969:

"We must find a way to curb inflation, which robs working men and women and their families of hard-earned gains. And we must do this without asking the wage earners to pay for the cost of stability with their jobs.

"Our goal should be to provide for each citizen the opportunity to develop his full potential. And to help do this, we must revitalize our manpower and educational efforts to prepare all our people more effectively for rewarding employment. I hope it may be said of 1969 that a priority item of business in America was to see that every citizen—whatever the color of his skin—has a fair chance to realize the promise within him."

Two months later, Arthur F. Burns—then the President's chief economic counsellor and now chairman of the Federal Reserve Board—scoffed at suggestions that the Administration's policies would lead to heavy unemployment.

"Bear in mind that we have a great labor shortage," Burns said, ". . . so that if the pace of production slows down a bit, employers will still be hoarding people and they are not going to let people go, they are not going to lay off people in any significant numbers."

As the year grew on and the economic picture grew worse, the Administration's optimism never flagged.

In June 1969, Burns said: "We believe that the decisions that we have made will begin to have effect within a matter of two to three months."

In August 1969, Treasury Sec. David M. Kennedy said "there are indications that these policies are beginning to pay off."

Already the "pay-off" could be counted in terms of rising unemployment, which reached 3.8 percent by the end of September even as prices continued their steady climb.

On Oct. 17, 1969, in a nationwide radio address on the state of the economy, Nixon exuded confidence that the Administration's policies had taken hold:

"Here we are nine months later and I can report to you that the medicine has begun to work. There will be no overnight cure, but we are on the road to recovery from the disease of runaway prices.

"We are not going to change our game plan. . . . We are not considering wage or price controls. . . . Nor are we considering putting government into the business of telling the working man how much he should charge for his services or how much the businessman should charge for his goods."

A month later, the President's optimism was undiminished as he declared: "Those who bet on inflation

will lose . . . those who bet on a cooling of the economy will win. . . ."

Year-end reports from the Bureau of Labor Statistics, however, scarcely justified Nixon's views. They showed that consumer prices had gone up 6.1 percent in 1969, the sharpest annual increase since 1951.

And in January 1970 unemployment, which had dipped slightly toward the end of 1969, shot up to 3.9 percent as industrial production registered a decline for the fourth straight month.

The President acknowledged that the rate of inflation had exceeded expectations. In his economic report to Congress, he and the CEA projected an economic slowdown for the first half of 1970, moving to a "moderately" more rapid economic expansion in the second half. They conceded that this "courts the risk of some rise in unemployment," but Nixon said his policies held out the only hope of keeping "that risk low."

In testimony before the House Banking Committee on Feb. 17, 1970, Burns predicted that unemployment would rise to "4.3 percent this year or maybe a little higher."

Just one month later, in March, the nation's jobless rate went up to 4.4 percent, its highest level in four and one-half years.

Prices also continued to climb during the first three months of 1970, although at a slightly slower pace. This prompted House Republican Leader Gerald R. Ford to declare on Mar. 17 that "the problems of inflation have been defeated" and "the danger of recession is nil."

Optimism continued to reign among Administration spokesmen as McCracken forecast improvements in incomes, output, productivity and profits. Vice Pres. Agnew chimed in with assurances that "1970 is going to be a good year for business with an upturn in the second half."

For workers, 1970 was steadily getting worse as the BLS announced that unemployment had hit a five-year high of 4.8 percent in April.

"But the unemployment we presently have is the result of the cooling of the economy and our fight against inflation," the President explained.

A month later, on June 17, 1970, Nixon again addressed the nation on the state of the economy. This time he acknowledged that "the pace of our progress toward price stability and high employment has not been quick enough."

This didn't mean that "we should abandon our strategy," the President said. It would be enough to "adjust our tactics."

One such tactic was the announcement that his economic advisers would issue "inflation alerts" from time to time. The first one came in August, but it only hinted at the steps the Administration planned to take.

By that time the unemployment rate had reached 5.1 percent. It jumped to 5.4 percent in September and to 5.5 percent a month later.

But optimism was still rampant.

McCracken declared in mid-October that the economy was "on the threshold of a vigorous upswing."

This expansion failed to materialize in the fourth quarter as industrial output continued to drop and hit its lowest level in 16 months. But consumer prices still rose, climbing at an annual rate of 7.2 percent in November.

The CEA issued its second "inflation alert" in December, complaining that the Auto Workers' wage settlement with General Motors was excessive and even criticizing the railroad wage settlement proposed by a presidential emergency board.

By now it was evident that the Administration had picked a whipping boy for the failure of its economic policies—union-negotiated wage increases.

The BLS figures for the month of December showed unemployment at a 10-year high of 6.2 percent, prices rising at an annual rate of 6 percent and real spendable earnings of the average worker down 68 cents in the first two years of the Nixon Administration.

Yet in January, Fed Chairman Burns was attacking organized labor as the source of these economic woes. In a speech in California, he called for repeal of the Davis-Bacon prevailing wage law, compulsory arbitration of bargaining disputes in major industries, lower minimum wages for some workers, plus faster tax write-offs for industry.

In this year's economic report to Congress, Nixon and his CEA made it clear that they had abandoned their pledge to combat inflation without sacrificing jobs. They predicted, however, that unemployment would be cut back to 4.5 percent by mid-1972. Even this modest goal was based on the assumption that the nation's gross national product—the sum of all goods and services produced—would climb by 9 percent in 1971. A large number of economists who don't share the Administration's optimism think the 1971 increase in the GNP will be in the 7 to 7.5 percent range at best.

The Administration stepped up its attack on workers' wages in February when Nixon suspended the Davis-Bacon Act, which requires that the prevailing wage be paid on all federal or federally assisted construction.

As confusion and furor arose over this action, the President reinstated the law but, at the same time, established the Construction Industry Stabilization Committee and gave it a mandate to limit wage settlements in the building trades to 6 percent.

Last month, the third "inflation alert" by the CEA continued the concentration of fire on wages, attacking the Steelworkers' agreement with the container industry as inflationary and calling on the union to settle for less in this year's negotiations with the basic steel companies.

This adjustment of "tactics" by the Administration was branded by AFL-CIO Pres. George Meany as a move to impose a "low-wage economy" on the United States. In testimony before a Senate Banking subcommittee recently, Meany summed up the Administration's record this way:

"Instead of positive actions to turn the economy around from stagnation to sustained and rapid expansion, the Administration has given the American people a diet of rosy predictions that have not been achieved.

"Instead of directing its attention and policies to real problems in the economy, the Administration has tried to make workers in general—and construction workers in particular—the scapegoat. . . .

"We want inflation ended. We want full employment restored. We are prepared to sacrifice to meet these goals—as much as anyone else, for as long as anyone else. But we will not be the scapegoat for the economic mess created by this Administration's ill-conceived 'game plan'."

'I Can See Without Them!'

A New Loophole?

ALTHOUGH THIS TAX GIVEAWAY is being labeled and merchandised as a means to promote economic expansion and improve the administration and enforcement of the tax laws, we are convinced that it will not serve any of those causes. Rather, it is merely another in a series of efforts by the Administration to heap more of the tax burden on the shoulders of wage and salary earners, and redistribute still greater shares of the nation's income and wealth to those who need it least.

This pattern was set soon after this Administration took office. It has been followed ever since.

In September 1969, with tax reform as the claimed objective, the Administration proposed a $1.6 billion corporate tax cut and recommended a substanital trimming of the House-passed tax-reform measures to bring tax relief to those of low and moderate income.

In May 1970, the nation's balance of trade was used as the Administration's excuse to advocate a corporate tax bonanza of up to $1 billion—the so-called Domestic International Sales Corp. proposal.

In July 1970, curbing inflation and abating pollution were the veils for legislative proposals to postpone scheduled reductions in federal excise (sales) taxes and to put a new tax on leaded gasoline —taxes borne entirely by the consumer.

Throughout its tenure, Administration spokesmen have launched trial balloons, threatening new consumer taxes, such as the so-called value-added tax, or new corporate tax giveaways such as the reinstatement of the investment tax credit.

THE DEPRECIATION ruling was announced in January, only weeks after the President vetoed a bill passed by both houses of Congress to provide federal funds for the creation of public-service jobs for the long-term unemployed and seriously underemployed; it came only weeks after the President vetoed congressional appropriations for housing and urban development; and only weeks after he vetoed funds for education.

This proposal boils down to the addition of a new loophole in the tax structure. The benefits, in the main, will flow to the larger and wealthier businesses. And, like most tax incentives, large amounts of public revenues will be totally wasted, since businesses will receive this tax reduction, whether they increase their rate of investment in machinery and equipment, decrease it, or carry on as before.

In its most basic sense, every dollar of taxes given away to business and industry is a dollar more that must be paid by someone else, or a dollar's worth of public facilities and services that are foregone. In the main, that "someone else" is the American wage earner. He now pays more than his fair share of taxes and increasingly finds it difficult to convince himself that he's getting his money's worth.

The Treasury's ruling would add to the unfair tax burden that is now borne by middle- and low-income taxpayers. It would not only add a new loophole to the federal tax structure; it would also provide a regressive shift in income, adding to the income-shares of business and major stockholders while reducing the share that goes to the vast majority of Americans.

—From an AFL-CIO statement at a Treasury Dept. hearing on accelerated depreciation.

A Word Edgewise:

Red China's New Mood Based On Economics, Not Ping-Pong

By John P. Roche

IT IS ALL VERY WELL to ring the church bells because Chou En-lai indicated to visiting ping-pong players that a "new page" could begin in the relations between Washington and Peking. Predictably, Sec. of State William Rogers has upped the stakes by predicting a "new chapter" and probably before long there will be a whole new book in the offing. Any sane person welcomes, of course, the possibility of normalizing relations with a nation of 800 million people.

At the same time, several factors must be taken into consideration before we begin dancing in the streets. The first is that any moves by Peking toward detente with the United States have been based on a cold-eyed reading of Chinese national interest.

Chou En-lai and the marshals of the People's Liberation Army have not been converted to Quakerism. With the Soviets on their back, and after undergoing the appalling convulsions of the Great Proletarian Cultural Revolution, a rational Chinese Communist leadership must make up for lost time. As they read the calculus of interest, the men in Peking realize that they need us far more than we need them.

Why? Here we come to the second vital consideration. They do not need us for ourselves. It is not that we are holding the vital island of Taiwan out of their reach—Taiwan has only symbolic significance. It is not that we have kept them out of that center of international decision-making, the United Nations—they know a talk-shop when they see one.

No, the men in Peking need the United States for an entirely different reason, one that for some reason has hardly been mentioned in discussions of the ping-pong demarche. We hold the keys to Japan.

Japan is the only Asian "great power." The overcrowded, polluted island nation has the third largest gross national product in the world, surpassed only by the Soviet Union and the United States. Without underestimating the internal reasons for this fantastic achievement, it has in considerable degree arisen from the fact that Japan has been, since World War II ended, in effect an American protectorate. In practical terms, this has meant that trivial amounts are spent on defense: around 1 percent of GNP.

As the Japanese economy has grown (in a highly protected environment), more and more problems have arisen with the United States and other industrial states. The recent imbroglio about textiles is one symptom. The Japanese have asked us to abide by the principles of free trade while at the same time engaging in wide-ranging restrictions on U.S. enterprise in Japan.

The men in Peking know this and also appreciate the extent to which American "protection" has offended traditional Japanese patriotism. Chou and his colleagues, looking around them at the economic shambles that Mao Tse-tung generated, would rationally look across the Sea of Japan to another model of economic development.

IN THE 1930s, the Japanese attempted to impose a "co-prosperity sphere" on China and Southeast Asia. Now the Japanese are in no position to impose anything, but the concept must have an independent appeal for the Chinese Communists. (There is interesting support for this from an odd coincidence: most of the Zaibatsu, the big businessmen, opposed the invasion of China. One huge firm was, however, favorable, and this is the outfit that Peking has been flooding with favors in recent months.) A Peking-Tokyo axis would radically alter the world balance of forces and hence the Soviets are obviously terrified at the prospect.

Maybe we should be upset too; maybe not. There are pieces on the board that must be accounted for before one can bring in a hard verdict.

However, let us at least discuss them and not talk as though the only matters at issue between Washington and Peking were the marginal problems of recognition, the status of Taiwan, and Red Chinese membership in the United Nations. The crux of the whole affair is our policy towards Japan.

Job, Income, Decent Home:

Nation's Priorities Must Include Basic Objectives of Workers

The following is excerpted from a recent address by AFL-CIO Sec.-Treas. Lane Kirkland to the Citizens' Housing and Planning Council of New York.

THERE IS—OR SO I READ in the book reviews—a simple, barefoot, homespun law professor at Yale who is peddling a rather misty vision of a green new world called Consciousness III (Roman numerals, of course)—a world where people don't worry about such vulgar things as making a living or paying off the mortgage. His book may or may not be "greening" America, but the sales and royalties must surely be greening Professor Reich.

Far be it from me to knock his pitch. As they say uptown, any man who invents a new hustle can't be all bad.

But the world that I want to talk about is the one seen, not from the Yale Faculty Club, but from downtown New Haven, Brooklyn and the Bronx, Chicago, Minneapolis and Seattle and all of the places where plain people work and struggle to make ends meet.

And in that world, the oldest and most durable ingredients of the American dream remain as always—a good job and a nice house in a pleasant neighborhood. That is the then, now and future craving of the American working man, young and old, black and white—and he doesn't give a damn who calls it materialism.

A place of one's own is what most workers struggle all their lives to get and to keep. It is the framework of their family life, the reward of their sacrifices, the repository of their savings and the keystone of the pride and independence that the uncomplicated, unalienated American treasures. Disregard or trample on that premise, and you will soon find out what alienation really is. Any national policy or plan for dealing with the social ills of this nation that fails to take it into full account will court disaster.

And I suggest to you that no failure of social policy is so glaring and obvious to the rank and file of the American people than our abject failure in the field of housing.

Twenty-two years ago, the Housing Act of 1949 established a national housing goal of "a decent home and a suitable environment for every American family." No serious effort, commensurate with the rhetoric, was ever made to fulfill that goal.

Nineteen years later, in the Housing and Urban Development Act of 1968, Congress set a 10-year goal of 26 million additional dwelling units, including at least 6 million subsidized units for low- and moderate-income families. But, as you know, instead of moving toward an average annual rate of 2.6 million units, residential construction has lagged far behind.

The average citizen may not know the full dimensions of this failure, but he feels its effects—in soaring rents, in environmental deterioration, in growing congestion, in social tensions and in jangled nerves and depleted purses. And, if he has not yet become a total cynic, he wonders why all the brains in the richest country in the world can't do something about this mess.

The fact is that government policy has been effective—to the wrong ends and for the wrong people. Jacking up interest rates to a 100-year high is a rational policy with predictable results: the further enrichment of money-lenders and the depression of the housing industry, among others. Restrictive monetary and fiscal policies were logical means toward an inevitable end: a recession with rising unemployment.

Promoting private accumulation, through tax loopholes, at the expense of public investment works very efficiently to assure the decay of municipal facilities and urban life.

The political process has not broken down; it has simply installed in power a combination of forces with a wrong set of prioritites.

I can think of no single program that would more effectively counter this trend and more dramatically improve the quality of our lives—esthetically, socially, morally—than the construction of a specific quantity of additional new dwelling units in a specific quantity of years. The quantities here are, respectively, 26 million and 10.

ACHIEVING THIS GOAL would not only be a boon to the millions of our countrymen who are ill-housed. It would not only generate new jobs for the unemployed and open the way to new advances toward racial and social justice. It would also enhance our political health by strengthening confidence in the capacity of democratic government to see, to act and to do. And by demonstrating that one great social problem can be solved, it would help to reduce the apparent scale of obstacles to the solution of others.

It is not likely that we will succeed in the goal of a "decent home and a suitable environment for every American family," if simultaneously we fail in the goal of a decent job at decent wages for every American worker, or the goal of a decent education for every American to the maximum of his ability, or the goal of adequate health care, regardless of ability to pay.

With all the faddish talk about ecology—and the labor movement has a record of commitment and work in that field long before it became fashionable elsewhere—we must not forget some of the basic elements of human ecology in a democratic society. Central among those elements are a job, an income and a decent home.

Facilities Inadequate:

Quality Child Day Care Vital To Mothers Who Need Work

FULL-RANGE, quality child care is the key to letting mothers who want and need to work, train for and accept jobs, rather than depend on public assistance, two labor legislative representatives declared in a network radio interview.

Calling for passage of the bipartisan Child Development bills now pending in the House and Senate, Kenneth Young, AFL-CIO assistant legislative director, and Jane O'Grady, Washington legislative representative for the Clothing Workers, stressed that present facilities can handle little more than 10 percent of the children in need of care during their mothers' working hours.

Mere "custodial care"—putting children "in a little room with TV"—falls short of the "educational, nutritional, social and health services" so vital in the pre-school years, they asserted.

Miss O'Grady said that without quality day care, much of the potential value of manpower training programs "goes down the drain." She said the Clothing Workers have demonstrated the effectiveness of full-range day care for both working mothers and their children in the union's pilot centers in the Baltimore region and Chicago, which now care for some 1,000 children of mothers who work in clothing factories.

But, she added, unions and other private groups can't hope to meet the growing demand alone.

"THIS MYTHOLOGY of 'idlers on the welfare rolls' " just doesn't stand up to the facts, when mothers have a chance to work and know that their children will get quality care in a safe facility, she declared.

Young said there is growing realization in Congress that "emphasis just on putting mothers to work . . . isn't the way to go," and that "the real investment has to be in the child." He said that leaving children "out on the streets" without proper attention . . . even though the mothers earn some sort of income," only shapes "another generation of economically disadvantaged children who are going to be real problems in society."

Miss O'Grady and Young appeared on Labor News Conference, produced as a public service by the AFL-CIO and broadcast Tuesdays on the Mutual Broadcasting System. They were questioned by Robert Barr of Fairchild Publications and Harry Conn of Press Associates, Inc.

By Press Associates, Inc.

ON JUNE 26, Arnold Ordman, general counsel of the National Labor Relations Board comes to the end of his term there. On Aug. 27, the same thing happens to board member Gerald Brown. Both are Democrats.

These are dates and political designations that have not escaped the notice of the U.S. Chamber of Commerce which sees them as glorious opportunities for a businessman's take-over of the board.

In a recent issue of the Chamber's "Washington Report" what amounts to an open appeal to the Nixon Administration to appoint officials who will bring an end to what the Chamber regards as a pro-labor board is put forward boldly and blatantly.

How much truth is there in the long propagandized claim that the NLRB has been notoriously pro-union? One good way is to check the board's past decisions against the attitude taken by the courts in confirming or reversing them. The record is clear.

- In fiscal 1970, the NLRB's position was sustained "in whole or in part," in 83.9 percent of the cases that came before the U.S. Court of Appeals. The record in 1969 was 81 percent and in 1968 was 84.7 percent. In the first six months of fiscal 1971, the record was actually an overwhelming 90.7 percent.
- The record before the U.S. Supreme Court was equally good. In fiscal 1970 the Supreme Court handed down decisions involving five NLRB cases. Of these, two were affirmed in full, two were remanded to the circuit courts for further consideration and only one was set aside.

Surely this is not a record justifying the harsh statement of the Chamber of Commerce which said: "Pro-union appointments made by previous Administrations have made this agency notorious. As a prominent TV columnist noted: 'It's about as impartial as a branch of the AFL-CIO.' "

If that is the case then the federal courts also are "a branch of the AFL-CIO," which is patent nonsense and evil propaganda to boot.

On the other hand what is the record of the two NLRB members already appointed by Pres. Nixon?

Ralph E. Kennedy, a former NLRB regional director in southern California, has been on the board only a short time, has participated in a limited number of cases and it would be unfair to come to any conclusions as to the positions he will take in the future.

Chairman Edward B. Miller, one-time management lawyer, however, has been on the board almost a year and has participated in hundreds of cases. His dissents when in the minority and his reasoning when in the majority have developed a pattern of thinking and attitudes that justifies a judgment of his position.

WHEN 1970 ENDED, Miller already had filed numerous dissents that showed his thinking. He disagreed with his colleagues, for example, in cases where they held that workers had been fired for union activity rather than for legitimate cause.

The record in 1971 is equally revealing. In one case he was sympathetic to the right of a company not to disclose its financial records in disagreement with two other colleagues. In a second case he upheld the right of an employer to bar "undesirable literature"—read pro-union—from its premises. In a third case he accused his colleagues of "selecting" testimony and then using it to reverse a trial examiner who turned in a pro-employer finding.

Of late, Miller has begun to find himself in the majority with the dissents coming from older members of the board, notably Gerald Brown who goes out of office this summer.

Thus the NLRB already is responding to the new tone brought to it by its chairman. That it will continue to do so is all but certain with the upcoming appointments by the President of a general counsel and a third board member. The U.S. Chamber of Commerce really needn't worry, but organized labor has plenty of reason to.

THE POTENTIAL VALUE of job training for mothers "goes down the drain" unless coupled with full-range, quality child care facilities, Jane O'Grady, legislative representative for the Clothing Workers, and Kenneth Young, assistant director of the AFL-CIO Dept. of Legislation, declared on Labor News Conference. They were questioned by Harry Conn, left, of Press Associates, Inc., and Robert Barr, right, of the Fairchild Publications.

How to Buy:

Food Prices Expected to Rise, But Farmers Unlikely to Gain

By Sidney Margolius

MANY PEOPLE WERE SHOCKED when Agriculture Sec. Clifford Hardin recently told a press conference, "I hope the housewife can expect higher food prices this year." Hardin explained that he expected farmers would benefit.

But while many were shocked to hear a leading official hope prices would go up more even after the recent big jumps, David Angevine, a consumer co-op expert, did something about it. Angevine, who had attended the press conference, made his own comparison of farm and retail prices. He found that higher retail prices do not necessarily mean that the farmer does get more money. Often the food processors and retailers pocket the difference.

From 1961 through 1970, whenever consumers paid more for steak, potatoes, oranges, corn flakes, bread, canned tomatoes, frozen peas, and many other items, farmers did not generally receive more for these crops, Angevine found.

While higher consumer prices and higher farm prices tended to move together in the case of a few products—pork and milk, for example—the connection even there was far from precise.

The Agriculture Dept.'s economic research service regularly figures the average retail price of 45 common foods and how much farmers get for each—called "farm value." For example, late in 1970, consumers paid 58 cents for a half-gallon of fresh milk, and dairymen got 29.2 cents of that. Consumers paid 33.5 cents for 12 ounces of corn flakes, and farmers got 3 cents for the ingredients.

In the case of beef, you might expect the price of round steak, chuck roast, and hamburger to rise or fall as the price of choice steers rises or falls. Not so. The Agriculture Dept. figures show that retail beef prices rose during 23 quarterly periods in 1961-71, although the farm value of beef had gone up during only 18 of those periods. Five times while retail prices were rising, cattlemen's prices dropped—22 percent of the time, Angevine reports.

In produce, prices are even more likely to rise even when farm prices do not. One out of four times during the past 10 years when farm potato prices dropped, retail prices went up anyway. Two out of five times when orange prices actually had dropped, store prices rose.

Similarly, for grain products like bread and corn flakes, in over half the instances in which you paid more, the farmers were getting no more or even less.

Hardin is not the only government official who has condoned or even encouraged higher food prices on the mistaken notion that the farmer automatically benefits. Even some farm-organization leaders have sought to rally followers by claiming city consumers are paying too little for food.

Food processors, handlers, wholesalers, and retailers have also tended to pit farmers against consumers. Like Wimpy, they keep suggesting to farmers and consumers, "Let's you and him fight."

For if consumers really believed Hardin's theory that the consumer's loss is the farmer's gain, consumers presumably would focus their complaints on farmers, not the middlemen who actually take the lion's share of your food dollar. Currently the middlemen get 67 cents of your dollar and the farmer only 37 cents compared to the 50-50 division back in the 1940s.

What has happened to pork prices is especially revealing. Despite the fact that farm prices for hogs went down 9 percent from 1961-70, retail prices went up 21 percent, Angevine points out.

SIMILARLY CONSUMERS recently have been paying 31 percent more for oranges even though growers are getting 24 percent less than 10 years ago.

One fact is certain: you are facing a summer of new food price increases. Prices probably are going to be the highest on record. Hardin's comment again shows that the government is unwilling to take any real action to hold down rising food prices even though these costs have been a main cause of labor unrest.

SUPERIOR HONOR AWARD medal is pinned on George P. Delaney by Under Sec. of State John N. Irwin II at a reception honoring Delaney on his retirement as Special Assistant to the Secretary of State and Coordinator of International Labor Affairs. Delaney, a former member of the AFL-CIO Dept. of International Affairs and U.S. Worker Delegate to the International Labor Organization, also received the Distinguished Honor Award from the Agency for International Development.

Standards Proposed:

Shatter-Proof Lenses Reduce Eye Injuries

A SERIOUS DANGER to millions of Americans is right in front of their eyes, and they don't even see it—rather ironic, since the danger is the glasses they wear in order to see.

According to the National Safety Council, each year thousands of people receive major and minor eye injuries—not to mention those who become blind—as a result of their eyeglasses shattering from various types of blows. In some cases, it has been baseballs shattering the lenses. Other times stones have smashed the glass and sent sharp edges into the victim's eye. Injuries are occurring on the job, at home, at school, and during recreational activities.

The accidents themselves are unfortunate. But what makes them really tragic is that they might have been prevented or the injury lessened had the victims been wearing shatter-resistant eyeglasses.

Shatter-resistant lenses are laminated glass, heat-tempered glass, or plastic that do not shatter upon impact, as do the crown-glass lenses of regular eyeglasses and sunglasses. If the blow is heavy enough, the heat-treated lenses will break, like safety glass in a car, but not so as to injure the wearer.

The Society for the Prevention of Blindness says that thousands of people in the past few years have avoided serious injury to their eyes as a result of wearing these safety-type glasses.

The fact is, however, that 100 million Americans wear prescription eyeglasses, of which only a fourth are shatter-resistant. The Food & Drug Administration has proposed a regulation to remedy this huge injury potential. It would require all new eyeglass lenses, including prescription and non-prescription sunglasses, to be shatter-resistant.

These lenses would have to meet a standard impact test: a 5/8-inch-diameter steel ball weighing 16 grams is dropped on the lens from a height of 50 inches. A properly manufactured, shatter-resistant lens will resist the blow, bouncing into the air unbroken.

Much to the dismay of concerned organizations and individuals, the FDA regulation has not been approved, although the following states have passed their own legislation on shatter-resistant lenses: Alaska, California, Connecticut, Georgia, Massachusetts and Arkansas. Therefore, soft-glass lenses continue to be sold and used.

UNTIL THESE LENSES are legally declared unsafe, the public will have to serve as its own safety valve, requesting shatter-resistant lenses in their new eyeglasses and sunglasses or replacing the eyeglasses and sunglasses they are now using, the Safety Council suggests. And if the regulation becomes effective, people will still have to replace their present unsafe glasses.

Even with shatter-resistant lenses, eyeglasses can still harbor danger if the frames are made of cellulose nitrate, an explosive material when exposed to heat, say when the wearer is smoking a cigarette or cooking. American firms no longer make cellulose nitrate frames, but use a less combustible material, called cellulose acetate.

However, thousands of cellulose nitrate frames—especially sunglass frames—are imported into this country each year. Again, people will have to be their own safeguards, requesting the frames not be made of cellulose nitrate.

When ordering new glasses, including prescription and non-prescription sunglasses, specify shatter-resistant lenses and flame-retardant frames. The cost will be minimal and your eyesight may be saved.

Soup to Nonsense:

What We Need Is a New Batch Of Saucy Four-Letter Words

By Jane Goodsell

FOUR-LETTER WORDS have become so commonplace that they no longer qualify as true blue four-letter words. They have totally lost their power to shock. A pity. There is, I think, a place in this world for strong expletives and unprintable language.

On occasion, people have an emotional need to express themselves in terms not commonly used in polite society.

It is a good way of letting off steam. There may even be a correlation between the upsurge of physical violence and the devaluation of four-letter words. When people can express aggression verbally, they may be less likely to hit somebody else over the head.

We inherited from our ancestors a meager supply of unprintable words, and we have squandered them recklessly. By over-using them, we have drained them of their vitality and I see little hope of charging them up again.

What's needed are some new bad words to take their place, and I herewith offer some tentative possibilities along with suggestions for infusing them with ribald overtones:

Expletives: Tush! Fiddlesticks! Poppycock! Balderdash! Flapdoodle! Gadzooks! Yoicks; These innocent exclamations can be upgraded into unprintable words by the simple technique of not spelling them out but merely hinting at them. Like so: T——H! F————S! P————K! Any word printed thusly looks obscene and, ipso facto, comes to be accepted as an obscenity.

Graffitti: Probably there has always been a certain sameness to washroom walls. Once you've read one, you've read 'em all. Still, they had a certain piquancy back in the days when a public washroom was almost the only place you saw such words spelled out in their entirety. Today, with those words showing up with monotonous regularity in Book-of-the-Month-Club selections, the scrawls on washroom walls rate nothing but ho-hums.

FOR A REFRESHING CHANGE I'd suggest the following substitutions: The Cat's Pajamas! Odds Bodkins! Jumpin' Jehoshophat! Heavens to Betsy! Twenty-three Skiddoo! My Stars and Garters! In no time at all, these expressions should be firmly established as crudities which are unsuitable to be uttered in mixed company.

Of course, nothing lasts forever. In time, the new bad words would become as trite and hackneyed as the old Anglo-Saxonisms are today. But then we could drag the classic four-letter words out of mothballs and they'd seem to us just as bad as new.

Protection Strengthened:

Challenge to Amtrak Clarifies Job Rights

Railroad labor failed to win a delay in the takeover of the nation's passenger train service by a quasi-public corporation, but it did gain stronger protection for the workers affected.

The National Railroad Passenger Corp. went into operation as scheduled May 1, operating 182 trains connecting 300 cities. The corporation, formerly called Rail-pax, will be known as Amtrak.

Amtrak dropped 178 passenger trains, which could cost the jobs of 16,000 to 25,000 rail workers.

The AFL-CIO Railroad Employes Dept. and 17 rail unions sought to postpone the immediate Amtrak takeover for six months in hope of securing greater severance protection for laid-off workers.

The U.S. District Court and the U.S. Court of Appeals in Washington both denied the request for postponement. But the Appeals Court laid down conditions that strengthen job protections, said Attorney William Mahoney, who represented the unions.

Later interpretations by the Labor Dept. also strengthened job protection provisions and plugged some of the loopholes, Mahoney said.

U.S. District Judge Howard F. Corcoran, in turning aside the union's request for postponement, said that Labor Sec. James D. Hodgson had given laid-off employes a better deal than the law requires "by extending the protective period from four to six years," and by inserting "burden of proof provisions" favorable to employes.

A worker furloughed as a result of Amtrak is entitled to another job from his employer, or up to six years of full income.

Judge Corcoran noted that Hodgson's arrangement "allows train discontinuances by railroads and reassignment of affected employes pending the outcome of arbitration."

But, he claimed, Hodgson "fully protects such employes during the arbitration period and further provides that any employe improperly displaced, dismissed or reassigned, will be made whole."

The federal court rulings came the day before the Amtrak system went into effect, and the unions did not take the case to the U.S. Supreme Court.

Senate Majority Leader Mike Mansfield (D-Mont.) sought to delay the Amtrak takeover, but failed to get the unanimous consent he needed for consideration of a bill postponing it.

The unions also were joined in their fight by the National Association of Railroad Passengers, a group opposed to the dropping of specific trains.

Labor Backs Bill to Finance Ethnic Studies

A Senate bill to help finance ethnic heritage studies centers at various universities was endorsed by the AFL-CIO as a means of focusing scholarly interest on "one of the most important but most educationally neglected aspects of American life."

The federation endorsed a bill sponsored by Sen. Richard S. Schweiker (R-Pa.), which specifies that the centers must be "multi-ethnic" in their concern—dealing with diverse groups rather than a single part of the nation's heritage.

"This nation has been a vital amalgam of the cultures of a multitude of ethnic groups," the statement said. "No one is in a better position to know this than the American labor movement which includes in its ranks workers who have descended from virtually every ethnic background in the world. The labor solidarity which we have achieved has been welded from the greatest conceivable diversity."

But the AFL-CIO emphasized that funds for the program should be "new money" and not diverted from existing federal aid to education programs.

Canada's NDP Chooses David Lewis as Leader

Ottawa—Canada's New Democratic Party elected a new leader, reaffirmed its support for organized labor and rejected a minority group bid to have it adopt radical, far-left policies.

Delegates to the party's convention here chose David Lewis, 61-year-old deputy leader, to succeed the retiring 66-year-old T. C. (Tommy) Douglas, who had headed the party since it was founded 10 years ago with the strong support of trade unionists. Lewis defeated four other candidates. He is a member of Parliament and an attorney who has represented a number of unions in Canada.

Douglas, in his final report as leader, said state ownership of monopolies and key sectors of the economy was only one form of social ownership, and that in a social democracy "there must always be a role for private ownership where competition is sufficient to prevent exploitation of the public and employes."

The convention called for increased government control over resources industries, and increased public investment in them, but it rejected a move to have the party commit itself to nationalization of all resource industries.

It also rejected a bid to give the French-language province of Quebec the right to "self-determination"—seen by many as separatism—but adopted a policy of a united Canada within which no province would be forced to remain against the will of its residents.

It pledged an NDP federal government to enact a labor bill of rights, ensuring free collective bargaining, the unfettered right to peaceful assembly and picketing, the right to bargain on all matters arising from technological change and automation, and some strike rights during the term of a collective agreement.

Only one speaker who was not a delegate was invited to address the convention: Pres. Donald MacDonald, of the Canadian Labor Congress. He reminded the delegates that the CLC was instrumental in the creation of the party.

About 527 of the total 1,683 registered were delegates of local unions and other labor organizations.

TRADE UNIONISTS from Latin America are congratulated by Rep. Dante B. Fascell (D-Fla.), chairman of the House Inter-American Affairs subcommittee, on completing the six-weeks training program of the American Institute for Free Labor Development.

TWUA Urges Steps to Curb 'Brown Lung'

New York—The Textile Workers Union of North America scored an industry management group for merely analyzing byssinosis, or "brown lung" disease, instead of taking immediate step to safeguard textile workers from the respiratory ailment.

"Surely the time has come to concentrate our efforts on preventing workers from being exposed to this disease," said Textile Workers Pres. William Pollock.

"Whatever the specific causative agent may turn out to be, it is clear that workers are being diseased as a result of their exposure to cotton dust.

"Engineering controls are available to minimize exposure," Pollock said.

"We call upon the textile industry to install effective control measures to remove cotton dust from the plant environment. The time to act is now."

Pollock's comments were prompted by the release of a byssinosis study sponsored by the American Textile Manufacturers Institute.

The study, conducted by the Industrial Health Foundation, concluded after 16 months that there are respiratory problems peculiar to the textile industry.

"We welcome the association's belated realization of this fact which was clearly established in scientific articles by Dr. Arend Bouhuys in the Annals of Internal Medicine (August 1969) and Archives of Environment Health (November 1969).

"The question now is what will the textile industry do about it," said Pollock, adding that it appears the management group is interested in a further study to prove or disprove the theory that "an enzyme, or combination of enzymes found in dust from raw cotton . . . is the specific causative agent in byssinosis."

The textile union president recalled that the AMTI rejected an invitation from the union two years ago to cosponsor an independent study of brown lung disease.

Pollock said the respiratory disease presents a serious on-the-job hazard to more than a half-million textile workers who are exposed to cotton dust each year.

Broadcast Employes Picked by FAA Unit

Oakland, Calif.—The Broadcast Employes & Technicians won a representation election in a unit of Federal Aviation Agency employes at the international airport here.

NABET polled 18 votes to 7 for no union and 1 vote for the unaffiliated National Association of Government Employes.

Role of Unions Stressed In Aiding Latin America

The 35th graduating class of the American Institute for Free Labor Development was advised that labor alone cannot solve the problems facing Latin America, but "it can and should play a major part in the task of improving living standards."

The 34 trade unionists from 13 Latin American countries heard Rep. Dante B. Fascell (D-Fla.) pledge U.S. readiness to work with them "man to man, union to union, and nation to nation." He noted that programs such as the AIFLD institute in Front Royal, Va., help, but said only Latin Americans can find solutions to Latin American problems.

Fascell, who is chairman of the House Inter-American Affairs subcommittee, outlined the problems facing Latin America—unemployment, lack of capital, too-narrow an industrial base, and inadequate distribution of income.

He suggested that unemployment, "Latin America's most pervasive and explosive problem," seems "uniquely susceptible to solutions based at least in part on the efforts of a free democratic labor movement."

Maximo Falla Aristondo of Guatemala, responding for the class, asserted that an "intelligent labor action plan" must be implemented at once to meet the urgent needs of economic and social development in Latin America. He said that what the class had learned from the U.S. labor movement would be "of great value in the pursuit of social justice that presently stirs Latin America."

Pres. Joseph Beirne of the Communications Workers, who is secretary-treasurer of AIFLD, spoke at the luncheon honoring the graduates. He expressed the hope that they would use the "brotherhood and solidarity "experienced during the six weeks at Front Royal to develop the understanding and cooperation necessary to carry out their struggle for "genuine social justice."

Stressing the brotherhood of workers, Beirne said, "regardless of where we come from we have one thing in common: we are one man searching for a better life."

1971 Union Wage Gains Average 8.4 Percent

Major collective bargaining settlements won by unions during the first three months of 1971 contained wage increases averaging 8.4 percent over the life of the contract, the Bureau of Labor Statics reported.

The average was higher than the 7.7 percent figure recorded in the first quarter of 1970 but lower by one-half of 1 percent than the average increase for all of 1970, the Labor Dept. agency said.

This year's settlements affected 750,000 workers in the railroad, can, petroleum, auto and farm implement industries.

Major contracts covering more than 4.75 million workers are due to expire this year.

BLS said the average size of increases in manufacturing industry settlements was about the same as in 1970 at 6 percent, but settlements in nonmanufacturing were lower at 11.3 percent. The report said the latter figure partly reflected the limited amount of construction industry bargaining in the first quarter.

The BLS said only five major settlements covering 14,000 workers were reported in construction. Last year, relatively large settlements for nearly 700,000 construction workers contributed heavily to the slightly higher nonmanufacturing average for 1970—11.5 percent—according to the BLS.

Adding fringe benefits to wages, the average rate of increase this year to date was 8.5 percent as against 9.1 percent for all of 1970. First-year changes considered alone averaged 10.5 percent in the first quarter of 1971 against 13.1 for all of 1970.

Nearly two of every three workers covered by the agreements received first-year wage and benefit improvements between 7 and 9 percent.

Considering total changes averaged over the life of contracts, about half the workers got boosts between 9 and 11 percent. About 8 percent received increases of 11 percent or more and 7 percent got less than 5 percent, the report showed.

AFGE Official Named To Health Benefit Panel

Clyde M. Webber, executive vice president of the American Federation of Government Employes, has been named to a three-year term on the advisory panel for the federal employes health benefit program.

The appointment was announced by the U.S. Civil Service Commission, which administers the program.

House Rollcall on Public Works Jobs

The AFL-CIO strongly supports the $2 billion accelerated public works program passed by the House Apr. 22 to provide jobs and needed facilities in communities with high unemployment.

The key vote was the 262-128 defeat of a Republican motion to recommit the bill with instructions to delete the entire accelerated public works section.

On labor's scorecard, the 218 Democrats and 44 Republicans who opposed the recommittal motion cast Right votes (R), while the 10 Democrats and 118 Republicans who voted to kill the program were Wrong (W).

One-Year Compromise:

Congress Extends Controls Authority

Congress approved a compromise one-year extension of the President's authority to impose wage, price and rent controls and added language discouraging—although not prohibiting—its application to a single industry.

The House accepted intact a Senate-passed version of the extension bill which continued the stand-by control authority until May 1, 1972.

This was a compromise between the six-month extension that had been recommended by the Senate Banking Committee and the two-year extension supported by the Nixon Administration.

The new language added to the legislation prohibits the President from invoking controls on a single segment of the economy unless he determines that wages or prices in that industry have increased at a rate "grossly disproportionate" to the economy as a whole.

It also directs the President to take into account in making his determination such "mitigating factors" as the seasonal nature of employment and the rate of unemployment in that industry.

Since the construction industry is marked both by seasonal employment and a high jobless rate, the language could be read as an implied rebuke to the President's action, but stopping short of voiding his imposition of wage curbs.

Sen. William Proxmire (D-Wis.), whose subcommittee held hearings on the legislation, told the Senate his panel had "serious reservations" over applying controls to a single industry.

"Workers subject to wage controls have no protection against a continued rise in the cost of living," he noted.

The original House bill would have had the practical effect of ending the President's authority to impose controls as of Sept. 29, even though it purported to be a two-year extension of his authority.

That is because the House version would have ended the President's authority to invoke controls six months after he made use of it—unless Congress voted a subsequent extension. Since the President invoked this authority in his Mar. 29 executive order on construction wages, the six-month limitation in the House bill would have started running from that date.

The House, however, chose to go along with the Senate version rather than insist on a House-Senate conference to resolve the differences.

In addition to the wage, price and rent control powers, the legislation also extends the President's authority to set ceilings on interest rates paid by banks and savings and loan associations, and to initiate a program of voluntary credit controls.

This is the first year the Administration has endorsed any stand-by control legislation. Previously, the White House said it didn't want such powers, wouldn't use them, and implied that it was all a Democratic trick to pass the blame of inflation to the President.

WARM WELCOME to legislative conference of the Textile Workers Union of America is extended to Rep. John H. Dent (D-Pa.), chairman of the House Labor subcommittee dealing with minimum wage legislation. He is greeted by Beverly Kline, left, of TWUA's Carlisle, Pa., local, and Sandra Stem of the Easton, Pa., local. At right is Bill DuChessi, the union's legislative and COPE director. This is the 22nd year the union has brought local leaders to Washington to meet with senators, congressmen and other public officials.

Study Finds Consumers Pessimistic on Economy

Ann Arbor, Mich.—Lower family income, unemployment, inflation and general dissatisfaction with the social as well as economic climate were cited by University of Michigan economists as reasons for depressed consumer sentiment.

In its latest "Quarterly Survey of Consumer Attitudes & Inclinations to Buy," the university's Survey Research Center says the average American is far from being optimistic about 1971.

"With growing incomes and rising ability to buy, further gains are expected, but the continued low level of consumer sentiment suggests that they will be moderate," the report stresses.

"The savings rate will remain fairly high during the next six months."

"Nearly one-third claimed to be worse off financially than a year ago, including some upper-income families," the survey noted.

Inflation and unemployment were mentioned frequently by those surveyed as reasons why business conditions will not be good during the next year, even though an increased proportion of people expects lower unemployment.

"Some people have become accustomed to higher prices," the report said, "but there is no decline in the extent of inflation which consumers expect during the next year."

The report indicates the housing market will benefit greatly from the widespread awareness of lower interest rates and the resulting increased credit availability with carry-over demand from last year when mortgage money was in short supply.

The consumer evaluation of market conditions for cars remained slightly less favorable than a year ago.

The University of Michigan quarterly survey is based on data compiled from interviews with 1,300 persons representing a nationwide sampling of consumer attitudes.

In addition to measuring consumer expectations and intentions to buy, the survey is designed to explore the reasons for changes in consumer attitudes.

State-County Gains N. J. Hospital Unit

The State, County & Municipal Employes won representation rights for 8,000 employes of 21 New Jersey state hospitals in an election conducted by the state's Public Employe Relations Commission.

The mail ballot election among nursing aides, orderlies, food service workers and others showed these results: SCME 2,326, Communications Workers 703, New Jersey Civil Service Association 626, New Jersey State Employes Association 78, no union 101.

SCME Pres. Jerry Wurf said the election was the largest ever conducted under the state's Public Employes Relations Act. It followed three other union victories in recent months—in Hawaii, Pennsylvania and Washington.

The four elections added 56,600 new members to SCME rolls in the last four months, Wurf said.

Garment Union Bans Work on Asbestos Cloth

New York—Serious health hazards—including the threat of lung cancer—as a result of inhaling dust from asbestos fibers has prompted the Ladies' Garment Workers to order its members not to handle the material.

ILGWU Vice Pres. Henoch Mendelsund said he was "shaken" by medical evidence compiled by the Mount Sinai School of Medicine linking inhalation of asbestos dust with various diseases, including lung cancer.

Mendelsund said the ILGWU is pressing for a government ban on cloth containing asbestos.

"But the wheels of government move slowly," he said. "We're not waiting for them to act. We are instructing our men—for their own safety—not to work with the material."

Mendelsund said that more than 100,000 ladies' winter coats containing dangerous levels of asbestos had been manufactured by members of the union for the 1970 season.

He said some of the same type cloth, with 8 percent asbestos, is still available.

Dr. Irving J. Selikoff, director of the Environmental Science Laboratory at Mount Sinai, said one of five insulation workers dies of lung cancer after years of breathing in dust containing asbestos fibers.

Dr. Selikoff, who brought the hazard to the attention of the union, said that brushing or rubbing a sample coat made of the material produced asbestos levels in the air 10,000 times those normally present.

Chances of recalling the coats were slim, but Mendelsund said the fiber content was listed on a detachable label in the coats.

Dr. Selikoff said letters of warning were sent to the U.S. Food & Drug Administration and to Mrs. Virginia Knauer, special assistant to the President on Consumer Affairs. But no replies from these agencies were received, he reported.

Former AFGE Leader James B. Burns Dies

James B. Burns, a former president of the American Federation of Government Employes, died at his Washington, D.C., home at the age of 77.

Burns, a former attorney with the Veterans Administration, served as AFGE president from 1939 to 1948. He had been a national vice president from 1933—just one year after the union was founded—until his election to the presidency.

Income Gap Diminished For Negroes in Decade

The median income for black families in the United States amounted to only 61 percent of that for white families in 1969, according to the Commerce Dept., even though this income gap had been narrowed 10 percent since 1959.

In that year, the median income for black families stood at little more than half—51 percent—of that for white families.

Surveys by the Census Bureau showed, however, that outside the South, the picture was somewhat brighter. The median income for black families living in the North and West was more comparable to the median income for white families than it was in the South both in 1959 and 1969.

Incomes for Negro families outside the South in 1969 averaged 73 percent of that of whites, as compared with 57 percent in the South.

The median income for Negro families outside the South was highest when the head of the family was under 25 years. For these families the median income jumped from 75 percent of that of whites in 1959 to 107 percent in 1969.

Slightly older Negro families, those with the family head 25 to 34 years of age, were making about 91 percent as much money in 1969 as white families of comparable age. Negro families whose incomes nearly equaled those of whites accounted for a relatively small percentage of all Negro families in the United States.

And while the gap between Negro and white husband-wife families in the North and West is narrowing, the percentage of Negro husband-wife families as a percent of all Negro families in these areas has decreased from 75 percent in 1960 to 67 percent in 1970, the report showed.

The Commerce Dept. reported that even in the North and West—where the relative disparity in median income between Negro and white families was smaller—this trend applies more to husband-wife Negro families than to other types of families most of which were headed by a woman.

Regarding the overall 10-percent decrease in disparity between Negro and white family incomes from 1959 to 1969, the chief of the Population Division of the Census Bureau cited a number of reasons.

Dr. Herman P. Miller pointed to a proportionately larger increase in educational attainments for blacks, meaning more qualified Negroes for professional-technical jobs.

He also noted the black exodus from the South to the higher-paying job areas of the North and West.

"And there has been an increased emphasis on obtaining equal employment rights for blacks," he observed.

"The gains have been most notable for younger blacks, particularly younger husband-wife black families. These families, especially in the North and West, had the greatest relative increases."

The report was based on data gathered from 53,000 households in a one-in-a-thousand sample of the 1960 Census and from approximately 50,000 households in the March 1969 and March 1970 Current Population Surveys.

The median income was defined as the amount dividing income distribution into two equal groups—one having incomes above the median and the other having incomes below that point.

Bonadio Set As Successor To Haggerty

(Continued from Page 1)

ment during the period of its greatest growth.

He was elected business manager of his Lathers local in Los Angeles in 1928, and an international vice president a year later. He became secretary of the Los Angeles Building & Construction Trades Dept. in 1933 and president of the California State Federation of Labor in 1937.

In 1943, Haggerty was elected secretary-treasurer of the state federation — the principal executive post in the organization.

After the AFL-CIO merger, he was named to the same post in the merged state labor organization and was credited with cementing the unity of the trade union movement in California.

He was the first union man to be named to the University of California Board of Regents. And both in California and as head of the Building & Construction Trades Dept., he served on major public service assignments — for government, the trade union movement and private organizations.

During four presidential administrations, Haggerty was the chief spokesman for the nation's construction workers, members of 17 international unions.

Nixon Serves Notice:

Job Measures Face New Threat of Veto

Pres. Nixon served notice that he will continue to veto job-creating bills that exceed his budget proposals and reiterated his belief that the economy is on the rebound.

While expressing confidence that the "long-term effect" of the Administration's economic policies will overcome unemployment, the President indicated he would propose a tax cut rather than direct job-creating programs if the economy remains sluggish.

He has already in effect ordered a cut in business taxes by allowing companies to claim a bigger depreciation allowance on equipment and he defended this as a means of providing needed "incentives" to business which, in time, would result in more jobs.

The President told a news conference that inflation remains a danger and it must be fought both by "responsible" decisions on wages prices and by holding down government spending. Therefore, he said, it will be "necessary" for him to veto "irresponsible spending proposals" by Congress which exceed his budget.

Asked about House Speaker Carl Albert's suggestion that the White House call a national conference on unemployment, Nixon replied that he didn't see anything to be gained by such a conference.

Anyway, Nixon said, unemployment today is "highly regional in its impact," hitting hardest on the West Coast as a result of aerospace and defense cutbacks.

On the forthcoming steel negotiations, Nixon first said the government won't impose itself in the negotiations although it "stands ready to be of assistance." Then he expressed concern over the increased production of steel in other countries and the low level of the U.S. steel industry's profits.

The President's words appeared intended to stiffen the resistance of steel companies to union wage proposals. But business reporters from leading newspapers had already been told at a background briefing that the White House is really not upset about the prospects of an "inflationary" steel settlement.

A high-ranking presidential adviser was widely quoted as telling newsmen that "anyone who thinks the settlement in steel will be less than the can settlement is out of his mind."

Nixon also affirmed a government policy of using devices such as federal loan guarantees to keep major companies from going bankrupt.

He spoke specifically of the problems of Lockheed Aircraft Corp., declaring: "We need a strong airframe producer like Lockheed in Southern California. And if we can save the company, and frankly help it toward better management, we will do so."

WITH THEIR JOBS IN JEOPARDY, New York City workers rally outside the state capitol in Albany appealing for a restoration of funds and programs cut back by Gov. Nelson A. Rockefeller.

N.Y. Workers Seek to Block 90,000 Layoffs

Albany, N.Y.—Nearly 15,000 New York City employes demonstrated at the state capitol here protesting state budget cuts that have threatened the world's largest city with the loss of 90,000 jobs.

The demonstrators, members of a variety of municipal unions, rallied at the New York City Hall before coming here by bus caravan to seek restoration of $760 million in state aid and support an increase in the city's taxing authority.

Among the unions represented were State, County & Municipal Employes, Fire Fighters, the Communications Workers, Teamsters and unaffiliated police groups which make up the New York Municipal Labor Council. The city's Teachers local also was represented.

SCME Council 37 Director Victor Gotbaum and John DeLury, president of the Uniformed Sanitationmen's Association, discussed the employes' demands for nearly two hours with Gov. Nelson A. Rockefeller.

Gotbaum said the meeting produced "nothing definitive," but that Gov. Rockefeller was "deeply concerned" about the city's problems.

"This is the beginning of a fight," he said. "Right now, we are on rock bottom."

Political Action Theme Spurs Arizona Delegates

Tucson, Ariz.—A series of calls for political action to prepare well in advance for the 1972 election campaign, went out to delegates to the annual convention of the Arizona AFL-CIO here.

The convention put heavy emphasis on the need for vigorous drives to register voters in the wake of a state law wiping out the eligibility lists after last November's election.

COPE Director Al Barkan sounded the keynote at the opening session urging a special effort to register 18-year-olds so they can cast ballots in the federal election.

His theme was taken up by Regional AFL-CIO Director Daniel V. Flanagan, who also called for increased organization and additional mergers of federation affiliates as a move toward more effective political activity.

Barkan and Sen. Harold Hughes (D-Iowa) drew prolonged cheers when they told the convention that Pres. Nixon can be beaten in 1972 if labor and other liberal forces work together for victory.

Barkan warned that labor has "just begun" to feel Nixon's anti-union bias but that "the prejudice will be given full sway" if the President is re-elected.

He classed Arizona's Republican U.S. senators, Barry Goldwater and Paul Fannin, as enemies of labor. Fannin, he added, introduces anti-union legislation "every chance he gets."

Rep. Morris K. Udall, only Democrat in Arizona's congressional delegation, introduced Hughes who told the 250 delegates that Nixon's popularity and credibility have now fallen to their lowest points "because of his preoccupation with statistics and unconcern for human beings."

Ann Draper, West Coast union label director for the Clothing Workers, pleaded for political action as a means of getting legislation to combat exportation of the jobs of American workers.

Mrs. Marcella Beatty, executive director of the AFL-CIO women's Auxiliaries, cited the important role women can play in both registration and get-out-the-vote drives.

A convention resolution called on Gov. Jack Williams (R), who recently proclaimed John Birch Day, to designate Sept. 5, the day before Labor Day, as Walter Reuther Day in "remembrance of those American labor leaders who died prematurely during their struggle for racial justice and decent wages and working conditions."

The convention also endorsed the AFL-CIO Executive Council's February statement urging the United States to give Israel "full diplomatic and political support in her efforts to secure a just peace settlement" in the Near East.

State AFL-CIO Pres. Horace Bounds, Vice Pres. Fred J. Brown, and Sec.-Treas. Darwin Aycock were re-elected without opposition.

COPE Regional Director LaMar Gulbransen presented awards to activists in the COPE Women's Activities Division for volunteer service ranging from 100 to 5,000 hours.

About 50 women attended the first Arizona State AFL-CIO women's conference, held concurrently with the convention.

55% of Public Supports Health Security Concept

(Continued from Page 1)

borhood health centers for one-stop complete family medical care and encouragement of group practice.

Neighborhood health centers were favored 77 to 17 percent. The concept of group practice drew a response of 74 percent favorable to only 15 percent negative.

The Nixon program calls for "health maintenance organizations" which might undertake such steps as yearly checkups and medical care. It is far more limited than the Health Security bill's "comprehensive health service organizations," which would provide complete care under one roof.

National Health Security provides strong financial incentives for development of group practices. This is in line with the Harris survey report that "one of the most common complaints people have is that they have to go to many different sources to obtain different aspects of health care."

The poll reported 48 percent of those surveyed had some worries they might not be able to choose their own physician under a federal health care system. Health Security allows freedom of choice by the patient.

Those surveyed thought group practice would enable doctors to treat more patients and was an answer to the doctor shortage.

The Harris survey also showed that families would be willing to pay $208 per family to receive comprehensive coverage. Health Security would cost only 1 percent of the first $15,000 of income—or a maximum of $150 a year.

While 84 percent of the nation's families report they are covered by some form of health insurance, the Harris survey revealed a substantial 33 percent thought they would not be adequately protected in the event of a major illness.

Other common complaints were: Prescription drugs are too expensive; not enough doctors; not sure what insurance covers; middle income people don't get proper health care; it's hard to get a specialist, and many operations are unnecessary.

Nixon Health Plan Seen Riddled with Loopholes

New Orleans—Pres. Nixon's national health insurance proposal contains so many deductibles, exemptions and limitations that it reads like a "who's who—or a what's what—of a hospital bill," said Bert Seidman, director of the AFL-CIO Dept. of Social Security.

Seidman, addressing a meeting of the American Association of Orthodontists, said Nixon's proposal to compel employers to purchase private health insurance for their workers is deficient in several ways:

- The policies would cost the employer more than the Health Security tax.
- The coverage would not be as comprehensive as National Health Security.
- There is no cost control on the administrative expenses of insurance companies.
- There are no quality or efficiency incentives.

He described this as a "piecemeal approach aimed at solving only one problem: sickness insurance."

The Nixon proposal, and most of the other bills, depend on private insurance, which Seidman called "inadequate" and "fragmented." Private insurance, he charged, is interested "only in higher premiums, not in better health."

"Just providing a national insurance policy is not enough." The trade union movement puts the emphasis on "health," Seidman said.

He explained that National Health Security would "redirect the present piecemeal expenditures in a planned, orderly fashion to provide a dollar's worth of health care for every dollar spent."

"Health Security is the complete benefits package." Seidman said, "the benefits package private insurance can't write for all Americans, but that all Americans need."

He noted that orthodontia would not be covered except in cases of handicapping malocclusion. But the bill does provide extensive dental coverage for all under age 15, and that limit will be gradually extended, Seidman explained. He cited a recent statement by the president of the American Dental Association, Dr. John M. Deines, praising the dental coverage under the National Health Security program.

Air Controllers Report Sharp Gain in Rolls

Atlanta—A growing Professional Air Traffic Controllers Organization is looking ahead to an improved bargaining position with its increased membership, convention delegates were informed.

Membership of PATCO, which affiliated with the Marine Engineers last year, climbed to 6,000 in March—an increase of 51 percent in the past six months.

The three-day convention re-elected the top officers of the union to one-year terms. They are Pres. John Leyden, Vice Pres. Robert Greene and Sec.-Treas. Stan Gordon. Under the new PATCO constitution, officers will be elected to three-year terms at the 1972 convention.

Speakers at the convention included Pres. Jesse M. Calhoon of MEBA, Rep. Wendell Wyatt (R-Ore.) and Pres. Sam Higgenbottom of Eastern Airlines.

AFL-CIO News

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, May 15, 1971 | No. 19

Administration's Failures Draw Sharp Labor Attack

DELEGATION FROM Britain's Trades Union Congress meets with AFL-CIO Executive Council in Atlanta for a fraternal exchange of views. TUC General Sec. Victor Feather is seated at left, with AFL-CIO Sec.-Treas. Lane Kirkland and Pres. George Meany.

Policy Weakness Indicted by Council

By Saul Miller

Atlanta—The Administration's "engineered recession," its failure to plan for conversion to a civilian economy, its freezing of $12 billion in appropriated funds and the glaring shortcomings of its health care proposals came under sharp indictment at the meeting of the AFL-CIO Executive Council here.

The two-day spring meeting of the council focused attention also on the growing threat of the multi-national corporations and set out detailed proposals to regulate and curb their activities to bring them into line with the national interest.

In the area of international affairs, the council met with a six-man delegation of the British Trades Union Congress to discuss mutual problems involving the International Labor Organization, trade and global corporations and aid for the Rolls Royce-Lockheed joint production of planes.

In internal matters, the council unanimously approved the reaffiliation of the 90,000-member Chemical Workers union, strengthened the international disputes plan and after hearing objections to two proposed mergers let them stand.

AFL-CIO Pres. George Meany underscored the council's concern with the Nixon Administration's record on economic affairs when he told reporters that the outlook is "still gloomy" despite the optimistic statements coming out of the White House and its attempts to picture every small change as a major gain.

He scored the freezing of congressionally appropriated funds, noting that the "suspicion naturally arises" that the funds will be made available when it is "politically important" to Pres. Nixon.

The federation president also characterized the Administration's position on minimum wage legislation as "replaying the old record we've heard many times" on the dangers a higher wage floor poses to the nation. **(Story, Page 3.)**

The council adopted a series of statements that said:

(Continued on Page 3)

Labor Stresses Role of Health Manpower Aid

Lack of money to pay doctor and hospital bills isn't the only barrier to the goal of good health for all Americans, the AFL-CIO testified.

America needs more doctors, nurses and other health professionals, Legislative Director Andrew J. Biemiller said at a Senate hearing on health manpower training programs.

But it also needs a better method of delivering health care, he stressed. The nation needs more "primary" physicians in proportion to specialists, and it needs them in areas where there is a shortage of doctors.

Biemiller told the Senate's subcommittee on health that the AFL-CIO remains confident that Congress will enact a health security program "in the not too distant future which will remove the

(Continued on Page 2)

For Displaced Workers, GIs:

Defense Conversion Keyed to Job Efforts

Atlanta—Absorbing displaced defense workers and returning veterans into the civilian economy is a major issue of national concern that requires a broad attack along many fronts, the AFL-CIO declared.

The federation's Executive Council spelled out the attack in an 11-point program to aid returning GIs and workers displaced by declining defense production and technological change.

The council's statement pointed out that the decline in defense expenditures since 1968 was an opportunity to use manpower and material resources to meet the need for public facilities and services. But, it noted:

"The opportunity was lost because the Administration had no plans for this contingency. The result has been widespread unemployment, a dislocated economy and scores of badly depressed communities." **(Excerpts, Page 4.)**

The council recalled that in February 1966 it had warned that the government must be prepared "to offset a weakening of business investment and a levelling-off or decline of military spending."

Among the unemployed now, the council said, are skilled workers, scientists, engineers and technicians, as well as the unskilled and semi-skilled. It added:

"The unemployment rate for returned GIs is over 10 percent and for those veterans in the 20-24 age group it is over 13 percent."

The council's 11-point program cludes:

- Government policies to reach and maintain full employment.
- A cabinet-level committee to coordinate federal programs in the transition to a declining defense sector.
- An economic disaster bill to aid communities affected by high unemployment.
- A nationwide public service employment program.
- Senate passage of the accelerated public works bills and release of the $12 billion in appropriated funds by Pres. Nixon.
- Federal grants for research and pollution controls, environment and pollution controls, mass trans-

(Continued on Page 2)

Callous Politics Charged In Freezing of Funds

Atlanta—The AFL-CIO charged that Pres. Nixon's withholding of $12 billion in funds appropriated by Congress for more than 100 different programs "is a callous political device that victimizes the American people."

The Executive Council adopted a statement declaring that a "cynical political decision has been made to hold the funds until they can be doled out piecemeal to achieve maximum economic impact at a time when maximum political effect is desired."

Pointing out that the funds for programs ranging from highway safety to Appalachia have been voted by Congress and the bills signed by the President, the council said the need for the programs is not questioned. It scored the Administration argument that the funds are being held back as an anti-inflation move.

The shutoff of funds, the council added, "betrays a firm determination to manipulate the federal treasury as a political tool in preparation for the 1972 election campaign."

This action, it said, is "particularly ironic" at a time when the Administration is telling urban and state officials that it is seeking more federal funds for their needs. The urban and state leaders are outspoken in demanding that the funds be unfrozen.

Among the hardest hit by the freeze, the council said, have been the housing authorities in over 30 states where local housing programs are now in jeopardy and community development programs have been seriously undermined.

The council included with its statement a list of all the programs where appropriated funds have been frozen and called again on the President to release the $12 billion immediately.

Chemical Workers Union Back in AFL-CIO Ranks

Atlanta—The AFL-CIO Executive Council unanimously approved the reaffiliation of the 90,000-member Chemical Workers union to end the union's 19-month absence from the federation.

The Chemical Workers requested reaffiliation in a letter to AFL-CIO Pres. George Meany and accompanied the bid with a letter of resignation from the Alliance for Labor Action.

The Chemical Workers were expelled from the AFL-CIO at the October 1969 Atlantic City convention of the federation for refusing to sever their affiliation with the ALA, a loose coalition of the Auto Workers and the Teamsters.

Meany said the Chemical Workers would have the same status they held before the October 1969 expulsion. The only prerequisite for the union's return, he said, was severing its ties with the ALA.

IUE Backed In Boycott of Optical Firm

Atlanta—The AFL-CIO Executive Council urged all union members and friends of labor to refuse to buy any product of Dal-Tex Optical Co. of Dallas, Tex., "until the company engages in good faith collective bargaining and establishes wages and working conditions that will provide Dal-Tex workers a decent standard of living."

The council supported the don't-buy campaign of the Electrical, Radio & Machine Workers and called on every union health and welfare plan to reject Dal-Tex products and services.

Dal-Tex wages, the council statement reported, are less than half those paid employes in similar laboratories producing contact lenses and optical frames.

The statement said the company "persists in a callous anti-union campaign despite an NLRB election certifying the IUE as bargaining agent for the employes," the council noted.

IUE members struck the company in March 1969 "after futile bargaining collapsed—a strike that was broken after two years by newly hired strikebreakers."

The council charged that the firm has "arrogantly refused to bargain in good faith." It reported that a company "offer" to the union called for paying new employes the federal minimum wage of $1.60 an hour, despite their skills, with a 10-cent hourly increase for workers after three years of service.

Loud and Clear

Nixon's Health Plan Called 'Unacceptable'

Atlanta—Pres. Nixon's health program is "completely unacceptable" and in effect constitutes a financial bail-out for insurance companies, the AFL-CIO Executive Council declared.

The actual bills containing the President's program, after careful examination, "do not match the liberal rhetoric of his health message," the council said, and come nowhere near dealing with the "massive crisis" in health care he proclaimed nearly two years ago.

In addition, the council said, a close analysis shows that the President's legislative program would further fragment the system of health care and create elaborate new means tests. The proposals rely heavily on deductibles, co-insurance and cutoffs so that only the healthy could afford the cost, the council said.

The coverage provided by the Nixon program "is even more shockingly inadequate" than the proposed benefits, the statement said, including a "gigantic loophole written to benefit unscrupulous employers."

The only requirement is that employers make insurance available and the employe must pay a percentage of the premium to get the insurance. Employes of state and local governments, religious organizations and most part-time and seasonal workers would not be eligible.

The AFL-CIO, the council concluded, "reiterates its strong endorsement of National Health Security, which would establish one financing system, one set of comprehensive benefits to provide medical care for all Americans and control costs through one national health care budget."

Programs Urged to Fill Health Manpower Need

(Continued from Page 1)

financial barriers to health services for most, if not all Americans."

Extension and expansion of the various health manpower programs is therefore of "vital importance at this time because the next few years are likely to be a preliminary tooling up period to prepare for a national health program."

He urged the subcommittee, headed by Sen. Edward M. Kennedy (D-Mass.), to combine the best portions of a number of bills extending the Health Professions Assistance Act and the Nurse Manpower Training Act.

One feature of the Administration bill that should be included in any new legislation, Biemiller said, would authorize federal grants to help medical schools develop prepaid group practice or health maintenance organizations.

Citing provisions from other bills, including one sponsored by the chairman of the parent Senate Labor Committee, Sen. Harrison A. Williams, Jr. (D-N.J.), Biemiller also urged:

- Increased funding of construction grants for medical and nursing schools.
- Raising the annual ceiling on low-interest loans students may obtain under a Public Health Service program from the present $2,500 to $5,000 for medical students and from $1,500 to $2,500 for nursing students.
- Forgiveness of up to $5,000 a year in loans when primary physicians—general practitioners, internists and pediatricians—practice in a shortage area.
- Full forgiveness of loans to nurses who take jobs with a public or non-profit agency in a shortage area.

AFL-CIO Social Security Director Bert Seidman, who also took part in the Senate hearing, stressed labor's concern with the lack of national health goals in a recent speech to a New York Academy of Medicine conference.

This, he said, is a major weakness of the existing Comprehensive Health Planning Act—federal legislation that relies entirely on local and state planning groups and lacks both national guidelines and national resources.

Seidman also charged that a requirement that state health planning advisory councils have a majority of consumer representatives has too often been evaded under the premise that "everyone is a consumer of health care."

Thus, he said, instead of legitimate community representatives, doctors' wives, bankers, insurance company representatives and business executives are too often found on such committees.

And even when the advisory groups are more representative, the lack of a consumer-oriented technical staff to assist them through the maze of legal jargon too often makes their role ineffective, Seidman said.

Strike Time Lost At Four-Year Low

Time lost to workers through work stoppages in the first quarter of 1970 dropped to the lowest level since the comparable period of 1967, the Bureau of Labor Statistics reported.

The number of man-days lost because of strikes or lockouts totaled 1.5 per 1,000 working days in the three-month span. This compares with 1.7 per 1,000 days in the first quarter of 1970 and 1.9 the year before.

The BLS said that about 516,000 workers, or 0.73 percent of the labor force, were involved in the 1,180 work stoppages in the first quarter.

Council Keys Reconversion To Jobs for All

(Continued from Page 1)

portation, land use, urban development, health services, etc.

- Federally financed extended unemployment insurance to aid those whose benefits have been exhausted under state systems.
- Federal relocation allowances to assist unemployed workers to move to areas of job opportunities.
- Increase in education and training allowances under the GI Bill to encourage greater utilization by veterans.
- For Defense Dept. civilian employes, transfer rights within the government service, payment of moving expenses and training programs.
- Development and maintenance of a national inventory of public investment needs based on estimated future population growth and present backlogs.

Labor's 9-Point Plan:

Global Firms Target Of Trade Proposals

Atlanta—Sweeping new trade and investment legislation to meet the problems and realities of the 1970s has been called for by the AFL-CIO, with major attention focused on control of the growing power of the multi-national corporation.

The AFL-CIO Executive Council proposed new legislation covering nine basic points, many of them dealing with methods of curbing the export of American jobs and capital.

"Rapid changes in international relationships have deteriorated America's position in world trade and affected the world standing of the American dollar." While other nations have adjusted their policies "the U.S. has failed to adjust."

The council pointed out that multinational firms and banks, usually U.S. based, "now have global operations which benefit from the policies of every country but which are beyond the reach of present U.S. law or the laws of any single nation. The policies of these U.S. based firms and banks are designed solely to profit the corporations and are made with disregard for the needs of the United States, its economy and its people."

In the past decade investments of U.S. firms in their foreign subsidiaries have risen from $3.8 to $13.2 billion and this year outlays are expected to be more than $15 billion. "In addition, joint ventures, foreign licensing and patent agreements and other relationships of U.S. firms abroad have changed the patterns of the U.S. economy in its relation to world trade and investment," the council said.

New legislation should include the following concepts, the council said:

- New tax measures to halt the export of U.S. jobs, remove the incentive to establish production and assembly facilities abroad and curb expanded production abroad.
- Regulation, supervision and curbing of the outflows of U.S. capital. Present controls on foreign investments are loose, inadequate and not related to trade and production.
- Presidential authority to regulate, supervise and curb the export of technology via licensing and patent agreements.
- International fair labor standards in trade agreements.
- Quantitative restraints, with a base year of 1965-69, should be applied to products and parts imported into the U.S.
- Truth in labelling to establish the country of origin of components and parts as well as the final product.
- Consumer protection so that all imports conform strictly to all laws designed to protect the safety and health of American consumers.
- Federal standards for international accounting by U.S. firms with foreign operations.
- Modernization of existing anti-dumping and escape clauses in trade legislation.

SCME Supported In Atlanta Dispute

Atlanta—The AFL-CIO Executive Council during its meeting here took a critical look at its host city, expressing its deep concern over the refusal of Atlanta's mayor to accept a dues deduction provision as part of the settlement of a dispute with the State, County & Municipal Employes.

A council resolution praised the Atlanta labor movement for its "solid support" of the efforts of city employes "to achieve justice."

U.S. Pressed to Curb Border Industry Abuses

Atlanta—The Mexican Border Industrialization Program "has assumed utterly unacceptable economic and social proportions for the U.S.", the AFL-CIO declared as it called for strong government action to cope with the problem.

The Executive Council noted that the border program has grown from 30 U.S. companies in 1967 to 250 at present, with the growth due to policies of both the U.S. and Mexican governments.

U.S.-owned plants on the Mexican side of the border receive special tax and tariff assistance; they pay substandard wages to assemble components from the U.S. into final products for the U.S. market. The goods come into the U.S. under special low tariff duties and are sold at American prices.

The Mexican government, the council said, recently announced the extension "of these border industrialization lures" into the interior of the country.

This presents, the council said, a new threat of a rising flood of imports produced at substandard wages and aided by various Mexican government benefits.

The council called for repeal of the loopholes in the U.S. tariff laws; requirements for reporting of investment, production, employment and trade by U.S. firms in Mexico; regulation of border crossing of Mexican labor and, in general, discouraging U.S. firms from participating in the programs and directing government agencies to stop encouraging the operations.

British TUC Group Meets With Council

Atlanta—A delegation from the British Trades Union Congress met with the AFL-CIO Executive Council here for a broad-ranging discussion that the council predicted would lead to even greater cooperation between the two labor movements.

The British delegation was headed by the TUC's general secretary, Victor Feather.

A listing of issues discussed included "the AFL-CIO position in regard to the International Labor Organization, a number of world trade issues aggravated particularly by certain destructive practices of multi-national corporations, and the urgency of remedial measures to be taken by the governments of the United Kingdom and the U.S. to assure the continuity of production by the Rolls Royce and Lockheed corporations."

Council Hits Administration Failures

Presses Programs To Spur Economy

(Continued from Page 1)

- Absorbing displaced defense workers and returning veterans into the civilian economy is a major national problem that has not been tackled by the Administration and requires a broad-ranging attack along many fronts. **(Story, Page 1.)**
- The American people are being victimized by the President's holding up of appropriated funds for more than 100 different programs and the freeze "betrays a firm determination to manipulate the federal treasury as a political tool" in terms of the 1972 election. **(Story, Page 1.)**
- The Administration's health program is "completely unacceptable," is a financial bail-out for insurance companies and provides a gigantic loophole to benefit unscrupulous employers. **(Story, Page 2.)**
- **The economy is in a "state of stagnation" because of the Administration's "engineered recession" and government stimulus is needed to turn the situation around. (Story, this page.)**
- Sweeping new trade and investment legislation is needed to control the growing power of the multi-national corporation and meet the problems and realities of the 1970s. **(Story, Page 2.)**
- The Mexican border problem has assumed "utterly unacceptable economic and social proportions" for the U.S. and strong government action is needed to cope with the situation. **(Story, Page 2.)**

The council heard objections filed to the announced mergers of the Longshoremen and the Masters, Mates & Pilots and to the Steelworkers and District 50 and let them both stand. District 50 is an independent union formerly affiliated wtih the Mine Workers.

It voted funds for the Asian-American Free Labor Institute for impact projects, the Workers Defense League apprenticeship training program, National Planning Association, and Eisenhower College. It also endorsed a sysmatic fund raising program for the A. Philip Randolph Institute among federation affiliates.

The next meeting was set for Aug. 9-12 in San Francisco.

At press conferences during the sessions, Meany had the following comments in reply to reporters' inquiries:

—The federation is in favor of the government guaranteed loan to Lockheed and there is ample precedent for using government funds to aid private firms when it is in the public interest—especially with thousands of jobs involved.

—The situation on the ILO was to soften up the opposition in Congress to continuing to pay the U.S. share of supporting the ILO, and this might best be achieved by putting the question of withdrawal directly to Congress for resolution. The United States currently owes funds to the ILO and should pay all its proper and legal obligations.

—He has no "favorite candidate" for the Democratic presidential nomination.

—The federation continues to oppose the Administration's "blank check" revenue sharing proposals and suggests that an immediate and effective form of revenue sharing would be the House-passed accelerated public works bill.

—Singling out the wage factor in the construction industry without regard to land and other costs is not the way to fight inflation.

—The President is carrying out his promise to phase out the war in Southeast Asia and as long as he sticks with his commitment it meets with general federation approval. There is no indication that the leaders of the federation are not responsive to the feelings of the membership on this issue.

—Trade with Communist China should be looked at carefully and steps to lift restrictions should be taken slowly.

—Many of the speculators involved in the recent currency crisis were American multi-national firms whose leaders were "patriotically willing to make a profit at the expense of the American dollar."

—The recent demonstrations in Washington did not help the cause they espoused, and the police handled the situation quite well in terms of the right of the federal government to "stay in business."

NEWSMEN COVERING Executive Council sessions in Atlanta meet with AFL-CIO Pres. George Meany at a press briefing. Labor reporters for leading newspapers and magazines were on hand.

Hodgson Asks Delay in $2 Wage, $1.60 Freeze for Teens, Farm Labor

By David L. Perlman

The Nixon Administration asked Congress to wait until 1974 before raising the minimum wage to $2 an hour.

It said the wage floor for most teen-agers should be frozen at the present $1.60 level and the minimum wage of farm workers should be kept below that of other covered workers.

Furthermore, Labor Sec. James D. Hodgson testified, the Administration opposes any extension of the wage-hour law to workers not now covered. It is particularly against further coverage of state and local employes.

Hodgson told a House Labor subcommittee that he was testifying for the Administration, not just for the Dept. of Labor.

The Administration, he said, agrees that wage trends and price increases of recent years make an increase in the minimum wage "desirable."

But Hodgson argued that increasing the wage floor "too rapidly" might reduce employment opportunities and would be "inflationary." He endorsed an increase to $1.80 in January 1972, with a further rise to $2 an hour put off until January 1974.

AFL-CIO Pres. George Meany described the Administration's minimum wage position as "replaying an old record we've heard many times" on the hardship to business of increasing the wage floor.

He told newsmen covering the Executive Council sessions in Atlanta that all of the dire predictions made every time the minimum wage and coverage have been increased have proved unfounded.

The AFL-CIO earlier had testified for an immediate increase in the present $1.60 wage floor to "at least $2 an hour," coupled with expanded coverage and full wage parity for farm workers, whose minimum pay is now frozen 30 cents an hour below other workers.

The Administration proposed to widen the gap to 40 cents an hour. Under its plan, the farm minimum would rise from the present $1.30 to $1.45 when other workers move up to $1.80. And when the $2 level is achieved in 1974, the farm minimum would be frozen at $1.60 an hour.

Proposals to lower or abolish the minimum wage for teenagers have repeatedly been made by employer groups, and AFL-CIO Legislative Director Andrew J. Biemiller emphasized labor's opposition to such a move when he testified before the subcommittee last month.

Biemiller warned that this would result in displacement of heads of families and allow "unscrupulous employers" to profit by paying lower wages.

Anticipating Hodgson's argument that a lower minimum wage would reduce the heavy teen-age unemployment rate, Biemiller said equally "ridiculous" reasoning would come up with the conclusion that the minimum should be lowest of all for black teenagers, since their unemployment rate is highest of all.

The Administration asked that the minimum for 16 and 17-year-olds in covered employment and for full-time students under 20 be kept at $1.60.

The $1.60 level would also apply to 18 and 19-year-olds for the first six months of their first job.

Hodgson agreed there might be "some risk" that a lower minimum wage for young people might reduce job opportunities for older workers but he discounted the extent of the threat.

Even though the Supreme Court upheld the extension of the federal minimum wage to several groups of state and local employes in the 1966 amendments to the Fair Labor Standards Act, Hodgson argued that a further extension "would impinge unduly upon the federal system of our nation."

He said it would be "at cross-purposes" with the Administration's efforts to restore the "vitality" of state and local governments.

Likewise, he opposed any steps to bring the minimum wage in Puerto Rico closer to mainland levels through two 20-cent increases rather than a proportional increase.

While Republican members of the subcommittee vied to praise Hodgson's testimony, Chairman John H. Dent (D-Pa.) and other Democratic members challenged the Administration's "go-slow" doctrine.

Hodgson was reminded that House Ways & Means Committee Chairman Wilbur D. Mills (D-Ark.) had urged that the minimum wage be raised to $2 by the start of 1972 as a necessary prerequisite to the Administration-sought family assistance program.

And he was asked how the Labor Dept. could defend proposing minimum wage levels so far below its own estimate of a bare minimum family budget.

Hodgson's defense was that both the welfare reform plan and budget estimates were based on families and many of the people affected by the minimum wage were single persons or second wage-earners.

He contended also that "increasing the minimum wage too rapidly will in turn prompt increases in wages of those already earning above $2—a large majority of all wage earners."

And this in turn, he asserted, would push prices up "thus frustrating our efforts to help low-wage earners."

As the House panel wound up its hearings, Senate Labor Committee Chairman Harrison A Williams (D-N.J.) announced that he will sponsor a bill raising the wage floor to $2 immediately and to $2.25 a year later.

He said his committee will hold early hearings on the bill which would also extend coverage to nearly all workers now excluded.

Full Employment Policies Urged To Pull Nation Out of Recession

Atlanta—The Administration's "engineered recession" has left the American economy in a "state of stagnation," the AFL-CIO said, as it called for government stimulus to turn the economy around.

In urging policies that would produce full employment, the council warned against proposals to raise interest rates and adopt restrictive policies "which would increase unemployment to even more disastrous heights."

And it called also for an early congressional investigation of recent international speculation against the American dollar, "including the activities of American-owned international companies and banks, and the profits they made from undercutting the nation's currency."

In an immediate response, House Banking Committee Chairman Wright Patman (D-Tex.) announced that he will ask his committee to initiate "a full-scale investigation and study of international monetary affairs as they affect the American dollar and the domestic economy."

Patman cited the AFL-CIO statement and told the House that the "international manipulations" raise questions that require an answer.

The council drew this picture of the economy, which it called "a dismal record:"

- Unemployment moved up to 5.1 million in April, up 1.2 million in the past year and 2.4 million from January 1969.
- Areas of substantial unemployment increased from 6 in January 1969 to 52 today.
- Unemployment rates for teenagers, Negroes, construction workers, veterans all moved up sharply.
- Living costs for the first quarter of 1971 were 4.9 percent above a year ago.
- Buying power of rank-and-file workers is less than in 1969 and even below 1965.
- Industrial production is below levels of last summer and industry's operating rate is down to 73 percent of capacity.
- Profits are up in the first quarter of the year; bank profits continue to skyrocket; dividend payments are increasing.

Labor Protests Plan For N.Y. Payroll Tax

Atlanta—A proposal by New York Mayor John V. Lindsay to impose a 3 percent payroll tax was opposed by the AFL-CIO Executive Council as "unfair" and "inequitable."

The council joined New York's trade union movement in attacking the plan, noting that workers in New York City already pay a state income tax, a local income tax, and a 6 percent sales tax which it is proposed be raised to 7 percent.

Reconversion

WE URGE the Administration and the Congress to adopt the following measures:

1. Federal government policies to reach and maintain full employment are the basic prerequisite for an orderly transition to a smaller defense sector of the national economy. We reject the view that high-level defense expenditures are necessary to maintain high employment.

2. The Administration should establish a cabinet-level committee to coordinate federal programs in the transition to a declining defense sector. Such committee should create special government task forces to focus and direct federal assistance in hard-pressed communities.

3. An economic disaster bill should be enacted to provide special assistance to communities and people affected by man-made economic disasters.

4. A nationwide public service employment program is required immediately—with sufficient federal funds to state and local government agencies to create jobs for the unemployed and serious underemployed. It would create useful jobs in providing badly needed public services.

5. (A) The $12 billion of appropriated funds for public facilities and services, which are now frozen by Pres. Nixon, should be released to provide the increased public investment intended by Congress, when the funds were appropriated.

(B) We urge speedy enactment by the Senate of the accelerated public works bill to provide $2 billion of federal funds to accelerate public works construction and repairs of needed public facilities in areas of high unemployment.

6. Federal grants should be provided to state and local governments and non-profit educational and research institutions for the establishment or expansion of research and development activities in such areas as the environment, pollution controls, mass transportation, land use, urban development, health services and basic research.

7. A program of federally financed extended unemployment insurance is needed immediately for the long-term unemployed whose benefit periods have been exhausted.

8. Federal relocation allowances are long overdue to assist unemployed workers to move to areas of job opportunities.

9. Education and training allowances under the G.I. Bill should be increased.

10. Defense Dept. civilian employes, blue collar and white collar alike, displaced by defense production cutbacks . . . should be provided with transfer rights within the government service and the payment of moving expenses to new locations.

11. America also needs a long-range national effort to develop, coordinate and maintain a national inventory of public investment needs based on estimated future population growth and present backlogs—in each major category such as low- and moderate-cost housing, schools, health-care facilities, day-care centers, mass transit, parks, pollution controls, other community facilities and public services.

A Word Edgewise:

'Heavies' of the Anti-War Left Produce a Victory for the Right

By John P. Roche

A PARANOID would not have much difficulty convincing himself that Rennie Davis and the other "peace"-lovers who tried to shut Washington down are on the payroll of the American right. Indeed, a good Marxist, without paranoia, could argue that they are "objectively" right-wing provocateurs who are working for nothing. Let us look at what they accomplished in a few short days.

The background was an impressive, non-violent anti-war demonstration. Whatever one thinks of the objectives—and I think it would be folly for Pres. Nixon to turn up his hole cards by announcing a flat, final departure date for American troops in Southeast Asia—it was conducted in the best democratic tradition.

The people assembled peaceably to petition for the redress of grievances. Sure, some of them slept in the parks and probably walked on the flowerbeds. But after initial huffing and puffing from the Justice Dept. they were wisely left alone. Anyone who has ever had a hand in applying rules realizes that a passion for the letter of the law is a silly, even a dangerous characteristic. Justice must be tempered with equity, that is, a prudent respect for the spirit and basic purpose of the laws.

Then the heavies came to town, their ultimate goal a revolution of some sort (they are long on cursing but short on theory), their immediate objective: to close down the nation's capital.

One can only conjecture what an authentic revolutionary like the late Leon Trotsky (whose name is frequently invoked) would think of this lunatic adventurism. In effect, Davis and his politburo seemed to believe that (1) they could close Washington down; and (2) that this putsch would lead to a general uprising against the war, imperialism, racism, etc. It would be the great catalyst that would turn America around—or, at worst, force the terrified American "ruling class" to take repressive action that would generate wide sympathy for the anti-war (actually anti-American) cause.

What country have they been living in? There is an "Alice in Wonderland" quality about the whole scenario—echoed by the remarkable fantasies revealed in the correspondence between Sister Elizabeth McAlister and Father Philip Berrigan released by the Harrisburg grand jury that indicted them on charges of conspiring to kidnap Henry Kissinger and disrupt the government's heating system.

IT IS TRUE that most Americans are sick of the war (including Sen. Henry Jackson and myself), but that does not mean that most Americans want a Hanoi victory. (I was sick of World War II before I even finished basic training.) These are two separate propositions, a fact that a number of Democratic presidential hopefuls might well keep in mind.

So the May Day militants tried to close Washington down, and as the news came into the Justice Dept. one can almost hear the Attorney General's mordant chuckle. Because the hard fact is that the United States government is capable of defending itself, and once the militants named the weapons and opted for violence they were already defeated. Violence is not a game for amateurs so the professionals took over very effectively. And the people cheered.

Now a legitimate complaint is going to be emphasized—numerous innocents were caught in the sweeps, perhaps roughed up in the process, and dumped in jail overnight. But as far as the great bulk of the American people is concerned, the innocents have to pay for an education. "If they hadn't gotten mixed up with those kooks," the logic runs, "they wouldn't have been locked up." Davis & Co., in short, have provided the law-and-order contingent with their greatest victory since Chicago. The "revolutionaries" elected Richard Nixon to his first term; they seem determined on a repeat performance in 1972.

UNION LABEL AND SERVICE TRADES DEPT., AFL-CIO

'Essence of Democracy':

Denial of Bargaining Rights Creates Second-Class Citizens

The following is excerpted from an address to the first May Day mass sponsored by the Archdiocese of Atlanta, Ga., by William L. Kircher, AFL-CIO director of organization.

LET ME ENCOURAGE YOU to see collective bargaining as machinery—flexible machinery—rather than to look at it in the stereotyped form of some trade union tradition which, for one reason or another, you have grown used to. Let me give you a few examples.

All of us today are quite used to bargaining for company-paid insurance programs. Yet, less than 20 years ago unions had to go to the Supreme Court of the United States to get a ruling that such a program is a proper item for bargaining.

There was a day when pensions were outside of the scope of bargaining—and yet today the impact of union bargaining on the total subject of pensions has had the greatest helpful effect on the question of protection and dignity of older citizens of anything in the national spectrum.

I would emphasize the importance of looking at unionism not in an institutional or traditional form, but as the organized embodiment of collective action and collective bargaining with a man's work as the common cement which brings together people for these common purposes.

To understand the flexibility of the collective bargaining process is to take the first step toward successful organizing because new or potential members aren't often inspired by what unionism did for you. They need to know what it can do for them.

The skill in organizing today is not making workers appreciate what turned you on as a condition of their embracing the union. The skill is to learn and understand their hopes and aspirations—their fears and hang-ups and then to show them honestly the manner in which their union offers a method of attainment of the goals, an overcoming of the fears.

We all need to know and to better understand the concept of collective bargaining as an important bulwark in a free society. I tell you that no single thing more distinguishes our free American system in history and in the world than the unique role of free collective bargaining.

In support of this, I could point to the fact that every major social improvement in this nation has been accomplished either because of or with the critically important help of organized workers, whatever their form at any given time. Whether it was the power and foresight of the Mechanics Societies and the Cordwainer Guilds 150 years ago in formulating and bringing about free public school education or the role of AFL and CIO unions starting in 1946 with the Murray-Wagner-Dingell Bill and ultimately attaining Medicare, organized labor, as the champion of collective action and collective bargaining, has always been in the forefront of progress through social change.

Our system, while very young and fragile when measured against 6,000 years of western civilization, is the first system that ever seriously suggested (and then stuck to the idea) that those who would govern do so only with the consent of the governed. The principle of self-determination is so ingrained in our system's free collective bargaining process that it becomes the very essence of democracy in practice.

No system in history has been able to incorporate the concepts of democracy without specifically guaranteeing workers the right of self-organization for meaningful collective action. Of equal importance is the fact that no system has been able to successfully move toward the totalitarian concepts of fascism or communism without first denying those rights and destroying those who effectively advocate them.

THERE ARE VARIOUS "classes" of citizenship in this nation where the availability of collective bargaining is concerned. If you doubt that ask a Mexican-American or Filipino farm worker in Texas, or California—ask a textile worker in South Carolina, or even a municipal worker in Georgia. The answer, shamefully, is "yes."

Second-class citizenship where collective bargaining is concerned is like school segregation. There are two kinds— de jure and de facto. De jure means in this case that the legal situation inflicts second-class citizenship. De facto means that while the legal situation doesn't cause it, certain practices do.

Public employes, farm workers and others who are specifically denied the full protection of the law on a basis equal to other workers are de jure second class citizens.

Poor people, who work at substandard wages in private industry and are ostensibly protected by the law, are the de facto victims because of the imbalance and inequity of the law and the manner in which the circumvention of the law by employers prevents many workers who honestly desire a collective bargaining base from ever attaining it.

The poor are most frequently less able to understand fully their rights under the law, and therefore more susceptible to intimidating techniques by the boss that might suggest the absence of, or ineffectiveness of such rights.

Workers earning substandard wages are most often working at those jobs because they have a limited job expectancy in the job market generally. Because that job means the difference between a little poverty or the great poverty of unemployment, they become even more susceptible to the vicious intimidation of a management which, in various ways, equates the effort to unionize with the possibility of unemployment.

'Industrial Blackmail':

Plant Shutdown Threats Seen Move to Block Pollution Curbs

AFL-CIO ECONOMIST George H. R. Taylor charged that employer threats to close plants and lay off workers rather than comply with anti-pollution controls often amount to "industrial blackmail."

But the labor movement won't be deterred from its drive for measures to reclaim and preserve the environment, Taylor declared as he called for national anti-pollution standards, "imposed impartially across the country." He pointed out that uniform standards would "close the escape hatch" that now lets companies leave a state with strict controls and "go to another state that will be more lenient."

Taylor said that while some threatened layoffs and plant closings are only "bluffs . . . used by industry to try to prevent the imposition of strict controls over the environment," many companies have actually shut down rather than invest in process changes that would meet standards set by law. He cited the case of a cattle feed company with a "$30-million-a-year-take" that closed its plant in central Kansas, rather than spend some $250,000 to meet the water pollution control standards of the state.

Taylor, who is also secretary of the AFL-CIO Staff Committee on Atomic Energy and Natural Resources was questioned by reporters on the network radio interview, Labor News Conference.

He said that unions strongly oppose the prohibition of non-returnable bottles and cans in Maryland, because that kind of "easy approach, which is very popular at the present time," touches "only a very minor portion" of the problem.

He said that rather than attack one aspect of the problem, there should be development of "a total technology" that includes effective collection methods for such "by-products of industry as the bottle and the can—paper products and plastics—so that they can be re-cycled and re-used."

Reporters questioning Taylor on the AFL-CIO produced public service program, broadcast Tuesdays on Mutual Radio, were Tom Joyce of Newsweek magazine and Frank Swoboda of Business Week magazine.

By Press Associates, Inc.

THE WILLIAMS-DANIELS Occupational Safety & Health Act could well be the landmark job-related legislation of the 91st Congress, but there remains a high level of apprehension over its administration.

Both the Dept. of Labor and the White House have unleashed a barrage of words detailing the structure of the new Occupational Safety & Health Administration (OSHA) and expressing dedication to the job of achieving a more healthy workplace.

This has not eased the concern. There is particular wariness over the heavy emphasis placed by the Nixon Administration on turning inspection programs over to the states.

"Our approach to the role of the states is along the line of Pres. Nixon's 'New Federalism'," says Assistant Secretary of Labor George C. Guenther.

The law spells out eight steps which states must take before the Secretary of Labor can approve state plans for enforcing safety and health standards.

The Administration hopes to be able to approve as many state plans as possible by July 1972. Meanwhile, 26 states—at last count—have signed interim agreements in which they are permitted to enforce one or more of their occupational health and safety standards pending final approval of the state plan.

Officials of OSHA stress that state plans will not be approved unless they are "at least equal to" the federal program.

All this may sound quite good but, as the Dept. of Agriculture has learned, turning over to the states responsibility for inspection and compliance has serious pitfalls.

The Wholesale Meat Act went into effect Dec. 15, 1967. For the first two years only two states were able to develop programs "at least equal to" federal standards. Today, although 34 states have received certification from the Secretary of Agriculture, the picture is not bright.

Under the Wholesale Meat Act, as under the Williams-Daniels Safety Act, the federal government is authorized to provide half the funds for the state programs.

Now a crisis has emerged. Agriculture Dept. officials acknowledge that not a single state today can afford to operate its program with the federal government paying only half the cost. The states are requesting that the federal payment cover 80 percent of the cost. However, with the overlaps and duplications, Agriculture officials have concluded that a far more economic and efficient program could be worked out if the federal government paid all of the costs, but played a stronger role.

AGRICULTURE OFFICIALS point out that they must maintain a constant surveillance over state operations. This is costly. In addition, there is an extremely vital, if subtle, difference between state and federal inspection. For example, it is far more difficult for state inspectors to take a rigid stand against violations by major meat packers than it would be for federal officials.

Under the Williams-Daniels Act the federal government provides grants covering up to 90 percent of the cost of planning for a state program. The question is whether the states can enlist a sufficient number of personnel with satisfactory backgrounds to train as compliance officers.

Even more apprehension is caused by Guenther's record in setting up the Pennsylvania job safety program. Inspection jobs were Republican patronage handouts—to grocery store owners and gas station operators with little or no experience to qualify them for safeguarding the workplace. Guenther insists, however, that the federal program will not be based on patronage.

Funding of the program also poses questions. The Administration requested $16.8 million for the balance of Fiscal 1971 to finance both the labor Dept. and Health, Education & Welfare programs. But Congress appropriated only $11.8 million.

EMPLOYER THREATS to close plants and lay off workers rather than comply with anti-pollution controls often amount to "industrial blackmail," AFL-CIO Economist George Taylor, center, charged on Labor News Conference. He was questioned by Frank Swoboda, left, of Business Week magazine and Tom Joyce of Newsweek magazine.

DELEGATE'S BADGE is pinned on AFL-CIO Pres. George Meany by Pres. Louis Stulberg of the Ladies' Garment Workers at the ILGWU convention in Miami Beach. Meany called for a change in Administration policies that have caused many American workers to lose their jobs.

'Deliberate' Rise in Unemployment:

Nixon's Economic Policies Blasted at ILG Convention

Miami Beach—The Ladies' Garment Workers Union set the tone for its 34th convention by placing the blame for the country's current economic recession "squarely at the doorstep of our Republican Administration."

"Since it came to power," ILGWU Pres. Louis Stulberg said of the Administration, "it has embarked on a deliberate policy of fostering unemployment in the name of fighting inflation."

Along with AFL-CIO Pres. George Meany and a series of speakers led by key Democratic senators, Stulberg leveled heavy broadsides at the Nixon Administration for:

- Current unemployment of 6.1 percent that resulted from the "Nixon game plan" to curb inflation.
- A failure to respond to organized labor's pleas for relief from the exportation of American production that Stulberg said has cost nearly 250,000 American jobs in the garment industry alone over the past 15 years.

Meany told the approximately 1,000 delegates that "despite the hot air, all the bluebird predictions, all the effort to find a scapegoat for its failures, the Nixon Administration game plan is a complete and absolute miserable failure."

With unemployment persisting month after month, America's jobless are being forced on welfare as their unemployment compensation payments run out, Meany noted.

"This to me is a disgrace in this richest and greatest nation on earth," he told the delegates.

Meany blasted the Administration for proposing tax relief to business while blocking programs to create jobs for the unemployed such as accelerated public works.

Sen. Edmund S. Muskie (D-Me.) charged that the Administration had resorted to the old "Republican trickle-down theory that if enough wealthy people buy limousines, there will be more jobs for chauffeurs."

Sen. Hubert H. Humphrey (D-Minn.) offered a "prescription for economic recovery" through the injection of $10 billion into the economy to achieve, among other things:

- $100 minimum social security payments plus accelerated cost-of-living increases for the elderly.
- A public service employment program to create some 350,000 new jobs.
- Implementation now, retroactive to Jan. 1, of the personal income tax reductions scheduled to take effect next January.

The delegates representing the 422,000 members of the ILGWU, now in its 70th year, devoted much of their deliberations to the growing problem of imports as they directly affect garment workers.

The root of the question, Stulberg suggested, lies in the fact that American and Canadian garment workers who earn about $3 an hour find they must compete with nine cents an hour in Korea, 15 cents in Taiwan, 25 cents in Spain, and 39 cents in Japan.

"That's not trade," said Stulberg. "That's cutting each other's throats. That's fighting over jobs in the same way workers used to fight over bundles of work in the sweatshop days."

The ILGWU's position with regard to imports is that they have not only damaged the total employment picture in the industry but have had a particularly heavy impact on women, who hold about 80 percent of the jobs in the garment trades, and on minority group members who constitute a substantial percentage of the work force.

Ed Haines Dies at 53, Led Organizing Drives

Edward S. Haines, assistant director of organization for the AFL-CIO since 1966 and veteran union organizer, died of a heart attack May 9 at Montgomery General Hospital, Olney, Md. He was 53.

"He was a fine gentleman, a loyal trade unionist and a warm friend," AFL-CIO Pres. George Meany and Sec.-Treas. Lane Kirkland said in a message to the family expressing "deep sorrow."

"All of us who worked with and admired Ed join with you . . . in mourning this great loss."

The AFL-CIO Executive Council adopted a memorial resolution at its Atlanta meeting expressing its "deep sense of loss on the death of our friend, colleague and companion in many struggles." Haines, the council said, served with "dedication, devotion and true loyalty" for many years.

Haines is survived by his wife Elaine of Silver Spring, Md.; daughter, granddaughter and parents, all of New York City.

In his final post, Haines filled a number of special assignments for Director William L. Kircher. He was serving at the time of his fatal illness as national coordinator for organizing programs in the graphic arts field and in Naval shipyards — the latter in cooperation with the AFL-CIO Metal Trades Dept.

Born in New York City in 1917, Haines became an active union man after his return from military service in World War II. He became president of the Amalgamated Sugar Workers Conference and a vice president of the former New York City Industrial Union Council.

Haines in 1948 joined the staff of the Packinghouse Workers, later merged with the Meat Cutters, as an international representative. He became assistant director of organization for the union and in November 1953 was named to the organizing staff of the former CIO in Washington.

His initial assignments were largely with the Brewery Workers. He served for a period as an assistant to the union president, primarily in the field of organizing.

After the AFL-CIO was formed in 1955, Haines was named assistant director of the Illinois-Iowa region with headquarters in Chicago. He served in that region until May 1966, when he became assistant director of organization in Washington, D.C.

Memorial services were set for 1 p.m., May 14, at the Warner E. Pumphrey Funeral Home, Silver Spring. The family asked that, instead of flowers, contributions be made to the North Shore Association for Retarded Children, 2525 Church St., Evanston, Ill. 60201.

EDWARD S. HAINES

Firemen & Oilers Pay Tribute to Ill President

Bal Harbour, Fla.—The 28th convention of the Firemen & Oilers developed into a tribute to ailing Pres. William E. Fredenberger as the delegates responded with dispatch to the programs presented by the officers.

Two days before the convention opened, Fredenberger suffered a heart attack at the Americana Hotel. He has since been listed in satisfactory condition at St. Francis Hospital.

While the 57-year-old leader recuperated, representatives of the 50,000-member union squarely confronted issues Fredenberger had described as "the most critical, most demanding, most challenging and most hazardous in the last 40 years."

These issues were spelled out in a 73-page report from the officers and executive board, which declared:

"The basic responsibility of this convention is to reaffirm our continuing objects while charting new directions for our future."

Returned to office along with Fredenberger were Sec.-Treas. John J. McNamara and Vice Presidents J. W. Lebeau, James M. Kennedy, Daniel S. Anderson, Robert A. Duvall, John B. Curan and Michael Martz.

Major speakers at the convention were AFL-CIO Vice Pres. Joseph D. Keenan, Pres. James E. Yost of the AFL-CIO Railroad Employes Dept., Pres. Maywood Boggs of the Metal Trades Dept. and Executive Sec.-Treas. Peter McGavin of the Maritime Trades Department.

Among the critical issues considered by the delegates was the continuing decline of the union's railroad contingent, a reflection of the steady erosion of employment in the railroad industry. Once dominant in the union, the railwaymen now represent only about 35 percent of the membership.

There was heartening news, however, in reports of health and welfare improvements for the union's membership on the railroads. These include higher surgical and radiation therapy payments and a rise to $20,000 in the maximum major medical benefits.

The convention also devoted considerable time to discussing the Nixon Administration's economic policies.

"The Administration's game plan to combat inflation through an economic slowdown has finally been abandoned in the midst of its tragic consequences:—a prolonged recession and increasing unemployment, combined with an accelerated rise of living costs," said the officers' report.

The report also criticized the Administration's "new game plan" as outlined in budget messages and economic reports, calling it "an experiment to psych the economy toward prosperity by mid-1972 through mini-expansion measures presented in an upbeat barrage of optimistic rhetoric."

Service Employes Win in Alameda

Alameda, Calif.—Three local unions of the Service Employes were chosen as bargaining representatives by nearly 3,000 Alameda County employes in a series of elections held over a 10-day period ending May 5.

SEIU Local 535 won two units—one of 700 social workers and another of 600 eligibility workers. Local 250 won two units of hospital workers—one with 500 and the second with 600 employes. A unit of 400 county probation officers voted for SEIU Local 390.

Most of the elections were won by margins of 2 to 1 or better. Some 15 leaders from other SEIU locals in California aided in the successful organizing drive, the union reported.

The campaign was participated in by outgoing Pres. David Sullivan and First Vice Pres. George Hardy, who succeeds Sullivan May 26.

The 325 delegates not only approved the executive board's five years of leadership but returned the full slate to another term.

Postal Service, Unions Pick Fact-Finding Panel

The U.S. Postal Service and seven unions representing 660,000 postal workers chose a fact-finding panel as the next step in efforts to resolve their stalemate over contract terms.

The panel held an organization meeting and is expected to start gathering the facts from both sides for the report it is required to issue within the 45-day period ending June 10. Panel members are Eli Rock of Philadelphia, chairman; Bernard D. Meltzer of Chicago and Laurence E. Seibel, Washington, D.C. All are professional arbitrators.

The Postal Service made no money offer to the unions in three months of negotiations that started Jan. 20. That forced the talks into the fact-finding stage. Bargaining resumes when the fact-finders report, but the parties are not obliged to accept the panel's recommendations.

"This is an entirely new process for the Postal Service," said Attorney Bernard Cushman, chief negotiator for the unions. "The law doesn't compel the panel to do anything but report."

The seven unions all hold exclusive national recognition for members of their crafts. They are the Letter Carriers, Postal Clerks, Post Office & General Services Maintenance Employes, the Mail Handlers division of the Laborers, Special Delivery Messengers, Post Office Motor Vehicle Employes—all AFL-CIO affiliates—and the Rural Letter Carriers, unaffiliated.

The unions seek wage increases totaling about 30 percent over the next two years in their first contracts under the new collective bargaining procedures with the Postal Service. Also they have proposed a 35-hour week, more holiday and vacation time, better pension benefits and other improvements over present conditions.

Highest For Blacks:

April Jobless Rate Moves Up to 6.1%

By Tom Castor

Unemployment edged up again in April to 6.1 percent, just under the nine-year high of 6.2 percent recorded last December.

Although employment actually increased and unemployment decreased, the improvement was less than normal for this time of the year, thus pushing the seasonally adjusted jobless rate higher by one-tenth of a point.

Joblessness for Negroes showed a sharp increase, jumping from 9.4 percent—where it had been for the past four months—to 10 percent, the Bureau of Labor Statistics reported.

Teen-age workers and job seekers continued as the age group hardest hit with unemployment in the 16-19-year bracket at 17.2 percent, seasonally adjusted, almost three times the national rate. The rate was higher in March—17.8 percent.

Among the teenagers, blacks felt the severest unemployment with a rate 5.5 times greater than the overall national rate.

Although no great significance was attached to the April increase, Labor Sec. James D. Hodgson called the figures "disappointing."

Actual employment during April increased by 711,000 to 78,204,000, but the seasonally adjusted increase was only 223,000.

Unemployment decreased by nearly a half million in actual numbers to 4.6 million, due partly to an opening up of agricultural jobs.

On a seasonally adjusted basis, however, the Labor Dept. said, unemployment was up by 85,000 to put it that much above 5 million.

About 230,000 workers entered or rejoined the civilian labor force to bring it to a total of 82,898,000 unadjusted, and to 83,783,000 on a seasonally adjusted basis.

The average duration of unemployment jumped from 9.5 weeks to 12.6 weeks. On an adjusted basis, it remained relatively unchanged at 10.9 weeks.

The number of workers unemployed 27 weeks or more increased by 283,000 to more than a half million, but on an adjusted basis, the BLS placed the figure at 430,000, a decline of 26,000.

The Labor Dept. said the employment picture for most major groups in the labor force showed little or no change during April.

"Over the month," the BLS said, "employment gains in state and local government, contract construction and finance, insurance and real estate were largely offset by declines in manfacturing and transportation and public utilities."

Among construction workers, the jobless rate dipped to 9.6 percent, the first time it has been under 10 percent in 1971. But the actual number of unemployed construction workers stood at 428,000, an increase of 63,000 over April 1970.

The jobless rate for transportation and utility workers rose to 4 percent in April as compared with 3.3 percent in March.

In manufacturing, unemployment went up one-tenth of a point to 7 percent, with 411,000 more manufacturing employes out of work than a year ago. Manufacturing jobs dropped 53,000 in April—the fourth straight monthly decline—bringing total manufacturing jobs lost to 1.4 million in the past year and leaving factory employment at its lowest point in five years.

The factory workweek also was off in contrast to the average, dropping one-tenth of an hour to 39.8 hours, seasonally adjusted.

The number of wage and salaried workers on private nonfarm payrolls stood at 70.4 million in April, 500,000 more than in March, on an unadjusted basis. The increase was above the normal March-April pickup, and after seasonal adjustment, the increase was placed at 55,000.

Compared with year-ago figures, the total number of nonfarm, payroll jobs was down by 380,000.

The average workweek rose one-tenth of 1 hour in April, to 37.1 hours, seasonally adjusted.

Average hourly earnings were up 2 cents to $3.39, 21 cents higher than in April 1970.

Average weekly earnings were up 73 cents to $124.75. Over the year, weekly earnings showed an increase of $7.41, or 6.3 percent. The Consumer Price Index rose 4.6 percent in the 12 months ended in March.

STEWARDESSES won a new contract from American Airlines soon after walking demonstration picket lines in 50 cities, like this one at Washington National Airport, to protest the slow pace of bargaining negotiations by the airline. Three other groups of Transport Workers also won better contracts, with agreement depending on a vote by 20,000 union members.

Director of Job Statistics Study Scores Suspension of Briefings

A University of California economics professor sharply criticized the Labor Dept.'s cancellation of press briefings on monthly jobless figures, calling it an attempt by the Administration to minimize bad news by muzzling its own experts.

Dr. R. A. Gordon, who headed the President's Committee on Employment & Unemployment Statistics in 1962 under Pres. Kennedy, said there was nothing in his committee's report suggesting discontinuance of the technical briefings by Bureau of Labor Statistics personnel.

Gordon also predicted little change in current high unemployment rates during 1971.

Labor Sec. James D. Hodgson had cited the Gordon Committee's report when he announced cancellation of the news conferences on jobless figures as well as the Consumer Price Index.

In testimony before the Joint Economic Committee, headed by Sen. William Proxmire (D-Wis.), Gordon suggested that the conflict between interpretations by BLS technicians and the rosy evaluations of the Nixon Administration brought an end to the briefings.

"It is difficult to believe that the timing of the decision to eliminate the technical press conference was not influenced by these developments," Gordon said.

"I wonder if I am unfair in suggesting that the Administration has—in effect—announced by this action that it wants to be free to minimize bad news and to maximize good news without any interference from its own technical experts who know most about the facts."

Hodgson announced the cancellation of the briefings Mar. 19, stating that it would speed up the release of statistics, that it would put the BLS in line with other government agencies with regard to the release of statistics and that it would "avoid an awkardness that can occur and has occasionally occurred to our professional staff from having to respond to inquiries that call for policy response."

Gordon testified that his personal investigation of the matter revealed the BLS statistics are not being released any faster, and he said, there is no need for the BLS to conform to other agencies in the release of statistics since the seasonally adjusted unemployment rate is "the most important single statistic published by the federal government."

And he said that the only awkwardness under the system was that suffered by the Administration.

Proxmire's committee has held hearings on the unemployment figures and the Consumer Price Index since the press briefings were discontinued. He said he had summoned BLS technicians to testify on the latest unemployment report but was informed they were not available because they were needed to answer telephone inquiries from the press.

Ironically, telephone service to the BLS was interrupted the same day, and only two emergency telephones were manned. None of the technicians appeared at the JEC hearings.

In a stinging telegram to Hodgson, Proxmire deplored what he called the treatment of Congress as a "second-class citizen in this important matter."

"Your reply to our request is insulting to the Congress and to this committee, and I respectfully request that you reverse your decision," the telegram read.

"We feel we should hear—and I believe Congress has the right to hear—from a competent person who can interpret the unemployment figures in an objective and technically competent way. This is all we ask and we have every right to make a request and have it honored."

Metal Polishers Adopt Per Capita Dues Hike

Cincinnati—The Metal Polishers voted in convention to increase per capita payments and strengthen the union's defense fund for use in future strike situations.

About 100 delegates from 75 local unions approved a rise in per capita from $2.65 a month to $3.25, effective July 1. Forty cents of the 60-cent increase will go to the strike fund. The object, Pres. Jim Siebert explained, is to build up a fund to the point where the present $10 weekly strike benefit can be raised to $25.

The convention voted to change the name of the union to the Metal Polishers, Buffers, Platers & Allied Workers. The change substitutes the last two words for "Helpers."

Siebert was re-elected to his third full three-year term as president and secretary-treasurer. The delegates also voted another term for Vice Pres. B. F. Wilburn, and for seven of the eight-member executive board. Chosen for a first term was Oscar Wiese of Local 13, St. Louis.

William Clauer of Local 10, Milwaukee, was elected as a new member of the board of trustees.

The delegates endorsed the National Health Security proposal pending in Congress. Speakers included AFL-CIO Organization Director William L. Kircher, Pres. Maywood Boggs of the AFL-CIO Metal Trades Dept., and Executive Sec.-Treas. William P. Sheehan of the Cincinnati AFL-CIO.

Kircher stressed the need for a united labor effort to solve the problems caused by inflation, unemployment, and imports that increase business profits while sacrificing American jobs. He warned of a difficult organizing climate just ahead and the Nixon Administration's encouragement of employer resistance.

Sanctions Spelled Out On Literature Violations

Atlanta—The AFL-CIO Executive Council has adopted a resolution spelling out sanctions against unions found in violation of the section of the internal disputes plan dealing with use of offensive and scurrilous literature in organizing campaigns.

Section 5 of the plan, Article XX of the AFL-CIO Constitution, declares that "no affiliate shall, in connection with any organizational campaign, circulate or cause to be circulated any charge or report which is designed to bring or has the effect of bringing another affiliate into public disrepute or of otherwise adversely affecting the reputation of such affiliate or the federation."

The resolution adopted by the council declared that when the Executive Council subcommittee on compliance set up under the plan finds a violation of Section 5 "the bargaining unit gained by the offending affiliate shall not be protected by Article XX for a period of three years from the date of certification or recognition."

The resolution said that "any complaint brought by the offending affiliate under Article XX with respect to that unit during that period will not be considered under the internal disputes procedures of Article XX, if the subcommittee on compliance has made such a determination.

"Where the organizing campaign has not resulted in certification or recognition of either contending affiliate, or where such affiliate has violated the provisions of Section 5, compliance shall require a written repudiation of the acts involved in the violation by the offending affiliate or affiliates, and any further complaint of a repetition of such acts in the same campaign shall be referred directly to the subcommittee on compliance, without intervening steps under Article XX."

Senators Urged to Concur:

Public Works Jobs Termed Urgent Need

Senate conferees were urged by the AFL-CIO to accept House-passed legislation authorizing $2 billion for an accelerated public works program in communities with high unemployment.

The House added the job-creating program to a Senate-passed bill extending the Appalachia regional development law. It will be up to a House-Senate conference committee to decide whether the public works program will be included in the final version of the legislation.

AFL-CIO Legislative Director Andrew J. Biemiller stressed the importance labor attaches to the accelerated public works plan in a letter to Sen. Jennings Randolph (D-W.Va.). Randolph is chairman of the Senate Public Works Committee and will head the Senate conference delegation of four Democrats and three Republicans.

The Senate panel held an unusual pre-conference hearing to solicit views from interested groups on whether to seek to substitute a disaster-type economic assistance program for the House-passed bill.

The alternate proposal would enable the President to order an assortment of special assistance—at the request of a governor—when a community has suffered an "abrupt rise in unemployment of such magnitude as to disrupt the economic life of the area."

Biemiller said the emergency-type program has "merit," but he strongly urged that it be handled as separate legislation and not as a substitute for the public works proposal. In addition, he noted, an attempt to interject a program not considered by either the House or Senate into the conference report could pose "insurmountable parliamentary problems."

The value of accelerated public works was demonstrated in the 1962 anti-recession program which generated 210,000 man-years of employment in less than two years, Biemiller noted.

He stressed that comparable programs could get under way even faster today, since there is a "huge backlog" of projects already planned and blueprinted as well as the experience gained in the earlier program.

In a companion area, the AFL-CIO wrote all House members urging support for the public service employment program which provides federal funds to enable cities, counties and states to hire needed workers from the ranks of the unemployed.

The bill, approved by committee and scheduled for early action by the House, would provide funds during periods of high unemployment.

Biemiller termed it emergency legislation—operating nationwide when the unemployment rate is 4.5 percent or higher and thereafter only in communities with unemployment rates above 6 percent.

He cited various safeguards in the bill and noted that it does not include some of the controversial sections of last year's manpower bill which was vetoed.

The Senate earlier this year passed a public service employment bill by a large margin, with strong bipartisan support.

Asbestos Union's H. E. Mulligan Dies

Chicago — Pres. Emeritus Hugh E. Mulligan of the Asbestos Workers, who retired last year after 48 years of service to the union, died May 9 at 76.

Mulligan was the unanimous choice of the executive board to succeed Pres. Joseph A. Mullaney in 1954 but declined because he did not want to leave Chicago and the union's Local 17. When Pres. C. W. Sickles retired in 1967, Mulligan accepted appointment as interim president but served only until the next convention.

Born in Spring Valley, Ill., he went to work in the coal mines as a boy but was injured in a coal slide. He joined Local 17, served two years with the Allied Expeditionary Forces in France and was elected business agent on his return in 1922.

BEST WISHES to Cornelius J. Haggerty, left, on his retirement as president of the AFL-CIO Building & Construction Trades Dept. are offered by Pres. Peter T. Schoemann of the Plumbers and Dept. Sec.-Treas. Frank Bonadio, right, who succeeds Haggerty. Schoemann recently announced his own plans for retirement.

House Vote Revives Prospects for SST

A bipartisan drive to revive the SST program shifted to the Senate after an important victory in the House.

By a 201-197 margin, the House reversed the stand it had taken less than two months earlier and voted an interim appropriation of $85.3 million to continue development of an American-built supersonic commercial airliner.

The money had been included in a supplemental appropriations bill to cover part of the costs of cancelling SST contracts and closing down the project. But the House vote changed the language to transform the burial fund into a possible reprieve.

Neither Boeing nor its subcontractors were moving to recall thousands of laid-off workers, however, since the Senate remained a major hurdle. Senate Majority Leader Mike Mansfield (D-Mont.) predicted a "nip-and-tuck" battle over the issue with the possibility of a filibuster by opponents.

Actually, the battle over the $85.3 million was considered primarily a test of congressional intent since substantially more funds in regular appropriations would be needed to gear up the program anew.

Nevertheless, the House vote showed a significant switch in sentiment since March when SST funds were cut off by a 215-204 margin. And there were clear indications that supporters of the SST had several additional votes in reserve if they were needed — congressmen who would have withdrawn their votes against SST funding if needed to make the difference.

As it was, six Republicans who initially voted against SST funding withdrew their votes before the tally was closed to be recorded as "present" and paired with absent members who supported the SST.

AFL-CIO Pres. George Meany had testified in favor of funding the supersonic transport at Appropriations Committee hearings earlier this year, stressing the importance to the economy of continued American leadership in aircraft production.

"A sick economy, crippled by high unemployment," can't finance the social progress America needs, Meany warned.

Both the Democratic and Republican leadership in the House supported the revival of the SST project. On the rollcall, 107 Democrats and 97 Republicans voted for the funding and 129 Democrats and 68 Republicans opposed it.

In other major congressional developments:

- The House Ways & Means Committee moved towards a final vote on an omnibus welfare reform and social security bill on which it announced tentative agreement.

The legislation was not yet in final form as the AFL-CIO News went to press. But it reportedly includes a federally-financed income floor of $2,400 for a family of four, gradual federal assumption of the full costs of welfare payments for the aged, blind and disabled, an assortment of social security improvements although apparently not an across-the-board increase, and an expansion of Medicare to disabled persons below retirement age.

- The Senate was still in the early stages of prolonged debate—and a threatened filibuster—over a House-passed bill to extend the draft beyond its scheduled June 30 expiration date.

A host of amendments—many unrelated to the purpose of the bill—have been proposed. Action on an amendment by Majority Leader Mansfield to cut in half U.S. troop strength in Europe was postponed a week as opponents sought more time to round up votes against it. Sen. Mike Gravel (D-Alaska) has already served notice that he will filibuster against extension of the draft law.

Rail Signalmen Slate Walkout As Talks Stall

The Railroad Signalmen have made "absolutely no progress" in negotiations with the carriers and have notified all other unions they will "peacefully withdraw from service" at 6 a.m. local time May 17, the union announced.

The work stoppage would affect all railroads in the United States except the Long Island Rail Road and the Port Authority of New York, Pres. Charles J. Chamberlain said. The union represents about 13,000 men who construct, install, inspect and maintain the signal systems controlling the safe operation of all trains.

Still unsettled after more than 20 months of brief talks are two major issues: wage inequities for skilled craftsmen, and away-from-home expenses instead of the camp-car accommodations most railroads provide their signal crews.

"Over 80 percent of our members are skilled workers," Chamberlain said. "It just doesn't make sense that experienced workers in an essential industry must put up with substandard pay and primitive living and working conditions while men doing comparable work get from $1.50 to $3 an hour more."

The union head said railroad camp cars are "relics of the Dan'l Boone days" without toilets or other modern facilities. They usually are "parked in the boondocks" and signalmen must find their way to crossroads service stations for toilet facilities, it said.

Union members have voted by a margin of 98.6 percent to authorize a walkout.

5-15-71

IBEW Locals at Western Electric Plan Solid Front at Bargaining Table

Current contract negotiations between the International Brotherhood of Electrical Workers and Western Electric Co.—the manufacturing arm of the Bell Telephone System—will continue until a new agreement is reached or all contracts have expired, the IBEW said.

The union said it is determined to bargain centrally for its 80,000 members in 16 manufacturing plants of Western Electric across the country. It charged that management not only has refused to bargain nationally but has failed to make counter-proposals to move the bargaining process forward.

Contracts in the 16 plants began expiring May 1. When all have expired—a point due late in August—the union said it will decide whether a walkout is necessary.

Four IBEW agreements have expired to date—at Indianapolis, Omaha, Columbus, Ohio, and Montgomery, Ill. Members in those plants voted "overwhelmingly" Apr. 25 to give union negotiators the authority to call a strike, the IBEW reported.

"We don't intend to strike at this time," the union said in response to a request by Director J. Curtis Counts of the Federal Mediation & Conciliation Service that negotiations be continued.

Counts sent IBEW Pres. Charles H. Pillard a telegram noting that negotiations "reached a critical stage" at several Western Electric plants where contracts have expired or are about to expire.

Offering mediation assistance, Counts requested union and management to "intensify their efforts to reach an equitable solution and, pending such efforts, to maintain the status quo."

The union's System Council EM 3, representing electrical manufacturing employes of Western Electric, has been meeting with management in New York City over a 60-day period. Simultaneous negotiations have been held on local issues at the 16 company plants.

The IBEW said management's approach is to make an offer locally, but union negotiators at the local level have turned down the offers to date and are taking strike authorization votes.

"The negative attitude of the company and its failure to make any counterproposals to the union have provoked the four manufacturing locations into taking a strike vote," an IBEW statement said.

The Communications Workers also reported no progress in contract talks with the Bell System. CWA has extended its contracts with Western Electric and other subsidiaries of the American Telephone and Telegraph Co. on a day-to-day basis.

CWA Pres. Joseph A. Beirne predicted last week that if the Bell System does not come up with an adequate contract offer by May 19, the union's executive board would authorize a strike vote.

TV 'Advocates' To Air Public Strikes Issue

Civil service workers, traditionally secure in their jobs but without control over their working conditions, have no legal right to strike in most states. Yet walkouts have become common. What's the answer?

The Advocates, a Public Broadcasting Service program, will deal with the question "Should public employes have the right to strike?" The program is scheduled for Tuesday, May 18, at 9 p.m., EDT.

Advocate Howard Miller, a law professor from the University of Southern California, will argue for the right of public workers to strike. Witnesses supporting his case will be Theodore Kheel, New York mediator and arbitrator, and Pres. Jerry Wurf of the State, County & Municipal Employes.

William Rusher, publisher of the National Review, is the advocate in opposition.

Five Postal Unions Ratify Merger Plan

AFL-CIO News

Vol. XVI | Issued weekly at 815 Sixteenth St., N. W. Washington, D. C. 20006 $2 a year | Second Class Postage Paid at Washington, D. C. | Saturday, May 22, 1971 | No. 20

96 Percent Of Members Vote 'Yes'

By David L. Perlman

Members of five postal unions voted almost unanimously to ratify a merger agreement creating a new 300,000-strong organization, the American Postal Workers Union, AFL-CIO.

Ninety-six percent of the votes cast in the mail referendum balloting were marked "Yes"—for the merger.

The two biggest unions—the United Federation of Postal Clerks and the unaffiliated National Postal Union—had been bitter rivals for more than 12 years, competing for members and bargaining rights

When the ballots were tallied, UFPOC members had voted 103,768 to 5,279 for unity. And NPU members approved the merger, 36,863 to 572.

The rank-and-file approval of the merger agreement worked out by their leaders was just as overwhelming in the three smaller AFL-CIO affiliates that are parties to the merger.

Members of the Post Office & General Service Maintenance Employes voted 5,624 to 359 for ratification.

The Post Office Motor Vehicle Employes approved merger 4,617 to 170.

And the Special Delivery Messengers voted 1,588 to 73 for ratification.

Francis S. Filbey, who has been president of the Postal Clerks, will serve as president of the new American Postal Workers Union until elections are held in 1972.

NPU Pres. David Silvergleid becomes executive vice president of the merged union. Postal Clerks Sec.-Treas. Owen H. Schoon will hold the same post in APWU.

Filbey termed the overwhelming vote for merger a sign of worker unity and militancy in the stalemated negotiations with the management of the new United States Postal Service.

"The arrogant refusal of the postal service to discuss a single monetary issue in four fruitless months of labor negotiations under the postal reform act contributed enormously to the birth of the American Postal Workers Union," he said. "Our members recognized that we must match strength with strength, power with power, to be heeded."

Four of the unions that went into the merger hold nationwide exclusive bargaining rights for their crafts, and along with the Letter Carriers, the Mail Handlers division of the Laborers and the unaffiliated

Meany Warns Job Export Policies Threat to Nation

Steel Talks Under Way For 450,000

Members of the Steelworkers look to their union and management for a "measure of economic justice" in negotiations this year, USWA Pres. I. W. Abel said as bargaining talks opened May 18 for 450,000 employes of nine corporations in basic steel.

Since the last negotiations, Abel said, "continuing inflation has eaten away the buying power of the increases in wages we negotiated three years ago." He stressed that members of the union have "made very clear their deep dissatisfaction with these unpleasant, unfortunate, and I would say unnecessary economic developments."

Abel stressed that the Steelworkers are entering negotiations with complete faith in the collective bargaining process and can see no reason why agreements cannot be reached before contracts expire Aug. 1.

He declared that the union wants an agreement, not a strike. There have been no major strikes in steel for the past 12 years, the longest period of industrial peace since the beginning of contract relations, Abel noted.

Delegates from steel locals instructed the union at meetings six weeks ago to seek substantial wage adjustments, inclusion of a cost-of-living clause in contracts, and wide-ranging improvements in benefits and working conditions.

Abel reported "deep anxiety and frustration" in the ranks of members who "have had to endure a difficult period of economic stress and inflation." They are entitled to expect "satisfactory and constructive solutions" to the problems, he said.

END TAX ADVANTAGES to runaway firms that shift production overseas to take advantage of low wages, AFL-CIO Pres. George Meany urges members of the Senate Finance Committee. With Meany at the witness table is AFL-CIO Research Director Nat Goldfinger.

Scores Gaps Encouraging 'Runways'

Government policies that encourage the export of American jobs and production threaten economic disaster to the United States, AFL-CIO Pres. George Meany warned at Senate hearings on world trade.

Meany urged Congress and the Administration to face up to the fact that the American economy can't continue to lose jobs to low-wage areas of the world without undermining the standard of living of all Americans.

A dwindling U.S. workforce can't support a rising welfare load, he stressed. Nor is labor "an interchangeable part, as some economists believe. A jobless shoe worker in Maine does not automatically become a clerical worker in New York."

Meany told members of a Senate Finance subcommittee that America's workers have a legitimate grievance with their government because of trade, tax and investment policies that encourage runaway employers to shift production to low-wage areas of the world.

The workers have come to their unions for help but "this is not a problem of the unions alone." As the job losses spread to all segments of the economy, "with those losses will go much of the American standard of living," Meany said.

Bipartisan Backing:

House Panel Okays Social Aid Package

The House Ways & Means Committee has approved a 446-page package of major changes in social security, Medicare, family assistance and Medicaid programs—all wrapped into a single bill that is expected to reach the House floor under a no-amendment rule.

Although the committee was sharply divided on various provisions of the bill, it gave the final package a bipartisan 22-3 endorsement.

Pres. Nixon, pleased by inclusion of much of his welfare reform proposals, issued a statement warmly praising the bill and even had a good word for a social security benefit increase the Administration had opposed.

Although House passage is expected, the final version of the bill could still be substantially different than the committee package. That's because the legislation will be wide open to amendment in the Senate—first in the Finance Committee and then on the Senate floor.

Last year in fact, in the final weeks of the 91st Congress, a House-passed welfare reform package was so changed and loaded with amendments that it never did get to a final vote.

The bill the House will vote on, probably in June, includes these main provisions affecting social security:

Benefits—Effective June 1, 1972, all 25 million persons on social security benefit rolls would receive

HEW Scored For Allowing Welfare Cuts

The surrender of the Nixon Administration to California Gov. Ronald Reagan's demands to weaken welfare payments has brought a sharp challenge from AFL-CIO Pres. George Meany.

Meany declared that the Dept. of Health, Education & Welfare has no legal authority to approve changes in state public welfare programs on the basis that legislation now pending before Congress will eventually become law.

In a letter to HEW Sec. Elliot L. Richardson, Meany wrote:

"We have been shocked to read newspaper articles reporting that you have approved requests by the Governor of California for changes in that state's public welfare program that do not appear to con-

Congress Halts Railroad Strike, Votes Wage Boost for Signalmen

By Eugene A. Kelly

Railway Signalmen returned to work on the nation's major railroads after a two-day strike was halted by Congress.

Their union president, noting that the carriers have negotiated for a total of no more than 24 hours over a 21-month period, warned there may be another strike unless management faces up to the needs of its 13,000 signal system employes.

The Signalmen walked out at 6 a.m., May 17 and began returning May 19 after Congress passed an emergency resolution and Pres. Nixon signed it into law. The measure gives the signal employes a retroactive pay raise averaging 12.5 percent for top-skilled workers—49 cents an hour for journeymen—to stay in effect while negotiations continue on other details of a new contract.

The resolution prohibits any change in contract conditions by either side before Oct. 1 unless agreement is reached meanwhile.

But it also expresses "the sense of the Congress that the living accommodations of the employes . . . while they are on travel status, are unsatisfactory. . . . The Congress does not intend . . . to endorse the continued furnishing of substandard quarters . . . and urges management and labor to negotiate . . . substantially improved living quarters" as soon as possible.

'Only This Will Make It!'

Elderly Faring Worse, Ohio Conference Told

Columbus, O.—"Serious economic neglect" of millions of over 65-citizens is creating a "tragic generation gap" throughout the country, the 1971 Ohio Governor's Conference on Aging was told by Jacob Clayman, administrative director of the AFL-CIO Industrial Union Dept.

"While Pres. Nixon keeps assuring the nation that our prosperity is rising, the indisputable fact is that the elderly in America are getting poorer," Clayman said. "Unless we are prepared to initiate programs that spell realistic hope rather than empty illusions, the senior generation gap is going to increase."

He outlined a five-point program to improve the lot of the aging in America:

- Major improvements in social security, including an increase in benefits of at least 35 percent in the next two years, a $100-a-month minimum benefit and a cost-of-living escalator for the future.
- A national health security program with adequate health care as a matter of right, including the dispensation of needed drugs essentially without cost.
- An emergency program to assure massive improvement and upgrading of nursing-care homes, too many of which are now unregulated and "create the makings of a national scandal of exploitation and callousness".
- Major programs to provide more adequate housing for older couples and individuals in an environment in which they can better enjoy their later years.
- An innovative effort to provide various forms of "useful employment—not a senior citizens' version of leaf-raking"—to provide additional income for older men and women. "The government should examine its potential as an employer of last resort for older Americans, particularly in the social services—teaching, nursing, child care and similar occupations," Clayman said.

He told the Ohio conference that "few Americans apparently have any real concept of the amount of poverty among the country's older age groups."

He cited a questionnaire that elicited responses from 200,000 men and women over 55 years of age which "cast the spotlight" on the poverty situation.

The survey found that 55 percent of the persons questioned can't afford the food they want, Clayman said. Over half the respondents somehow get by on incomes of less than $200 a month, and a full 20 percent have less than $100 a month in spendable income. Nearly 72 percent must live solely on their meager social security benefits.

"When prosperous America has some five million citizens over 65 years of age living below the poverty line, that is a critically serious matter," Clayman added. "What's even worse is that between 1968 and 1969, the number of older poor increased by 200,000."

Paper Industry Unions Discuss Joint Program

Chicago—Delegates from 30 local unions under contract with the Kimberly-Clark Corp. in both the United States and Canada met for two days here to develop plans aimed toward ultimate coordinated bargaining.

Goals of the conference were outlined by Pres.-Sec. Joseph P. Torelli of the Pulp, Sulphite & Paper Mill Workers and Pres. Harry D. Sayre, Papermakers & Paperworkers who called the meeting.

These include efforts to achieve common contract expiration dates on all local contracts, mutual moral and financial support of all such aims by the locals concerned, and ultimately the instituting of multiple coordinated bargaining.

The 80 delegates were brought together as an outgrowth of numerous and lengthy strikes called against Kimberly-Clark properties in both countries.

"We do not intend to allow ourselves to be fragmented any more by this company," Tonelli said. "We are greatly pleased at the enthusiasm and militancy emphasized by the delegates here this week."

Kimberly-Clark is a multinational giant in the industry employing more than 29,000 workers in 34 plants in 14 states and 18 foreign countries. Its announced after-taxes profit for 1970 was $38.3 million.

Seth Zinman Named to Labor Dept. Legal Post

Seth D. Zinman was named Deputy Associate Labor Dept. Solicitor for legislation and legal counsel.

Zinman joined the Labor Dept.'s legal staff in 1961 and for the past two years served as counsel for legislation in the office of the solicitor.

Major Changes Drafted:

Ways & Means Panel Clears Broad Social Aid Package

(Continued from Page 1)

a 5 percent increase. This would add an estimated $2.1 billion a year in purchasing power.

Cost-of-living provision—In the future, benefits would automatically be increased in years when the Consumer Price Index rose at least 3 percent—provided Congress had not enacted legislation raising benefits during the preceding year.

Minimum benefits—Persons who worked in jobs covered by social security for 15 or more years would be guaranteed not less than $5 a month multiplied by years of service, up to 30. Thus a person with 30 years of covered employment, no matter how low paid, would receive at least $150 a month. It is estimated that 500,000 persons would receive higher benefits under this provision, effective January 1972.

Widows' benefits—A widow would be entitled to 100 percent of the benefit her husband would be receiving if he were still living. But the benefit would be reduced if she applied for it before the age of 65. Some 3.4 million widows (and dependent widowers) now on the rolls would receive $728 million in additional benefits the first year.

Age 62 retirement—Over a three-year period, the system of computing benefits for men retiring at age 62 would be equalized with the more generous provisions now applying to women.

Additional dropout years—Long-service workers would be able to raise their social security benefits by dropping out more years of lower earnings. At present, the five years of lowest earnings can be dropped in computing benefits on a formula based on years of covered employment since 1951 multiplied by a percentage of average wages on which social security taxes were paid. The change would allow an additional dropout year for each 15 years of covered employment. Thus a worker with 30 years employment could drop out his seven lowest years, instead of five.

Retirement earnings—The amount that a beneficiary under age 72 may earn without reduction of benefits would be raised from $1,680 under present law to $2,000. Above that amount, benefits would be reduced only $1 for each $2 earned. The value of this provision is estimated at $458 million the first year. Furthermore, the $2,000 ceiling would be raised automatically as average wages in the nation go up.

There are many other changes affecting smaller groups of persons, including a new formula allowing some workers receiving both workmen's compensation and social security disability benefits to obtain an increase in their joint benefit.

Financing—To pay for these benefits and for the Medicare improvements listed below, both the taxable wage base and the payroll tax paid by employers and workers would be increased.

The amount of wages subject to social security tax would rise from $7,800 to $10,200 next January. The combined social security-medicare tax would go up to 5.4 percent; under present law, it is scheduled to rise then to 5.2 percent. The rate would rise to 6.2 percent in 1975 and to 7.4 percent in 1977.

To the extent necessary to cover cost-of-living increases, the taxable wage base or the rate could be moved up without new legislation.

MEDICARE

The House bill includes both improvements and cutbacks. The chief gain is expansion of Medicare coverage to some 1.5 million persons under 65 who are receiving social security or railroad disability benefits, starting in mid-1972. This improvement is valued at $1.8 billion the first year.

Other plus factors include limitations on increases in the premium for optional medical insurance and automatic enrollment in the program unless a person specifically rejects the coverage.

On the minus side, patients would have to pay a portion of hospital costs from the 31st to 60th day of hospitalization and the $50 deductible for the voluntary medical insurance would rise to $60.

FAMILY ASSISTANCE

The proposed new family assistance program would provide federally-paid minimum benefits to families with dependent children, which states could supplement if they wish. Unlike the present aid to families with dependent children (AFDC) program, it would include the "working poor"—those whose earnings still leave them below the poverty level. Coupled with the program would be stiff requirements for all able-bodied persons to accept training or jobs, with a directive to the government to provide child-care facilities for working mothers.

The federal payment would amount to $2,400 a year for a family of four—based on a formula of $800 for each of the first two family members, $400 each for the next three, $300 for the next two, and $200 for the next for a maximum of $3,600 for any family of eight or more.

Families receiving these benefits will no longer be eligible for food stamps, which means that many would be worse off than at present unless states supplement the benefits.

States that do supplement benefits would receive additional federal relief only if their welfare expenditures rose above this year's level.

For the working poor—and for welfare recipients placed on jobs—here's how the program would work.

The first $720 of earnings and one-third of the remainder would be exempt. The balance would be subtracted from the family assistance entitlement. Thus, if earnings amounted to $3,000 a year, only $1,520 would be charged against the assistance payments. So a family of four would receive an $880-a-year supplement.

There has been considerable criticism of the low level of family payments—particularly coupled with the elimination of food stamps.

The bill would, however, greatly expand child care facilities throughout the nation. It authorizes $50 million a year for construction of facilities and more than $480 million to provide the services.

It also would inaugurate a public service employment program for persons on welfare rolls, aimed at creating 200,000 jobs in government agencies or non-profit organizations. Persons hired would be paid the prevailing wage or the federal minimum wage, whichever is higher. The federal government would pay 100 percent of their salaries the first year, 75 percent the second year of employment and 50 percent the third year.

OTHER PROVISIONS

Medicaid—It would become harder for persons not on welfare to qualify as medically indigent and eligible for comprehensive health services under the federal-state Medicaid program. The Dept. of Health, Education & Welfare would be able to require such persons to pay a premium, related to their income, to be entitled to services. And states providing more than minimum benefits could require recipients to pay part of the cost.

Aged, blind, disabled—The existing federal-state programs of aid to the aged, blind and disabled would be replaced by a new federal program. Individuals and couples would be eligible if they have cash resources under $1,500 and a monthly income less than the amount of the payment.

Benefits for a single person would start at $130 in mid-1972, go to $140 the next year and $150 a year later. For an eligible couple, the payment would be $195 initially and $200 a year later.

All of these provisions, it should be emphasized, are subject to change as the bill goes through the legislative process.

Federal Employes Manual Updated

A newly revised AFL-CIO Manual for Federal Employes has been issued as a guide for local union officers and stewards.

The key role of the steward is emphasized both in the introduction by AFL-CIO Pres. George Meany and in the detailed descriptions of all steps in the grievance procedure.

The 81-page booklet, AFL-CIO Publication No. 138, also includes the text and a discussion of the latest presidential executive order governing labor-management relations in the federal civil service.

Single copies are free from the AFL-CIO Pamphlet Division, 815 Sixteenth Street, NW, Washington, D.C. 20006. Additional copies are 20 cents each or $15 for 100.

Council Aims At Expanded Service Role

Atlanta—The AFL-CIO Executive Council looked to an expanded role for labor's community service programs in a resolution adopted at its recent meeting here.

The resolution cited the many accomplishments in helping union members, their families and their communities.

But, it added, "more people must be reached. Better service must be given. Experimental programs must be developed to meet unmet needs. Successful programs must be extended. Additional methods of financing must be discovered."

The council drew up guidelines to help AFL-CIO central bodies in selected cities set up permanent labor community service agencies to broaden the scope of existing activities.

Wage Hike Voted:

Congress Steps In To Halt Rail Strike

(Continued from Page 1)

Pres. Charles J. Chamberlain of the Signalmen told newsmen "this is another case where the railroad industry was rescued by Congress from its obligation to settle labor disputes through the collective bargaining process."

The joint resolution by Congress incorporates a portion of the wage recommendations of a Presidential Emergency Board in another rail dispute last November, but trims back other recommendations.

Congress mandated the Secretary of Labor to report by Sept. 22 on the progress, if any, made in Signalmen's negotiations and his proposals for a settlement. Also it ordered the secretaries of Labor and Transportation to report not later than July 31 on the impact of the May work stoppage on industry and the movement of "goods vital to the national defense."

In testimony prior to enactment of the resolution, Chamberlain told the House Commerce Committee that "the employes in this dispute have made every effort to negotiate a satisfactory agreement, without success." He said union members had been "most patient in these negotiations and have tolerated numerous delays during the past 21 months because of the carriers not meeting with us for numerous, and in many cases inexcusable, reasons."

For this reason and the "severe economic pressure" on railroad employes and their families because of substandard wage rates, Chamberlain said prompt settlement of the dispute over wages and living conditions is imperative.

He said this can be accomplished only if the carriers are sincerely willing to bargain and added: "We are ready to resume negotiations at once."

Chamberlain listed these unsettled issues:

- A skill inequity adjustment for experienced signalmen and signal maintainers to correct the disparity between railroad wages and wages in comparable jobs inside and outside the railroad industry. Because of these inequities, skilled signal employes have lost some $750 per man from 1967 through 1970.
- Away-from-home expenses for signalmen employed in construction gangs and required to live "on the road" during their work week. The union is seeking actual expenses for room and lodging and a ban on the use of camp cars, highway trailers or other cars for housing after Jan. 1, 1972.

The union statement said "the deplorable, unsafe, unsanitary, totally inadequate conditions of camp cars . . . have existed for many years. They must be removed and employes permitted to live in hotels and motels with actual expenses for meals and lodging paid for by the employer . . . as in other industries."

The pay increase mandated by Congress will give all signal employes a 5 percent increase retroactive to Jan. 1, 1970, and another increase as of Nov. 1, 1970, of 30 cents an hour for leaders and mechanics, 18 cents for assistants and helpers.

Signalmen construct, install, inspect and repair the signal systems that control the safe operation of all trains. Their average wage of $3.78 an hour for top-paid men is far below the rate of electricians.

LIVING CONDITIONS of Railroad Signalmen who must live in camp cars away from home are pictured by Signalmen's Pres. Charles J. Chamberlain, who testified before the Senate Labor Committee on issues in his union's contract dispute with major railroads. Chamberlain said many cars and trailers lack inside toilets, have broken windows, and inadequate heating devices.

3,000 Eligible For Benefits in Import Layoffs

Nearly 3,000 members of the Electrical, Radio & Machine Workers who lost their jobs because of growing imports of television sets were made eligible for special assistance programs by Pres. Nixon.

The White House certified about 2,000 workers formerly employed by RCA in Memphis, Tenn., and another 850 former employes of Emerson TV & Radio in Jersey City, N.J. The President's decision came after the U.S. Tariff Commission was stalemated in a 2-2 vote on the issue involving the IUE workers.

IUE Pres. Paul Jennings said that the union was pleased with the President's decision, but he stressed that adjustment assistance "is far from the whole solution to the imports problem. Thousands of jobs a month are being eliminated because of increased importation of electrical products."

He urged Congress and the Administration to take action on a broad front to meet the problem.

"This should include the enactment of import quotas, speedier processing and resolution of claims against illegal dumping by foreign manufacturers, controls against the export of U.S. capital and technology by U.S.-based multinational companies, and an immediate moratorium on government purchases of foreign-made heavy electrical equipment," Jennings suggested.

REFERENDUM BALLOTS on merger of the Postal Clerks with four other postal unions are opened under the supervision of members of the union's election committee before being fed into a computer for tallying. The result was overwhelming ratification of the agreement to create a 300,000-strong American Postal Workers Union, affiliated with the AFL-CIO.

Merger Plan Approved by Postal Unions

(Continued from Page 1)

Rural Letter Carriers have been bargaining jointly through the Council of American Postal Employes.

While the National Postal Union did not have nationwide bargaining rights, it had won local bargaining rights in a number of large cities.

The constitution of the merged union describes the APWU as an industrial union but provides separate craft departments, with officers of each department elected by the members of that postal craft.

National officers of the union will be elected by nationwide mail referendum for two-year terms.

For the first election, in 1972, candidates for top offices must have been members of designated premerger unions—the president and secretary-treasurer coming from the Postal Clerks and the executive vice president from the NPU. Other unions involved in the merger also have designated offices.

Starting in 1974, there will be no restrictions on officers except that voting for craft department officials will be limited to members of the craft.

The constitution provides the option of either a two-thirds vote at conventions or a majority vote in referendum for approval of constitutional amendments. It allows recall elections under certain conditions and membership initiation of referenda. After incumbents leave office, no person may be elected to national office after his 65th birthday.

Salaries of officers are initially set in the constitution, with $35,000 for the president and $30,000 for the two other top officers. Designated staff officials will in the future receive the same percentage pay increase negotiated by the union for postal workers.

The presidents of the five unions in the merger termed the formation of the new organization "a giant step toward one big union of postal employes."

Merger was accomplished, they said, because "the common concerns of postal workers outweigh their occupational or organizational differences."

Hodgson Denies Ceiling On Craft Pay Increases

The Construction Industry Stabilization Committee is not limiting all wage increases in building trades contract settlements to 6 percent a year, Labor Sec. James D. Hodgson emphasized at a special news briefing.

Although he denied that the committee had set a specific limit on construction wage settlements, Hodgson conceded that the committee was working toward bringing the wage increases to the 6 percent range—possibly by 1973.

Hodgson pointed out that two criteria were established by the stabilization panel in dealing with wage contracts. One has been recognized as the 6 percent wage limit. The other covers inequities that may exist in certain situations and allows for adjustments beyond the 6 percent level.

"The 6 percent is not etched in concrete," Hodgson told reporters. But he said that the press had misinterpreted Pres. Nixon's Executive Order as setting a 6 percent guideline for wage increases in construction.

The Secretary said the Administration set no specific "target" for wage increases. He said the objective was not to hold wage increases in a certain range, but to bring them "somewhat lower than the 16 percent" settlements before the stabilization committee was established.

He noted that the stabilization committee has reviewed "10 or 12" contract agreements so far. All have been approved.

The settlements provide for wage increases of up to 13 percent a year, with a "large cluster" in the 6 to 9 percent range, Hodgson reported.

The committee recently approved a contract negotiated by Painters Local 424 in Little Rock, Ark., providing for pay increases of 60 cents an hour in each of three years. The committee reported that the settlement raises the wages of the Little Rock Painters 13.5 percent the first year, 11.9 percent the second year and 10.6 percent in the third year.

The approval was made on the basis that the Painters' settlement was in line with deferred wage increases, negotiated earlier by the Carpenters, Plasterers and Bricklayers in the Little Rock area.

"The Painters' settlement preserves traditional craft relationships among crafts most suitable for comparison and it does not set new relatively higher rates," the committee reported.

The report pointed out that the Painters' agreement "does not go out ahead of other comparable craft rates and benefits."

Hodgson termed the Little Rock agreement "heartening" and stressed that the "stabilization plan was never intended to apply fixed criteria or a figure to all wage increases in the industry."

But he also noted the plan was intended "to retard the level of negotiated increases and the level of strikes."

"Only time and decisions of the stabilization committee will determine the amount of the intended retardation," Hodgson added.

He said the plan to reduce the number of strikes is working with only 56 strikes in progress as of May 12 compared to 167 a year ago, "although the number of negotiations in both years was comparable."

Service Employes Mark 50th Year

The Service Employes, united with other unions in the AFL-CIO, has "contributed immeasurably to the well-being of American workers," Federation Pres. George Meany said in a message of congratulation on the union's 50th anniversary.

"United together, working men and women have proved a great social force in America," Meany said. His greeting, and one from Sec.-Treas. Lane Kirkland, appear in the anniversary issue of the union's magazine, the Service Employe.

The issue recounts the chartering by the former AFL of the union which now has a membership approaching 450,000. Pledging determination to meet future challenges, officers headed by Pres. David Sullivan said "modern society has created no institution or instrument as useful as the labor union for the advancement of the cause of working men and women and their families."

The Trade Issues

WORLD TRADE and international investment are of direct importance to American workers.

Specifically, the current deterioration of the United States' position in world trade is having a major adverse impact on America's steelworkers, machinists, electrical workers, on clothing, garment, textile and shoe workers, on glass and pottery workers, on shipyard and maritime workers and many others.

Almost no segment of America's work force has escaped some adverse effect. The American worker is today the major victim of the fall-off in exports or the flood of imports or both.

The American workers have come to their unions for help. And their unions, in concert, seek redress and remedies to this very great threat. Tens of thousands of American workers are suffering loss of jobs, underemployment, a lowered standard of living, and loss of their dignity and their role in our work-oriented society. These workers' grievances are with the government of the United States because it is the government's foreign trade and investment policies that have been responsible in most part for this situation.

The AFL-CIO intends to pursue this issue and intends to fight for international trade and investment policies that will end these hardships.

The AFL-CIO seeks a national policy of healthy expansion of international trade on a reciprocal basis. We seek a trade policy that enhances the well-being of the American people in place of one that enhances private greed.

This is not a problem of the unions alone. It is a problem of all Americans because the loss of our productive base and the loss of our industrial employment will mostly be followed by job losses in all segments of the economy. And with those losses will go much of the American standard of living.

SINCE 1934, the trade union movement has provided consistent support to government policies for the expansion of world trade. We have based our support on the trade union goal of increasing employment and improving living standards both at home and abroad. We are not interested in trade for trade's sake alone.

For many years, as world trade expanded, the majority of Americans and, for that matter, the majority of the people of the world benefited. But during the 1950s, changes in world economic conditions occurred and they accelerated in the 1960s. The benefits to Americans of expanded world trade decreased. The problems grew. And the American workers suffered. By the late 1960s, imports were taking over large and growing portions of U.S. domestic markets of manufactured goods and components.

The U.S. has become a net importer of steel, autos, trucks and parts, as well as such products as clothing, footwear and glass. In consumer electrical goods, imports have taken over major parts of the U.S. domestic market. Even in electrical and non-electrical machinery, during the 1960s, imports increased more rapidly than exports—posing serious potential problems for the days ahead.

These events are the result of changes in world economic conditions, they require that changes be made in the United States' trade policies. The hard facts of life dictate that the government's foreign trade policies be swiftly modernized in light of these events.

—From testimony by AFL-CIO Pres. George Meany before the Senate Finance subcommittee on international trade, May 18.

'Have Bags, Will Travel!'

A Word Edgewise:

Campuses Split Into 2 Worlds Of Serious Students, Radicals

By John P. Roche

A NUMBER OF PROFESSORS from New England colleges and universities turned up accidentally at a social function. Inevitably the conversation turned to the situation on campus, the impact of the Washington demonstrations, and the financial malaise that permeates higher education. Surprisingly, there turned out to be general agreement that the best institutions now have student bodies which are in fact (to borrow a term from Benjamin Disraeli) "Two Nations."

That is, two student sub-cultures are inhabiting the same turf. Technically all are undergraduates at Harvard, M.I.T., Brandeis, Williams, or X, but in reality they travel in different orbits, have little intercommunication, take radically different courses; in sum, live in different educational universes.

Of course, there have always been easy schools and gut departments in good schools. But in the old days, even the most dedicated fraternity loafer or football player got trapped into taking a certain number of required courses. While freshman English, for example, never guaranteed literacy, it did make an ascertainable dent in illiteracy.

Now even freshman English seems to be on the skids. It was abolished at one university on the ground that it reinforced "white chauvinism," and the faculty refused to substitute a literacy test because such an act would smack of "racism."

In general, required courses are a thing of the past and even distribution requirements (two courses in humanities, two in science, etc., selected from a panel of general education offerings) are going down the drain.

When a freshman enters college, then, he finds himself a citizen of libertyville. To graduate, he or she must accumulate a certain number of points and all points are equal. One professor, who gives a four-point course in economics and takes his work seriously, is matched by another who offers "astrology" for the same four-point return.

If you throw in the movement towards abolishing the grading system, a college or university has lost whatever educational structure it may have had. The faculties have retired from the battlefield, and administrators have perfected the technique of pre-emptive capitulation to student demands.

A large number of students still go to college and want to learn something. So, in effect, they set up their own standards and little by little form a self-propelled academic sub-culture which demands excellence and has only contempt for their fellows who have come to play. Similarly, the serious departments have adopted an enclave strategy.

THE AVERAGE UNIVERSITY thus resembles medieval Germany, dotted with feudal kingdoms, duchies, baronies, and the like. The most massive feudality, the Prussia of this medieval map, tends to be the hard sciences. History, economics, and political science are usually well dug in and fortified. And out there in the woods someplace are the soft baronies, most notably sociology.

This was brought out interestingly enough by my students in constitutional history. It is a large class and just out of curiosity I inquired whether they thought there would be a big campus turnout for the Washington revels. From somewhere in the back came a most explicit answer: "Only the sociologists have time for that **!" The class roared, and afterward one student came up to tell me the latest "in" joke: "We believe sociology should be legalized only among consenting adults."**

For one who believes that a university should be more than a smorgasbord, this is a depressing mode of operation. It puts a tremendous burden on the student. Yet, at the same time, perhaps confronting young people with the necessity for choice, however painful it may be, is an invaluable contribution to their real education.

Too Costly for Poor:

Nixon's Health Care Proposal Offers Only Scanty Coverage

Following is the text of the statement adopted by the AFL-CIO Executive Council on May 12, 1971, at Altanta on Pres. Nixon's health care legislation.

PRES. NIXON'S health message has, at long last, been introduced in bill form. After careful examination, we find it to be completely unacceptable.

The President's proposals do not match the liberal rhetoric of his health message. Indeed, taken as a whole, his program falls far short of meeting the "massive crisis" in health care the President proclaimed more than 20 months ago.

His program constitutes a giant step backward. The much publicized "National Health Strategy" is a strategy to provide a financial bail-out for insurance companies, further fragment the system of health care, and create elaborate new means tests—all of which will prevent Americans from receiving the health care they need.

The Administration proposals rely heavily on deductibles, co-insurance and cut-offs. This is the cruel theory of utilization controls that if the worker has to pay more he'll only seek health care when he absolutely needs it. The trouble is that even when they do need the care, deductibles and the like keep people from seeking early diagnosis and treatment and destroy any hope of encouraging preventive medicine. But we are totally unimpressed by the argument that any of this constitutes effective cost control.

The deductibles, co-insurance, cut-offs and premium payment in the Nixon program add up to a rich man's bill. Only the rich can afford the excessive cost.

The poor and near-poor would be eligible only for a substantially reduced portion of the benefits paid under the private plan. In degrees varying according to income, the poor would have to pay a portion of the premiums. This would further expand the already wide gap in health between the poor and the more affluent.

The benefits under both the private and public plans in the Administration proposal are quite limited. In addition to limits on those benefits that are provided, it would not include any mental health care, outpatient drugs, dental care or prosthetic devices.

As inadequate as the proposed benefits are in the Nixon program, the coverage is even more shockingly inadequate.

The coverage aspects are a gigantic loophole, written to benefit unscrupulous employers. The only requirement is that employers make insurance available. If the employe wants the insurance, he must pay a percentage of the premium. For workers at or near the minimum wage, this cost is excessive.

THE UNEMPLOYED would have to use their meager resources to purchase coverage. Employes of state and local governments, religious organizations, and most part-time and seasonal workers would not be eligible for the employer-provided insurance.

Individuals and families eligible for the Family Health Insurance Plan would have to meet degrading means tests. This would require substantial administrative costs and a further proliferation of red tape.

Even with this limited coverage, the Administration was unable to agree on who would pay what. Hence, the House bill differs from the Senate bill on payment procedure for small employers, providing both a government subsidy and an income tax deduction.

Because of the added paperwork necessitated by a system which would require means tests, use of the more than 1,000 private insurance companies with their 1,000 different forms and multiple standards of benefits, it is not inconceivable to foresee the entire health delivery system collapsing under a flood of paper.

The AFL-CIO reiterates its strong endorsement of National Health Security, which would establish one financing system, one set of comprehensive benefits, provide medical care for all Americans, and control costs through one national health care budget.

Delay Feeds Unemployment:

White House Freeze of Funds Tied to 1972 Election Strategy

THE ADMINISTRATION'S "callous manipulation" of funds Congress earmarked for vital programs not only "feeds unemployment," but will drive eventual costs of those programs even higher, AFL-CIO Legislative Rep. Ray Denison declared.

Pres. Nixon's claim that the withholding of more than $12 billion intended for continuing federal programs is needed to stem inflation, "just doesn't hold water," said Denison on the network radio interview, Labor News Conference.

The real reason the President has decided to "stash away these funds" is to "dole them out piecemeal" as the 1972 elections approach, and "achieve maximum economic impact at a time when maximum political effect is desired," Denison charged.

He said that while other Presidents have held back appropriated funds, as Pres. Roosevelt did to assure continuation of war-necessitated projects in World War II, there was never such "callous manipulation of the federal treasury, as a political tool."

Denison said it is "ironic" that the President refuses to spend appropriations he himself signed into law, at a time when he and his Administration are working hard to enlist the support of state and local officials for so-called "revenue-sharing" proposals that total less than half the amount he has "impounded."

THE RESULTING DELAY of approved projects has a "total community impact," with disrupted timetables, added unemployment and, "in the long run . . . a much higher price tag on both the project and the human needs," he added.

Denison related that "we now have a situation where unemployment is beyond the 6 percent level where the Administration itself is talking in terms of trying to get the economy going again, and where, in the construction field, there is approximately 11 percent unemployment at this time."

He continued: "So it seems to us that the way to move the economy at this critical moment would be to expend the funds that have already been appropriated by Congress and signed into law by the President, to the programs they were intended for."

Asked whether labor has "lost confidence completely" in the Nixon Administration, Denison said "it is our belief that the Administration does not have at heart the best interest of working men and women." He listed Nixon vetoes of programs aimed at helping the unemployed, the underemployed, and the economy in general.

"By his actions is how we must judge him."

Denison said he doubts that further legislation aimed at forcing the President to spend the money would be effective, since he is already "circumventing the intent of Congress" in laws now on the books. He said that other routes are under study, including "judicial review" of the President's authority to, in effect, "exercise a line veto," and "the more political alternative of denying the President funds for one of his favorite programs."

But the most effective remedy, Denison said, may be the 1972 elections.

Reporters questioning Denison were Ronald Sarro of the Washington Evening Star and Donald Finley of United Press International. The program is broadcast Tuesdays on the Mutual Broadcasting System.

By Press Associates, Inc.

PRACTICALLY EVERYBODY agrees that the states and local communities are in bad financial shape as the costs of services increase and the sources of public revenues dry up.

In New York, there is the extraordinary spectacle of two powerful Republicans—the governor of the state and the mayor of its largest city—berating each other over the division of state and city incomes which clearly are inadequate for both.

Nor is the problem confined simply to New York State and New York City. It is the same story throughout the country as conferences of governors and mayors, each one in almost hysterical agreement, bear out.

The question, then, is not revenue sharing, but fiscal responsibility and method.

The Nixon Administration would turn over some $5 billion now and up to $10 billion later to the states and local communities to be spent as they see fit. This, of course, fits neatly into the Republican concept of the "new federalism" which is a way of going back to the old "state's rights" concept which has produced the wide disparity in income and social legislation that has become characteristic of many areas of the country.

Organized labor is flatly opposed to turning over billions of dollars of federal revenues to states and local communities without strings. Its reasoning is based on wide and unhappy experience with state standards and practices in such areas as unemployment compensation, industrial accident insurance, "right-to-work" laws and any number of programs including desegregation of the schools, meat inspection and industrial health and safety enforcement.

When left to the states, these programs have produced a wide variety of inequities that make no sense and reflect the social and cultural prejudices of the communities involved.

Why the $5 billion or even $10 billion "revenue sharing" should have become so important is difficult to understand. The federal government already provides federal funds for state and local programs.

In 1968-69, state and local revenue from the federal government as a percent of state and local tax revenue ran from a low of 17.5 percent in Wisconsin to a high of 100 percent in Alaska, which perhaps is an unusual example, and 63.1 percent in Wyoming. The country-wide average was 25 percent, and represented some $19.1 billion.

This "sharing" of federal revenues covered such areas as general government, natural resources, agriculture, community development and housing, education and manpower, commerce and transportation and health and welfare.

ORGANIZED LABOR is strongly of the view that this kind of "sharing" is highly worth while since it covers areas of clearly needed government services. It has called on Congress and the Administration to fund fully many highly important programs which already have been approved by Congress but are lacking the finances needed to carry them out fully.

There is another aspect of the Nixon "revenue sharing" program which needs close attention. Will this free and unrestricted federal money really be used for funding important social services and "innovating" new programs as the President himself has suggested?

Revenue sharing, as conceived by Pres. Nixon as part of his "new federalism" and "new American revolution" is running into difficulties in the Congress. Congressmen who have to do the hard political chore of voting higher federal taxes are not too enthusiastic about giving up the responsibility of checking on how those billions are spent.

Labor has called revenue sharing "passing the buck." It is a good analysis and should be heeded.

VITAL PROGRAMS ranging from low-income housing to veterans' aid are suffering from Pres. Nixon's "callous manipulation" of more than $12 billion appropriated by Congress but impounded by the White House, AFL-CIO Legislative Rep. Ray Denison, center, charged on Labor News Conference. Questioning him were Donald Finley, left, of United Press International and Ronald Sarro of the Washington Evening Star. The AFL-CIO public service interview is broadcast Tuesdays on Mutual radio.

Ranks of Poor Increase 5.1% In Single Year

High unemployment and inflation are swelling the ranks of the poor, according to the Census Bureau's annual population survey which showed that the number of Americans living below poverty levels increased by 1.2 million in 1970.

The increase of 5.1 percent—the biggest jump since the Census Bureau began keeping the statistics—brought the total number of persons living in poverty to 25.5 million, or 13 percent of the population.

The figures represented a direct reversal of a trend established during the 1960s when the poverty-level population decreased by 4.9 percent each year.

The percentage of Negroes living in poverty was more than three times that for whites, the Census Bureau said. But the rates of increase for whites and blacks living below poverty levels were about the same.

The government defines the poverty income level on a sliding scale. In 1970, the poverty threshold for a nonfarm family of four was $3,968 as compared with $2,973 in 1959. In 1969, the poverty threshold stood at $3,743.

Inflation has added many pensioners and welfare recipients living on fixed incomes to the ranks of the poor, the bureau said.

But persons most adversely affected have been those living in families headed by a woman, it reported.

Of the 1.2 million persons added to the poverty population, half of them were in such families. Families headed by women account for 44 percent of those living in poverty.

More than a third of the 1.2 million persons added to the poverty classification were living in black families headed only by mothers. This number accounted for nearly all of the increase in black poverty.

FOR DISTINGUISHED SERVICE to American music, Pres. Hal C. Davis, left, of the Musicians receives an award from the Third Street Music School Settlement at a luncheon in New York City. William Carlin, board chairman of the school, makes the presentation. The Third Street School, established in Manhattan in 1894, is the oldest community music school in the country. Proceeds from the luncheon went to the school's scholarship fund.

Senate Votes Down Further SST Funds

Congressional supporters of an American-built SST supersonic airliner conceded defeat of their effort to restore federal financing for two prototype planes.

The House had voted by a slim margin to revive the project. But whatever slim hopes existed that the Senate would go along were dashed when the prime contractor—the Boeing Co.—served notice it would take up to $1 billion in additional federal funds to get the test models off the ground.

The company stuck to its figures despite White House efforts to come up with a lower estimate. Several key senators and congressmen announced they could no longer support the SST at such a price tag, and the Senate voted down further financing by a decisive 58-37 vote.

Senators then voted to increase the amount earmarked for cancellation expenses of the contract and the House was expected to go along.

In another area, however, the Administration won a significant victory for the bipartisan policy of continued support for NATO—the North Atlantic Treaty Organization—whose combined forces have stood as a barrier to Soviet expansion in Europe.

A motion by Senate Majority Leader Mike Mansfield (D-Mont.) to cut American troop strength in Europe in half by the end of this year was beaten, 61-36, and various "compromise" proposals lost by even bigger margins.

In the House, Democratic leaders postponed final action on a labor-supported public service jobs bill to take a new nose count on what had appeared to be a solid majority for passage.

House Republicans pulled off a coup on a procedural vote that had been expected to follow party lines by luring to their side a bloc of conservative southern Democrats reportedly by promises to help build opposition to a bill giving stronger powers to the Equal Employment Opportunity Commission.

The result was a 210-182 vote to allow Republicans to offer a manpower special revenue-sharing bill sought by the Administration as a substitute for the legislation authorizing federal financing of an estimated 150,000 new jobs with local and state governments.

Under normal House rules, the revenue-sharing plan would have been out of order since its scope goes far afield from the purpose of the legislation being considered.

On the procedural issue, liberal Republicans supporting public service jobs had been expected to vote with the GOP leadership to allow the hastily drafted Administration bill to be considerd. And they did so.

But the party lines failed to hold solid on the other side of the aisle and the rule under which the bill is considered was amended to allow the Republicans to offer their plan as a substitute.

It would abolish most existing federally financed manpower programs and leave it up to states and communities to use federal funds without federal supervision.

Jewelry Workers Seek Relief Against Imports

Miami Beach—Delegates to the triennial convention of the International Jewelry Workers demanded relief from foreign imports, particularly Japanese flatware.

The union, representing 12,000 American and Canadian jewelry and allied workers, said the Japanese imports are produced by poorly paid workers and are costing American jobs.

The union also went on record as urging the U.S. Senate to ratify the Genocide Treaty adopted by the United Nations in 1948. It provides for a permanent international court to determine and punish acts of genocide.

The treaty, which was last seriously considered in 1950, lost Senate support then because of constitutional objections over sovereignty and disapproval from the American Bar Association.

The 67 delegates unanimously passed a resolution calling for total U.S. withdrawal from Viet Nam by the end of 1971.

Economic resolutions included a call for an increase in the federal minimum wage to $2.50 an hour and a 35-hour standard workweek.

The convention denounced a current move in Congress to deny food stamps to strikers. Pres. Leon Sverdlove said the congressional measure would have disastrous effects if passed and would virtually eliminate the capacity of many workers to exercise their right to strike.

"The American labor movement must remain constantly on guard against attempts by anti-labor forces in this country to weaken it," said a brief resolution.

The union termed the food stamp program "one of the significant humanitarian policies sponsored by the federal government in the 1960s.

A bill to deny strikers the stamps was introduced in the 92nd Congress by Rep. Larry Winn, Jr. (R-Kan.).

In its final days, the convention heard a report from AFL-CIO Community Services Activities Director Leo Perlis, changed the allotment of union dues income, and returned Sverdlove and seven vice presidents for new three-year terms in office.

First terms were voted Vice Presidents Edward Albuquerque, Wallingford, Conn.; William Cummings, Indianapolis; Joseph Tarantola, New York City Local 1, and Clifford Wilson, New York City Local 38.

Hit Nixon Failures:

ILG Delegates Cite U.S., World Needs

Miami Beach—More than 1,000 delegates ended the 34th convention of the Ladies' Garment Workers Union by adopting a wide-ranging legislative program as well as 33 resolutions dealing with international affairs.

Pres. and Sec.-Treas. Louis Stulberg was re-elected unanimously on the final day of the convention along with 20 incumbent vice presidents and three new ones.

A detailed report from the union's Committee on Social & Labor Legislation was sharply critical of the Nixon Administration and reminded delegates that progress toward the ILGWU's goals will be made "only if we first succeed in replacing the reactionaries who now rule in Washington with men and women motivated by genuine concern for the welfare of the working people of this nation."

Among the legislative goals adopted were:

- An increase in the minimum wage from the present $1.60 to $2.50. Continuing inflation has made the increase essential, said the legislative report, pointing to the "working poor"—those who work fulltime but still find their wages below the federal poverty levels.
- An increase of at least 15 percent in social security benefits this year, and another 20-percent increase next year.

In the field of international affairs delegates called for withdrawal from Viet Nam in a manner consistent with the safety and ultimate freedom of Americans now held prisoner by North Viet Nam.

The convention deplored the war but at the same time warned that the world faces the possibility of other Viet Nams as long as totalitarian governments are "determined to impose their system of government and ideology on others by force. . . ."

The Viet Nam statement was approved unanimously and Stulberg said the statement basically reaffirmed the union's previous position.

Delegates also supported other statements backing Israel's efforts to achieve peace through secure borders and condemning Soviet persecution of Russian Jews.

By constitutional amendment, the convention increased the size of the executive board from 21 to 23 members. The two additional seats were filled by Nicholas Bonanno, director of the union's southeast region, and Abe Dolgen, business manager of Cutters' Local 10 in New York City.

A third new vice president elected was Si Bresner, general manager of the union's Montreal office, suceeding Vice Pres. Bernard Shane, who retired.

Delegates also heard civil rights leader Roy Wilkins blame discriminatory zoning ordinances in the nation's rich suburban communities for high unemployment among urban blacks.

Wilkins, executive director of the National Association for the Advancement of Colored People warned that the policy can be harmful to all workers in the long run.

He said the inability of blacks to follow industrial jobs into suburban communities has impeded their economic progress and contributed to feelings of "desperate frustration."

But, he warned, zoning ordinances that restrict or ban multi-family units—"the only kind factory workers can afford to buy or rent"—also threaten white employment.

"On the surface they appear to deal only with housing," he said. "Underneath, however, is the sinister purpose of keeping out people who are not $30,000-a-year-and-up executives, who are skilled workers, who are Spanish speaking or black."

Earlier, delegates gave a prolonged ovation to Sen. Henry M. Jackson (D-Wash.), when he told them he favors "an honorable conclusion" to the Viet Nam war, "in a way that will not tempt the enemies of the United States to engage in adventures elsewhere which could be upsetting to the peace."

"We as Americans above all else have a responsibility to see to it that we maintain a credible defense posture so that we can preserve our own freedom and make it possible for others to enjoy freedom and to extend freedom wherever that's possible," he stressed.

Jackson said that America has the resources to meet this challenge and to eradicate poverty at home, as well.

AFL-CIO Donation Aids Hunger Walk

The AFL-CIO contributed $1,000 to the International Walk for Development, a campaign to raise funds for domestic and overseas anti-poverty programs.

More than 600,000 persons made the hike in about 350 communities in the United States to raise $5.1 million. Millions of persons also participated in the march overseas. Marchers in 600 communities of 50 countries covered at least 10 million miles.

Funds from the march, sponsored by the American Freedom from Hunger Foundation, will be used in domestic and foreign projects to alleviate hunger and encourage economic development.

Mohawk Pilots Win Gains in Arbitration

Awards by Arbitrator David L. Cole have resolved most of the unsettled contract issues between the Airline Pilots and Mohawk Airlines, the union announced.

Cole ruled that Mohawk's pilots will receive protection from loss of jobs and earnings in the event that the airline reduces or suspends flying over a given route and subcontracts the flying on that route to another carrier.

Mohawk's pilots were granted pay increases effective Apr. 1, 1971, up to a maximum of $36,420 yearly for senior jet captains and $29,724 for senior turbo-prop captains. On Mar. 1, 1972, senior jet captains will receive an additional increase to $38,220 while on Apr. 1, 1972, turbo-prop captains and first officers will work a maximum of 80 hours per month instead of the present 85.

Three unresolved issues—training, filling of vacancies, and scheduling rules and contract interpretations—are deferred for further direct negotiations between the airline and the union.

Seattle Feels Deep Impact of Job Losses

High Unemployment Rate Cuts Through Community

By Tom Castor

Seattle—The impact of high unemployment is being felt across the board—and across the country.

But if you really want to know about unemployment, and the depressing effect it can have on a community and its people, the place to start looking is Seattle.

The U.S. Bureau of Labor Statistics says Seattle has the highest unemployment rate in the United States—13.6 percent on a seasonally adjusted basis. In terms of absolute numbers of jobless—more than 100,000—Seattle is third in unemployment only to New York and Los Angeles.

This page represents the first of a series of features by the AFL-CIO News as a prelude to the conference on the nation's unemployment problem scheduled by the federation next July 12-13 in Washington.

The series will focus on the causes and effects of joblessness—its impact on people in all occupations, at all skill levels, how it reaches into many industries and nearly every community.

Seattle didn't want it this way. Its high jobless rate can be attributed, directly or indirectly, to the sorry state of the aerospace industry and, in a deeper sense, to the sorry state of the economy.

Out here, the Boeing Co., the aerospace giant, is to the Seattle area what Fort Knox is to the U.S. dollar. It turns out civilian aircraft exclusively and is not dependent on military procurement.

In the past two years, Boeing has laid off 65,000 workers ranging from blue-collar production employes to highly skilled aerospace engineers. Boeing already has announced that 10,000 more jobs will go by the end of the year. There is no other major industry to take up the slack.
